Make the nest boxes of ample size, but not too deep. The hens, if large in size, will break the eggs in getting into the nest if it be too deep.

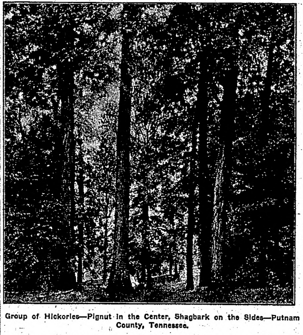
VALUABLE HICKORY TIMBER GROWS SCATTERINGLY OVER LARGE AREAS

(Prepared by the United States Department of Agriculture.)

Hickory timber, although held in seemingly vast amount by the forests of the country, may soon become insufficient to meet American manufacturing and woodworking needs. The increasing demand for this valuable species, together with the scattered character of its growth in the forest, has resulted in merchantable stands becoming more and more inaccessible and difficult to log.

The Forest Service, United States Department of Agriculture, puts the country's present supply of hickory, distributed through 200,000,000 acres of forests, at 15,784,000,000 board feet. Of this the Central states have 1,791,000,000 feet, the lower Mississippi states 5,171,000,000 feet, the South Atlantic and East Gulf states 8,183,000,000 feet, the Middle Atlantic states 412,000,000 board feet, the Lake states 187,000,000 feet, and the New England states 40,000,000 feet.

One of the uses to which hickory is put is the manufacture of spokes for automobile wheels. The yearly demand upon the hickory reserves by this industry alone is tremendous, as there is much waste in getting the select stock necessary not only for spokes but also the rims of wheels.



Group of Hickories—Pignut in the Center, Shagbark on the Sides—Putnam County, Tennessee.

Industries Compete for Hickory.

For the most part vehicle and agricultural implement industries compete with the handle industry for hickory and ash. These are located mainly in the Middle West, but now derive most of their wood supplies from the South. A large number of far-sighted organizations purchased more or less extensive hardwood tracts some years ago, from which they are now able to draw at least a part of their wood supplies. To secure hickory, which grows scatteringly over large areas, the vehicle and vehicle-implement industries originally maintained extensive buying, logging, and milling organizations in the South. They draw upon every conceivable source—farmers' wood-lots small mills, large sawmills, and even specialized operations designed to secure hickory alone. These concerns in general carry in stock about a two years' supply of special-dimension stock.

Makers of automobile wheels say that they can still get the material required if they make sufficient effort and pay the price, but it is necessary to go farther and farther away for it. Many inquiries received by the forest service from vehicle implement makers, requesting information on possible substitutes for the woods used in vehicle making, is merely another indication of the difficulties in getting adequate supplies at the present time and of uncertainty as to the future.

Ten Different Kinds of Hickories.

Hickory is often referred to as if it were a single species, like red gum or yellow poplar. In reality there are 10 different kinds of hickory trees. For hickory-handle purposes those known as true hickories are most valuable. The pecan hickories include the water, nutmeg, and bitter nut varieties. The true hickories comprise shagbark, pig shellbark, pignut, and mocker nut. The handle industry is largely dependent on this last group of trees for its raw material.

The wood of the butt of a young hickory tree is of greater average toughness than it is when the tree is old. The wood of butt cuts of both old and young trees is tougher than that cut higher up the trunk. The handle manufacturers, for the most part, demand second-growth hickory, which consists of young stock of rapid growth.

Best Material for Handles.

Hickory is the best known material for certain classes of tool handles, such as the ax, adz, pick, hammer, and hatchet. There is a certain strength, toughness and elasticity to hickory which nature has denied to other commercial woods. Some are stronger, many are harder, but the rare combination of the qualities mentioned is lacking in all of them.

The raw material for handles in the form of short log bolts is sometimes split into handle blanks in the woods, but the usual practice is to rip-saw the bolts into blanks at the factory. The split-handle blank is considered superior to the sawed blank in that it insures a straight-grain handle. On the other hand, sawed blanks, though they are likely to show more cross grain, are more economical in the use of timber.

Hickory, due to its unrivaled properties of great strength, elasticity, and resiliency, is used exclusively in the manufacture of handles of golf clubs. The constantly increasing popularity of this sport has placed another demand on the hickory supply.

KEEP CONTAINERS AT FULL SIZE

"Short" Baskets Due to Lack of Proper Inspection.

Manufacturers Are Ready to Correct Any Defects Pointed Out by Department of Agriculture—Shippers Blamed.

(Prepared by the United States Department of Agriculture.)

A "short" tomato basket masquerading as a 4-quart till basket. The United States Department of Agriculture picks up the scent. On the "trail of the troublesome till," the chase is called.

Partly through a desire to conform to the wishes of the shippers and partly because of failure to have the basket forms inspected frequently, containers far short of the standard measure were being made. Short-measure till baskets for fruits and vegetables are frequently the result of careless handling of the forms used in manufacturing the containers, the department points out. Dropping the forms on the floor or otherwise mishandling them can easily knock them out of shape.

Forms and containers of numerous basket manufacturers in the United States are inspected as often as possible by the department, and the experience has been that the manufacturers are ready to correct any defects in a desire to turn out baskets of standard size. But the department cannot get around to all manufacturers, who are therefore being urged to have their forms frequently inspected and to submit samples of their output to the department to be tested. If the shippers generally would also appreciate the desirability of uniform containers, the standardization of containers would be a simple matter, says the department.

Hogs on Alfalfa Pasture.

Hogs should not be turned on alfalfa pasture until it has a good start.

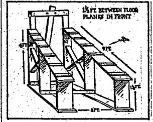
DAIRY FACTS

SERVICEABLE BREEDING RACK

Useful Device When Bull Becomes Heavy Is Not Difficult to Build—Must Be Braced.

A bull that is a good individual and that has excellent breeding back of him should be kept in service at least until his daughters come in milk. If he transmits his breeding to his daughters he should be kept in service until he is no longer useful. To follow this plan it is necessary to exchange bulls with other breeders and in most cases it will be necessary to use a breeding rack after the bull becomes too heavy. It is too often the case that the breeding value of a good bull is not discovered until he is dead.

A very serviceable breeding rack can be made as follows: Take two planks 2 by 12 by 9 feet long and place them on a level foundation for the floor of the breeding rack. These planks should be placed one and one-half feet apart in the front part of the rack and two feet in the rear, inside measurements. Each side of the breeding rack has three posts made of the same material as the floor which are four feet high in front and one and one-half feet in the wear. The posts are nailed to the floor and a plank 2 by 12 by 9 feet long is nailed on the top of the posts. Two-inch strips are nailed across the top of the breeding rack at intervals of ten inches to prevent the bull from slipping.



Durable Breeding Rack for Bull.

The breeding rack must be well braced with 2 by 4's as indicated in the diagram. Four pieces 1 by 6 are nailed across the front end to prevent it from spreading. A 2 by 4 is nailed across the floor plank just back of the middle posts. A stanchion is placed in the front end of the breeding rack which is so constructed that it can be moved backward or forward.—The Prairie Farmer.

TESTS DETECT REMADE MILK

Necessary That Some Method Be Devised That Natural Product Be Distinguished.

(Prepared by the United States Department of Agriculture.)

The increased use of remade milk and cream—that is, milk and cream made from powdered or condensed milk and sweet-cream butter—has made necessary some method by which they may be distinguished from the natural products. Such a test has been devised by chemists of the United States Department of Agriculture, and it is now possible to detect as little as 10 per cent of remade milk in a mixture with natural pasteurized milk. If milk powder has been used in making the mixture, the amount that can be detected will depend on the degree of heat used in its manufacture.

The test for both milk and cream is based upon the color produced when the washed curd made from them is dissolved in sodium hydroxide. When this curd solution has stood for several hours a characteristic yellow color develops in the samples taken from remade milk and cream or mixtures containing them; samples of the natural products or only slight mixtures do not show it.

Remade milk and cream are wholesome foods if made properly from good, natural milk, but should be sold for what they are, and this test makes it possible for food officials to determine whether or not the consumer is being deceived.

TAKE RIGHT CARE OF CREAM

During Hot Weather It Should Receive More Attention—Cool Soon as Possible.

During hot weather cream must receive better care on the average farm. As soon after separating as possible, cool the cream by setting the can in cold water. Never mix the fresh warm cream with the cream from previous separation until cooled as low as possible. Do not keep cream too long at the farm. Send it to the creamery or take it to the cream station at least twice a week, and three times a week when the weather gets hot. Poor, stale cream will not make good butter. If the creamery cannot make good butter the average price of cream will be lower than if good butter can be made.

Mrs. G. Josephson and daughter, Violette, Mrs. Owen Olson and Susie Lindvick autoed to Thief River Falls Wednesday evening to shop and attend the pavement dance.

Miss Della Urdahl left on Tuesday morning for Thief River Falls, where she will have some dental work done. From there she will go to St. Hilaire to visit with friends for a few days.

AT THE CHURCHES

NORWEGIAN LUTH. CHURCH.

V. O. Aaker, Pastor.

Sunday, July 30. Norwegian services at Erie at 11 A. M. English services at Torgerson at 2:30 and Goodridge at 8 P. M. A cordial welcome awaits you at all these churches. The confirmation classes meet at Bethania church every Tuesday at 2 P. M.; at Torgerson every Wednesday at 10:30 A. M.; at Erie every Wednesday at 2:00 P. M., and at Goodridge every Friday at 2 P. M.

Bethania Young Peoples' Picnic.

The Bethania Young Peoples' picnic will be held in the grove of Mr. Ludvig Stenseth, about eight miles southeast of Thief River Falls, next Sunday, July 30. Rev. E. A. Mostue of Thief River Falls will preach at 11 A. M. Dinner at noon and in the afternoon a nice program will be rendered. The main speaker will be S. J. Tharaldson of Goodridge. Be sure to come and bring your friends with you.

Young People's Lutheran League.

The Goodridge Young Peoples' Lutheran League will meet at the church Wednesday, August 2, at 8 P. M. The program committee has arranged for a splendid program, of which may be mentioned an address by Mr. Bjornaraa. He is a well known person and a very able speaker, who always has a message that everybody ought to hear. A large crowd of people was gathered at the last meeting of the Lutheran League and this time we expect a still larger one. Be sure to come.

FARM WANTED.

FIELDS OF RYE ARE HA[illegible]

Good Yields Are Reported From Various Sections of County.

Harvesting, which has been under way in this section of Pennington County for the past two weeks or more, is nearing completion so far as cutting of rye is concerned, and it is thought that wheat, oats and other small grains will be ready for the binder within a short time.

Heavy rains that visited the territory to the north and east of Goodridge last Saturday and Sunday did not hinder to any great extent harvesting operations. There were meager reports of hail from Grygla early this week, but as yet these reports have proved unfounded. On the other hand, crops in this particular section are in excellent condition and some rare specimens of rye have been exhibited.

Some threshing has been done on a few farms hereabouts and several loads of the new grain has been marketed at local elevators. The grain is well-filled and brings a good price. By next week it is believed that farmers generally will be hauling grain to the elevators.

Taken altogether, Eastern Pennington County will harvest and thresh a crop this year that is considerably above the average. There are fields that are not turning out well, but these are few and far between.

Potatoes are in splendid condition, according to reports reaching The Banner office, and the recent warm weather is giving corn its needed impetus.

LOST!

Somewhere on road between Thief River Falls and Goodridge last week side curtain for Chevrolet touring car. Finder please notify The Banner.

Some folks are so suspicious that they even want to put the Golden Rule to the acid test.

CLEARING TEST NEAR [illegible]UDETTE IS SUCCESSFUL

The land clearing demonstration at the Holt farm east of Beaudette last week was well attended and proved practical and interesting. The Martinson wheelbarrow puller created a great deal of interest and convinced those present that it is the most practical puller made.

It is easily handled and does great work. Some electric cap blasting was done, and a ditch was blasted with electric caps and picric acid.

The conclusion drawn from the demonstration is that large green stumps like elm are better left in the ground for several years owing to the cost or explosive necessary to pull them out. The ideal way of clearing land was found to be the group plan, where three to six men go together and exchange work.

The wheelbarrow puller came in for much praise. Picric acid was found to be the cheapest explosive to use.

Saturday a demonstration will be given at the Frank Peterson farm one mile south of Pitt, Monday at Cedar Spur and Tuesday at Roosevelt.—Beaudette Region.

GUIDE TO BE AT GOLDEN VALLEY PEAT FIELDS

Owing to the condition of the roads, many who wished to do so were unable to visit the experimental tract on Saturday, July 22, the regular visiting day.

No doubt many will wish to visit the fields at some other time during the season. For the benefit of such it has been arranged to have a guide at the field Saturday afternoons and Sundays, except during the hours of service at Golden Valley.

FIRST LOAD OF GRAIN IS MARKETED DURING WEEK

The first load of new grain arrived at the Hanson & Barzen Elevator on Monday. The grain, a load of rye hauled in by Fred Aubol of Erie, was the product of Gustav Iverson of that section and commanded a good price.

LESSON FOR STATE IN TIMBER DEBAUCH

Michigan Is Paying Penalty for Quarter Century of Forest Butchery.

Michigan's wood using industries are now paying the economic piper for the state's quarter century timber debauch, according to a statement just issued by the Forest Service of the United States Department of Agriculture, whose experts are engaged in a study to determine the effects of forest devastation on population, agriculture, industry and economic life in that state.

The forests of Michigan, the statement continues, as a result of devastating fires and reckless cutting are now so greatly depleted that they produce chiefly fuel wood and other minor forest products instead of high grade lumber on which the state's main industries depend. The building trades and the automobile industries of Michigan must largely import their supply of high grade lumber from other states instead of growing it at home.

For the most costly classes of woods, such as those used for automobiles, furniture and building, Michigan goes as far south as the Gulf and as far west as the Pacific; she imports all told a little more than a billion board feet of lumber and timber annually, of which 400 million come from the Gulf Coast Region and nearly 180 million feet from the Pacific Northwest. For these amounts the state pays not only an enormous freight bill, but also the high prices incident to constantly dwindling forests.

The reforestration of Michigan's denuded lands would after a few decades, say forest experts, not merely stop these costly importations, but go far toward re-establishing the state's lost leadership in her once great industry—lumbering—and put it upon a permanent basis.

GOODRIDGE SERVICE MEN TO APPEAR IN BIG SHAM BATTLE

Several ex-service men from Goodridge and surrounding territory are to appear in the big sham battle to be put on by the American Legion on the closing day of the Pennington County Fair (today). The men have been going through the various maneuvers nightly and it is thought that the takeoff on what actually took place on the battlefields of France will be as realistic as it is possible to make it.

Rifles and high explosive is in the hands of the Legion men and noise enough for any battle is promised the large crowds that are expected to witness the spectacle.

HE WAS EVERYTHING.

A salesman sold a bill of goods to a merchant in a small town. They were returned as not satisfactory. The wholesale house undertook to collect, anyway, and drew a sight draft on the bank in the customer's town. The bank returned the draft unpaid. Then the house wrote to the village postmaster and asked if the merchant was good for the enclosed bill. The letter was returned O. K.'d at the bottom. Next the postmaster was asked to put the bill in the hands of a local lawyer for collection. The answer received by the wholesaler ran as follows: "The undersigned is the merchant on whom you tried to palm off your worthless junk. The undersigned is also the president of the bank that returned your draft. The undersigned is the postmaster to whom you wrote, and also the lawyer whom you tried to get to collect your bill. And if the undersigned were not the pastor of the local church, the undersigned would tell you to go straight to the devil."—Ex.

RESORT KEEPER SHOT BY JEALOUS HUSBAND

Helmer Bjorge Fires at the Proprietor of Pettibone Lodge at Detroit.

George Pettibone, proprietor of Pettibone Lodge at Shoreham, was seriously wounded last Sunday night, according to the Frazee Press, by Helmer Bjorge, of Detroit, who, pressing a gun which he held in his coat pocket against the stomach of Mr. Pettibone, fired a shot into his body. The bullet was deflected and went around the body instead of through it, and the life of Mr. Pettibone was saved. He fell to the floor and a second shot missed him. While Bjorge was attempting to pull the gun from his pocket, a clerk in the lodge hit him over the head with a chair, knocking him down and with the assistance of others Bjorge was overpowered.

It is reported that Helmer Bjorge and his wife had had domestic difficulties and Mrs. Bjorge had left him and started suit for divorce. She was employed at Pettibone Lodge. It is stated also that she received a letter from her husband saying that he was going to shoot her. When he arrived at the Lodge Sunday night between 11:30 and 12 o'clock, Mr. Pettibone was sitting in a chair in the office. Bjorge demanded that he tell him where his wife was or the number of her room. Mr. Pettibone answered that he did not know where she was, and Mr. Bjorge stepped forward and pressed the revolver which he had in his pocket against Mr. Pettibone, and fired.

Mr. Pettibone was taken to a hospital in Detroit, where the bullet was removed. He will recover.

Bjorge was locked up in the Becker county jail and soon after pulled out a knife which he had concealed about his person and slashed his throat in an attempt to kill himself, but he did not succeed.

Helmer Bjorge is about 30 years of age and comes from one of the prominent families of Becker county and regarded as a fine young man and it is difficult to account for his rash act.

Mr. Pettibone is widely known and there was no ill feeling between the two men.

LABOR DEMAND NEAR NORMAL

Bureau Survey Shows Farm Workers Receive from $2.40 to $2.75 a Day.

Farm labor demand in Minnesota is normal, according to F. L. French, secretary of the Minnesota Farm Bureau Federation, who has just completed an exhaustive survey. In 75 per cent of the counties, Mr. French says, farmers are having no more trouble than usual in getting hands. In 25 per cent, mostly in the Red River Valley, there appears to be a shortage, due to the fact that harvest is under way.

The survey shows the following average wage for various kinds of work:

General, by the day	$2,40
Haying, by the day	2.60
Shocking, by the day	2.70
Threshing, by the day	2.75
General, by the month	46.50
General, 8-month basis	38.50

These wage scales, according to Mr. French, as a rule, include board, room and washing.

Farmers now are paying approximately 8 per cent more for all kinds of labor than they were a year ago.

Somehow or other, the fellow who is always talking about how to run the government is never called upon to do it.

HESSIAN FLY, ENEMY OF WHEAT RAISERS, APPEARS

For the first time in 15 years the Hessian fly, once the Minnesota wheat farmer's most dreaded pest, has been found in the state. "Although the danger of widespread damage is not imminent," says A. G. Ruggles, state entomologist at University Farm, "there is danger that the pest may again become one of the worst in the state."

Hatching out in the spring as maggots from eggs laid by the adult fly, the larvae attack the wheat stalk between the leaf sheath and the stem. Eventually the stalk breaks over with the result that much is lost in harvesting. Still greater loss occurs when immature grain is attacked, the heads, deprived of nourishment from the roots, failing to develop properly.

Because pupae of the fly live over winter on volunteer wheat and in the stubble, eradication of all volunteer wheat is very important in spring wheat areas, according to Professor Ruggles. Deep plowing after harvest with frequent cultivation is another important measure, for 95 per cent of the pupae so buried will not survive.

GOODRIDGE TAKES RUBBER GAME FROM HIGHLANDING

Timely batting, coupled with errors on the opposing nine, gave Goodridge a six-run lead over Highlanding in the first four innings of a baseball game played on the Highlanding diamond last Sunday.

Overby was on the mound for the local team and he turned in an exceptionally good game. He fanned nine men and kept the Highlanding hits to the infield, where they were scooped out of the atmosphere and dust in great style.

The final result was 10 to 2, Highlanding securing one score in the first inning and one in the last.

Fame and Fortune sem to like the man who is on the square.

STATE FAIR TICKETS OFFERED AT BARGAIN

Reduction Offered Those Who Purchase Coupon Book of Six Ducats.

For the first time in the history of the Minnesota State Fair, advance sale coupon tickets at reduced prices are to be offered for this year's fair, September 2 to 9.

Each ticket will contain six admission coupons and will sell for $3, or at the rate of 50 cents an admission. The tickets will be transferable and may be used by any adult or party of adults, for admission at the outside gate, or to the unreserved sections of the grandstand or horse show.

All of the banks in the state will be given an opportunity to handle the tickets. The sale will close August 19. A purchaser of a ticket will save $1.50 on the six admissions, since the regular charge of 75 cents, which has been made by the Fair the past two years will be made again this year. Without this ticket, six admissions to the fair at fair time will cost $4.50. The biggest purchasers of coupon tickets will be families and groups intending to visit the fair as a party.

Until August 19, advance sale coupon tickets may be purchased of W. H. Honebrink, treasurer, First National Bank, St. Paul, in case a local banker has none for sale.

The advance sale plan put into operation by the Fair has been used successfully by the Canadian National Exhibition at Toronto, Canada, for years. The Minnesota State Fair is a leader in introducing the plan in the United States. Fair officials believe it will stimulate an early interest in the Fair and help to increase total attendance at the big exposition.

Another important change in admission rules has been adopted this year in permitting children to visit the Fair free on the opening Saturday, as well as Labor Day, when accompanied by an adult member of the family. Children will also be admitted free to the Fair each evening after 6:00 o'clock under the same condition.

Automobiles will also be admitted free to the grounds each evening after 6:00 o'clock, except on Labor Day.

The kids in the mountains are apparently the only ones who now have a "high bawl."

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

THE FRIENDLY BANK

FARMERS STATE BANK
of Goodridge

Do You Own Your Home?

THERE'S no place like home. No matter how humble, there's no place like home!

It's the joy of every woman's heart—the most companionable place a man can find.

Are you making preparations for a home of your own? Or to bettering your present one?

Get the habit of "LOOKING AHEAD"—start a bank account this pay day.

"A CARNIVAL JOKE"

SYNOPSIS.—During the height of the New Orleans carnival season Jachin Fell, wealthy though somewhat mysterious citizen, and Dr. Ansley, are discussing a series of robberies by an individual known as the Midnight Masquer, who, invariably attired as an aviator, has long defied the police. Joseph Maillard, wealthy banker, is giving a ball that night, at which the Masquer has threatened to appear and rob the guests. Fell and Ansley, on their way to the affair, meet a girl dressed as Columbine, seemingly known to Fell, but masked, who accompanies them to the ball. Lucie Ledanois, recently the ward of her uncle, Joseph Maillard, is the Columbine. At the ball, Bob Maillard, son of the banker, again proposes to her and is refused. He offers to buy some of her property. A Franciscan monk interests her. He turns out to be Prince Gramont. In his library Joseph Maillard and a group of his friends are held up and robbed by the Midnight Masquer. Lucie Ledanois, the last of an old family, is in straitened circumstances. Joseph Maillard's handling of her funds has been unfortunate. Fell is an old friend of her parents and deeply interested in the girl. Henry Gramont, really the Prince de Gramont, is enamored of Lucie. Lucie talks with Fell about her affairs and the Masked Masquer. Gramont's chauffeur, Hammond, sergeant in the A. E. F., lives with him. He was the original Midnight Masquer, and Gramont had assumed the role. Where Hammond had been a robber for financial gain, Gramont, of course, is not. He arranges to return the "loot" to those whom he has robbed. Gramont and Hammond put the jewels and money in individual packages to be returned the next day. An explanation is inclosed in each.

CHAPTER VI—Continued.

—9—

Hammond stood staring after the swaggering figure; for once he was speechless. The jaunty words had sent terror thrilling into him. He started impulsively to pursue that impudent accoster—then he checked himself. Had the man guessed something? Had the man known something? Or had those words been only a bit of meaningless impertinence—a chance shaft which had accidentally flown home?

The last conjecture impressed itself on Hammond as being the truth, and his momentary fright died out. He concluded that the incident was not worth mentioning to Gramont, who surely had troubles enough of his own at this juncture.

As for Ben Chacherre, he sauntered from the alley, a careless whistle upon his lips. Once out of Hammond's sight, however, he quickened his pace. Turning into a side street, he directed his step toward that part of the old quarter which, in the days before prohibition, had been given over to low cabarets and dives of various sorts. Coming to one of them, which appeared more dirty and desolate than the rest, Chacherre opened a side door and vanished.

He entered what had once been the Red Cat cabaret. At a table in the half-darkened main room sat two men. One of them, who was the proprietor, jerked his chin in an invitation to join him.

A man famous in the underworld circles, a man whose renown rested on curious feats and facts, this proprietor; few crooks in the country had not heard the name of Memphis Izzy Gumberts. He was a grizzled old bear now, but in times past he had been the head of a far-flung organization which, on each pay day, covered every army post in the country and diverted into its own pockets about two-thirds of Uncle Sam's payroll—a feat still related in criminal circles as the ne plus ultra of success. Those palmy days were gone, but Memphis Izzy, who had never been "mugged" in any gallery, sat in his deserted cabaret and still did not lack for power and influence.

The man at his side was apparently not anxious to linger, for he rose and made his farewells as Chacherre approached.

"We have about eighteen cars left," he said to Gumberts. "Charley the Goog can attend to them, and the place is safe enough. They're up to you. I'm drifting back to Chi."

"Drift along," and Gumberts nodded, a leer in his eyes. His face was broad, heavy-jowled, filled with a keen and forceful craft. "It's a cinch that nobody in this state is goin' to interfere with us. About them cars from Texas—any news?"

"I've sent orders to bring 'em in next week."

Gumberts nodded again, and the man departed. Into the chair which he had vacated dropped Ben Chacherre, and took from his pocket the money he had obtained at the bank. He laid it on the table before Gumberts.

"There you are," he said. "Amounts you want and all. The boss says to gimme a receipt."

"Wouldn't trust you, eh?" jeered Gumberts. "Why wouldn't the boss leave the money come out of the takin's, hey?"

"Wanted to keep separate accounts," said Chacherre.

Gumberts nodded and produced two large sealed envelopes, which he pushed across the table.

"There's a rakeoff for week before last," he announced. "Last week will be the big business, judgin' from early reports."

Chacherre pocketed the envelopes, lighted a cigarette, and leaned forward.

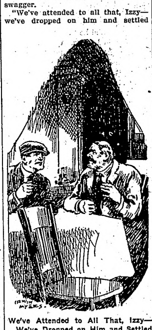
"Say, Izzy! You got to send a new man down to the Bayou Latouche right away. Lafarge was there, you know; a nigger shot him yesterday. The nigger threatened to squeal unless he got his money back—Lafarge was a fool and didn't know how to handle him. The boss says to shoot a new man down there. Also, he says, you'd better watch out about spreadin' the lottery into Texas and Alabama, account of the government rules."

The heavy features of Gumberts closed in a scowl.

"You tell your boss," he said, "that when it comes to steerin' clear of federal men, I don't want no instructions from nobody! We got every man in this state spotted. Every one that can be fixed is fixed—and that goes for the legislators and politicians clear up the line! Tell your boss to handle the local gov'ment as well as I handle other things, and he'll do all that's necessary. What he'd ought to attend to, for one thing, is this here guy who calls himself the Midnight Masquer. I've told him before that this guy was playing h—l with my system! This Masquer gets no protection, see? The quicker Fell goes after him the better for all concerned—"

Chacherre laughed, not without a swagger.

"We've attended to all that, Izzy—we've dropped on him and settled him! The guy was doin' it for a carnival joke, that's all. His loot is all goin' back to the owners today. It needn't worry you, anyhow! There was nothin' much to it—jewelry that couldn't be disposed of, for the most part. We couldn't take chances on that sort o' junk."



We've Attended to All That, Izzy—We've Dropped on Him and Settled Him!"

"I should say not." Gumberts regarded him with a scowl. "You've got the stuff?"

"The boss has. Look here, Izzy, I want you to use a little influence with headquarters on this deal—the boss doesn't want to show his hand there," and leaning forward, Ben Chacherre spoke in a low tone. Then, Gumberts heard him out, chuckled, and nodded assent.

At two that afternoon Henry Gramont was summoned to the telephone. He was greeted by a voice which he did not recognize, but which announced itself promptly.

"This is Mr. Gramont? Police headquarters speakin'. You laid a charge this morning against a fellow named Chacherre?"

"Yes," answered Gramont.

"Must ha' been some mistake, then," came the response. "We thought the prints fitted, but found later they didn't. We looked up the Chacherre guy and found he was workin' steady and strictly O. K. What's more to the point, he proved up a dead sure alibi for the other night."

"Oh!" said Gramont. "Then there's nothing to be done?"

"Not yet. We're workin' on it, and maybe we'll have some news later. Goodby."

Gramont hung up the receiver, a puzzled frown creasing his brow. But, after a minute, he laughed softly—a trace of anger in the laugh.

"Ah!" he murmured. "I congratulate you on your efficiency, Mr. Fell! But now wait a little—and we'll meet again. I think I'm getting somewhere at last, and I'll have a surprise for you one of these days!"

CHAPTER VII.

In the Open.

In New Orleans the carnival season is always opened by the ball of the Twelfth Night Revelers soon after Christmas, and is closed by that of the Krewe of Comus on Mardi Gras night. Upon this evening of "Fat Tuesday," indeed, both Rex and Comus hold forth. Rex is the popular ball, the affair of the people, and is held in the Athenaeum. From here, about midnight, the king and queen proceed to Comus ball.

Comus is an assembly of such rigid exclusiveness that even the tickets to the gallery are considered social prizes. The personae of the Krewe, on this particular year, as in all previous ones, would remain unknown; there is no unmasking at Comus. This institution, a tremendous social power and potentially a financial power also, during decades of the city's life, is held absolutely above any taint of favoritism or commercialism. Even the families of those concerned might not always be certain whether their sons and brothers belonged to the Krewe of Comus.

Henry Gramont did not attend the ball of Proteus on Monday night. Instead, he sat in his own room, while through the streets of the French quarter outside was raging the carnival at its height. Before him were maps and reports upon the gas and oil fields about Bayou Terrebonne—fields where great domes of natural gas were already located and in use, and where oil was being found in some quantity. Early on Wednesday morning Gramont intended to set forth to his work. He had been engaged to make a report to Bob Maillard's company, and he would make it. Then he would resign his advisory job, and be free. A smile curled his lips as he thought of young Maillard and the company.

"The young gentleman will be sadly surprised to discover that I've gotten out from under—and that his respected father holds my stock!" he reflected. "That was a good deal; I lost a thousand to old Maillard in order to have the balance of thirty thousand!"

A knock at his door interrupted the thread of his thought. Gramont opened, to find the concierge with a note which had been left at the door below by a masked Harlequin, who had then disappeared without awaiting any reply.

Gramont recognized the writing on the envelope, and hastened to the note inside. His face changed, however, as he read it:

"Please call promptly at eleven tomorrow morning. I wish to see you upon a matter of business.

"LUCIE LEDANOIS."

Gramont gazed long at this note, his brows drawn down into a harsh line. It was not like Lucie in its tone, somehow; he sensed something amiss, something vaguely but mostly decidedly out of tune. "Eleven tomorrow morning, eh?" he murmured. "That's queer, too, for she's to be at the Proteus ball tonight. Most girls would not be conducting business affairs at eleven in the morning, after being up all night at Proteus! It must be something important. Besides, she's not in a class with anyone else. She's a rare girl; no nonsense in her—full of a deep, strong sense of things—"

He forced himself from thoughts of Lucie, forced himself from her personality, and returned to his reports with an effort of concentration.

When Gramont went to bed that night it was with a startling and audacious scheme well defined in his brain; a scheme whose first conception seemed ludicrous and impossible, yet which, on second consideration, appeared in a very different light. It deserved serious thought—and Gramont had made his decision before he went to sleep.

The following day was Tuesday—Mardi Gras, Shrove Tuesday, the last day before Lent began, and the final culminating day of carnival. Henry Gramont, however, was destined to find little in its beginning of much personal pleasure.

At eleven in the morning Hammond drove him to the Ledanois home, where Gramont was admitted by one of the colored servants and shown into the parlor. A moment later Lucie herself appeared. At first glance her smiling greeting removed the half-sensed apprehensions of Gramont. Almost immediately afterward, however, he noted a perceptible change in her manner, as she led him toward the rear of the room, and gestured toward a mahogany tilt-top table which stood in a corner.

"Come over here, please. I have something which I wish to show you."

She needed to say no more. Gramont, following her, found himself staring blankly down at the symbol of consternation which overwhelmed him. For upon that table lay all those boxes which he himself had packed with the loot of the Midnight Masquer—the identical boxes, apparently unopened, which had been stolen from his automobile by the supposed thief, Chacherre!

"Tell me, Henry Gramont, what mad impulse brought you to all this?"

(TO BE CONTINUED)

RADIO

VARIOMETER SET ON A VERTICAL PANEL

Method of Building This Receiver and Setting It Up Explained in Detail.

The radio receiver described here is one using a variometer for the tuning circuit and mounted on a vertical panel, 6 inches by 8 inches, instead of a horizontal base board.

To support the panel in a vertical position a small base board four inches wide by six inches long and 1-2 to 5-8 of an inch thick is screwed to the panel.

The material required for the variometer follows:

One piece of bakelite or stiff cardboard tubing, three inches long and 3 1-4 inches outside diameter. Cost about five cents.

One peice of bakelite or stiff cardboard tubing 1 1-4 inches long and 2 3-4 inches outside diameter. Cost about five cents.

100 feet of No. 26 DCC wire. Cost about 25 cents.

Six inches of 1-4 inch outside diameter brass tubing costing about 25 cents.

Four small blocks of wood as shown in Fig 18.

One panel 6 by 8 by 3-8 inch.

Eight small round-head 1-4 inch long brass wood screws.

One base board 4 by 7 by 1-2 inch.

One standard four-inch diameter dial and knob to take 1-4 inch shaft, costing about $1.50.

Seven binding posts.

Fig. 18 shows how the details of the variometer are assembled.

The rotor is wound with 40 turns of the No. 26 DCC wire, diveded into two groups of 20 turns, each symmetrical with respect to the center line of the rotor. Start 1-16 of an inch in from the edge of the rotor and wind on 20 turns, then, crossing over on the other side of the center line, wind on 20 more turns, so that the end of the second group of 20 turns will terminate 1-16 of an inch in from the end of the tube. Bring out the end of the rotor winding on the inside of the tube.

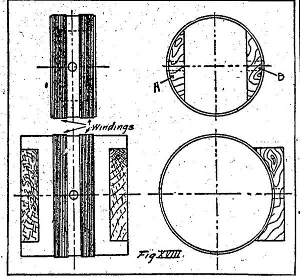


Fig XVIII.

Cut two blocks of wood, A and B in Fig. 18, from pieces of 3-inch soft wood and fasten them as shown diametrically opposite each other on the inside of the rotor tube with some small wood screws. Drill two shaft holes, one through each side of the tube over the thick portion of the wooden block. The diameter of this [illegible] turns winding on the stator is similar to that on the rotor. There are 40 total turns divided into two sections of 20 turns each. The beginning and the ending of the stator windings are 15-16 of an inch from the ends of the tube. When the rotor is assembled inside the stator, the winding on the stator should fall just above that on the rotor.

After the rotor and stator are wound, give them a thin coat of shellac and allow it to dry thoroughly before attaching the wooden blocks. Assemble the blocks on the rotor and stator and then give the assembled part a second thin coat of shellac. Put the variometer parts in a hot dry place and allow them to dry until all the volatile matter has been driven off. This will give the windings a hard finish that will not absorb moisture, yet protect them from mechanical injury and hold them in place.

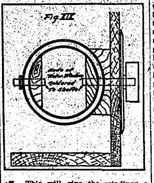

Fig XIX

The vertical panel upon which the set is mounted is six inches high and eight inches long by three-eighths of an inch thick. It should be of a clear, close-grained wood that has been well dried to prevent warping. The panel is fastened to the base board, which is four inches by seven inches, by one-half inch thick, by means of the screws.

Before mounting any of the parts, the panel base board should be finished. Staining the panel dull black and shellacking the base board will make a pleasing combination.

Fig. 19 shows how the variometer is assembled on the panel. The center of the variometer is three and one-quarter inches up from the bottom of the panel and two and three-quarter inches from end. The assembling drawings are all to scale and by referring to them, all the details will be made clear.

Fig. 20 is a plan view of the set, showing the location of the tube socket, grid condenser with grid leak and phone condenser.

A receiver of this type is very simple in operation, since the wave length is entirely controlled by one knob and the detector by the other knob.

CRYSTAL SET IS ALL RIGHT

In Its Own Way It Is Quite as Efficient as the Vacuum Tube Outfit.

The small crystal receiving set, which may be likened to "the poor man's set," contrary to reports heard in some quarters, is quite as efficient in its way as the much higher-priced and elaborate vacuum tube outfit. While these sets are usually not guaranteed to receive more than fifteen or twenty-five miles, some amateurs have succeeded in hearing music over a fifty-mile range.

But the most amazing of all is the report which comes from a retailer in New York, who says that he has succeeded in connecting up an amplifier with his set. Despite the handicap of being entirely surrounded by steel skyscrapers, this set is in daily operation.

Radio Warns of Thunderstorms.

Detection of approaching thunderstorms in time to make necessary adjustments in operation of electric service is a valuable practical use of the radio, according to the report of the electrical apparatus committee of the National Electric Light association presented at the convention in Atlantic City. The radio also serves to detect defects in electrical apparatus and equipment more efficiently than any other agency, the report says.

SPARKS

The man who uses bedsprings in place of an aerial might at times be accused of "lying down on the job."

The University of South Carolina, Columbia, S. C., is planning to erect and operate a broadcasting station by popular subscription. It is hoped that $12,000 will be raised.

The difference between party-line telephone service in the country and radio service is that all the neighbors are expected to listen in in both cases, but no one objects in the case of the radio.

A magnifying violin, for radio purposes, has been invented by a musical genius. Its use by beginners should be prohibited by law. What the violin beginner needs is a soft pedal of pronounced ability.

To tell of their issues of new bonds and quote prices on regular issues a firm in San Francisco has adopted the radiophone. Besides furnishing the bond news to local investors, the firm in time intends to have a large broadcasting station to keep in touch by wireless telephone with its branch houses, in addition to having the regular telegraph wire.

CASH OFFERS SCARCE

Cattle and Hog Prices Remain About the Same.

U. S. Bureau of Markets, Washington, D. C., for week ended July 28, 1922.

GRAIN: Wheat prices during first half of week experienced losses because of favorable crop and weather conditions and hedging pressure. A large export demand for wheat developed on the 25th and exporters stayed in market and continued to buy on all breaks until close of week. The market sentiment however was bearish despite export sales. The week closed with losses in wheat ranging from one cent to more than two cents in the various markets. Cash corn was in strong demand but prices fluctuated largely in sympathy with wheat. On the 28th wheat market advanced sharply due to strong cash demand and continued export business but prices lost most of gain under hedging pressure and liquidation through commission houses. Corn was strong but fluctuated with wheat. Closing prices in Chicago cash market: No. 2 red winter wheat $1.10; No. 2 hard winter wheat $1.15; No. 2 mixed corn 66c; No. 2 yellow corn 66c; No. 3 white 35c. Average farm prices: No. 2 mixed corn in central Iowa 52½; No. 2 hard winter wheat in central Kansas 90c; No. 1 dark Northern wheat in central North Dakota 1.10¾. Closing future prices: Chicago September wheat $1.08⅜; Chicago September corn 63⅜; Minneapolis September wheat $1.14⅞; Winnipeg October wheat $1.14⅝; Kansas City September wheat $1.00⅛.

LIVESTOCK AND MEATS: Chicago hog prices ranged 15 to 50c lower than a week ago, heavy hogs losing most. Cattle prices were not materially changed, beef steers 10 to 15c lower; heifers steady, cows steady to 10c higher, fat lambs steady to 15c lower; feeding lambs down 50c net. Yearlings were 15c to $1.25 lower for the week. 40c lower to 25c higher while fat ewes On July 28th at Chicago hogs opened 15 to 25c higher. Closed firm on light hogs and 10 to 15c higher on others. Beef steers strong, butcher cows and heifers and stockers steady; bulls dull unevenly lower; calves around 25c lower. Lambs strong to higher, considering quality, sheep very scarce. July 28th, Chicago prices: Hogs top $10.60; bulk of sales $8.25 to $10.50, medium and good beef steers $7.90 to $9.85; butcher cows and heifers $4 to $8.85; feeder steers $6.65 to $7.75; light and medium weight veal calves $8.50 to $10.25; fat lambs $12 to $13. Feeding lambs $11.50 to $12.50; yearlings $8.50 to $10.85; fat ewes $3 to $7.50. Stocker and feeder shipments from 12 important markets during the week ending July 21st were: Cattle and calves 47,627; hogs 5,140; sheep 34,919. All classes of fresh meats in eastern wholesale markets showed declines for the week. Beef declined 50c to $1; veal $2 to $4; lamb $2 to $3; and mutton $2 to $5 down; light pork loins were weak to $1 lower and heavy loins $1 to $2 down per 100 lbs. On July 28th lamb, mutton and pork loins weak to $1 lower; veal weak and beef weak to $2 lower per 100 lbs. July 28th prices good grade meats: Beef $14 to $15 50; veal $13 to $14; lamb $20 to $25; mutton $13 to $15; light pork loins $20 to $23; heavy loins $12 to $18.

DAIRY PRODUCTS: Butter markets unsettled during the week. Prices have been fluctuating from day to day. Heavy receipts and storage stocks are the weakening factor. Closing prices, 92 score butter: Chicago 33½c. Cheese markets show weaker trend with trading on lower basis in line with lower cost at country points. Demand still relatively light.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 1.40@1.51; No. 1 northern, 1.36@1.43; No. 1 dark hard, 1.29@1.34; No. 1 hard, 1.19; No. 1 am. dur., 1.08@1.12; No. 1 durum, 1.05@1.08. Corn No. 2 yellow, 59@60c. Oats No. 2 white, 31@32c. Barley, choice to fancy, 52@54c. Rye No. 2, 73@74c. Flaxseed No. 1, 2.45@2.46.

South St. Paul Live Stock.

So. St. Paul—Steers, $4.00@8.25; veal calves, $4.00@9.75; cows and heifers, $3.25@6.00; hogs, $8.50@10.50; sheep and lambs, $2.00@12.50

Minneapolis Butter, Eggs and Poultry.

BUTTER—Extras, 33c; firsts, 30c; seconds, 26c; packing stock, fresh, sweet, 23c; state goods, 5c; grease, 1c.

EGGS—Country receipts, rots out, per case, $5.10. No. 1 candled, good extras, free from rots, small dirties and checks out, per dozen, 19c; small dirty and held stock, rots and leakers out, dozen, 16c; quotations on eggs include cases.

LIVE POULTRY—Not advisable to ship turkeys under 7 pounds in weight. Hens, 4 pounds and over 19c; hens under 4 pounds, 16c; cripples and culls unsalable; ducks, fat, 13c; geese, fat, 10c; turkeys, fat, over 8 pounds, 25c; turkeys, thin and small, 15@20c; cripples and culls unsalable, guineas, per dozen, $5.00; roosters, 12c; broilers, 1½ lbs. and up, per pound, 28c; Leghorns and small broilers, lb., 25c.

Forms Human Chain.

Chicago—A policeman, a street car motorman and a bridge tender formed a "human chain" and, hanging from a bridge rescued from the Chicago river Helen Culaski, 18 years old, who had attempted to take her life by jumping into the water.

Worries Declared Ended.

Battle Creek, Mich.—"Our strike worries are over," H. E. Wittenberg, general manager of the Grand Trunk Western lines anounced here.

Columbus' Message Undiscovered.

Christopher Columbus is believed to have been the first captain to try the idea of entrusting a message to the sea. In a storm near Madeira he placed a written statement of his adventures up to that time in a stout wooden cask and cast it overboard in February, 1493, but unfortunately it has not turned up as yet. This would have been the champion maritime trophy of the world, had it ever been picked up. Since then there have been thousands of bottles, tin cans, casks, etc., containing messages for the world cast into the sea.

She Bears It All.

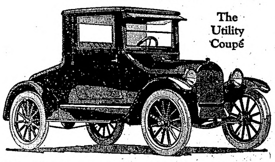
"Do you share your husband's sorrows?"

"Yes; he blames me for everything."

One hundred and fifty-seven plays were produced in London last year.

CHEVROLET

for Economical Transportation



The Utility Coupé

Built Especially for Busy Men

$720 *f. o. b. Flint, Mich.*

Here is a new closed car built especially for utility purposes in city or country driving.

Farmers and ranchers have long wanted a low-priced, economical, closed car of better quality and great durability—completely equipped with all the essentials of modern motoring.

Chevrolet Utility Coupé satisfies this need in every particular.

It also possesses distinct advantages for salesmen, business men, suburban residents and those who need a car for every day use providing protection against all kinds of weather.

The Chevrolet Utility Coupé has a high-grade, Fisher body with black finish; gray whipcord upholstery; plate glass windows; double ventilating windshield, sun visor and extra wide doors.

Under the rear deck is a compartment approximately twice as large as those usually found on coupés.

Comparisons Sell Chevrolet

Standard Rear Axle Construction. Strong, Quiet Spiral Bevel Gears.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System—Starter, storage battery, electric lights.

Standard Cooling System—pump circulation, large, honey-comb radiator and fan.

Standard Doors—two on roadster coupe, and light delivery, four on touring and sedan.

Standard Instrument Board—speedometer, ammeter, oil pressure gauge, lighting and starting switch, and choke pull.

Standard Type of Carburetor, with exhaust heater.

Powerful, Valve-In-Head Motor—the same type as used in successful cars selling at much higher prices.

Demountable Rims—with extra rim.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.

TWO MEETINGS HELD

Executives in New York and Striking Unions in Chicago Conferences Consider Suggested Concessions for End of Tie-up.

Cincinnati.—Five specific proposals for the settlement of the railroad strike were contained in President Harding's plan, which was submitted to railroad executives in New York and rail union heads in Chicago.

The five specific proposals, according to an official of the shopcrafts union who had advance information, include:

1.—That the employes will abide by the decisions of the United States railroad labor board in the future.

2.—In the matter of seniority the employes who remained on the job during the strike will receive preferential treatment. Men who have been on strike will return with their seniority rights subject to those rights acquired during the strike by men who remained on the job and that the seniority of the new employes will date from the time they entered the service.

3.—The men will accept the recent wage reductions of the railroad labor board pending a further hearing on the matter by the board.

4.—"Farming out" of shop work by the railroads will be discontinued.

5.—Discussion of the establishment of adjustment boards.

Unions Stress Three Points.

Regarding the matter of adjustment boards the officials stated that the unions desire a national board of adjustment while the railroad executives seek either regional or system boards.

Three points were stressed by the general chairman as a basis for settlement: Restoration of full seniority, national boards of adjustment and elimination of "farming out" of work.

It was stated they would oppose curtailment of seniority, agreement to accept in the future decisions of the board other than national boards of adjustment.

Up to Policy Committee.

It was stated that the matter of accepting the proposals of President Harding is entirely up to the policy committee of the railroad department of the American Federation of Labor since that body was the one which sanctioned the strike of the shopmen. The policy committee is composed of 90 men, 30 from each of the three districts, the dividing lines of which are the Mississippi river and the Mason and Dixon line.

Washington Prepares for Peace.

Washington.—Convinced that the railroad strike would be a matter of history within 24 hours after acceptance by railway shopmen and transportation chiefs of President Harding's compromise plan, all of the government's influence was mustered behind the effort to obtain its adoption by the employers' meeting in New York and that of the employes in Chicago.

DAUGHTER BORN TO WIDOW

Day of Accused Murderer's Release on Bail Marked by Birth.

Amidon, N. D.—The day following the release under $12,000 bail of David McCutchan, charged with first degree murder in connection with the fatal shooting of Walter Inman, young Amidon businessman, on March 28 last, a daughter was born to Mrs. Inman, widow of the slain man. The birth, coming four months after the fatal shooting, leaves the widow with four daughters to support.

Bail bond was signed by J. E. Phelan of Bowman and others. It is said to be the understanding that McCutchan remain on the farm, just north of Amidon, where the family is living.

Admittance to bail of a prisoner charged with murder, attorneys explain, is possible under the change in North Dakota laws imposing life imprisonment instead of capital punishment for murder.

The case, taken from Slope to Stark county on a change of venue, probably will come up at the August term of district court for Stark county.

High First Wheat Yield.

Moorhead, Minn.—Forty bushels to the acre is the average yield of wheat on a six-acre tract on the Schroeder brothers' farm, in Glyndon township, Clay county, County Agent Oscar M. Olson reports. This is believed to be the first wheat threshing of the season and the yield is unusually high.

Burke to Practice in Fargo.

Fargo.—John Burke, former United States treasurer, who recently returned to North Dakota, has decided to make his permanent home in Fargo, where he will resume the practice of law. Mr. Burke will come to Fargo from Devils Lake, his former home, to complete the details incident to opening a law office here. He expects to move his family to Fargo from Devils Lake within the next month. Since his return from New York, Mr. Burke has been looking over the various cities of the state for a location.

When Baby Complains.

THERE ARE MANY WAYS a baby has of expressing any pain or irregularity or digression from its normal condition of health and happiness. A short sharp cry, a prolonged irritated cry. Restlessness, a constant turning of the head or of the whole body, fretful. In these and other ways a baby tells you there is something wrong. Most mothers know that a disordered stomach, or bowels that do not act naturally are the cause of most of baby's sufferings. A call for the doctor is the first thought, but in the event of any delay there should be ready at hand a safe remedy such as Fletcher's Castoria.

Castoria has been used for baby's ailments for over 30 years and has merited the good will of the family physician in a measure not equaled by any other baby's medicine because of its harmlessness and the good results achieved.

And remember this: Castoria is essentially a baby's remedy and not a cure-all for every member of the family. What might help you is too often dangerous when given to a babe.

CASTORIA

Let's Think It Over.

There is such a thing as saying too much on any subject, and the "grand-stand" talker sooner or later becomes a bore. The truth is always welcomed, and the truth reiterated and confirmed is more than welcome—it reaches your innermost soul.

Fletcher's Castoria is all its advertising has claimed for it. Scrutinized by the microscope of public opinion and used for over thirty years it stands without a peer in the hearts of thoughtful, cautious, discerning Mothers. And once used, mother love—there is no substitute for mother love—will scorn to try a "substitute" or a "just-as-good".

Masquerading under many names drugs that are injurious to the tender babe have found their way into some households, but the light of experience soon casts them out. Are they cast out before it is too late?

MOTHERS SHOULD READ THE BOOKLET THAT IS AROUND EVERY BOTTLE OF FLETCHER'S CASTORIA

E D I T O R I A L

TILL THE COWS COME HOME.

Away back in the days when land was worth from $5 to $10 per acre and when about the only enemy to be feared was frost, wheat was, sometimes, a profitable crop. At that time a few people made money raising wheat and a still smaller number saved it.

But with the general breaking up of the prairie, the seasons became longer and hotter. And just as soon as it became a known fact that the prairie land was fertile, it began to increase in price. Right there wheat ceased to be a profitable crop except in infrequent years.

Commenting on this and on some of the articles which have recently appeared in these columns, advocating the abandonment of wheat-raising as a major crop in the Red River Valley, an old-timer, a man who has been here ever since there has been a country, said: "Yes, I know wheat raising is not a very profitable business, but what are you going to do? We are equipped for wheat farming, we know no other angle of the agricultural game, and so I, for one, am going to stick to wheat growing till the cows come home."

Here was a man who had raised wheat in what is admittedly the richest agricultural section in the west, admitting that the game was a failure; and in the same breath declaring that he was going to "stick to it till the cows come home."

And in using that phrase, he epitomized the trouble with all wheat farmers—there are no cows to "come home."

It has taken 30 years to demonstrate that only poverty and hard labor come from raising wheat, and some of the most poverty-stricken are still unconvinced and still hoping.

How long are we going to "kid" ourselves? How much longer are we going to feed the world—at a loss?

You can stick to wheat raising "till the cows come home, but unless you change your ways of farming, unless you arrange it so that you and each of you will have some cows to come home, there will be no money made on Red River valley farms—except by the grain gamblers.

"NO CHANCE HERE!!"

Next time you get to thinking that you have no chance to "get there" and that there are no opportunities in America, just think about these things for a while:

Thirty years ago—

The world's most famous automobile manufacturer and rated as the richest individual in America, was a day laborer in a bicycle factory.

The country's most famous hotel owner and a millionaire many times over, was a bell boy in a rooming house.

The man who is today the "steel king" of America was working sixteen hours a day as a stoker in a blast furnace.

The man who is today one of the country's most powerful bankers, a financier of international repute, was firing a locomotive.

The president of the United States was working as a day laborer in a printing office.

One of the greatest merchants in America was a peddler traveling over the country with a pack on his back.

The president of one of the nation's biggest railroad systems was pounding a key in a telegraph office.

By the way, where will you be in 1952?

Don't let anybody fill you up with the idea that what your station in life will be 30 years hence is not going to depend upon yourself more than upon any other factor.

EQUALIZING THE SEXES.

"Touchin' on and appertainin' to" the ruling passion which is so strong in death. Gangs of bandits and insurgents in the hills of County Wicklow in Ireland, including Irish mountain girls, have been making night raids on the villages in the valley. The millinery shops were especially singled out for looting by the lady members of the band.

A great step toward the accomplishment of the feminist dream—the equality of the sexes. The men raid the grog shops, hardware stores and haberdasheries. The ladies loot millinery shops, dressmakers' establishments and corset factories—that is, if corsets are in style.

Ingratitude is a crime for which there is no excuse.

WHICH IS TO BLAME?

Turning out for another machine on a broad, smooth road the car hit loose sand at the road-bed edge, skidded completely around and shot into the ditch and through a four-strand fence on the opposite side, says an account of an automobile accident on a highway.

The small car carrying several people turned over three times when it struck a spot on the road where recent rains had deposited a small bed of sand, reads another account.

Sand or speeding to blame? You decide.—Highway News.

Newspaper advertising is worth vastly more today and costs the user proportionately less for what he gets than at any time in history. This is as true of the smaller country papers as of the big city dailies, as Harry L. Tyler, buyer of advertising for the W. H. Rankin Company, points out. For wherever it is situated, the newspaper that survives in these times has become more than an individual enterprise—it is an institution whose lines of influence are closely woven into the very fabric of the community life around it. There is ample reason for the great power of newspaper space. Any manufacturer that has placed a good product on the dealer's shelf and is getting eye strain from watching it stay there, can trace it to just one thing—he is not telling the people what he has to sell and where they can buy it. And people can't be expected to buy things they do not know exist.

The use of so-called "machines" for the picking of blueberries is proving very destructive to the plants and should be prohibited by law, as it is in Wisconsin. In spots where they were used last year there are only a few berries on the vines this year. The leaves are torn off, leaving the stems bare. The blueberry is one of the important crops of the north country, even from a financial standpoint, and is one of nature's gifts that must not be wasted.—Warroad Pioneer.

Rye bread is a better and healthier food than wheat bread, and those of us who live in the rye producing districts should lose no opportunity to impress that face upon the public's mind.

Have you visited the great Pennington County Fair yet? If not, do so today! There is still time.

Old Man D[illegible] sit in waiting at the side of the old narrow road with his traps in the steep, soft bank hidden by tall weeds remarks an exchange—but on the broad, modern highway, he rides in the car of the driver who cannot resist the temptation to "step on 'er."

HIGHWAY BOUQUETS

Candidates who seek votes by knocking the Babcock road program are going to find tough sledding. Minnesota's Highway Commission is sure on the job every minute and is doing a splendid work—the kind that is sincerely appreciated.—Frazee Weekly Press.

Automobile tourists from Iowa and South Dakota miss no opportunity to praise Minnesota's highway system. In the matter of good roads the North Star state has a decided advantage over both its neighbors, and the visitors are first to admit the fact.—St. Peter Herald.

The long distance tourist's praise for Minnesota roads, he said was no greater than that of the public in general residing in Iowa, Illinois and Nebraska, where all would invariably state: "Wait till you reach Minnesota! That's where they have good roads, and all over the state, not just in spots."—Ortonville Journal.

" * * * then I crossed the Mississippi and was inspired by the beautiful scenery and the difference in the highways. At Winona I struck T. H. No. 7 and touring became restful instead of tiresome, a pleasure instead of drudgery and full of praise for road builders instead of damnation. There is no comparison between Minnesota and Wisconsin roads; it is a contrast. I would rather drive 100 miles on Minnesota roads than ten miles in Wisconsin mud. Hereafter I shall be a booster for Minnesota.—A Wisconsin correspondent in Slayton Herald.

MANY BLUEBERRY PICKERS.

Northeastern Roseau county, particularly the section east of the river, has been the mecca for hundreds of automobile parties the past two weeks, all bent on getting a share of the blueberry crop and they have not been disappointed. Parties from within 200 miles distant and further have had their outing on the blueberry ridges. Hundreds of cars have passed through here the past week literally loaded to the gunwales with the much-sought fruit. Last Sunday those returning from Karlstad found it almost a constant job to turn out for the westward bound cars, more than half of which had North Dakota license tags. In different sections on the road they were met in long processions, 40 being passed on the drive from Greenbush to Badger alone.—Roseau Times Region.

INVITES COMMENTS ON STATE HIGHWAYS

Babcock Asks Public to Cooperate in Improving Road Service.

Thief River Falls hotels and garages this week received from the state highway department self-addressed mailing cards on which to make suggestions of ways in which the highway using public may be better served by changes calling for small expenditures.

Charles M. Babcock, state highway commissioner, said that constructive criticism from any person will be appreciated at the highway department offices, 1246 University avenue, St. Paul. The name and address of the sender should appear as evidence of good faith, he added, and suggestions should be practicable and reasonable.

"If a highway employe is doing good work or bad; if someone is escaping the tax on his car; if the official marking at some highway can be made plainer, the department wants to know—wants everybody's suggestions of how the highway service can be improved and extended without large outlays. Petitions for costly improvements at this time when funds are limited are outside this particular plan.

"But the highways belong alike to all and every man and woman is urged to take active interest in them. The highway department and all its members are the employes of every taxpayer and want to give the best service possible."

A postcard will carry the suggestion, it is explained, and a widespread response will go far toward bringing small betterments which will make more deserved the reputation of Minnesota as a state of enjoyable highway travel.

Amboy Herald: We have received information that the Vernon Center lodge of Masons fell heir recently to $50,000. It seems that one of their members, a Mr. Barney, who lived in the east, died about two weeks ago, and in his will left $50,000 to the lodge. The lodge held a special meeting this week and it seems to be the disposition of the lodge to send a delegate east to his home and get all particulars in regard to same, but it is understood that the lodge will insist that the money be given to Mr. Barney's widow, and if she in turn wishes it to go to the lodge, then only will the lodge accept the gift. If the Vernon lodge is fortunate enough to get this fine gift, we know that the funds will be put to the best of use, and much good will be derived therefrom.

People from all over this part of the country are flocking to the blueberry woods north and east of here like bees around a sugar barrel, and every one comes back with a load.—Grygla Eagle.

Highlanding Breakers

Gilbert Overwold shopped here Friday.

A TRUE FISH STORY

Here's a fish story that's absolutely true, even if it's given you 'pon the wird of a praise agent.

At the United Studios in charming Hollywood where Constance Talmadge is starring in "East Is West," for First National release, there is a Chinese street scene so lifelike that the cats won't let it alone.

The studio watchman, rebuked for not paying more attention to the office buildings, declares he can't keep the cats off Connie's sets and watch the administration buildings too.

He blames it on a string of dried fish hung high on the wall of a Chinese market and says the fish must be taken in at night or he quits his job.

More than twenty cats were counted trying to scale the wall to get at the fish and the watchman says it keeps him busy clubbing the felines to keep them from tearing up the set to get a Chinese fish meal.

Director Sidney Franklin has promised to have the Chinese delicacy (?) taken down at night and put in a safe where only the use of nitroglycerine will make the fish accessible.

The auto tourist business is getting bigger every year as the roads are improved. All tourists remark on the fineness of Minnesota roads.—Fergus Falls Tribune.

BEAUTIFUL RED LAKE

Little Is Known of Minnesota's Finest Lake—Greatest Bathing Beach in the Country.

By J. S. ARNESON.

My first impression of Red Lake, after a two-day trip over the lake, camping over night on the point at the "Narrows," where the Thief River Falls road ends, is that Red Lake is not only the largest lake in the state but the finest as well, combining the good points of the best of them with many points of attraction not to be found elsewhere.

That is saying a good deal when it is considered that Minnesota actually has ten thousand lakes. I do not claim to have seen all of them, but I have seen Minnetonka, Leech Lake, Lake Vermillion, Mille Lacs, Minnewaska and hundreds of others, and the magnitude, the beautiful bathing beaches, the tree-lined shore line, the attractive outlets of Red Lake, its wild scenery and the opportunity it offers for fishing, hunting, boating and bathing surpasses anything I have seen.

The second impression which a two-day closeup of this wonderful body of water gave me, is the woeful lack of information concerning it. Surprising as it may seem, there are few people in Thief River Falls who know anything about Red Lake. It would be easier to get correct impressions of Los Angeles, San Francisco or Vancouver.

Plenty of people may be found who have seen the Red Lake Agency, which by the way, is a beauty spot on the lake; others have camped at the outlet, which means the source of the Red Lake River, some have been at Redby, where the fisheries are located, one has been here and another there, but no one can be found who has explored any considerable part of the lake with an observing eye. One man will tell you the lake is a shallow marsh, a big slough filled with starving fish. The next man describes the region as a swamp filled with man-eating mosquitoes, offering no attractions whatever. There is much misinformation concerning the lake, its size, its contour and its general nature.

Even the boatmen who ply the lake every day are surprisingly ignorant with reference to the geography of Red Lake. There are as many opinions about distances on the lake as there are boatmen.

One man told me there was 400 square acres of water in Red Lake. I presume he meant miles.

The Indians who have lived there all their lives also disagree about some of the lake statistics that ought to be a matter of common knowledge.

One Indian said the distance from the Narrows to the mouth of the Tamarac was 32 miles. Another called it 24. One said it was 22 miles from the point to the outlet of Red Lake river. Another called it 18.

So, if I make misstatements in this article, I intend the above general statement to be a complete alibi for myself. After all, I will endeavor to follow the rules governing a witness on the stand by stating what I saw rather than what I heard.

There are two good roads to Red Lake from this city, one being by way of Thorhult, and the distance about 75 miles. The other route is by way of Gonvick, which is somewhat further, but it had rained all night so I concluded to go the latter route, as most of the distance is over the Jefferson Highway, which is in excellent condition. One leaves the JH a couple of miles this side of Gonvick. The road is marked all the way and the drive through the reservation woods is full of interest. Coming back, it came near being too interesting as we overtook a skunk in the road. His skunkship proved to be a real road hog, his dilatory and arbitrary tactics giving us some delay, but we made no attempt to crowd him or argue the right of way with him. We understand it is always well to act the part of a gentleman in the presence of a skunk.

Red Lake has about 350 miles of short line. It is 10 miles across its smallest bay. It is advisable, therefore, when one visits Red Lake to have friends who possess boats. We found a good one in Sever Selvog, in charge of the state fisheries. We mean a good friend and he had a good boat. Its name is the "Carlos A.," named after Hon. Carlos Avery, state game and fish commissioner who is also a pretty good friend to have when one visits Red Lake.

The "Carlos A." conveyed our party to the point at the Narrows, where we camped over Saturday night. Ever since the road to Red Lake was started I have been extremely curious to see the point, first, because this particular place is destined some day to be famous as a summer resort and, second, because of the many controversies regarding the character of the land at the point.

The point itself, a narrow projection which is about a mile long, is fairly well covered with timber, but is too low, in my opinion, for cottage sites. It is an attractive spot, however, and one of the most sightly in the lake, because of the commanding view one gets of "Twin Sister's Bays," and the large point across the lake. From the point itself, I examined the shoreline for nearly four miles along the south bay. The bathing beach at this point is one always to be remembered. It is in a class by itself. It reminds one of the beach at Atlantic City, except that it has that beach beaten by a mile of Sundays. Fine, white sand, packed by the waves for hundreds of years, begins at the tree line and recedes gently into the lake, the slope being so gentle that one may with safety walk out a thousand feet anywhere in the bay. Not a pebble or a weed of any kind to touch the feet of the bather, the entire bottom being as smooth as a velvet carpet.

If there is another beach like it in the country, I have never seen it, and I doubt if one can be found. There are a hundred such bathing beaches on the shores of Red Lake.

The shoreline both north and south from the point is well-wooded, and the ground is amply high for building purposes. There are a few low places, but with a little drainage and clearing this point will take its place with the most attractive summer resorts in the country.

Almost every tree native to Minnesota will be found on the shores of the lake. Across from the point is the finest tract of standing pine and hardwood to be found in Minnesota, and I understand this will always remain a national forest reserve or park. I sincerely hope this plan will materialize, as no place could be found where nature has smiled more generously.

To have a cottage at Red Lake will mean that one may find new things to see and strange places to explore upon the occasion of each succeeding visit, no matter how often one goes there.

The lake probably has more than 350 miles of shore line, innumerable bays and inlets and several rivers and creeks flow out of it, some flowing south, others north. One may start out for a day's trip or may go for a month without seeing the same place twice. Hundreds of wild animals, including moose, deer and bear, drink from the lake every day and its waters teem with fish of many varieties.

There are no white people living along the lake now except those engaged in business at the Red Lake Agency, Redby, at Ponemah, the Indian village across the bay from Redby, and a few at the mouth of the Tamarac River.

My opinion is that Thief River Falls will be well represented there upon the completion of the road now under course of construction, and if every man and woman in this city who loves nature and the great outdoors could have accompanied me on my camping trip, I am sure the enthusiasm for the Red Lake Road would be greatly increased.

I am going to take Charley Babcock and John Mullen, of the Highway Department, up to the lake some time this month, as I figure that will have the effect of making them lay off every other road project in the state until we get a good graveled road to the lake.

It should be stated here that State Auditor Chase and Commissioner of Immigration Oscar Smith visited Red Lake a week ago Sunday and, according to E. O. Mogensen, of this city, who accompanied them, both were deeply impressed with the beauty of Red Lake. They expressed their intention of boosting for our road (which helps some in view of the fact that Ray Chase is a member of the board which distributes the road money) and were greatly surprised to think a more concerted effort had not been made in the past to secure this improvement.

The Fisheries.

Sever Selvog told me Red Lake had yielded up as much as 800,000 pounds of commercial fish in one year, mostly pike, white fish, large pickerel and perch. About 400,000 pounds of fish has already been taken out this year. This is in addition to the fish taken for local use. The fishing in Red Lake has been a godsend to the Indians, who market large quantities every day. The state also does some fishing. Mr. Selvog says the fish in the lake have shown an improvement in quality since the fisheries started some years ago. It seems that the lake was enormously overstocked and the fish which were thin and emaciated, are now large and sleek, commanding a premium in the fish markets of the large cities.

Land at Point Leased.

At the Agency I met Indian Agent Cross, who informed me that the land at the Narrows, on both sides of the new Red Lake Road, had been leased to Dan Shaw of Thief River Falls. Mr. Shaw tells me that he has associated with him T. L. Melgaard, Math Barzen and John Bratrud, the object being to assure proper handling of the property at the point. When the lease is completed, a larger association will be formed, says Mr. Shaw, and every precaution taken to safeguard the interests of the public.

Paint Up!

Put your buildings in a spic and span condition with a new coat of HICKORY PAINT. Do it right now, as the longer you delay the matter the costlier it will be for you. And when you get right down to doing the job, done overlook the fact that you must have the best. Cheap paint proves the costliest in the end.

RATES ON FUEL WOOD LOWERED

Order by State Commission Issued to Supply Farmers With Better Market.

Orders lowering the freight rates on fuel wood approximately 20 per cent, were issued last week by the Minnesota Railroad and Warehouse Commission. The order is temporary, effective August 1 to April 1. Its immediate purpose is to give farmers a better market for cordwood and to serve the larger cities in the event the fuel shortage becomes more desperate.

The Interstate Commerce Commission several weeks ago issued a general order reducing cord wood rates 10 per cent. This gave farmers of western Wisconsin an advantage in putting wood on the Twin Cities market, due to the fact that sections of that state where wood is cut are closer to the market than those in Minnesota. The Minnesota reduction serves to equalize this situation.

On shipments moved 250 miles, the rate has been reduced from 11 to 9 cents; on 200-mile shipments, 9½ to 8 cents; on 50-mile shipments, 5½ to 4½ cents.

The railroads, of course, have an opportunity to contest the order, but in view of coal shortage, such action is not expected, especially as the order is temporary.

[illegible] MOTOR [illegible] LICENSED IN STATE

Minnesota Motor Vehicle Registration Show a Big Increase.

Taxes on 20,000 more motor vehicles to date this year have increased receipts by $560,000 over the full 1921 total, but the tax enforcement campaign is to go on until every slacker has been rounded up, says the Highway Department Bulletin this week.

Charles M. Babcock, state highway commissioner, said nearly 150 engineers and other field men of the department will continue to prosecute unlicensed car cases in addition to carrying on their regular duties. The announcement followed a report from Mike Holm, secretary of state, of 1922 motor vehicle registration totals to August 1 of about 316,000 passenger cars, 36,000 trucks, 3,200 motorcycles and 800 trailers. This is a gain of about 20,000 for the seven months over the complete 1921 figure and many new applications are being made.

The enforcement campaign now going on through the regular employes of the Highway Department has listed more than 1,000 unlicensed cars and brought more than 700 prosecutions, with fines in the majority of cases. A large number of cars are being recorded for sheriffs' sales provided the taxes remain unpaid.

Receipts are put on the trunk highways as fast as they come in and the construction and other improvement programs are advancing accordingly. Current trunk highway funds this year include $6,175,000 of auto taxes and $1,500,000 of federal aid, say official statements. The $7,675,000 total is compared to the annual $10,000,000 average expected for the so-called

Muskrat Farm Started by Bemidji Blacksmiths

First Industry of the Kind to Be Attempted in Minnesota, Says Game Warden.

Minnesota's first muskrat farm is now under construction and by the middle of August it will be in full operation. The site of the new industry in at the north end of Three Island Lake, about 20 miles north of Bemidji.

While muskrat farms are common in some states, the one at Three Island Lake will mark the first experiment in this state, according to John A. Cline, local game warden, who has made an inspection of the industry. Walter E. Fowler and John Curry, both formerly "smithies" of the twin cities, are the proprietors.

A tract of 17 acres bordering on the lake has been purchased as the home of the colony of 100 animals which Fowler and Curry expect to start out with. A request for permission to trap the muskrats has been sent to the state game and fish commission. When completed, the establishment is to represent an investment of about $3,600.—Bemidji Sentinel.

PUBLIC ISN'T ERRORLESS.

When a mistake is made, it's human nature to try and blame it on the other fellow and hold one's self blameless. Especially does this apply to mistakes made in the postal service. Convinced that the blame did not lie entirely on the shoulders of the employes, the force in a New Jersey postoffice kept an accurate record of errors made by the public as compared with mistakes made on their part. The public made 8,426 errors and the employes 74. Friend public sent out 1,110 letters without proper name and [illegible] addressed [illegible], there being 10 [illegible] place of the same name; 376 letters were received with wrong numbers, [illegible] were received without street number, and [illegible] other errors were recorded.

Letters [illegible] thrown or not handled [illegible] the postoffice force, [illegible]

Next time your letter miscarries or is delayed, quiz yourself as to your own responsibility in the error.

Citation for Hearing on Petition to Sell, Mortgage or Lease Land.

Estate of Ole A. San, Incompetent.

STATE OF MINNESOTA, COUNTY of Pennington, ss. In Probate Court.

In the Matter of the Estate of Ole A. San, Incompetent.

The State of Minnesota, to Ole A. San, and all persons interested in the sale of certain lands belonging to said Ole A. San. The petition of Nick Bundhund, as representative of the above named Ole A. San, being duly filed in this court representing that it is necessary and for the best interest of said estate and of all interested therein that certain lands of said Ole A. San, described therein be sold and praying that a license be to him granted to sell the same.

Now, Therefore, You and each of you, are hereby cited and required to show cause, if any you have, before this court, at the Probate Court Rooms, in the Court House in the city of Thief River Falls, County of Pennington, State of Minnesota, on the 12th day of August, 1922, at 10 o'clock A. M., why the prayer of said petition should not be granted.

WITNESS, The Judge of said court, and the seal of said court, this 18th day of July, 1922.

(COURT SEAL)
LARS BACKE,
Judge of Probate.
H. O. CHOMMIE,
Attorney for Petitioner. J-21-28 A-4

How The Master Driver Became Master Tire Builder

IN 1903, driving the "999" racing car, Barney Oldfield started his career of victories that later earned him the title of "Master Driver of The World." To overcome the tire weaknesses that made racing difficult and dangerous, he studied tires—specified materials—supervised construction.

Today, Barney Oldfield is known as the "Master Tire Builder." Starting with the crude tires which carried the "999" one mile in sixty seconds, Oldfield gradually developed his famous Cords—a set of which covered 500 miles at eighty-eight miles an hour without a change.

In three years Oldfield tires have won every important race on American speedways. They are the only American tires that have ever taken first place in the French Grand Prix. They have won for three consecutive years in the 500-mile Indianapolis Sweepstakes. So far in 1922, Oldfields have lowered four World's Records and seven track records.

The Wichita Test Run gave evidence of Oldfield superiority in touring—when a set of four Cords covered 34,525 miles over rutted, frozen, winter roads—a performance attested by the Mayor of Wichita.

See your dealer and get a set of these rugged tires that Barney Oldfield has developed and perfected through a lifetime of practical tire experience. Their performance will convince you that they are "The Most Trustworthy Tires Built."

Albright of Yellowstone National park and Miss Anne Anzer of the National Editorial association decorating the commemorative tablet at the golden anniversary of the park. 2—Shriners of United States drawn by water buffalo parading the streets of Honolulu. 3—Dr. Porras for Peru and Senor Aldunate for Chile signing the treaty to arbitrate the Tacna-Arica dispute.

NEWS REVIEW OF CURRENT EVENTS

President Harding Still Tries to Bring the Railway Strike to an End.

CONFERS WITH THE LEADERS

Government's Plan for Fair Distribution of Fuel and Food and to Curb Profiteering Put Into Operation—Bavaria in Revolt Against Control by Berlin.

By EDWARD W. PICKARD

PRESIDENT HARDING and his administration forces devoted themselves last week almost exclusively to the problems arising from the railway and coal strikes. That their efforts might result in the ending of the former was the renewed hope at the close of the week, for Mr. Harding held a most important conference in Washington with Chairman T. De Witt Cuyler of the American Association of Railway Executives, and President Jewell of the railway shopmen. His aim presumably was to induce the rail executives to modify their firm attitude concerning the seniority rule and to persuade the shopmen to recognize the decision of the railway labor board and return to work pending a rehearing of their grievances.

After leaving the White House Mr. Cuyler announced that the executives of 148 of the largest railroads in the country would meet in New York on August 1 to talk over a tentative plan for settling the shopmen's strike. He would not tell what Mr. Harding had suggested, but denied that he had asked the executives to recede from their position on the seniority rule. The presidents of western roads insisted the strikers would not be taken back with full seniority rights restored.

Having abandoned for the time being any hope of ending the coal miners' strike, the President and his aids turned their attention to the question of averting the threatened fuel famine and followed up the call on the various state executives to facilitate and protect the resumption of mining with measures designed to insure a fair distribution of such coal as may be produced and to curb profiteering. Secretary of Commerce Hoover devised a plan which was promptly adopted and put into effect with the legal approval of Attorney General Daugherty. It rests upon the powers of the interstate commerce commission, which body, declaring the existence of a national emergency, took charge of the routing of cars and the distribution of fuel and food. The plan provided for a committee of general supervision in Washington, to be named by the President and which will establish in every coal producing district a representative and a committee of operators. Also, there is an administrative committee comprising representatives of the presidential committee together with representatives of operators, representatives of the railways, and where necessary, representatives of the larger consuming groups.

The basis of prices agreed upon between the operators and the secretary of commerce on June 1 is to be maintained, except where varied by the presidential committee, and this same basis of price determination shall be applied to all districts which are so far not co-operating.

President Harding announced the appointment of Attorney General Daugherty, Secretary of the Interior Fall, Secretary of Commerce Hoover, and Commissioner Aitchison of the interstate commerce commission as members of the general committee. Mr. Hoover is chairman. A fifth member was to be added to undertake the administrative direction.

Mr. Hoover called on the governors of the states to set up state organizations to co-operate in the distribution of the available coal supplies to the points of greatest need. Distribution for railway use will be directed from Washington. It was stated there that states which have large bituminous deposits will be expected to mine their own coal instead of obtaining it from other fields under the emergency order.

IN ILLINOIS the prospects for ending the mine strike were slightly brighter. President Farrington of the Illinois miners, always an advocate of separate state agreements, came to the conclusion that the time for putting that policy into action had come and called a convention of delegates of every local union in the state to meet in Peoria August 3 to consider peace proposals of the operators. Next day he rescinded the call because of "premature" publicity. Acting Governor Sterling asked Farrington to consider the proposal that the miners of Illinois return to work at once at the wage scale and under the working conditions existing when operations ceased April 1 last, pending a readjustment of the same by an agreed tribunal, and that representatives of the miners and operators of Illinois should meet and endeavor to arrive at a settlement. Farrington replied that this plan was impracticable.

Orders for immense quantities of coal have been placed in England by Americans but not all of them are being accepted because of market conditions there. Prices of coal and shipping and freight rates have advanced sharply in Great Britain. The British miners may refuse to mine coal for America, and American dock workers may refuse to handle it if it comes.

ONE J. Cleve Dean, chairman of the railway employees' publicity association, sent to President Harding a telegram bitterly attacking the supposed attitude of the administration toward the two great strikes. He said: "For you or any governor to attempt to operate the mines or railroads by military forces or to attempt to draft men into mining or railroad service would be an attempt to establish involuntary servitude," and he predicted such an attempt would bring on the "long predicted war between capital and labor." He asserted, also, that the Republican party was hostile to the American farmer and labor and that "the hard times that now exist is a premeditated plan to bring the farmer and labor down to their knees."

Mr. Harding's reply to this outburst, while dignified, was a scathing rebuke of Dean's "political partisan references" and of his false assumptions. The President explained at length the attitude of the government and asserted its intention to speak and act, not for any one class alone, but for "the American people as a whole and the common good of all its citizenship." He made it clear that while the right to strike was recognized, the government would fully protect those who desired to work. The latter, he said, in responding to the call of the country, are exercising their rights "and at the same time making their contribution to our common American welfare."

CHICAGO'S street car strike was still in the making last week. Hope and despair alternated, the former fostered by the optimism of International President Mahon who told the men they must take a referendum vote on a new proposal made by the companies, and the latter due to the pessimism of local President Quinlan, who said the employees would accept no offer the employers were likely to make. The workers were called to hold a mass meeting Monday evening of this week, and Quinlan told the Chicago public to prepare to find a strike in effect the following morning.

DEBATE on the tariff in the senate was enlivened last week by Senator McCumber's assertion that in 1912 spokesmen for the newspaper publishers told the senate finance committee that if newsprint paper were not placed on the free list they would defeat the Republican party at the polls, and that, the committee refusing to yield, the publishers therefor did defeat Taft for re-election. Other senators calling for names, Mr. Smoot said that the late John I. Norris, representing the publishers' association, told a finance subcommittee that if a duty were imposed on newsprint "the Republican party would be driven from power." This, Mr. Smoot supposed, was the basis of McCumber's statement, but he, Smoot, did not think Norris had been authorized by the publishers to make such a threat. McCumber reiterated his statements with added details and was supported by Watson of Indiana who related how Norris and other publishers in 1908 offered to make Joe Cannon president if he would put through a bill placing newsprint and wood pulp on the free list. Cannon, he said, ordered Norris from his office. All of this, whether true or not, was highly entertaining to the Democratic senators.

COMMISSIONER BLAIR of the internal revenue bureau dealt the liquor industry a hard blow by forbidding further imports of wines and liquors until the supplies already in the country for nonbeverage uses are insufficient for national requirements. Secretary Hughes asked, and presumably was promised the aid of the British government in the suppression of liquor smuggling from Bermuda and the Bahamas. The British government, however, has refused the unofficial request of the United States for the right to search outside the three mile limit British vessels suspected of being engaged in smuggling liquor into the United States.

THAT the French are at last reaching a point where they will consent to a reduction of the German reparations debt is evidenced by the plan on which Premier Poincaire is working. As it stands now—it is being modified daily—the proposition is that for every dollar paid by Germany on the reparations account and for every dollar of the allied debts which is canceled, France will cancel an equal amount of a certain class of bonds. In the second week in August, or sooner if the Italian government crisis is cleared up, the Morgan committee of bankers will meet again in Paris, and it is hoped that meantime the League of Nations council will have prepared the way for the bankers to propose a new reparations settlement. Poincare and Lloyd George are to hold their conference in London August 16.

THE Bavarian government is in open revolt against the central German government at Berlin and has issued a decree that rejects and supplants the recent legislation by the reichstag for the defense of the republic. The Bavarian minister at Berlin was instructed to inform Chancellor Wirth that any outside police official attempting to operate in Bavaria would be promptly arrested. Wirth has called a conference of all the German states to consider the problem, and if Bavaria does not suppress its new law President Ebert may summon the staatsgerichtshof, or tribunal of the states, to deal with the case. Chancellor Lerchenfeld of Bavaria says he is opposed to any separatist movement but that his state will not submit to any abridgement of its rights. The old enmity between Bavaria and Prussia and the strong monarchist sentiment among the Bavarians make the situation difficult for Berlin.

FROM several widely separated sources comes the information that soviet Russia is planning military operations on her western front in the autumn. Frank Vanderlip, the American financier who has been in touch with the Russians in Berlin, says in Paris that the probability is increasing that the bolsheviki will force such a war on Europe in the harvest season, attacking Rumania and Poland "in an attempt to rally Russian morale and also to get food from the eastern harvests." Russian refugees in Belgrade assert the soviet government is preparing for a drive through the Balkans and then westward through Austria.

AUGUSTUS THOMAS has been appointed executive chairman of the Producing Managers' association for three years at a large salary, with powers in the world of the spoken drama comparable to those of Will Hays in the motion picture industry and Judge Landis in baseball. The association includes practically all the important theatrical producers.

News of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Duluth—S. V. Saxby, formerly of Hibbing, was elected secretary of the Duluth Chamber of Commerce at a meeting of the directors of the organization.

Red Wing—While L. E. Gallagher was advertising for a lost cow which disappeared some days ago, bossie was lying dead under a cavein at a sandbank.

Minneapolis—Building contractors in Minneapolis are experiencing shortage of all classes of labor, according to Clarence Gunn, secretary of the Minneapolis Builders' Exchange.

Red Wing—Because the city council decided to allow the present rate of $1.73 for gas to prevail until Oct. 1, the hope for reduction in price to consumers has vanished.

Red Wing—A swarm of bees, apparently a million strong, alighted on the awning of a hardware store on Main street here. After consultation the authorities called in a bee handler from Welch.

Thief River Falls—While digging at the bottom of an old ditch on the Barsen farm, Ernest Barzen uncovered an old buckskin purse containing $13 in cash. The money was so badly corroded that it is difficult to determine the dates of the silver coinage.

Minneapolis—Chief of Police Jensen called upon S. B. Qvale, state prohibition director, to make a personal investigation of a clash between police and Federal dry agents which led to the arrest of three agents.

Red Wing—Statistics compiled by the state dairy and food commissioner, Chris. Heen, showed a wonderful growth in creamery business in Goodhue county and the state during 1921 as compared with 1920.

Fairmont—This city is assured of a good ball team for the balance of the 1922 season. Promises of support from Fairmont business men to support the team for the next two months have relieved the management of financial worries.

Red Wing—That Goodhue county is considered a mecca for railroad damage suits is evidenced again by the filing of a $35,000 damage suit in this county for an accident which occurred at Owasso, Mich., in November of last year.

Red Lake Falls—A. J. Endersby, veteran horseman of Willmar, died from heart disease while driving his horse in a race at the Red Lake county fair. The horse had just won the second heat when the driver toppled over.

Winona—Twenty bands from neighboring towns are expected to take part in a band tournament here Aug. 27, it was announced by the Association of Commerce. Prizes will be awarded to the best band in each class after each given a brief concert.

Hibbing—Seventy-five men were cut from the village payroll by action of the village council at the regular weekly meeting. Among these were forty village laborers, thirty policemen, three from the engineering department, and two from the health department.

Long Prairie—Three hundred armed men, including the Long Prairie company of the Minnesota National guard formed a ring around a woods northeast of this village, and a battle with bank robbers who shot and killed Village Marshal George Williams was expected.

Fairmont—President Wade of the Fairmont Rotary Club was presented with the official charter of the organization at Interlaken Inn, after 129 delegates from cities all over Minnesota and the members of the local club had been served one of the Interlaken's famous dinners.

Northfield—Remodeling of the new gymnasium in the I. O. O. F. home here is nearly completed. The Rebekahs of Minneapolis and St. Paul have furnished funds for the remodeling. About 60 orphans are at the home, which is maintained by the I. O. O. F. lodges of Minnesota.

Winona—Scattering reports from southern Minnesota and South Dakota indicate yields of rye, barley, oats and winter wheat well in excess of the average for the last five years, according to the weekly statement issued by the Cihcago and Northwestern railway. Yields range from 20 to 35 bushels an acre, the report says.

Red Wing—All personal property in Goodhue county, including the city of Red Wing, bears an assessed valuation of $3,846,591 according to figures returned by the county assessors and checked over by the county board of equalization. True value of this same property is listed at $11,691,834. In addition the assessors found that the county had 2,360 persons paying taxes on monies and credits valued at $6,668,732.

Luverne—At the annual meeting of the Rock County Public Health association Mrs. O. I. Godfrey was elected president; Mrs. A. W. Rice, vice president; Mrs. C. L. Sherman, secretary, and Mrs. D. M. Main, treasurer.

Little Falls—The rural carriers of Morrison and Crow Wing counties held a meeting at Ft. Ripley for the purpose of electing and instructing delegates to the state convention to be held at Lake City, August 11, 12, and 13. E. A. Savage, Little Falls, and R. E. Falconer of Brainerd were elected. R. S. Beymer of this city will also attend the convention

[illegible] estimates submitted to the board of equalization.

St. Paul—City government set up at Nashwauk, Itasca county, was held invalid by the Minnesota supreme court and officers were ousted while the community again goes back to the status of a village.

Moose Lake—Professor J. N. Bald died from heart disease at his summer home near here. For 17 years he was superintendent of schools in North Dakota.

Minneapolis—More than seven hundred city employes have been placed on the pension rolls of the Municipal Employes' Retirement Fund association, Walter Scott, secretary, said.

Moorehead—Frank Amberor, a section man, was sentenced to an indeterminate sentence in Stillwater penitentiary when he pleaded guilty in Clay county district court to assault with a deadly weapon with intent to kill.

Crookston—The entire scalp of Miss Nan Head, aged 31 years, was torn off when her hair was sucked into a flywheel of a motor engine in the basement of their home at Warren.

Preston—The 4 year old son of Lon Nagel, farmer near here, is in a hospital, recovering from a badly torn cheek. Result of chewing on a torpedo until it exploded.

Minneapolis—The city council committee on street railway extensions was guest of 200 reisdents of the 4th ave. s. district beyond 38th st., at Royal Arcanum hall, 3011 1st ave s., in gratitude for the recently granted extenison of the 4th ave. s. carline.

Austin—August F. Detloff, Jr., held in the county jail here, will be charged with the murder of his parents-in-law, Mr. and Mrs. John Wagner, of Grand Meadow, slain by an ax in their home 10 days ago.

Winona—The Rev. John Meier, pastor of St. Joseph's German Catholic church here, has been invested with the dignity of domestic prelate and the title of Monsignor.

Sandstone—Hans C. Sandwick, aged 58, a merchant here for 14 years, is dead at his home. He came to America from Norway 36 years ago.

Duluth—John Richards, Duluth City attorney, who has conferred with members of the state railroad and warehouse commission, declared that the city of Duluth will be ready for a hard fight against the telephone rate.

New Ulm—The Pioneer drug store, the oldest of its kind in this section of the state was damaged by fire to the extent of $7,000. For a time the fire threatened the whole block. The state fire marshal's office is investigating.

Albert Lea—Clark Hord of Alden and his wife were injured when the surrey in which they were riding was hit by an automobile. A baby in the mother's arms was uninjured.

Thief River Falls—The district convention of the auxiliary to the American Legion will be conducted here on Friday. Auxiliaries in the thirteen counties in the ninth district will be represented.

Minneapolis—A woman's hat, found in a stolen automobile abandoned at Third and Washington avenues S., coupled with a report that a woman's body had been seen in the street near that point has started a police investigation.

Brainerd—A cave-in at the Kennedy iron mine at Cuyuna instantly killed Andrew E. Rossburg, aged 26. His partner, Alex Johnson, escaped injury. Rossburg leaves a widow and three children, ranging in age from one to six years.

Brainerd—Harry O. Toms, driver of the automobile which upset near Brainerd, July 14, and caused the death of Miss Christine McIntosh, of Brainerd, and Wayland Smith of Minneapolis, has been held to the grand jury.

Rochester—Governor Preus, James F. Reed, president of the Minnesota Farm Bureau federation, and several other men prominent in agricultural and civic affairs will participate in a barberry eradication demonstration in fields 25 miles south of here.

Minneapolis—Five Minneapolis postoffice employes, delegates from their union to the Trades and Labor assembly, are facing dismissal from government service as the result of a resolution adopted by the assembly attacking the Harding administration for its attitude on the railroad shopmen's strike.

Cloquet—Virtually all the cutover and brushland of St. Louis county is rapidly growing valuable timber by natural reforestation, T. S. Hansen, assistant superintendent of the state forestry experimental station at Cloquet, who recently has completed a two year survey of the county, told members of the touring party of agricultural college faculty and farm paper editors here.

St. Paul—Every man in Veteransville, Minn., a town populated by former service men, will have five acres plowed by fall, according to a report made by Major George P. Ehren of the Veterans bureau, Washington, D. C. He just completed an inspection tour of the town. He said the plan of these men is to specialize in Guernsey cattle and to build up a reputation for high grade stock.

Hibbing—After a trial lasting three weeks the jury in the trial of Frank Nosie, a farm boy, found him guilty of murder. Nosie was charged with killing William Ruzic, Virginia taxicab driver, on the Bear River road, 35 miles north of here, on May 3.

Minneapolis—Railroad officials said that because of the freight service curtailment more harvest hands will make use of passenger service this fall than ever before. Men who have annually stolen rides on freight trains will this year pay their fare. More than 8,000 are expected to leave Minneapolis in August

GIRL NOW WELL AND STRONG

Daughter Took Lydia E. Pinkham's Vegetable Compound as Mother Advised

Wauseon, Ohio.—"My daughter always had backache and leg-ache at certain periods and could not be on her feet at those times. We read about Lydia E. Pinkham's Vegetable Compound doing girls so much good so she began to take it. That is two years ago and she is a different girl since then able to do any work she wants to do—although she is still careful not to do heavy work—and so well and strong. We recommend Lydia E. Pinkham's Vegetable Compound to all mothers with ailing daughters, and I give you permission to publish this letter as a testimonial."—Mrs. A. M. BURKHOLDER, Route No. 2, Box 1, Wauseon, Ohio.

Something out of balance will affect the finest clock, causing it to gain or lose. The proper adjustment made, all is well. So it is with women. Some trouble may upset you completely.

Lydia E. Pinkham's Vegetable Compound will correct the cause of the trouble and disagreeable symptoms will disappear as they did in the case of Mrs. Burkholder's daughter.

MOTHERS — it is worthy of your confidence.

Kill All Flies! THEY SPREAD DISEASE

Placed anywhere, DAISY FLY KILLER attracts and kills all flies. Neat, clean, ornamental, convenient and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed. DAISY FLY KILLER at your dealer or 5 by EXPRESS, prepaid, $1.25.

HAROLD SOMERS, 150 De Kalb Ave., Brooklyn, N. Y.

Then Father Flared.

A young man was wheeling a perambulator to and fro in front of his house. He looked hot, but contented.

"My dear!" came a voice from an upper window of the house.

"Now let me alone!" he called back. "We're all right."

An hour later the same voice, in earnest, pleading tones:

"Arthur, dear!"

"Well, what do you want?" he responded. "Anything wrong in the house?"

"No, dear; but you have been wheeling Dora's doll all the afternoon. Isn't it time for the baby to have a turn?"—Chicago Herald.

Not Always Successful.

She (to aviator)—And do you come down the same way you go up?

He—No; I try to come down feet first.

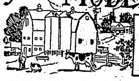
PERTINENT POINTERS for MODERN FARMERS



Prepared Under Direction of North Dakota Agricultural College

WINTER EGGS DEPEND UPON SUMMER CARE

(By G. W. McIlroy)

Keep the young poultry stock developing steadily during the summer months and until late fall. All hatching should be completed by the middle of June since hot summer weather is not nature's hatching season. Late hatched pullets cannot develop as they should by the time cool fall weather starts.

Egg production of the average flock of hens falls off considerably during September and October and poultrymen consider it very desirable to have pullets sufficiently matured to take their places. In order to accomplish this object the pullets must be six or seven months old and well developed by fall. Late hatching, then, means that egg-producing pullets for the fall are out of the question and lack of care of the early hatched means underdevelopment and no egg production until December or January.

Give the young stock abundant range. They will pick up a lot of protein in the form of bugs and worms, they will have access to plenty of green feed, and they will get an abundance of exercise. Buttermilk or skim milk is a valuatble source of protein, and can be fed to young or old stock to excellent advantage.

For a good feed, make a mash of equal parts of bran, middlings, another mill feed if you have it, and fine ground oats and corn. Best results are obtained by poultrymen who have the mixture before the hens at all times. A scratch feed that can be fed morning and night consists of oats, barley, and whole or cracked corn. Clean fresh water should be available to the flock at all times. As soon as the cockerels are a few months old separate them from the pullets if possible, for the pullets will develop better as a result. If you have a surplus of cockerels yard them closely, fatten, and dispose of them.

Pullets cannot be expected to develop properly if they are compelled to live in a filthy house, so keep the poultry houses clean. Lice and mites disturb the health and growth of growing stock. Sodium flouride, which can be purchased at your dealer is a good remedy for lice and may be applied by dusting the fowl or by dipping the birds into a solution of once ounce of sodium flouride to 10 gallons of water. In either case be sure the remedy reaches the skin. If the lice have laid eggs at the base of the feathers repeat the operation within ten days. In that time the eggs will be hatched, and the second treatment is necessary to kill them.

Mites spend the daytime in dirt or filth about the house, visiting the hen only at night. Clean houses are the best remedies for mites. A good spray can be made from one gallon of kerosene, two ounces of carbolic acid, and one pint of any coal tar dip. Spray the house well after cleaning all loose dirt away and repeat after a few weeks if necessary.

Contented, comfortable, well fed young poultry stock will help fill the egg basket next winter.

Says Sam: I see by the papers that folks who sow wild oats in roof gardens allus get a crop.

Of the 71,000 purebred cows in Ohio, 38,000 are Holsteins and 24,000 are Jerseys, the census says.

The teacher, the preacher, and the editor are mighty important people in a country community, and a little recognition of this will do no harm.

Sometimes deep cultivation in the garden does more harm than good because it cuts off the roots. All that's necessary is to kill the weeds and make a light mulch to conserve moisture.

A Michigan community raised the average butterfat production per cow from 215 to 276 pounds a year in 10 years. It was done by introducing purebred sires and grading up the herds.

We hope ultimately to double the average yield of wheat and corn to the acre; it will be a great achievement; but it is even more important to double the desirability, the comfort, and the standing of the farmer's life.—Theodore Roosevelt.

DIVERSIFICATION KEY TO CUTWORM CONTROL

"The pale western cut worm has now been discovered east of the Missouri river in McLean, Kidder, and Emmons counties," says Dr. R. L. Webster, entomologist from the U. S. department of agriculture, in discussing the latest conclusion of his research work on this insect in western North Dakota.

"This year the worm is doing damage especially to the corn crop in the eastern border region," said Dr. Webster, "It attacks all crops but this season has been favorable to wheat because of its constant growth. Morton county was the farthest eastern point where the pale western cutworm was found last year. Whether the insect is moving eastward so rapidly or whether it is a case of not finding it so far east before is a question, but it is certain that much damage has been done in the past few years in Bowman, Golden Valley, Hettinger, and Slope counties while the insect has been unknown east of the Missouri river."

"Diversification is the solution to the pale western cutworm problem," said Dr. Webster. "This may seem strange after saying that the insect will attack any crop. It is a question of opportunity of the moth to lay its eggs. We find eggs deposited in hoof tracks, which have been made so that the crust is broken between the middle of August and the middle of September. Wheat and other small grains are harvested at such a time as to cause a breaking of the crust which allows the moth to deposit her eggs in loose dirt. The following year's crop will be attacked early in the season as it is coming up. Following corn, potatoes, or pasture the insect does not appear because the crust is not broken by cultivation or harvest at the time the moth lays her eggs."

Following rye the insect will appear in infested regions unless there is rain between the time of harvest and the middle of August so that a crust is formed to prevent the depositing of eggs. The same applies to millet and all early harvested crops. It is only in the infested regions that any attention need be given to this pale western cutworm. It occupies the country of Montana east of the Rocky mountains and western North Dakota south of the Missouri river, and seems to be moving eastward. Fields infested are ruined while the seed is sprouting with the result that large patches do not come up. Corn shows the effect more strongly because the insects concentrate at the corn hills.

Spray brother, spray with care,
Spray potatoes here and there;
Use enough and some to spare,
Spray the bugs and spray for blight;
Mix bordeaux and use it right.

Built that silo early.

Careful poultrymen have no roosters left in the flock by summer.

Uncle Ab says: Only the real friends travel the uphill roads with you.

Clean sweet milk goes with utensils kept in the sun out of dust and dirt.

The touch end of the porterhouse is better ground up for hash than on the table as steak.

Squashes and pumpkins need plenty of room and do best at the edge of the garden next to corn or pole beans.

Isn't there some fruit juice left from last summer's canning that would taste good in cold water to the men in haying?

Plant alfalfa; it feeds your soil with nitrogen, your cattle and hogs with protein, and your heart with contentment.

Fence, posts, firewood, and lumber enough for the whole farm can be furnished by the properly managed farm woodlot.

Each prairie chicken on the farm saves five dollars to the owner in crops saved from the bugs it eats, someone has figured out.

Be it ablong or square, hand-worked or horse-worked, that home vegetable garden is one of the most profitable corners on the farm.

When anything boils over on the stove, cover it at once with salt; the odor will be killed, and the spilled food can be cleaned up easily.

Children who collect and sell old papers, rags, and rubber not only earn some pocket money but keep junk from collecting around the house and yard.

POULTRY

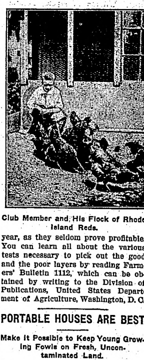
CULLING FOWLS FOR MARKET

To Make Best Possible Returns Every Hen in Flock Should Be Layer—Weed Out Culls.

(Prepared by the United States Department of Agriculture.)

Every boy or girl having poultry naturally wishes to earn as much money as possible. To do this every hen should be a good layer. All cockerels, except those kept for breeding purposes, as well as pullets that lack vigor and vitality, should be eaten, canned for home use, or sold as soon as they are large enough, says the United States Department of Agriculture. Selecting or "weeding out" the hens that are poor layers and picking out for market the cockerels least likely to develop into good breeders is commonly called "culling" or culling for eggs and for market.

The best time to cull the hens is during August and September, usually from August 15 to September 15, for at that season it is easier to determine which are the good layers and which are boarders. At that time of year hens which show signs of laying or are laying and have not molted usually are the ones that have been the better layers during the entire season, and the hen that lays best during her first year usually will lay best during her second and third years. She is, therefore, the one to keep. It is not often advisable, however, to keep hens of the heavier breeds, such as Plymouth Rocks, Rhode Island Reds and Brahmas beyond their second year, or the smaller breeds, such as the Leghorns and Anconas beyond the third year, as they seldom prove profitable. You can learn all about the various tests necessary to pick out the good and the poor layers by reading Farmers' Bulletin 1112, which can be obtained by writing to the Division of Publications, United States Department of Agriculture, Washington, D. C.



Club Member and His Flock of Rhode Island Reds.

PORTABLE HOUSES ARE BEST

Make It Possible to Keep Young Growing Fowls on Fresh, Uncontaminated Land.

On a recent visit to a large practical poultry farm, it was observed that good use was being made of a number of portable poultry houses. These were of good size and were on runners made of heavy joists. The runners were braced against each other, so that a horse could be hitched to the front and the house hauled anywhere. This made it possible to keep the young growing birds on fresh, uncontaminated sod, which was always sending up a good lot of fresh grass.

When the movable houses were pulled away from each place where they had been for a few weeks, the rains soon washed the droppings into the soil. This nourished the grass and improved the land. In no case was the sod eaten down till the ground was bare.

For small chicks the same plant used small coops on two wheels that could easily be pushed from place to place by hand. In this way they never were troubled with gapes or contaminated soil.

SEPARATE MALES FROM HENS

If Cockerels Are Wanted for Breeding It Is Well to Keep Them in Pens by Themselves.

After the breeding season the males should be separated from the females. If the male birds are good ones, they should be penned up separately, and if they are just mediocre it will not pay to feed and keep them over till the next breeding season.

INCREASE IN NUMBER OF SPRING LITTERS AS COMPARED WITH 1921

(Prepared by the United States Department of Agriculture.)

A net increase of 14.5 per cent in the number of young pigs produced this spring in the Corn Belt states is shown in a special pig survey just completed by the United States Department of Agriculture. This increase may overcome the present shortage of meat stocks, the department states.

The survey shows a gross increase of 22.8 per cent in the number of spring litters this year as compared with the number of litters born last spring, but the average number of pigs saved per litter is 7 per cent less than last spring. The April 1 brood sow report of the department indicated a net increase of 15.6 per cent in pig production this spring over last year.

The department points out that stocks of pork products other than lard in storage May 1 are 33 per cent less than the five-year average and 26 per cent less than a year ago. Lard stocks May 1 were 16 per cent less than the five-year average and 37 per cent less than on May 1, 1921. Stocks of other meats are correspondingly low.

It is also pointed out that the survey covers numbers of hogs and not weight. The records show that the average weight of hogs marketed has varied as much as 34 per cent, or from 193 to 262 pounds, during the past five years. Many producers have found it profitable to market their hogs early at light weight before the usual run of heavy hogs later, the department says.

If farmers carry out their expressed intentions with respect to breeding for fall farrowings the total number of sows expected to farrow for the year, including spring and fall farrowings, will be 28 per cent larger than last year.

The survey indicates a prospective increase of 49 per cent in the fall farrowings in these states over last year. Last year fall farrowings represented 28 per cent of the total farrowings for the year, while this year they will probably represent 35 per cent. If the number of pigs saved per litter is as low as this spring, however, the prospective increase in number of pigs next fall will be materially reduced. The average number of pigs saved per litter, as reported for this spring, is 5.66 pigs, compared with 6.1 pigs last spring and 5.9 pigs last fall.

Smaller Increases in East and South.

The survey in Pennsylvania, New York and Maryland shows an increase of only 5 per cent in the number of litters for the first half of the year, while the total number of pigs saved shows a decrease of 3 per cent from a year ago. The number of sows bred for fall farrowing shows an increase of 23 per cent over the number of sows which farrowed last fall. A total increase of 14 per cent in the number of litters for the year is indicated provided the intentions of farmers to produce fall pigs are carried out.

In the Southern states, including Georgia, Alabama and Mississippi, an increase of 5 per cent in the number of spring litters is reported, but the total number of pigs saved is the same as last year on account of the smaller number of pigs saved per litter. These Southern states show an increase of 27 per cent in the number of sows intended to be bred for fall farrowing over last year, with a total prospective increase of 11 per cent in the number of litters for the year.

The survey is based upon about 200,000 schedules received from farmers in the Corn Belt states, which produce about 70 per cent of the pigs in the United States, and from farmers in the eastern and southern states. The schedules were distributed by rural mail carriers to 15 farmers on each rural mail delivery route. It is planned to make a similar survey in about six months which will be used as a check on the department's estimate, and also indicate the number of pigs to be produced in the spring of 1923. The figures in the present survey are given herewith:

CORN BELT STATES	Nos. of litters first half of 1922 compared to first half of 1921. Per cent.	No. of pigs saved per litter. First half of 1921.	Last half of 1921.	First half of 1922.	Total No. pigs saved first half 1922 compared to first half 1921.	No. of sows bred or to be bred to farrow fall of 1922 compared to No. of litters fall of 1921.
Corn Belt States.						
Ohio	116.8	6.9	6.6	6.5	110.2	131.7

PRODUCING CERTIFIED SEED

Many Potato Growers Will Be Disappointed Because of Raise in Requirements.

Probably as a result of the better price received last year for certified seed stock, Maine potato growers this year have listed more than 3,300 acres for inspection of representatives of the State Department of Agriculture. Many of these growers will be disappointed, however, because they have started with stock of no particular merit. Over a series of years an average of 47 per cent of the entries passed the seed-certification requirements, but this year the percentage will probably be lower. The mosaic standard has been raised. This year a field having as much as 5 per cent of mosaic disease is disqualified for producing certified seed. The best stock grown now is that from strains imported from the Canadian provinces within the last few years.

Source of Contamination.

Unless properly cleaned and sterilized the milking machine is a likely source of contamination.

Swine Judging at a State Fair—Displays of Well-Bred Animals Competing for Honors Have an Important Influence in Improving Live Stock Industry.

Fertilizer Used in Row.

There is no evidence that the use of fertilizer in the row restricts root growth, nor is there any evidence that such use causes firing of crops during periods of dry weather.

DAIRY FACTS

MANY TUBERCULOSIS CAUSES

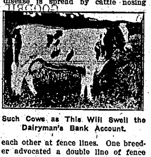
Department of Agriculture Receives Various Replies on Methods of Spreading Disease.

(Prepared by the United States Department of Agriculture.)

What is the most common method of spreading bovine tuberculosis in your community? This question asked by the United States Department of Agriculture in the interest of establishing accredited tuberculosis-free herds brought many answers ascribing the spread of this disease to about a dozen causes.

In North Dakota, where range conditions are typical of those in many other states of the northwest, unrestricted ranging of cattle was given as a common cause. Drinking at the same pool was another. The introduction of the disease was laid to cattle, not properly tested, being shipped into the state.

In parts where the pastures are fenced, the complaint was that the disease is spread by cattle nosing each other at fence lines. One breeder advocated a double line of fence to prevent this means of contact. In this state, where purebred cattle are generally tested before being sold but grade cattle are not, much of the spread of the disease is laid to infected grade stock. Close housing in poorly ventilated buildings was given as a cause of disease by a few breeders. Some, from observation and experience, laid the spread of the disease to feeding calves and pigs, milk from tuberculous animals. From one source came the claim that it was spread from dead animals by dogs and hogs running at large and feeding upon the carcasses.



Such Cows as This Will Swell the Dairyman's Bank Account.

From Oklahoma came fewer reasons, but of the same type: Common pasture, importation of untested animals from other states and the sale locally of untested animals, foul stables, and contact with infected cattle in adjoining fields by breachy stock crawling through fences or stock nosing at fence lines.

Among the chief causes given in New England were the low price at which suspected animals are sold, the lack of testing hogs and grade cattle to be sure they, as well as purebred animals, are free from disease when sold, the breeding to a common bull, serving cows outside the herd, the common drinking trough, milk from diseased animals fed to calves and hogs, unsanitary barns, drafty barns, underfeeding, the common pasture or pasturing boarder animals, and nosing at and breaking through fence lines by cattle, some of which may be diseased.

The 12 causes of the spread of the disease reported generally were:

1. Unrestricted range or common pasture.
2. Common drinking pool or trough.
3. Introduction of untested cattle.
4. Nosing at fence lines.
5. Close foul housing.
6. Milk of infected animals fed to calves and hogs.
7. Trading of untested animals.
8. Dead animals eaten by dogs and hogs.
9. Breachy stock.
10. Breeding to a common bull.
11. Serving cows outside the herd.
12. Conditions unfavorable to health, as drafty barns and underfeeding.

PRODUCTION OF CLEAN MILK

Chief Causes of Bacteria Are Found in Unsanitary Conditions and Bad Management.

Health authorities agree that the way to get pure milk is to produce it pure rather than to try to purify it afterwards. The chief causes of bacteria in milk are found to be in the unsanitary conditions under which it is produced. These causes are: Dirty stables; dirty cows; careless, slovenly habits; improper handling, and insufficient cleaning of utensils.

Contamination of Milk.

The milk of one diseased cow mixed with the milk from the balance of the herd will contaminate the whole lot, making it unfit for either human or calf food.

ARGY[illegible] DROWNS [illegible] MIDDLE RIVER

BOY DROWNS BEFORE EYES OF MOTHER—STEPS INTO DEEP WATER, SINKS RAPIDLY.

A sad drowning accident occurred last Saturday afternoon at 3 o'clock when Paul, the seven-year-old son of Mr. and Mrs. Peter Deschane met death in the waters of Middle River.

The Deschane home is on the banks of Middle River in the northeast part of town. Water at this point is shallow, not more than three feet deep, but further down stream there is a deep hole with eight feet or more of water. The young boys of the neighborhood frequently went bathing where the water was shallow and Paul had learned to swim well. On the fatal day Paul and his cousin, the young son of Alphon Deschane, were in the river together. The boys were running back and forth through the stream in their play, and it is thought Paul had gotten water in his lungs and was gasping for breath when he suddenly went into the deep hole and was unable to keep afloat. After going down once, he called to his cousin to call his mother and father. Mr. and Mrs. Deschane were both in the house and came at the first call. Mr. Deschane is crippled with the loss of one leg and could not venture into the water to rescue his son. Mrs. Deschane, however, plunged into the river as the boy was going down the third time, but being unable to swim she could not reach him without going beyond her depth, and he sank before her eyes. Their call for help brought Mr. and Mrs. Albert Prouix and George Morin, neighbors living close along the stream. Mr. Morin, a good swimmer, dove several times, but could not locate the body. Securing a ladder to keep him afloat while he dragged the bottom with a rake, he brought the body out 15 or 20 minutes after the boy had gone down. Dr. Roy was at the scene but every effort he could make failed to resuscitate the boy.—Argyle Banner.

BIRTHDAY "CAKE" IS WATERMELON

Central Celebrates First Anniversary With Record Run of Cars and Has Saved $123,940.

The Central Co-Operative Commission Association, farmer-owned livestock sales company at South St. Paul, Wednesday, August 8, celebrated its first birthday. Incidental to a record rush of business, the force gathered around a great watermelon, into which had been stuck a single stockman's cane.

"We planned a cake with one big candle," said J. S. Montgomery, general manager, "but when we received word that farmers were going to help us celebrate by sending us a record day's business—season considered—we fell back on the melon."

Mr. Montgomery denied the birthday centerpiece was suggested by the fact that the association has cut some mighty juicy financial melons for patrons during the year.

The Central's books show that at least $123,940 in cold cash has been saved patrons in its first 12 months. This sum represents money repaid to shippers as patronage dividends, cash reserves and savings due to lower commissions.

The Central is giving shippers satisfactory service both as to the manner in which shipments are handled and prices obtained. Its volume of business is constantly increasing. In 12 months it handled approximately 13,000 cars. During its first month, it ranked as the largest firm on the South St. Paul market and has held that position despite determined opposition. It has been handling from 25 to 30 per cent of all shipments, and on August 2nd established a record, when 40 per cent of all cars were consigned to it.

It now ranks as the largest farmer-owned livestock sales agency in the world, and is on a par with the biggest firms at Chicago, which have been years in the building.

The company started with 20 hog pens and now is using nearly 100. Plans are made for pen capacity to handle 12,000 hogs at a time by January 1, 1923.

Though the volume of business is far greater than it was the first week, very little more money now is paid for clerical and other office help.

During recent months, the feeder branch of the business has been growing constantly and is rendering unusually satisfactory service on a non-profit basis.

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

GIRL TO FLIRT WITH DEATH AT STATE FAIR

Lillian Boyer, 18-year-old Chicago school girl, will be the big feature attraction of the Minnesota State Fair, September 2 to 9, fair officials announced today.

Miss Boyer is the only girl who has ever passed again and again from a speeding automobile to a low-flying aeroplane. Louis James, the 19-year-old boy who did this each day of the Minnesota State Fair, a year ago, was killed in flight at Chicago about two months ago. Miss Boyer is his logical successor, and is acknowledged to be the leader in this field.

The slip of a girl who is coming to the state fair this year is a "Girl of Iron Nerves." Not only will she pass from auto to plane but she will do stunts in the air that are almost unbelievable. She will hang from one foot from a rope ladder dangling from the landing gear of the plane, swaying perilously back and forth as the ship careens forward at the rate of eighty to 100 miles an hour.

Her most thrilling feat is to jump off the wings of the plane hanging to a rope only by her teeth. The rope is about thirty feet long.

Nick Rohr, Well Known Farmer, Commits Suicide

Widower Blows Off Top of Head With Shotgun During Absence Children

Nick Rohr, well known locally, committed suicide by blowing off the top of his head with a shotgun at his farm between here and Plummer last Thursday, according to reports brought in by neighbors. Mr. Rohr was a widower and had two minor children. The latter had been away when the rash deed was committed, and upon arriving home found his father dead on the kitchen floor. Rumor was widespread last week that foul play was the cause of death, but later reports are as above stated.

No particular reason can be given as to circumstances that lead Mr. Rohr to take his life. He was in fair condition financially, and had no trouble otherwise as far as can be learned. —St. Hilaire Spectator.

SUNDAY SCHOOL PICNIC IS WELL ATTENDED

Comparatively little threshing of rye has been completed in the vicinity of Goodridge, although farmers who have threshed report fairly good yields, running from 15 to 20 bushels per acre. A few of the fields are reported as going stronger than this figure, however, running up to 25 and 30 bushels.

LARGE CROWD ATTENDS YOUNG PEOPLES' MEET

A large crowd attended the Young Peoples' Society meeting Wednesday evening. A good program, including a speech by Mr. Bjornaraa, was given. An elegant lunch was served by the members after the conclusion of the program.

Rev. and Mrs. V. O. Aakre, accompanied by Mrs. G. Gunderson, autoed to Thief River Falls Monday, where Mrs. Gunderson will remain for some time with her son, Harold, who is at the Sanatorium.

DISABILITY CLAUSE CALLED TO ATTENTION OF SERVICE MEN

Section 309 of the War Risk Insurance Act, as amended August, 1921, states that every person disabled as a result of his military service shall have five years from date of discharge to apply for compensation.

Dependents of persons who died while members of the military or naval service who were enlisted prior to February 9, 1922, are entitled to dependency compensation provided his death was not a result of his own wilful misconduct, and such claims must be filed within five years after death, as officially recorded in the department under which he was serving.

August 9, 1922, is the last date on which disabled persons may apply for a certificate of injury. This certificate is issued only to persons whose disabilities are due to service, but of a lesser degree than 10 per cent per centum. This certificate of injury is very essential as shown by the following example:

Bill Jones received a gunshot wound in the chest and to all indications it was only a flesh wound. He filed a claim shortly after discharge and was rated as due to service, no per cent disabled.

He did not apply for a certificate of injury and five years later the wound begins to bother him to the extent that he is not able to work. He cannot draw compensation because he was not disabled to a compensable degree within one year from the date of his discharge. Should he have become compensable within one year from date of discharge, no certificate would have been necessary.

A letter, containing your full name, address, rank and organization, stating that you wish to apply for a certificate of injury will be considered as a formal application.

Do it now!

T. P. ANDERSON,
Service Officer,
American Legion.

Mrs. George Josephson and daughter, Violette, Mrs. M. O. Seavey and daughter and Miss Mabelle Tweeton autoed to Park River, N. D., Saturday and returned Sunday. Miss Violette Josephson will remain in Park River for a few weeks.

Ball Players Vent Their Spleen on Town Rooters

After Losing Game, Litchfield Men Use Direct Action on Fans.

A cowardly attack on three of our young boys by five of the Litchfield ball team Sunday was an aftermath of the game here between the Litchfield and the Dassel teams.

An auto, loaded with five players passed Harry Nelson, Bernard Gaynor and Clifford Hardy on the way out of town and the players shouted something to them. They went a short distance and came back to where the Dassel boys were standing in the park. Two of the Litchfield players walked over and asking what they had said at the game, proceeded to maul them without warning. Nelson had his lip cup, Gaynor has a badly bruised eye and Hardy was deliberately fouled. The attack was committed by Cooper, pitcher and shortstop, and Long, center fielder. The other three players got out of the car to join in the attack, but did not do so. The suddenness of the attack confused the boys and before they were able to recover from their surprise, the brave warriors from the county seat jumped into their trusty Ford and flew for home.

Cooper, the pitcher, was "called" during the game for an attempt to spike or trip "Butch" Alexander, as he was running to home plate.

The victims of the assault claim that they said nothing out of the way at the game and that they did not arrive on the grounds until the seventh or eighth inning.

A warrant for the Litchfield boys has been sworn out and they will be brought to account.—Dassel Dispatch.

"PARLOR MATCHES" DON'T SCRATCH IN GOODRIDGE

The play, "Parlor Matches," presented here Saturday evening by a number of young folks from the vicinity of Hazel, was not very well attended, although some of those present report that the play was fairly good. Many from this community had attended several days of the County Fair and for this reason the attendance was somewhat light.

In addition, the play had been poorly advertised and few knew of the presentation of the play here until the company arrived.

PLENTY OF PICRIC AT REDUCED COST

University Has 58 Carloads and Can Fill All Orders—Saving Made on Freight

Farmers and organizations of citizens interested in land clearing will be glad to learn that the university now has a good supply of picric acid, which, by reason of recent reductions in freight rates, can be laid down at delivery points for about 4 cents a stick or about $11.80 per 100 points. This means an actual saving to land clearers of about 60 cents per 100 pounds, or about $120 a carload of 20,000 pounds, over previous costs. Every farmer can purchase picric acid to the extent of 1,000 pounds.

In view of the large supply, 58 carloads, at the disposal of the university, no more specific allotments will be made to counties. Under the new order of things counties can order picric acid in any quantity from the university. The land clearing specialists at University Farm estimate that the war salvaged explosive now in sight for Minnesota is sufficient to clear 38,500 acres.

A stick of picric acid is equal to a stick of dynamite in blasting stumps, according to the university's land clearing specialists. The consumer really pays nothing for the material; costs to him are represented only by the expense of cartridging and the transportation charges. Orders should be sent to the university through the county agricultural agent or the local banker.

SURPRISE PARTY GIVEN MR. AND MRS. McDONALD

Mr. and Mrs. R. H. McDonald were tendered a surprise party last Saturday evening when a number of their friends gathered at the family home to celebrate their fifteenth wedding anniversary. Those present were: Mr. and Mrs. P. O. Tvedt, Mr. and Mrs. Carl Christianson, Mr. and Mrs. V. C. McLeod, Mr. and Mrs. M. G. Thoresen, Mrs. Ferdinandsen and Stuart McLeod. The evening was spent in playing cards and at 12 o'clock a delicious lunch was served.

We can't possibly know the truth about any human being until we love him.

Remember Your
Savings Account

Every parent should start a Savings Account for his children. Deposit a dollar to their account and encourage them to save pennies, nickles and dimes to add to it.

A dollar looks mighty big to the child, and the meager start will provide him or her with the beginning of an account that may the means of their education in training for a successful life. And the saving habit that is formed in childhood will last througout life.

NEWS REVIEW OF CURRENT EVENTS

Railway Executives Refuse to Accept President's Plan as to Seniority.

STRIKE SETTLEMENT FAILS

Federal and State Control of Coal Distribution Gets Under Way—Chicago Traction Workers Quit—Results of Some Interesting Primaries—France Warns Germany.

By EDWARD W. PICKARD

NEGOTIATIONS for the ending of the railroad strike were at least temporarily halted again last week when the plan of President Harding failed of complete acceptance. Optimistic prophets of immediate peace were confounded.

As expressed by himself, the President's plan comprised these stipulations:

First—Railway managers and workmen are to agree to recognize the validity of all decisions of the railroad labor board and to faithfully carry out such decisions as contemplated by the law.

Second—The carriers will withdraw all lawsuits growing out of the strike and railroad labor board decisions which have been involved in the strike may be taken, in the exercise of recognized rights, by either party to a railroad labor board for rehearing.

Third—All employees now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and the representatives of the organizations especially agree that there will be no discrimination by either party against the employees who did or did not strike.

The railway executives were the first to act on these proposals. They accepted the first; agreed to the second with the understanding that the strike be first called off and that the representatives of the strikers pledge themselves and the strikers against violence in any form against the men now at work and the property of the carriers; declared it was impossible for them to agree to the first sentence of the third proposal.

Having placed themselves in a strategic position by awaiting action by the executives, the representatives of the striking shopmen met in Chicago and voted, though with expressed reluctance, to accept the President's proposals. This was conditioned upon recognition of the union interpretation of the plan, which, among other things, would require the Pennsylvania railroad to abandon its fight for the open shop. The shop crafts also insist on the establishment of a national board of adjustment which would relieve the labor board of all disputes except those involving wages. Some roads have agreed to regional boards, but probably all of them are opposed to one national board which would prescribe uniform conditions regardless of needs of various localities.

Seemingly the rail executives are in dead earnest in their refusal to abandon their stand on seniority rights. They notified their local employees and other workers that they would be protected and guaranteed permanent employment, and went ahead with the task of filling the places of the strikers. In New York it was said their decisive stand resulted in a rush of applicants for jobs. Public opinion is widely divided concerning this attitude of the railway executives. Many persons feel that it is only justice to the men who have remained at work and those who have responded to the call for workers to take up the tools the strikers laid down. Those who sympathize strongly with the demands of organized labor take the position that the action of the railway heads is a part of a campaign to destroy the unions.

It was predicted in Washington that President Harding would do nothing more in the matter at present, giving the railroads an opportunity to prove that they could operate effectively without the services of the striking shopmen. Roads unable to do so, particularly carriers reaching into the producing bituminous fields, may be taken over and operated by the federal government.

PRESIDENT LEWIS of the mine workers made a definite move for settlement of the coal strike by calling a joint wage conference of operators and miners of the central competitive bituminous field, to be held in Cleveland August 7. Unfortunately, the operators, or most of them, refused to attend.

Meanwhile Henry B. Spencer, who was appointed federal fuel distributor, and his committee and subcommittees began functioning actively. According to Mr. Spencer's plan, the federal organization will cover the distribution of available supplies among the railways, federal institutions and states, and the governors of the states will handle local supplies. State fuel committees were called on to report at once the consumption of coal in their territories by utilities, industries and households and to submit a list of those who should receive priorities. These state committees are also made entirely responsible for the prevention of profiteering and extortion in the sale and distribution of coal within their respective states.

Governor McCray of Indiana took the most vigorous action yet reported in the matter of getting out coal. The miners of the state refused to issue permits to sufficient men to operate the mines for emergency purposes, so the governor opened two strip mines in Clay county under the protection of 800 state troops as a preliminary measure and declared a state of martial law to exist in that part of the county. These mines are in the hands of a receiver appointed by the federal court, and the governor called attention to the fact that this places the United States government behind them. Mr. McCray also called a conference of the governors of Pennsylvania, Ohio, Michigan, Illinois, Kentucky and Wisconsin. Governor Preus of Minnesota says the coal situation in the Northwest is more threatening than ever, and he has asked the governors of Iowa, Wisconsin and North and South Dakota to meet with him in St. Paul August 10. In Wisconsin the bottom of the coal bin is in sight and, at the request of the state fuel commission, all ornamental and display electric lighting has been discontinued.

CHICAGO'S street car strike came along according to schedule. Some 20,000 employees of the surface and elevated lines quit early Tuesday morning and no attempt was made to take the cars out of the yards. Motor vehicles of all descriptions were called into service and on the first day there was a terrific congestion of traffic. By Wednesday the police, motor clubs and individual motorists had worked out a system that brought the situation almost to normal, and many a Chicagoan began to wonder if the city couldn't get along without the noisy street and elevated cars. Also they learned the worth of one-way street regulations in the business center.

Toward the end of the week peace negotiations were resumed, but the local president of the employees said he saw no prospect for an early settlement. The men are fighting not only a proposed wage reduction, but a nine-hour day. Chances of an order by the state public utilities board reducing fares and politics enter into the Chicago situation, and it was frequently and openly asserted that the strike was a "put up job" to prevent the fare reduction and to deal a blow to Mayor Thompson and his organization. The mayor has long promised a 5-cent fare and last week tried to take steps toward the establishing of a municipal bus line to supplant the street cars.

AT THIS writing it appears probable that United States Senator James A. Reed has been renominated by the Democrats of Missouri, defeating Breckinridge Long in a fight that was hot and even bitter. Mr. Long had the support of former President Wilson, during whose administration he was assistant secretary of state. The dislike that Mr. Wilson and many others have for Reed dates from the years of the World war. The Republicans of Missouri nominated R. R. Brewster of Kansas City for the senate.

In Kansas, W. Y. Morgan, Hutchinson editor, was leading former Gov. W. R. Stubbs for the Republican gubernatorial nomination when about 75 per cent of the returns were in. Phil Campbell, veteran member of congress from the Third district, failed of renomination. Senator Howard Sutherland was renominated by the Republicans of West Virginia.

Republicans of Iowa, in state convention at Des Moines, warmly indorsed the record of Senator Cummins and pointedly neglected to mention Smith W. Brookheart, the party nominee to succeed Cummins. This was pleasing to the Democrats, also in convention, and their candidate, Clyde L. Herring, predicted he would win without any Republican opposition.

GERMANY has been trying to postpone the payment of debts to French citizens contracted by Germans before the war, and last week France grew tired of this and brusquely notified Berlin that unless assurance of the payment of $10,000,000 by August 15 were received within four days France would impose penalties of an economic and financial character. It was stated in Paris that these penalties would include the seizure of such German industrial enterprises as are still tolerated in Alsace-Lorraine. It may be some industries in occupied Germany will be seized. A still more elaborate scheme was proposed by members of the French parliament to Premier Poincare. This is nothing less than the separation of the Rhineland from Germany, giving it a parliament and government and a financial regime supervised by the allies. All Prussian officials would be ousted.

Great Britain sent a note to all the allies explaining that America's attitude concerning war debts made it necessary for Britain to collect from her debtors unless all the inter-allied indebtedness is canceled. The other European nations interpreted this as directed solely to America, and in Washington it was stated officially the note would cause no change in the policy of the United States toward its foreign debts.

Premier Poincare and members of his cabinet are in London this week, the date of the conference with Lloyd George having been advanced. Premier Theunis and others of Belgium also are there. The general subject of reparations and war debts will be considered.

DOINGS of the Greeks in Turkey greatly disturbed the allies. First. King Constantine formally asked permission to occupy Constantinople. This was probably "for home consumption," but the allies, much excited, refused the request and sent a lot of troops into Thrace, forcing the Greeks to withdraw to six miles from the Chatalja lines. Then Constantine suddenly proclaimed Smyrna and its hinterland an autonomous state under protection of the Greek army, declaring the occupied regions in Asia Minor should not be returned to Turkey. He thus upset the plans of the allies for a peace settlement between Greece and Turkey, possibly believing that in this way only can he keep the Greek people from again driving him from the throne.

ONE after another the strongholds of the Irish rebels in the south are being taken by the nationals, and the irregulars so far have not made a determined stand, despite the reported pleas of De Valera. Harry Boland, one of De Valera's closest friends and who was with him in America, died of a bullet wound. Liam Mellowes, Sean O'Malley, Rory O'Connor, General Quinn and other Sinn leaders are prisoners. The final triumph of the provisional government seems near.

FOR one minute last Friday every telephone and telegraph instrument in America was silent. This was the impressive tribute to the memory of Dr. Alexander Graham Bell, inventor of the telephone, who died in Baddeck, Nova Scotia, at the age of seventy-five years. The great scientist perfected many other notable inventions, and also was untiring in his efforts to aid the deaf.

United States Senator William E Crowe of Pennsylvania, who succeeded Senator Knox, died at his home after an illness that began last December. He appeared in the senate only twice before that time.

MINERS TO GET OLD SCALE

New Plan Provides For Resumption of Coal Production Under Old Scale.

OTHER ORDERS ISSUED

Union, Operators' Heads Approve Proposal to Creat Coal Mining Industry — Probe Commission.

Cleveland.—Settlement of the nation wide soft coal strike under a definite plan, that may result in the making of wage agreement on substantially a national basis, will be presented to a conference here this week of coal operators who are expected to come from all parts of the country, with officials of the union miners.

In the main, the plan provides for the resumption of coal production by union miners under the wage scales that existed when the strike began last April 1, and for the appointment of an advisory commission of inquiry within the coal industry, the personnel of this commission to be approved by President Harding.

Wage Agreement Renewed.

Under the plan of settlement to be submitted, the wages of the miners, paid under the scale that expired last March 31, would be renewed until March 31, 1923, and meanwhile the advisory commission would decide what recommendations should be issued at once. The commission also would be authorized to investigate all questions affecting the coal industry, and though its powers would be purely advisory, both operators and union officials here regarded this as an important factor in settling local strikes.

The plan, which was understood to have the approval of John L. Lewis, president of the miners, and Alfred M. Ogle, president of the National Coal association, may be presented to Indiana and Illinois operators at their meetings to be held in Indianapolis and Chicago for the purpose of deciding who will join the conference here.

Northwest to Get Coal.

Washington.—Additional priority orders are to be issued at once by the Interstate Commerce commission to facilitate the movement of fuel to the Northwest, it was said at the central coal distribution committee. Coal movement to the Northwest will be inaugurated this week, according to C. E. Tuttle, in charge of distribution for the lake region, and provision will be made for handling bunker coal for lake steamers through a priority of 1,000 cars to transport bunker coal to the lakes. This, he said, would enable the lake steamers to transport emergency coal.

ENGINEER IS TO BLAME

Coroner's Jury Blames Engineer for Wreck of Flyer.

De Soto, Mo.—Blame for the Missouri Pacific wreck at Sulphur Springs last week, which caused death to 35 and injury to more than 100, was fixed on Engineer Matthew "Ginger" Glenn, of passenger train No. 4, by a coroner's jury which investigated the disaster.

The jury at first returned an open verdict but later reversed its decision, stating that Glenn, who was killed when he leaped from his cab, had failed to observe signals warning him that the track ahead was not clear. Glenn had received orders "on the run" to pull over on a siding at Cliffcave, 15 miles south of St. Louis, to allow the Sunshine Special No. 1 to pass, and it is believed he was reading these orders when he passed the block signal warning him of an obstructed track.

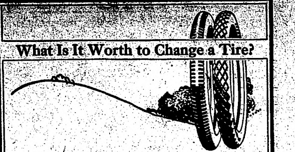
The death toll was brought to 35 with the death of Pearl Goff of Cadet, Mo., a sister of Beulah Goff, who was killed in the wreck, and a niece of William Goff, who was injured.

Houston, Mo.—Mrs. Gertrude La Ross, 29, dropped dead, when the body of her sister, Miss Irene Moon, 18, of Crystal City, Mo., was brought to her home. Miss Moon was one of the victims of the Missouri Pacific wreck at Sulphur Springs Saturday night.

St. Louis, Mo.—Ed Tinsley, fireman of Missouri Pacific passenger train No. 4, which crashed into local No. 32 at Sulphur Springs, bringing death to 35 and injury to more than 100, on a cot in a local hospital, declared the flyer was going from 40 to 50 miles an hour when it crashed into the local. Tinsley, who stuck to his post, was seriously injured.

Steamer Hits Rock in Fog.

Seattle.—The passenger steamer H. F. Alexander of the Admiral line, was proceeding, according to latest reports, toward Seattle, leaking in her forward port No. 1, after striking Cape Rock, near Cape Flattery, at the entrance to Pudget Sound. The coast guard cutter Snohomish was standing by. Other vessels were reported approaching the damaged liner and thus amply convoyed, her passengers and crew apparently were in no danger. She was expected to dock here.



What Is It Worth to Change a Tire?

On the road changing a tire is not an especially pleasant task.

The dust or mud, the grease and grime, the tedious delay—all are things we like to avoid.

But the time to think about these things is when you buy the tire—not after the blow-out occurs.

For some tires blow out much more easily than others.

Outward appearance counts for little.

It is the material in the tire and the construction of it that determines its strength.

Goodyear recognizes these facts and all Goodyear Tires are made of long staple cotton.

Take the 30 x 3½ Cross Rib Clincher Tire here illustrated, for example.

It is made of Egyptian and Arizona cotton, the fibres of which average 1⅛ inches long.

Many 30 x 3½ clincher tires are made of short staple cotton from ½ inch to 1⅛ inches long.

This means less strength and greater danger of blow-outs—more tire troubles.

Yet this high grade guaranteed Goodyear Tire costs only $10.95.

You can buy some tires for even less than this but none with the fine materials and construction of this one.

Can you afford to take a chance on more frequent tire troubles for the sake of the slightly lower price of cheaper tires?

A Thousand a Day
Now Buy Chevrolet

The New Superior Chevrolet is the most satisfactory low priced, fully equipped, most economically operated automobile in the world today.

This year's motor car buyers have recognized this fact to such an extent that 1922 has seen Chevrolet become the largest producer of high-grade automobiles in the world.

The New Superior Chevrolet has many improved features. It has a new front axle assembly, a new rear axle assembly including spiral ring and pinion gears. The clutch has been improved. In addition to its service brake, a hand-lever emergency brake has been provided. The front and rear springs have been re-graded to give easier riding.

With such improvements the New Chevrolet is indeed superior —superior in first price because no car of similar equipment and quality can be bought for less—superior in maintenance cost because it has the lowest cost of operation of any car built.

Comparisons Sell Chevrolet

Standard Rear Axle Construction. Strong, Quiet Spiral Bevel Gears.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System—Starter, storage battery, electric lights.

Standard Cooling System—pump circulation, large, honey-comb radiator and fan.

Standard Doors—two on roadster coupe and light delivery, four on touring and sedan.

Standard Instrument Board—speedometer, ammeter, oil pressure gauge, lighting and starting switch and choke pull.

Standard Type of Carburetor, with exhaust heater.

Powerful, Valve-In-Head Motor—the same type as used in successful cars selling at much higher prices.

Demountable Rims—with extra rim.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.

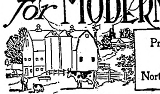
Timely Comments on Agricultural Topics for Our Readers

PERTINENT POINTERS for MODERN FARMERS



Prepared Under Direction of North Dakota Agricultural College

IMITATION OF JUNE CONDITIONS GOOD FOR COWS

"Imitation of June conditions is what the dairyman should strive for throughout the remainder of the summer months," said J. R. Dice, dairyman at the A. C., in answer to inquiries as to feed and care of dairy cows during August and September.

"To see that the cows get enough feed is the main thing during the late summer months just the same as at other times of the year," said Mr. Dice. "Most pastures in this state need supplement in August and September and the first consideration is to supply a succulent feed because the pastures are becoming quite dry. Silage is the ideal supplement to late summer pastures. If the silage cannot be supplied, the cows should be fed hay or grain. The amount of grain to feed will depend on the pasture and the amount of milk the cow gives."

"Cows on good pastures or on pasture supplemented with green feed or silage need not be fed unless they give 25 pounds of milk a day or more. If they give 25 pounds of milk they should have three pounds of feed and if they give 40 pounds of milk a day they should have nine pounds of feed a day in addition to pasture and silage," said Mr. Dice. "When pastures are dried up or exhausted the cows should be fed one pound of grain for every four pounds of milk the same as in the winter."

In June there is plenty of succulent feed in the pastures, the temperature allows the cow to be comfortable, and the flies are not numerous enough to worry her. To imitate these ideal conditions is what the wise dairyman strives to do. He supplies plenty of feed and succulent feed as far as possible. Then, he sees that the cows have some shade and does what he can to reduce the great swarms of flies that come during August and September to torment the cow. Elimination of manure piles and old straw piles goes a long way to reduce the numbers of flies, for these are their breeding places. Some of the flies may be killed by making a preparation of one pint of milk, and four tablespoonfuls of formaldehyde. Pour this in a dish of sand and lay a piece of blotting paper sprinkled with sugar over the dish.

A succulent feed is one of the foremost considerations in attempting to approach the ideal conditions of June during the hot dry weather of August and September. The silo is the only practical means of supplying this succulent feed. When the regular silo is out of the reach of the dairyman the pit silo can be constructed at a small cost.

Legumes in pasture or hay are very important because they furnish the nitrogen necessary for the cow's ration and they furnish it in the most economical form. They also furnish needed mineral substances. "Corn is king and alfalfa is queen when feed crops for the dairy cow are considered"; this is a good slogan. Sweet clover takes the place of alfalfa and may be more easily grown in some localities.

CLUB MEMBERS ASSIST IN SOLVING PROBLEMS

(By H. E. Rilling, State Club Leader)

That club members can assist in solving community problems affecting the farm and home has been clearly shown by county club programs recently conducted by club agents in different counties.

In Barnes county, a day's programs consisted of one number by every club in the county. Demonstrations by teams and individuals, vocal solos, instrumental solos, and readings made up the program. An especially interesting feature was a community band made up mostly of juniors who are club members. The club members of the county later put on a full number on the Valley City chautauqua program.

Hettinger county showed the nature of its club work in a series of exceptionally strong programs in which 16 demonstrations teams took apart. Two district programs were held and teams were chosen in agriculture and home economics to represent the districts in a third community get-together day.

Clothing work was represented by demonstrations of "Proper care of clothing," "Short-cuts in clothing construction," "Proper use of patterns," "Selection of garments as to proper combination of colors suitable to the wearer," and "Making of paper hats." This latter demonstration was said by feminine admirers to be especially practical. Hats made by club members to match any dress or complexion were exhibited. The cost ranged from 14 cents to one dollar.

A riot was nearly precipitated in one case when the audience was invited at the close of the demonstration to sample the appetizing potato dishes prepared by the team during its demonstration. Other subjects demonstrated were "Canning to balance the winter diet," "Proper testing of milk," "Making cheese from surplus milk," "Marketing of graded eggs," and "Pit silo construction." Specific instances were cited of poultry club members actually getting five cents per dozen for eggs above the market price as a result of offering a standardized product for sale. A pit silo team left no doubt as to the value of a silo on the average North Dakota farm and as to the proper, method of building a pit silo. The team showed the different steps by constructing a minature silo. In each case, the demonstrations were connected in some way with the project being carried by the club members at home.

Training Future Leaders.

The value of the work is realized when one considers that a large number of members receive training before the individuals were selected to represent the club. In addition, is the training for leadership secured by the members and the development of community life. Because of the physical impossibility of the club agent to supervise the development of all the teams in the county; it was necessary for each club to take the initiative. Good sized audiences of adults and juniors attended all of the meetings.

Another phase of club work relating to livestock was also recently shown in a series of stock-judging schools conducted by the club agent in Walsh county in which over 100 club members took part.

Visitors at the State Fair will be given an opportunity to see the products produced by club members as well as free public demonstrations by champion teams from 15 counties by about 30 teams.

APPETIZING MILK DRINKS FOR SUMMER

Milk drinks are easily prepared at home and are more nutritious than the ordinary hot weather drinks. They may be made to suit everybody's taste.

Use about 2 teaspoonfuls of syrup for each drink, using ¾ glass of milk. Sugar may be added to suit taste, but it is syrup usually gives the sweetness. Add the milk to the flavoring rather than the flavoring to the milk. A small stream of charged water is an addition to these drinks. All mixtures should be well shaken or whipped. A fruit jar makes a good device for shaking. A little nutmeg or cinnamon sprinkled over the top of any of these drinks makes them even more appetizing.

Macaroon milk may be made by sifting crushed macaroons over the top of the milk. Vanilla, root beer, maple, chocolate, strawberry, pineapple, grape, orange, raspberry, and cherry syrup may be used as flavoring. To make milk juleps, add ⅔ glass of milk to about 2 teaspoons syrup, then break an egg into the glass, shake thoroughly and add charged water if available. Use a whole egg with cherry, root beer, chocolate, strawberry, or pineapple syrup.

When mother's heart is in her shoes, and her feet hurt, and the view out the window is only "those same old fields," that's a pretty good time to get out the paint brush and brighten up the kitchen.

Rutabaga and turnips require cool, moist season for their growth and are often found to be woody and strong after a hot season. Watering these plants during growth will be a big aid in making the vegetable more edible.

POULTRY

COMPARE MERITS OF BREEDS

In Culling Operations in Indiana Standard Bred Hens Show Superiority Over Mongrels.

(Prepared by the United States Department of Agriculture.)

In Knox County, Ind., half the number of flocks of hens culled under the supervision of the county agent, employed co-operatively by the United States Department of Agriculture, the State Agricultural college, and the county, were standard bred and the other half mixed breeds, so their comparative merits could be considered through culling.

The 9 standard bred flocks numbered 1,087, while the 9 of mixed flocks numbered 1,103, or 16 more hens. The week before culling, the standard bred hens laid 2,906 eggs and the mixed breeds 2,547, or 352 less. In culling, 314 standard bred and 355 mongrel hens were removed from the flocks, leaving 773 standard bred and 738 mongrels, or 35 more standard breds. Two owners of the standard bred flocks, being breeders, culled much closer than the owners of the mixed flocks. The week after culling the standard bred hens laid 2,724 and the mongrels 2,433 eggs.

Mixed Flock of Hens.

The figures show that among the 1,087 standard bred hens there were 41 less culls than among the 1,103 of the mixed flocks, and that they laid 359 more eggs the week before culling and 291 more the week after.

CONTROL OF CHICKEN PESTS

Application of Blue Ointment Will Prove Efficacious, as Will Sodium Fluorid.

A study of the life of chicken lice shows that there are a dozen different kinds infesting the same bird. Most of them, however, frequent the rear part of the body at least once in every twenty-four hours where they obtain the necessary moisture for their life and growth. This moisture is obtained from around the vent. This habit of lice would answer one method of treatment, the use of blue ointment.

Blue ointment applied around the vent and under the wing of each fowl affected seems to get rid of the lice in a very short time. A piece the size of a good sized pea is plenty for one bird. If the blue ointment is thick and heavy it should be melted so that it can be applied in a very thin layer. It is well to make a second application two weeks after the first, especially if the birds are badly affected.

Any of the advertised lice powders and many of the home-made powders seem to work very well. Good dust wallows handy to the poultry house also aid considerably in controlling this pest.

Sodium florid can also be used to control lice. This is a common preparation which can be obtained at any drug store. It is applied by what is known as the pinch method. A pinch should be worked into the fluff of the tail, a pinch under each wing, a pinch on the back, and a pinch worked into the neck feathers.

POULTRY NOTES

Regularity in feeding is one of the secrets of success with fowls.

• • •

The tamer the flocks the more valuable and profitable they usually are.

• • •

Separate the sexes at eight weeks old, or as soon as sex can be determined.

• • •

Do not expect to hatch more than 75 per cent of the total eggs incubated, either in machines or under hens.

DAIRY HINTS

CONTESTS IMPROVE QUALITY

Demonstrations in South Carolina Have Done Much to Promote Dairy Industry.

(Prepared by the United States Department of Agriculture.)

County and state butter contests, a feature of South Carolina extension work for women last year, accomplished much in the way of improving the dairy industry there. South Carolina is not a dairy state. It uses annually about $14,000,000 worth of dairy products shipped in from other states. Some of this importation is due to the fact that while there is a large amount of farm butter produced within the state, no steady demand for it has been developed. For the purpose of creating an interest in this farm-made butter, and to teach the women to make a better product, contests which were open to home-demonstration club members were started during 1921 in 11 counties.

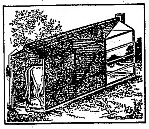
Butter demonstrations were given in all the women's clubs, and all interested persons were invited to a demonstration by the state specialist at the county seat. Three hundred and sixty women and girls enrolled for the contests, and of these 120 sent butter for every judging. Without exception there was a great improvement in the packages brought to market and the quality of the butter sold, as the women learned to what extent the butter is affected by the temperature used for ripening and churning, the care and cleanliness in handling, and the feeds for the cow.

"Contest butter" sold very readily at the various club markets, and those who did not enter the contest were obliged to make improvement in the quality of what they offered for sale or lose the market for their butter. Extension workers report to the United States Department of Agriculture that the butter produced in all parts of the state has been perceptibly improved as a result of these contests.

TRAP KEEPS COW CONTENTED

Kansas Farmer Designs Odd Contraption to Keep Flies From Milk Producers.

Along with keeping his hired help contented the farmer must also keep his cows "contented," if they are to give their maximum production of milk. A Kansas farmer, who believes that bovine contentment depends largely upon keeping the animals free of flies, has invented an odd flytrap for that particular purpose. The cow enters and walks through the cage, and the flies are brushed off by brushes that protrude from each side. The flies, or most of them, in their attempt to escape, are caught in a specially designed trap on the top of the inclosure.—Popular Mechanics Magazine.



A Special Flytrap, the Invention of a Kansas Farmer, Brushes Flies From Cows and Imprisons Them in a Trap at the Top of the Contrivance.

DESTROYING LARVAE OF FLY

Caution Must Be Used in Applying Chemicals to Manure Piles to Conserve Value.

There are many ways of combating the fly nuisance. On farms, the manure piles are probably the chief sources of fly infection. The use of chemicals in destroying the larvae of the fly in manure piles is one of the important ways of keeping this insect under subjection. However, one must be cautious inasmuch as a too liberal use of some of the chemicals will destroy the fertilizing value of the manure.

FACTORS IN DAIRY FARMING

Of Great Importance That Barns and Utensils Be Clean to Add to Creamery Check.

Good clean barns, clean milking practices, and clean dairy utensils are three essential factors in dairy farming, whether for the man who is making it his sole business, or the farmer who uses five to ten cows to add the creamery check to his income for the month, along with other farming work.

GREEN MANURING ONE OF OLDEST METHODS USED TO IMPROVE SOIL

Although green manuring is one of the oldest methods used to maintain or to increase the productivity of the soil, there have been enough new developments in the practice and in the plants used for the purpose in recent years to make desirable the publication by the United States Department of Agriculture of Farmers' Bulletin 1250, Green Manuring, by C. V. Piper and A. J. Pieters.

The subjects discussed range from a definition of the term "green manuring," which means "the turning under of any crop, while green or soon after ripening, for the purpose of soil improvement," to descriptions of the many crops that are used for land betterment in most regions of the United States and in some other countries. The use of special green-manure crops, says the bulletin, is much more general in the South than in the North. In the semi-arid regions, for reasons made clear, under dry farming green manures are not used, but in irrigated areas in the West orchardists depend upon them to a great extent to increase the yield of fruit.

Crops Benefit Soil.

These crops that are grown primarily as roughage for feeding the soil produce both chemical and physical effects that are of benefit to plants that succeed them. When a green-manure crop is turned under, the various fertilizing elements that have gone into the making of the crop are returned to the soil, and a quantity of organic matter not before in the soil is added, and, in addition to improving the physical condition, serves as food for beneficent bacteria. One of the most important functions of organic matter in the soil is to keep up the nitrogen supply. The bulletin gives three ways in which this is done: (1) Growth of nodule bacteria on roots of leguminous plants; (2) the making of nitrates by soil bacteria from organic nitrogen in the soil; and (3) growth of bacteria and molds that feed on plant waste in the soil and take nitrogen directly from the air. These processes may be stimulated by adopting the proper practices and suitable crops.

A Field of Soy Beans, a Good Home-Grown Feed, Rich in Protein and Excellent for Dairy Cows.

Satisfactory Cover Crops.

Legumes are of course the most satisfactory cover crops under most conditions, and all legumes do not have the same strain of nodule bacteria. For instance, that of clover is different from that of alfalfa, and that of the cowpea is distinct from that of the soy bean. These selective associations of plants and bacteria make inoculation of the soil necessary where the crop has not been previously grown, either by scattering soil from a field where the crop to be sown has been grown recently or by using an artificial culture. A strain of bacteria will often inoculate different closely related legumes. Alfalfa, bur-clover, and sweet clover nodules are produced by the same strain; a different strain inoculates most of the vetches, as well as the field and garden peas; still another strain is apparently used in common by red, white, alsike, and crimson clovers.

The question often arises, whether a crop should be turned under for green manure, fed on the farm, or sold as hay. The authors sum up the argument as follows: Where a forage crop can be grazed or advantageously fed and the manure returned to the land, this will be found most profitable. Where insufficient live stock is kept or where the soil is poor and in need of organic matter, a green crop may often be worth more if turned under. It is known that the turning under of a green-manure crop may effect the yield of subsequent crops even to the third year, and this fact should have weight when the question of selling a legume hay crop or turning it under is considered.

An Excellent Stand of Alfalfa.

Green manuring in some form should be part of the regular farm practice on most of the farms east of the hundredth meridian and on irrigated land elsewhere. Rotations should be arranged so as to work in a green-manure crop between regular crops without sacrificing direct money or feed crops. Preference should be given to a legume if possible. The value of these crops is determined by the quantity of humus formed, measured by the tonnage of the crop, the physical changes brought about in the soil, and the quantity of nitrogen taken from the air and added to the soil. There are probably other factors that are as yet but little understood. It is said that green manure in orchards checks certain diseases and improves the quality of the fruit.

Order of Importance.

The leguminous crops grown in this country listed in the bulletin in order of importance are: Red clover, alfalfa, alsike clover, sweet clover, cowpeas, peanuts, soy beans, velvet beans, crimson clover, field peas, vetch, Japan clover, bur clover, and white clover. A few others, such as beggarweed, grass peas, fenugreek, and horse beans are grown to a small extent in restricted localities. Non-leguminous crops that are considered as useful green manures are grasses, buckwheat, weeds, and some plants of the mustard family that are used more in Europe than in this country.

The bulletin contains more than 40 pages of valuable information on these plants and the ways of handling them; also tables of results that show their value in increasing returns. A copy may be obtained free by addressing the Department of Agriculture, Washington, D. C.

ERADICATION OF ALL WEEDS

One of Most Serious Agricultural Problems Is Prompt Destruction of Noxious Plants.

There is nothing which has a graver menace to agriculture than our noxious weeds. It is all right to think of serious marketing problems and economic subjects, but the solution of these is not a bit more important than the prompt eradication of Canada thistle, quack grass and other noxious weeds. Town, city and village must lend mutual strength to the warfare on weeds. It is a community problem, a personal issue.

Range Helps Health.

Wherever there is land enough for the fowls to enjoy a good range, they will keep healthy and thrifty and pay extra good profits.

Biggest Profit in Crops.

There is more profit in growing crops on one acre of fertile soil that has been thoroughly tilled than there is in the three acres of infertile soil.

ROBBING SOIL OF FERTILITY

Of Utmost Importance That Land Be Kept Fertile With Manure and Phosphorus.

If farmers continue to rob the soil of its natural store of fertility, what is the next generation of human beings going to do for food? Our best soils can produce profitably only 30 to 40 years unless they are kept fertile with manure, clovers, and finally phosphorus.

Prevent Bloat in Cattle.

The surest way of preventing bloat in cattle that are turned on clover or alfalfa pasture in the spring is to see that they are fairly well filled up on dry hay or blue grass pasture before allowing them to graze the clover.

Oats and Peas Together.

Sow oats and peas together and cut after oats are nicely headed. They yield a heavy crop of good hay besides being the best kind of a nurse crop for new seeding.

EDITORIAL

THE "350 POUND COW"

(By W. W. Brooks)

The most profitable cow for the farmer who farms under general conditions is the cow that will produce about 350 to 400 pounds of butterfat during the milking year. This cow at present prices of butter and general expense of care and feed will return about 30 cents per hour for the farmer's time in caring for her. This is good pay and a number of such cows will soon put a farmer on easy street.

Of course, as the general conditions of the farm improve, the producing ability of the cows can be made to increase also. I am talking about the kind of cows that pay best under general farm conditions in our country at present. I know of no farmers whose farms are on any kind of a dairy basis at the present time who are not ready for the 350-pound cow and for that reason the program or every farm in Todd county ought to be to grade the herd up to that standard. This is not a hard thing to do. Crossing the common cows of the herd now with the best dairy bull possible to use will, in a couple or three generations, bring the herd up to that producing ability. There is nothing about this program that every farmer in our county cannot accomplish if he only has the will to accomplish it. Let your program be: "Every cow on my farm a 350-pound cow."

If you will carry out such a program, hard times will mean little or nothing to you and you won't have to worry about what "big biz" is trying to do to you. As a matter of fact, "big biz" is the bogie man who is able to bother only the farmer who does not farm right. And like the bogie man who scares children, "big biz" is a useful individual to scare farmers who farm in such a manner as to play into his hands. The farmer who farms to "finish" his products on the farm; that is, if he is a dairyman, who farms to produce the largest amount of butterfat possible and who farms so as to cut down his feed bill in order to cut down the expenses and then who co-operates with his neighbors and his community and his county and state to build up co-operative marketing enterprises so that he controls the marketing end, can snap his fingers at Wall street, "big biz" and all the rest of the same crowd. The best way to get the drop on "big biz" is not necessarily to vote the Socialist ticket—it seems to me that the best way to beat "big biz," and beat him good and hard, is to make every cow on Todd county farms a 350-lb. cow, then raise every pound of feed of every kind on the farm that it is possible to raise, then work together to build up our co-operative marketing system. This program as carried out will leave "big biz" outside the breastworks so far that he won't try to bother us.

THE REVOLT FROM HOUSEWORK

A bunch of college students who were doing the domestic work at a camp recently wrote a song on "The Dishwashing Blues." What would they have said, if they were told that washing dishes was to be their daily occupation for many years, perhaps for a life time? They would have scorned such a pursuit. Yet that is the prospect that the average girl must face, if she contemplates marriage.

The distaste for housework is said to be one leading cause of divorce and marital unrest. The more sentimental and cultivated a girl is, the more she may revolt from these tasks that she feels are contrary to her nature. She secretly envies her husband, who can go out and meet interesting people in the field of business, while she has to stay at home and struggle with the dirt and distaste of homekeeping.

Many women are born housekeepers. They find joy in the triumphs of the kitchen. It makes them happy to see a toothsome pie eagerly consumed by the family, and they are as pleased as the cultured lady when her literary paper is applauded by the club. The details of homekeeping are a subject of inexhaustible interest to them. They take pride in their spotless management.

It is a rather happy point of view for a woman to attain and such women are tremendously useful in the world, even if they can't read papers at the club. But not all share that point of view; particularly those who have more intellectual tastes. For such women the drudgery of housework may always be a trial.

However, it is not to be despised as mere humble and prosaic work. It is a fine art, and the women who perform it well and speedily has a right to the same pride that the skilled workmen feels in the work of his hands. Husbands should remember that many wives do not enjoy housework and should provide their families with the best labor saving appliances so as to make it as easy as possible.—Ex.

OUR TOWN.

Our Town is the town of happiness. We strive for something more than business. We strive for friendliness, one with another, which makes life worth while. We have a family circle in which every inhabitant counts one. Our motto is: One for All and All for One. And we want to play the same game with our neighbors everywhere. Life is the game of Brotherhood, and Our Town is building on that basis.

THE GREAT LAKES PROJECT.

Julius H. Barnes of Duluth, president of the United States Chamber of Commerce and widely known as a wheat expert, makes a study of the Great Lakes Seaway project for the Review of Reviews that deserves careful consideration. He declares that this project is now running a gauntlet of opposition similar to that which the Panama Canal scheme faced at its inception, and equally unwarranted.

Mr. Barnes does not see this project as something entirely new and experimental. There is already an enormous traffic moving by way of the Great Lakes. For a thousand miles these Lakes now furnish a very cheap and efficient freight-way. They have been enabled to do this by reason of engineering improvements. Wheat is carried over this thousand-mile waterway for two cents a bushel, but at Buffalo it is forced to return to land carriage at seven or eight cents a bushel for the trip to New York.

The Great Lakes Seaway project does not involve adventuring into a new and untried field. It means merely a three hundred mile extension to the present waterway system, and this has been pronounced entirely feasible by the Joint International Commission.

It would mean a saving of from five to seven cents for these three hundred miles on every bushel of wheat shipped from the Middle West to the Atlantic ports. The importance of this can hardly be overestimated, at a time when a slight difference in the freight rates makes a vast difference in the flow and prices of essential commodities.

Mr. Barnes, speaking not as a Westerner, but in the light of large experience with grain and transport problems, is convinced that the more carefully this project is studied, the more feasible and promising it will prove to be, not only to the grain producers of the West, but to consumers in Eastern markets and across the water. The project takes on added importance in view of the impending freight car shortage, which will, at best, take some time to remedy.

DEFECTS IN EDUCATION.

Many people who at this time are beginning work for the first time realize that there are wide gaps in their education. When the stenographer has letters handed back with misspelled words, when the store clerk makes errors in his arithmetic that seem careless or ignorant, they lament some idle days spent in school work.

But young people who are determined to rise never worry much about such defects. A few hours a week of reading and study at home will put them in advance of many who have had better opportunities, but who have frittered them away. The early years of people's business careers should be a time when they make a special effort to remove these defects of education. If they do not do so then, they probably never will.

THE SWEEP OF ADVERTISING.

Some tremendous campaigns of advertising on a national scale are now sweeping across the country, and they have many suggestions for the local merchant. One magazine has increased its circulation from 450,000 to 1,500,000 through such advertising. There are many business houses that never before used much newspaper space that are doubling and tripling their advertising appropriation for this year.

Campaigns like that indicate what a tremendous force is found in publicity. The people have their eyes wide open to find the best goods and the best service. They are interested and impressed by any man who has the enterprise to talk about his goods, and tell people what he has and what it costs.

Be a genuine merchant—and show folks that you are actually in the selling game.

The only train holdup France ever knew occurred not long ago. The gentleman who did the holding up was guillotined last week. There will be no others.—Minneapolis Journal.

A lot of fellows who think they are pretty good debaters down town, never went home and won an argument with the wife—and never will.

It is a libel to say that women lack a sense of humor. If they couldn't take a joke, how few of them would ever get married.

The man who fights about every little thing, won't have any punch on the day he ought to put up a real battle.

Don't swell up if some one calls you "General." According to the dictionary, it means: Nothing in Particular.

The easiest thing in the world to do is to make trouble—and it's the most foolish and wasteful thing.

The days move rapidly, but not so fast that we cannot grab the joy upon their wings.

Playing the other fellow's game is still one of the favorite routes to the poorhouse.

You'd think a pessimist would be cured as the morning pelted him with a bird song.

There is too much religious discussion and not enough religious living.

Many a flapper who thinks she is dressed up needs a dressing down.

1,006 LABORERS SENT TO FIELDS

Government Agency, Co-Operating With Farm Bureau, Obtains a Low Fare to Aug. 15.

Government employment offices in St. Paul, Minneapolis, Duluth and Superior, co-operating with the Farm Bureau, last week sent out 1,006 farm hands to Red River Valley and North Dakota harvest fields. In one day the Minneapolis office sent out 391 men.

From August 1 to August 15, inclusive, farm hands are traveling from the Twin Cities or the Twin Ports to Northwest harvest fields for a flat rate of $5 a man. This rate was granted by the railroads after conferences with State and Farm Bureau officials of Minnesota and North Dakota, who made representations showing that a drastic fare reduction was the only way in which the farm hand shortage could be satisfactorily met.

The railroads agreed to carry men to any point designated by the government employment agencies for $5, provided five or more travel together.

J. D. Williams, industrial commissioner, directing the free employment service, expects to supply farmers with 3,000 or more men during the 15-day period.

Additional data received by F. L. French, secretary of the Minnesota Farm Bureau Federation, who is making a labor survey of the state, bears out earlier indications that the Red River Valley is the only section of the state where there is a farm hand shortage.

THE GIRL AND HER CAREER.

What are the ambitions of the modern young girl? What does she see herself doing in life, and what shape do her aspirations take?

The Y. W. C. A. in one city has been trying to find out, and to do so it sent out cards to 525 high school girls, asking them what they planned to make of themselves, when, at commencement, the high school doors sent them forth for the last time, to enter upon the next chapter in the business of life.

There were several very interesting results. The preference professed covered a very wide variety of callings, but these things stand out of the net results.

First—Not one of these 525 girls planned to become a moving picture actress.

Second—Only one girl professed a wish to be an actress in the spoken drama.

Third—Only one girl spoke up for marriage as a career.

These facts are rather notable. It is saying a good deal for the stability and common sense of these girls that in the face of the fabulous salaries reported to be paid to headliners of the films, and the motor cars and fancy dogs and wonderful homes and luxuries these salaries are reported to bring, none of them chose the screen as a career. That only one of them wanted to be an actress is also interesting, for before the careers open to women widened there would have been many more to choose that attractive field which is nothing like the bed of roses it seems to the dreams of youth.

But the outstanding fact is that only one spoke of marriage as a career. Nothing could more clearly reveal the change that has come from the time, not so long ago, when since marriage was about the only career open to women, most of these girls, if they had been frank, would have admitted that was the career they looked forward to. Of course, far more than one of these 525 will find that marriage is the career to which she is destined, and it is to be hoped that all of them, whatever form their self-expression may take in the choice of a career, will marry also. There is no reason why they shouldn't.

Nursing attracted many. Sixty-seven planned to be teachers, not counting several who wanted to be kindergartners. Fifteen chose the law and ten medicine, two pharmacy. One with an eye to business wanted to run a beauty parlor. A considerable number chose literary work and social service, and interior decorating, short story writing and newspaper work each claimed a few. One wanted to be a companion to an old lady.

On the whole, though one might have preferred to see a larger representation of the arts in this list, the showing reflects a great deal more stability and common sense than is being credited to girl youth by those who are talking—altogether too much—about the modern girls habits and clothing.—Duluth Herald.

How The Master Driver Became Master Tire Builder

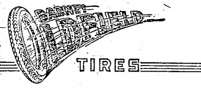
In 1903, driving the "999" racing car, Barney Oldfield started his career of victories that later earned him the title of "Master Driver of The World." To overcome the tire weaknesses that made racing difficult and dangerous, he studied tires—specified materials—supervised construction.

Today, Barney Oldfield is known as the "Master Tire Builder." Starting with the crude tires which carried the "999" one mile in sixty seconds, Oldfield gradually developed his famous Cords—a set of which covered 500 miles at eighty-eight miles an hour without a change.

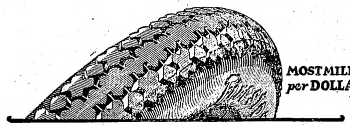
In three years Oldfield tires have won every important race on American speedways. They are the only American tires that have ever taken first place in the French Grand Prix. They have won for three consecutive years in the 500-mile Indianapolis Sweepstakes. So far in 1922, Oldfields have lowered four World's Records and seven track records.

The Wichita Test Run gave evidence of Oldfield superiority in touring—when a set of four Cords covered 34,525 miles over rutted, frozen, winter roads—a performance attested by the Mayor of Wichita.

See your dealer and get a set of these rugged tires that Barney Oldfield has developed and perfected through a lifetime of practical tire experience. Their performance will convince you that they are "The Most Trustworthy Tires Built."



TIRES



Firestone

GUM-DIPPED CORDS

~and Their High Mileage Records

The high mileage records of Firestone Cords continue to emphasize the fact that Firestone methods are different and better. These records, steadily increasing in number and in mileage totals, justify the Firestone contention that there is one best way to build tires.

Among the primary sources of Firestone extra mileage is double gum-dipping—the saturation of the cord plies in a vat of liquid gum—thus coating each cord and virtually eliminating internal heat and friction.

Another is Firestone air bag curing, with its 200 pound pressure, which places every cord accurately and equalizes the tension.

By blending the rubbers of different plantations, and types, and by tempering it before mixing, Firestone men add still more mileage.

Many cord tires are good—a few are better—Firestone users say one is best.

Those who have already experienced Firestone mileage, have stopped shopping and experimenting—they have made these cords standard equipment. Investigate your friends' success with Firestone Cords—and buy your next tire accordingly. Come in and get your share of extra mileage.

FARMERS ACT TO SPEED MARKETING

Conference Creates Committee of Five in Effort to Set Up Grain Sales Agency at Once.

Acting under orders to take all practical steps to establish a co-operative grain sales agency on the Minneapolis market at the earliest possible date, a committee of five Minnesota agricultural leaders is working at top speed in an effort to provide immediately the necessary facilities for handling the farmers' grain co-operatively.

The committee was created by a conference of representatives of farmers' elevators, county Farm Bureaus, the state Department of Agriculture and the Minnesota Farm Bureau Federation, in session in St. Paul on August 4. J. F. Reed, president of the Minnesota Farm Bureau Federation, was unanimously elected chairman of the committee. The other members are N. J. Holmberg, state commissioner of agriculture; T. E. Cashman, member of he Minnesota Farm Bureau Federation's marketing committee; T. H. Hagen, farmer and former grain man, and H. C. Lau, director of the U. S. Grain Growers, Inc.

The conference met in response to a call sent out by the Farm Bureau, urging farmers' elevators and all friends of co-operative marketing to come together and work out some plan for handling the 1922 harvest co-operatively for farmers who have joined the U. S. Grain Growers, and other who desire to market co-operatively, in case the U. S. Grain Growers is unable to function this fall. The committee of five was empowered and instructed to make the most rapid and thorough investigation possible to determine the best means of providing a co-operative sales agency immediately. With a committee representing the state Farm Bureau Federation of the midwest in session at Chicago, attempting to get a sales agency of the U. S. Grain Growers into operation at once, it was understood that the Minnesota committee would consider the handling of grain through the Grain Growers.

Plans as proposed by a re-organization committee of the U. S. Grain Growers, as well as one suggested by the state department of agriculture, were commended to the consideration of the Minnesota committee of five. The first consideration, Mr. Reed said, is speed in providing some practical means of handling grain co-operatively without delay.

To be worthy of the friendship of children and dogs—this is about the highest goal a man can set for himself.

ASKS INCREASE IN LOAN LIMIT

Federal Land Banks Should Be Able to Loan Up to $25 000, Says J. F. Reed.

Active steps to obtain legislation increasing the loan limit of Federal Land Banks from $10,000 to $25,000, were taken last week by J. F. Reed, president of the Minnesota Farm Bureau Federation. In 300 letters to presidents, secretaries of county farm bureau associations and county directors of the state federation, he urged that Minnesota senators and representatives be asked to support amendments to land bank laws now pending in Congress.

"In many places in Minnesota, the maximum of $10,000 now allowed, is insufficient to meet farmers' demands for capital investment needed in acquiring lands or making improvements," the letter says. "It is proposed to raise this limit where the security is sufficient. It is generally agreed by all interested in the welfare of the farmer, as well as those posted in good credit facilities that this change should be speedily made."

Sunday, August 13: The congregation is invited to attend the Mission Festival at Wylie, where the pastor will preach. Sunday, August 20: The parish will celebrate its annual Mission Festival in the Goodridge schoolhouse. Rev. Wiedenhaefer of Wylie and Rev. Fedcke of Mahnomen will speak. German services at 10 A. M. English at 2:30 P. M. Come and bring your lunch with you. Coffee will be served in the basement. H. Lutz, Pastor.

THE ADVENTURER.

When the clean tides of Death have washed my soul
High on the purple sands of some new shore
Beyond the sea-surge and the tempest's roar
Where never thunders of the main shall roll
To lure me back to wandering, what dole
Of curious adventure shall restore
The urge and ardour of the winds that bore
My restless dream toward a restless goal?
I who have followed every bounding breeze
And camped in all the trenches of the snows,
Knowing life only by its stings and scars,
In the vast bush of all eternities
I crave not scented harbors of the rose—
Let me crush on to new and lonely stars!

ACTION! SPEED! THRILLS APLENTY

World's Greatest Features Engaged by Minnesota State Fair Sept. 2 to 9.

Action! Speed! Thrills!

These three words—in a nut shell—describe the $100,000.00 entertainment program which will feature the coming Minnesota State Fair—Twin Cities—September 2 to 9.

Never before in the history of the Northwest has there been an attempt to stage such a stupendous amusement bill as will be presented each day at the State Fair. So many novel features have been engaged that visitors will be dazzled.

Exciting horse races; thrilling automobile races; a spectacular aerial circus; twenty-five big vaudeville acts; a gorgeous fireworks spectacle; auto polo, pigeon races, horseshoe pitching, a midway with twenty big attractions, and a dozen big bands and orchestras will be among the leading features on the program.

A slip of a school girl, just turning 18, Miss Lillian Boyer, of Chicago, will headline the aerial circus, which bears her name. Miss Boyer is the only woman who successfully changes from a speeding automobile to a low-flying airplane, with both car and "ship" going at 60 miles an hour.

As part of the evening show, Pilots Brock and Faulkner will stage an aerial battle. Using specially constructed planes, illuminated by fireworks, they will bomb the fair and perform other hair-raising maneuvers depicting modern warfare.

Lovers of harness horse racing will enjoy themselves to the limit on four days, Monday, Tuesday, Thursday and Friday, September 4, 5, 7 and 8. More than 400 horses have been entered in various events, and the best racing in years is forecost. The management is offering $22,000 in purses.

The world's fastest automobile—the Wisconsin Special, built in Minneapolis last fall—will be seen in the big automobile races that have been carded for three days of the fair. Sig. Haugdahl, the blond Scandinavian speed king, who piloted his freak machine over the Daytona Beach course faster than three miles a minute, will go after all records, including the world's circular dirt track record, with his new car.

Many a lad with a love for moonshine will never again see the sun shine.

Folks who live in glass houses ought not to invite stone-throwing.

OUR TOWN.

Our Town is a democratic town. It recognizes no aristocracy save that of character and merit. There is no class divisions. There is no artificial style, with fradulent barriers set up between one person and another. We care not how people dress, if the garments of their souls are clean. We are not interested in their lineage if their hearts are true. We do not worry about their education so long as they can read and write the language of humanity. Every man, woman and child is inside the Family Circle, and we all mix together on the basis of living earnestly and honestly for the common good. Our town belongs to all and not to any chosen few.

DEATH BY SUICIDE

Dominick Kipta, a well known farmer living in the town of Hartford, five miles north of Brownsville, committed suicide on Wednesday of last wek by shooting himself through the head with a 22 caliber rifle. The act took place in a small wooded pasture about a quarter of a mile west of his house and at about 11 o'clock in the morning. His body was found at noon. There is no reason for the suicide. He had been working in the fields during the morning, when he suddenly quit work, went to the house, took the rifle and went out into the pasture. When he did not return search was made with the result that his body was found where he had shot himself. Mr. Kipta was well to do financially, had built up a fine farm and apparently was in good health and spirits. He was about 62 years of age and is survived by four children. His wife died about twenty years ago.—Long Prairie Leader.

BAD HAIL STORM

The drought in central Todd county was broken last Thursday by a hard rain accompanied by hail. In the village of Long Prairie the rain was the hardest in years, the strets being flooded and some damage done. A hail storm which began in about the central part of Reynolds and swept southeast through Round Prairie, did a great deal of damage. Some astonishing stories are told about the size of the hail stones and their quality. At the John Swanson farm in Reynolds the hail lay on the ground for six hours after the storm, while many people gathered hail stones that were larger than ordinary eggs. On some of the farms the hail punched holes in the ground several inches deep and without doubt would have killed people had anyone been unfortunate enough not to have been able to get under cover. The hail fell over a strip of land about a mile wide and about ten miles long and was one of the most serious hail storms the country has experienced in years.—Long Prairie Leader.

THE LIVING.

The kings and crowns are turned to dust,
And monuments above the great
Are dim with age, and red with rust,
Their names no longer radiate;
But loving hearts whose kindness fell
Like sunshine on Time's weary way
Still move men with their magic spell
And fill the world with song today.

DAIRY SHOW OCT. 7-14.

W. E. Skinner, secretary of the National Dairy Association, has opened offices at St. Paul and has a staff at work making arrangements for the National Dairy exposition to be held October 7 to 14 at the Minnesota fair grounds. Indications point to the largest show in the history of the dairy industry in this country.

AN IDEAL.

If we laugh, love and dream as we journey along,
And tickle the world in the ribs with a song—
We shall find when the shadow falls over the day,
Life still holds a glory Age steals not away;
Fouth's music may hush and its visions depart
But the song and the dream still abide in the Heart.

THE PLAYMATE.

In the far-off years that held no tears,
When the bee to the blossom clung;
Ere the rose was fled, or the dream was dead,
And the world was white and young,
I met a lad who was clean and glad
And we mated eternally—
He called one day from his house, to say:
"Come over and play with me."

And over I went, and a new content
Spread over my heart like a sun—
I found in his face the morning's grace
And his heart was sweet with fun.
The years went by like a lullaby,
And whatever his life might be
We could not part, for I'd hear in my heart:
"Come over and play with me."

Now I'm old and gray, and the closing day
Falls over my drooping head;
But a joy divine in this heart of mine
Still keeps me comforted;
From the far sky-ways where he waits and prays
There drifts o'er the tideless sea,
The accents clear of his olden cheer:
"Come over and play with me."

IMPORTANT DON'TS.

Swim all you can this summer, but never on a full stomach, or if overheated or extremely tired.

Learn how to rescue drowning persons, but never pretend yourself to be drowning; you may really need help some day and not get it.

Learn to paddle your own canoe, but never rock the boat to scare the other fellow; this has caused the death of thousands of boys and girls.

Fly kites, but don't use copper wire instead of twine; scores of boys have been electrocuted when their kite wire came in contact with electric wires; also don't climb telegraph poles to recover entangled kites.

Don't be a jay-walker; in the city cross streets at regular crossings, never in the middle of the block; when walking on country roads, keep on the left instead of the right hand side of the road so you can see approaching vehicles.

Success seems to like to come to the man who hasn't forgotten how to smile.

SCORES OF BIG FEATURES
AT THE
MINNESOTA STATE FAIR

$1,500,000.00 Livestock and Poultry Show.
Biggest Farm Products Show in the World.

MRS. ABBEY PROUD OF HER BIG GAIN

Weight Increased 39 Pounds and Nine Years' Trouble Ended.

"I hardly see how I endured such awful suffering, and if it hadn't been for Tanlac I don't believe I would be here today," said Mrs. Mollie Abbey, of Jennings Lodge, Ore.

"For nine years everything I ate caused gas to form so that it almost drove me distracted. I didn't dare eat any fruit and for four years if I even drank a glass of cold water I would suffer dreadfully. No one who didn't see me can imagine the awful condition I was in.

"But Tanlac changed all this and now I'm simply feeling fine. My appetite is splendid. I eat anything I want, have actually gained thirty-nine pounds and have so much strength and energy I easily do all my housework. Tanlac is a wonderful medicine."

Tanlac is sold by all good druggists. —Advertisement.

The Salary of M. P.'s.

The salary of an M. P. is £400 (nominally $2,000) a year, on which he has hitherto paid income tax. As an income this is inadequate, but in the days of anti-waste campaigns both ministry and house of commons shrink from increasing it. But the law officers of the crown suddenly discovered that an M. P.'s expenses may legitimately be reckoned against his income, so that the poorer of them will now pay no tax at all. A happy issue, relieving the poor M. P., endearing the government to his grateful heart and throwing no odium on parliament ministry, since it seems that this is the ordinary law and always was, although no one suspected it till a few weeks ago.—New Republic.

"UPON MY HONOR!"

SYNOPSIS.—During the height of the New Orleans carnival season Jachin Fell, wealthy though somewhat mysterious citizen, and Dr. Ansley, are discussing a series of robberies by an individual known as the Midnight Masquer, who, invariably attired as an aviator, has long defied the police. Joseph Maillard, wealthy banker, is giving a ball that night, at which the Masquer has threatened to appear and rob the guests. Fell and Ansley, on their way to the affair, meet a girl dressed as Columbine, seemingly known to Fell, but masked, who accompanies them to the ball. Lucie Ledanois, recently the ward of her uncle, Joseph Maillard, is the Columbine. At the ball, Bob Maillard, son of the banker, again proposes to her and is refused. He offers to buy some of her property. A Franciscan monk interests her. He turns out to be Prince Gramont. In his library Joseph Maillard and a group of his friends are held up and robbed by the Midnight Masquer. Lucie Ledanois, the last of an old family, is in straitened circumstances. Joseph Maillard's handling of her funds has been unfortunate. Fell is an old friend of her parents and deeply interested in the girl. Henry Gramont, really the Prince de Gramont, is enamored of Lucie. Lucie talks with Fell about her affairs and the Masked Masquer. Gramont's chauffeur, Hammond, sergeant in the A. E. F., lives with him. He was the original Midnight Masquer, and Gramont had assumed the role. Where Hammond had been a robber for financial gain, Gramont, of course, is not. He arranges to return the "loot" to those whom he has robbed. Gramont and Hammond put the jewels and money in individual packages to be returned the next day. An explanation is inclosed in each. Ben Cacherre, an individual of unsavory character, appears to be associated with Jachin Fell. He has a peculiar interview with one Memphis Izzy Gumberts, notorious influential crook, in which there is significant reference to a mysterious "boss." Lucie summons Gramont to her home.

CHAPTER VII—Continued.

—10—

For a moment Gramont found himself unable to speak. He was thunderstruck by the sight of those unmistakable boxes. A glance at the calm features of the girl showed him that there was nothing to be concealed from her, even had he wished it. He was further stunned by this realization. He could not understand how the packages had come here. Recovering his voice with an effort, he managed to break the heavy silence.

"Well? I suppose you know what is in those parcels?"

She nodded. "Yes. One of them was opened, and the note inside was discovered. Of course, it gave a general explanation. Will you sit down, please? I think that we had better talk it over quietly and calmly."

Gramont obeyed, and dropped into a chair.

He was absurdly conscious of his own confusion. How had Lucie come into the affair? This staggered him above all else. Was she behind the theft of the loot? It must be. How long had she suspected him, then? He had thought Jachin Fell the sole danger point—he had never dreamed that this gray-eyed Athene could be tracing down the Masquer! He tried to visualize the situation more clearly and his brain whirled. He knew, of course, that she was fairly intimate with Fell, but he was not aware of any particular connection—

He glanced up at her suddenly, and surprised a glint of laughter in her eyes as she watched him.

"You seem to be rather astonished," she observed.

"I am." Gramont drew a deep breath. "You—do you know that those boxes were taken from my car?"

She nodded again. "Certainly. They were brought to me."

"Then you had someone on my trail?" Gramont flushed a little as he put the question to her.

"No. I have been chosen to settle affairs with you, that is all. It has been learned from the note in the opened box that you were not criminal in what you did."

She leaned forward, her deep eyes searching him with a steady scrutiny.

"Tell me, Henry Gramont, what mad impulse brought you to all this? Was it a silly, boyish effort to be romantic—was it a mere outburst of bravado? It was not for the sake of robbery, as the note explained very clearly. But why, then? Why? There must have been a definite reason in your mind. You would not have taken such dangerous chances unless you had something to gain!"

Gramont nodded slightly. A slight smile touched his lips. "You're not going to send me to prison, I trust?"

"I ought to!" The girl broke into a laugh. "Why, I can hardly yet believe that it was really you who were guilty of those things! It mortified me, it stunned me—until I realized the truth from the note. Even the fact that you did not do it for criminal ends does not relieve the sheer folly of the act. Why did you do it? Come, tell me the truth!"

Gramont shrugged. "The truth? Well, my chauffeur, Hammond, was the original Masquer. I caught him in the act—you remember I told you about him? After taking him into my employ, I became the Masquer."

"Why did you do it?" persisted the girl.

"Call it bravado, my dear Lucie. Call it anything you like—I can't lie to you! I had a motive, and I refuse to admit what it was; that's all."

"Aren't you ashamed of yourself?"

"Not particularly." He smiled. "I had a good end in view, and I accomplished it. Now that I'm all through, now that I've finished playing my little game, you happened to discover it."

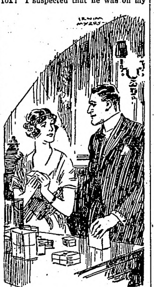
"I think you've been very silly," she said with a disconcerting calmness. He regarded her for a moment, steadily. "And you have displayed a fearful lack of judgment!"

"Silly! Well—perhaps. What are you going to do with those boxes?"

"I'll put them in the mail. I'm going downtown for luncheon, and will do it then. They'll be delivered this afternoon."

He nodded. "I had meant to have them delivered tomorrow; it makes no difference. You're the boss. It will give the good people a little more reason for jubilation tonight, eh?"

A sudden laugh broke upon his lips. "I'm beginning to see the humor of it, Lucie—and I know who put you next to me. It was Jachin Fell, the old fox! I suspected that he was on my trail, and I thought that he had managed the theft of those boxes. In fact, I was preparing to give him a big surprise this afternoon. But tell me, Lucie—are you angry?"



"No—Oil Is No Woman's Game, Unless She Can Afford to Lose."

She looked at him steadily for a space, then a swift smile leaped to her lips and she extended a pardoning hand. Her gesture and words were impulsive, sincere.

"Angry? No. I think you've some good reason behind it all, which you won't confide to me. I can read you pretty clearly, Henry Gramont; I think I can understand some things in you. You're no weakling, no romantic, filibustering crackbrain. And I like you because you won't lie to me. You've a motive and you refuse to tell it—very well! I'll be just as frank and say that I'm not a bit angry. So, that's settled!

"Now what was the big surprise that you just mentioned you were going to give poor Mr. Fell this afternoon?"

Gramont's eyes twinkled. "You remember that I thought he suspected me of being the Masquer? Well, I was going to him to propose that we enter business together."

"Oh! As bandits?"

"No, as oil promoters. I'm out of Maillard's company, or shall be out of it soon. The minute I'm out, I'll be free to go into business for myself. It occurred to me that if Jachin Fell had brains enough to run down the Midnight Masquer, he would be a mighty good business partner; because I'm poor on business detail. Also, I think Fell is to be trusted. He's very strong politically, I have found—although few people know it."

"But he's not interested in oil, is he?"

"I don't know; I take for granted that he's interested in making money. Most men are. The only way to make money in oil is to have money—and he has some! I have a little. I can put in twenty-five thousand. With an equal amount from him, we can sink a couple of wells, perhaps three. If we go broke, all right. If we find oil, we're rich!"

"But, my dear Henry, if he knew you to be the Midnight Masquer, do you think he'd want to go into business with you?"

"Why not?" Gramont laughed. "If he knew that I had brains enough to pull off that stunt and keep all New Orleans up in the air—wouldn't I make a good partner? Besides, I believe I have some notion where to go after oil; I'm going to examine your land first—"

"My good prince, you surely have no lack of audacity!" She broke into a peal of laughter. "Your argument about inducing Mr. Fell to go into business with you is naive—"

"But, as an argument, isn't is quite sound?"

"Possibly. Since it is Lucie Ledanois and not Jachin Fell who has brought you to a confession of your crimes against society—aren't you going to propose that she go into business with you? Doesn't the argument hold good with her?"

"No. Oil is no woman's game, unless she can well afford to lose. I imagine that you cannot, Lucie."

"You're right, I can't put in any money. I'm land poor. Unless I were to sell that Bayou Terrebonne land—it's an old farm, abandoned since before father died—"

"Don't sell it!" he exclaimed, quickly. "Don't consider any dealings with it until I have looked it over, will you?"

"Since you ask it, no. If there's gas near by, there must be oil."

"Who knows?" he shrugged. "No one can predict oil."

"Then you still mean to go to Jachin Fell with your scheme?"

Gramont nodded. "Yes. See here, Lucie—it's about noon! Suppose you come along and lunch with me at the Louisiane, if you've no engagement. We can put those boxes in the mail en route, and after luncheon I'll try and get hold of Fell."

She put her head on one side and studied him reflectively.

"You're sure you'll not kidnap me or anything like that? It's risky to become a friend of hardened criminals, even if one is trying to uplift them."

"Good! You'll come?"

"If you can give me ten minutes—"

"My dear Lucie, you are the most charming object in New Orleans at this minute! Why attempt to make yourself still more attractive? Gilding the lily is an impossible task."

"Well, wait for me. Is your car here? Good! I want to see Hammond's face when he sees us carrying out those boxes."

Laughing, the girl started toward the stairs. At the doorway she paused.

"One thing, M. le prince! Do you solemnly promise, upon your honor, that the Midnight Masquer is dead forever?"

"Upon my honor!" said Gramont, seriously. "The farce is ended, Lucie."

"All right. I'll be right down. Smoke if you like—"

In her own room upstairs Lucie closed the door and sat down before her dressing table. She made no move toward the array of toilet articles, however. Instead, she took a desk telephone from the table, and called a number. In a moment she received a response.

"Uncle Jachin!" she exclaimed. "Yes—it's just as we thought; it's all a joke. No, it was not a joke, either, because he had some motive behind it, but he won't tell me what it was. I'm terribly glad that you opened one of those boxes and found the letter—if you had gone to the police it would have been perfectly dreadful—"

"I never go to the police," said Jachin Fell with his dry chuckle. "You are quite satisfied that there is nothing serious in the affair, then?"

"Absolutely! He told me that he had accomplished his purpose, whatever it was, and that it's all ended. He just gave me his word that the Masquer was dead forever. Now, aren't you glad that you confided in me?"

"Very," said Jachin Fell. "Very glad, indeed!"

"Now you're laughing at me—never mind! We're going to lunch downtown, and we'll mail those boxes on the way, by parcels post. Is that all right?"

"Quite all right, my dear. Did your gown come for tonight?"

"It's to come this afternoon."

> "I don't care to have you offer any reflections on my actions, Maillard," said Gramont, evenly.

(TO BE CONTINUED.)

STREETS "LIT BY SMOKE."

It was on January 28, 1807, that Pall Mall was lit by gas—the first street in any city in the world to adopt the new illuminant. The cartoonists of the period drew pictures which represented people choked by the fumes of the new illuminant, and all manner of ridiculous stories were circulated about it. Sir Walter Scott wrote from London that "there was a madman proposing to light London with—what do you think?—why, with smoke." Sir Humphry Davy is also credited with giving the opinion that it would be as easy to bring down a bit of the moon to light London as to succeed in doing so with gas.—London Tit-Bits.

WEAK MARKETS RULE

N. W. Products Remain Weak, Wheat Declines.

U. S. Bureau of Markets, Washington, D. C., for week ended August 4, 1922.

HAY: Eastern hay markets weak because of poor demand. Some inquiry for good old timothy. New generally of only fair quality and selling slowly. Receipts light in central western markets and prices firmer. Strike appears to be curtailing shipments. Quoted Aug. 4, No. 1 timothy (old): New York $20.50, Chicago $21, Minneapolis $16. No. 1 prairie: Minneapolis $15.50, Chicago $19.

GRAIN: Strong cash and export demand gave strength to wheat market early in week but drop in foreign markets and exchange rates depressed prices before midweek. Selling pressure more than offset fair amount of export buying keeping wheat prices in narrow range with no particular direction until last day when short covering advanced prices sharply. For the week Chicago September wheat declined ⅛c, Chicago Sept. corn declined 1⅛c. On Aug. 4th wheat prices closed steady to higher upon removal of hedging sales against export demand and because of covering by shorts. Corn trade was moderate and prices advanced with wheat selling pressure lacking. Closing prices in Chicago cash market: No. 2 winter wheat $1.12; No. 2 hard winter wheat $1.14. No. 2 mixed corn 64c; No. 2 yellow corn 65c; No. 3 white oats 35c. Average farm prices: No. 2 mixed corn in central Iowa 51c. Closing future prices: Chicago September wheat $1.08¼; Chicago Sept. corn 62¼c; Minneapolis Sept. wheat $1.14⅛; Kansas City Sept. wheat $1.00½; Winnipeg Oct. wheat $1.11⅛.

DAIRY PRODUCTS: Butter markets steady to firm at close. Heavy accumulations caused declines early in week but war prices attracted speculative demand and brought about a reaction. Closing prices, 92 score butter: Chicago 34c; New York 34½c; Cheese markets lower and tone is somewhat unsettled although inquiries at country points indicate some revival of buying interests. Prices at Wisconsin primary cheese markets Aug. 3: Twins 18c, Daisies 18¼c, Double Daisies 17¾c, Longhorns 19c, Square Prints 20c, Young Americas 18¾c.

LIVESTOCK AND MEATS: Compared with a week ago hog prices at Chicago ranged from firm to 30c higher per 100 lbs. light weights showing most of the advance. Beef steer $5 to 50c higher and butcher cows and heifers 10 to 20c higher; veal calves were 50c to $1 higher but feeder steers were 10 to 15c lower. Fat lambs weak to 10c higher, yearlings firm to 15c higher and fat ewes 15 to 50c higher for the week. On Aug. 4th light hogs were strong to 10c higher at Chicago with packing grades unevenly 20 to 55c higher. Beef steers were strong with butcher cows and heifers about steady. Fat lambs strong to 15c higher with feeding lambs steady. Sheep were scarce but sold at steady prices. Aug. 4th Chicago prices: Hogs top $11; bulk of sales $7.80 to $10.80; medium and good beef steers $8.15 to $10.25; butcher cows and heifers $4.15 to $9; feeder steers $5.50 to $7.65; light and medium weight veal calves $9.50 to $10.75. Fat lambs $12 to $13.10; feeding lambs $11.30 to $12.50; yearlings $8.50 to $11; fat ewes $3.50 to $7.65. Stocker and feeder shipments from 12 important markets during the week ending July 28 were: Cattle and calves 66,983; hogs 4,552; sheep 46,100. The trend of eastern wholesale fresh meat prices was upward during the week though net advances were generally slight. Veal, lamb, mutton and pork loins ranged from firm to $2 higher per 100 lbs. Beef firm to 50c higher.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 1.32@1.44; No. 1 northern, 1.28@1.39; No. 1 dark hard, 1.24@1.29; No. 1 hard, 1.14; No. 1 am. dur., 1.05@1.07; No. 1 durum, 1.02@1.04. Corn No. 2 yellow, 59½@59¾c. Oats No. 2 white, 30¼@31¼c. Barley, choice to fanucy, 51@52. Rye No. 2, 72½c. Flaxseed No. 1, 2.43¼@2.45¼.

South St. Paul Live Stock.

So. St. Paul—Steers, $4.00@8.25; veal calves, $4.00@9.75; cows and heifers, $3.25@6.00; hogs, $8.50@10.50; sheep and lambs, $2.00@12.50

Minneapolis Butter, Eggs and Poultry.

BUTTER—Extras, 32c; firsts, 29c; seconds, 25c; packing stock, fresh sweet, 23c; state goods, 6c; grease, 1c.

EGGS—Country receipts, rots out, per case, $5.10. No. 1 candled, good extras, free from rots, small dirties and checks out, per dozen, 19c; small dirty and held stock, rots and leakers out, dozen 14c; quotations on eggs include cases.

LIVE POULTRY—Not advisable to ship turkeys under 7 pounds in weight; hens, 4 lbs. over, 18c; hens, under 4 lbs., 13c; cripples and culls, unsalable; ducks, fat, 13c; ducks, young, 18c; guese, fat, 8c, turkeys, fat, over 8 lbs., 25c; turkeys, thin and small, 15@20c; cripples and culls unsalable; guineas per doz., all sizes, $5; roosters, 12c; No. 1 broilers, per lb., 20c; leghorns, all sizes, 17c.

Big Four to Explain Views.

Cleveland—Legislative representatives of three of the four railroad brotherhoods in Washington were requested by telegraph to arrange a conference between President Harding and the chief executives of the brotherhoods for the purpose of presenting to the President their views in connection with the present strike of railroad shop crafts.

A telegra mwas sent direct to President Harding by the three local chief executives of the brotherhood asking for a conference.

HER AILMENTS ALL GONE NOW

Mrs. Sherman Helped by Lydia E. Pinkham's Vegetable Compound

Lake, Michigan.—"About one year ago I suffered with irregularities and a weakness and at times was obliged to stay off my feet. I doctored with our family physician and he finally said he could not understand my case, so I decided to try Lydia E. Pinkham's Vegetable Compound. After I had taken the first bottle I could see that I was getting better. I took several bottles of the Vegetable Compound and used Lydia E. Pinkham's Sanative Wash and I am entirely cured of my ailments. You may publish this letter if you wish."—Mrs. MARY SHERMAN, Route 2, Lake, Mich.

There is one fact women should consider and that is this. Women suffer from irregularities and various forms of weakness. They try this and that doctor, as well as different medicines. Finally they take Lydia E. Pinkham's Compound, and Mrs. Sherman's experience is simply another case showing the merit of this well-known medicine.

If your family physician fails to help you and the same old troubles persist, why isn't it reasonable to try Lydia E. Pinkham's Vegetable Compound?

Evidently a Good Riddance.

"Oh, dear!" exclaimed Mrs. Jibway. "Mrs. Glipping next door has lost her little poodle."

"Are you sure it's lost?" asked Mr. Jibway.

"Oh, yes. She's looked everywhere. And when you go out you might speak a word of condolence to her."

"I can't do that," said Mr. Jibway, "but I'll try to keep my face straight, and I promise not to jump in the air and crack my heels together until I get around the corner."—Birmingham Age-Herald.

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving bathing and shampooing.—Advertisement.

Prompt.

"You are strong in your praise of the Brokers and Stokers' Magazine."

"I am."

"Yet they have never printed any of your poetry."

"No, but it doesn't take them two months to decide that my stuff won't do. They get it back to me in the next mail."—Louisville Courier-Journal.

It is much easier to go to law than to get back.

Makes Hard Work Harder
A bad back makes a day's work twice as hard. Backache usually comes from weak kidneys, and if headaches, dizziness or urinary disorders are added, don't wait—get help before the kidney disease takes a grip—before dropsy, gravel or Bright's disease sets in. Doan's Kidney Pills have brought new life and new strength to thousands of working men and women. Used and recommended the world over. Ask your neighbor!
A North Dakota Case
Emile Masson, prop. shoe repair shop, W. 2nd St., Langdon, N. Dak., says: "My kidneys caused me trouble. My back was so lame and sore I could hardly get around. Sharp, cutting pains darted across my kidneys and my kidneys acted too freely and the secretions were unnatural. Hearing about Doan's Kidney Pills I procured some and after taking them was completely cured."

A TRUE RAT STORY

Auburntown, Tenn., June 22, 1922.
Stearns Electric Paste Co.,
Chicago, Ill.
Dears Sirs:

Mr. Robert T. Donnell of Auburntown, Tenn., came in our store the other day and wanted something to kill rats, so I sold him a box Stearns Rat Paste. And he put some paste on six biscuits that night and the next morning he found fifty-four big rats. And the second night he put out four more biscuits with paste on them, and the second morning he found seventeen more rats, making a total of seventy-one rats in two nights, and there were lots more that he did not find.

This is some big rat tale, but, nevertheless, it is so. Just thought would write to let you know that your rat paste is good.

Respectfully yours,
KENNEDY BROTHERS.

Western Canada
Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches and schools, good markets, railroad facilities, rural telephone, etc.

For certificate entitling you to reduced railway rates, illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, etc., write

A LUBRICANT—NOT A LAXATIVE

State Summary

Passing Glimpses of Late Events in North Dakota

Mott—Fifty-two children were operated on at a county school clinic.

Bismarck—The state railroad commission has been named as a fuel administration board for North Dakota.

Crosby—It is estimated that it will take 15,000 men to handle the northwest North Dakota crop properly.

New England—A radio set with a 1,000 mile radius has been installed by a local mercantile house.

Agricultural College—The state scale inspection department has been discontinued for lack of funds.

Fargo—W. N. Elton of Grand Forks won the state singles tennis championship in the tournament here.

Mandan—Putting "cow itch" on a woman's back for a joke cost a local young man a fine of $20.

Williston—Gasoline exploding in a cleaning plant wrecked the building and killed Joe Buller.

Killdeer—The American Legion and the Town Criers are organizing Boy Scout troops here.

Solen—Plans have been drawn and contract is being let for a $30,000 school house here.

University—Seventeen were awarded degrees at the summer school session.

Bismarck—Butterfat receipts in this state gained 20 per cent during the year ending with July, over any previous year in the history of the state.

A telegram was sent direct to President Harding tonight by the three local chief executives of the brotherhood asking for a conference.

St. Anthony—The 22-months-old son of Matt Goertl died as a result of scalds received when he pulled a kettle of boiling water on himself.

Oriska—The rear end of his car was carried down the track on the pilot of a freight engine while the driver was left at the wheel unhurt.

Fort Yates—Selfridge and Solen will run against this town for the county seat of Sioux county at this fall's general election.

Williston—A reddish lump found partially embedded in a mud puddle, which float on water, is believed to be of meteoric origin.

Valley City—A binder sickle projecting from an auto slashed the throat of Henry Young, who was walking along the street.

Minot—District and state convention of the Associated Advertising clubs of the World will be held here September 13-14.

Harvey—"Harvey—Cob of the Corn Belt, Home of the Tubers" is the slogan adopted by the local Commercial club.

Dickinson—C. C. Turner, Stark county treasurer, has been named register of the Dickinson land office, and will resign from his county post to assume the new office September 1.

Crosby—Albert Eckman, Norwegian banker who died at his home in Stavanger, Norway, had extensive land and business holdings throughout Northwestern North Dakota.

Shields—With the hay crop the best it ever has been, grain crops promising unusually well, and cattle fat and slick, farmers on the west Missouri slope are highly optimistic.

Grand Forks—The junior champion Guernsey bull shown at the recent fair here by a Duluth stock man, was purchased for the George W. Belcher farm at Devils Lake.

Fargo—During the year ending with the month of July, 1922, $305,620 were spent in maintaining Fargo's public schools, making the average cost per pupil, $84.05.

Mandan—September 19-20 are the dates fixed for the pageant to celebrate the completion of the Memorial bridge over the Missouri. Traffic has commenced.

New England—The fourth rural route out of here was opened August 1 when route No. 1 was transferred from Havelock postoffice to the local postoffice.

Minot—George A. McFarland, former head of the Valley City normal school and more recently city superintendent of Williston schools, has been chosen to head the state normal here, to begin service at the opening of the school year.

Lidgerwood—Miss Zena Irma Trinka of this city, formerly Dickinson librarian, where she was employed when her book "North Dakota of Today" appeared, has won recognition in California, where she is now engaged in library work, with a new book, "Out Where the West Begins."

Fargo—Offices of the employment service section of the United States Veterans bureau have been opened here with Fred R. Brady, formerly of Sioux Falls, in charge. W. T. Mollison, empoyment representative for the tenth district, had charge of launching the work in this section for the assistance of service men.

Valley City—Thirty-five carloads of horses, or 1,040 head, will be marketed through the North Dakota Farm Bureau federation in various New England points next winter, according to plans being laid at the present time.

Beach—While officers were repairing a blowout their prisoner, Omar Crawford, leaped to the running board of a passing car and made a good start toward a getaway, but when the involuntary chauffeur found that it was only a finger Crawford was poking into his ribs, the car was stopped and the officers retook their prisoner. He was charged with cattle rustling.

Mandan—Playground apparatus is being installed in Chautauqua park.

Velva—Heat proved fatal to Emil Hanson, 40-year-old farm laborer.

Dodge—A $25,000 school house will be built here this summer.

Montpelier—A Royal Neighbor lodge has been installed here.

Hillsboro—Rye near here yielded 40 bushels to the acre.

Medora—When a heavy tourist car overturned on a hill their small baby was killed and burial was made here.

LaMoure—Three lots have been donated by a local banker as a site for LaMoure's new municipal building.

Enderlin—A rusty knife tossed in play may cost the sight of the right eye of Marvin Ernst, aged 13.

Fort Yates—The annual Standing Rock Indian reservation fair will be held on September 6-8.

Antler—Mail is carried on this branch from Rugby by auto until train service is resumed.

Granville—The squatter cabin built by Axel Lyng in 1886 still stands on his farm near here.

Langdon—Nearly $30,000 worth of bridge and road work is under way in Cavalier county.

Bismarck—The North Dakota County Auditors association meets here August 15-18.

Fort Yates—The Commercial club will hereafter care for the grave of Sitting Bull.

Mandan—W. F. Reko has been named game warden for the second district.

Dunn Center—The Congregationalists have dedicated their new church here.

Minot—Bids are being opened for the big potato warehouse to be built here.

Hillsboro—The local vote having reached 600, citizens have petitioned the county commissioners to divide the town into two election districts.

Wahpeton—Twenty-two high-grade Holstein heifers will be sold to Richland county farmers on easy terms by the Wahpeton State bank.

Oslo—Six sons acted as pall bearers at the funeral of Mrs. Henry Robinson, for 45 years a local resident. Six daughters also survive.

Wishek—Fifty cows were recently loaded and shipped from here, the donation of Logan county residents to the poor of Germany.

Hamilton—Good results with winter wheat are reported by farmers near here. Elimination of rust danger is its greatest advantage.

Larimore—Financing a swimming pool, grandstand, and tourist camp by popular subscriptions has been proposed here.

Stanley—Mrs. Anna McBain has been appointed Mountrail county register of deeds to succeed John Husa, resigned.

Bismarck—State compensation claims were paid to service men during the year ending June 30, last, in the sum of $1,244,340. July 1 found a balance of $61,645 in the bonus fund.

Tower City—For the sixth time in as many years burglars recently entered the Hellickson hardware store here, getting away this time with about $400 worth of merchandise.

Hebron—W. H. Itrich was chosen president of the North Dakota Pharmaceutical association at the recent Jamestown convention, and Bismarck was awarded the 1923 meet.

Wahpeton—Detectives have failed to to find a trace of Paul Olk, young Richland county farmer, who disappeared June 17 when on a vacation trip to Minnesota lakes.

Devils Lake—Sweeping changes in laws affecting North Dakota publishers were discussed at the convention here last week of the North Dakota Editorial association.

Flasher—A six-months-old baby rolled upon its face in a feather pillow and smothered to death while the mother was gathering vegetables in the garden.

Ellendale—The local fair may be converted into a real Dickey county fair, with county support. October 4-7 are the dates set for this year's exposition.

Halliday—A local farmer sued for $500 for the death of several head of cattle from eating poisoned grain sold him by an elevator, where gopher poison had been stored by county officials. He won and the county and the elevator paid the damages on a 50-50 basis.

Hettinger—By spring a dairy cattle experiment project will be under way here under the direction of the North Dakota agricultural college. Work will be conducted in conjunction with the agricultural experiments already well established here.

Grafton—Because he was refused a vote in the recent primary, and, he alleges, denied the privilege of swearing in his vote, Hans Chally was awarded $50 judgment against the election officials of his precinct in justice court here. The defendants will appeal to district court.

New England—The Dakota Oil company, headed by a Texas oil expert, has suspended operations in the state after having secured leases to about 12,000 acres in this territory and sold some $1,000 worth of stock, money for which was refunded when the company quit.

Tuttle—To help him finance his crop while laid up with a broken leg sustained in a recent ball game here with the penitentiary nine, inmates of the state prison have raised a $250 fund for James Barber.

Bismarck—There is but one-half mile of hard surfaced road in the state outside of municipalities, according to statistics compiled by the Good Roads association. There are 500 miles of macadam or gravel highways, 4,000 miles of graded highway, 3,000 miles of primary and 4,000 miles of secondary highway. The total highway mileage is 106,202.

HAD STUDIED HIS SUBJECT

Little Bobby's Essay Showed He Knew Practically All There Was to Know About Doors.

Little Bobby Jones was told to write an essay on "Door," and the effort which he sent in was as follows:

"Most houses have all the doors that they need, and no house is complete without at least one. The two main differences between a door and a gate is: first, their opposite location; and, second, that people have much less respect for a gate, and would rather kick it than knock on it.

"But a gate is more useful than a door because it does everything that a door can do, and, besides that, it can be climbed over, and often is.

"The door handle is a small but important part of the door which people never appreciate until it comes off. Most people never notice the door handle unless it is brought to their notice on account of having jam spread all over it.

"Doors are great things to give people privacy, and would give them still more if it wasn't for the keyholes."—Exchange.

He Gets Full Benefit.

Hubby—I can't understand why you should always show such a mean and cranky disposition in the morning.

Wife—At what other time should I show it, may I ask? You're not here during the rest of the day.

Considering what most people are willing to do for money, it's a wonder there are not more millionaires.

HOW BOOKS ARE DISINFECTED

Method Employed in France Is Said to Be the Most Successful Yet Devised.

The danger of contagion from books that have been in the hands of persons suffering from various diseases has led to the invention of methods of disinfecting, of which none appears to be more effective than that devised by a member of the municipal council of Paris.

This process consists of two features. In the first place, the books are placed in a "beater," where a strong current of air opens every leaf, and an aspirator sucks out the dust and deposits it in aseptic water. Then they are suspended in a disinfector, the covers being bent back and held by clips, so that the leaves are widely opened, and placed over a heater, which for a long time subjects them to a temperature of 167 degrees Fahrenheit. The paper is not damaged, and the efficiency of the process is said to be well demonstrated.

Cleaned the Stream.

"Caught anything?"

"No. Haven't even had a bite."

"That's queer. Old Man Johnson got 84 out of that place the day before yesterday.

"That so? He must have got them all then."

Quarrelsome.

"Before we were married her people said we would never get along."

"Well?"

"Well, they were partly right."—Detroit Free Press.

DECLARED HIMSELF AT ONCE

New Yorker Saw Fearsome Possibility of Near Future and Gave Wife Due Warning.

Visitors to Central Park the other day saw a new angle of the family pet out for an airing, reports the New York correspondent of the Pittsburgh Dispatch. A young woman was out with her variegated parrot. The bird stalked majestically about the lawn, but quickly came back and perched on the young woman's finger whenever she called. His comings and goings to and from the finger gave the parrot its prescribed exercise, whether it wanted it or not.

The young woman didn't seem to mind the crowd that gathered about to watch. In fact she seemed rather proud of the attention she and the bird were attracting. Jiggers, whose family pet is a dog, happened along with his wife and stopped to look.

"I suppose the next thing," he remarked to his wife, "will be that I'm to take the canary up to the park for a walk. Right here I announce the answer: Nothing doing!"

He Admits It.

"What did the fortune teller tell you?"

"Oh, a lot of foolishness. Said I would be lucky in love."

"Well, aren't you?" demanded his wife.

"I—er—sure."—Louisville Courier-Journal.

Why is there no bronze tablet to the person who invented the fly swatter?

No heat with this summer meal

A DISH of crisp, delicious Grape-Nuts, with cream or milk (some berries or fresh fruit, too, if you like) is cooling to serve, cooling to eat and cooling to digest—with a charm of flavor and goodness that rouses appetite enthusiasm. No preparation, no cooking—no heating of the body afterward, as heavy, starchy meals do—but well-rounded nourishment for every bodily need.

There's a noticeable feeling of lightness and comfort after such a meal.

Try this way out of the heat, bother and uncertainty that usually goes with the midsummer food problem.

Order Grape-Nuts from your grocer today.

Mr. and Mrs. Nick Bundhund and family visited at the Fred Rux home west of Thief River Falls last Sunday.

Miss Gladys Wilson returned Monday to resume her duties at the Farmers State Bank after a two weeks' stay at her home near Grygla.

Mr. and Mrs. B. O. Norby drove up from Thief River Falls Saturday evening. They will leave for their home at Eyota, Minn., in a few days.

The sooner we lose our hair, the more speedily can we avail ourselves of the bill-board possibilities of our domes. And with most of us this represents the highest value of the aforesaid dome.

Rev. and Mrs. H. Lutz returned Saturday evening from a six weeks' visit at Rev. Lutz's home at Dennison, Ia., and points in South Dakota and Illinois.

THE BEST POSITIONS.

The best positions go to students of the Union Commercial College, Grand Forks, N. D. Mr. Kueber goes to a fine bank at Westhope and Miss Ackerson to the Nash Auto Co. If you want to procure a position that offers big chances for promotion, get a business education. Send for a free catalog and find out how this school can help you.

Rudolph and Andrew Kusmack and Lester and Arlie McVay autoed to Warren, Argyle and St. Thomas Sunday. Andrew Kusmack and Lester McVay returned here Sunday evening, while the others remained at St. Thomas where they will be employed.

Germantown News.

Threshing has begun in this vicinity.

Henry Roller was a Thief River Falls business caller Tuesday of last week.

Miss Frieda Ristau and Hjalmer Hostveit visited at the home of the former's parents last Sunday.

Miss Rose and Joe Vakach and the Misses Emma and Lena Ristau were Mavie visitors Tuesday.

Chester Boyce and Pearl Stack visited at the home of Hans Clausen on Tuesday evening.

Mr. and Mrs. Emil Ristau called at the Frank Kainz home Tuesday.

Miss Tillie Ristau and brothers, Johnnie, were callers at the home of their brother, Ed Ristau, of Thief River Falls Thursday.

Mr. and Mrs. Stack and children visited at the home of Chester Boyce one day last week.

Mr. and Mrs. Joe Vakach and family, Mr. and Mrs. Emil Ristau and family and Misses Bernice and Lois Struble visited at the August Ristau home last Wednesday.

Mr. and Mrs. Nick Bundhund and family of Goodridge called at the home of Chester Boyce Wednesday.

Mr. and Mrs. Joe Vakach and son, motored to Grand Forks Saturday and returned Sunday evening.

Mr. and Mrs. August Ristau and son John, and daughters, Emma and Tillie and Miss Lois Struble motored to Thief River Falls Thursday to attend the wedding of Miss Frieda Ristau and Hjalmer Hostvet.

Carl Haberdank was pleasantly surprised Sunday evening when a number of people gathered at his home, the occasion being his birthday. Among those present were: Mr. and Mrs. Henry Roller and family, Mr. and Mrs. Charles Struble and family, Mr. and Mrs. August Ristau and family, Mr. and Mrs. Emil Ristau and family, Mr. and Mrs. John Aandahl and son, Arlo, Mr. and Mrs. D. Dau and sons, Detfef and Henry, Mr. and Mrs. Paul Stack and children, Mr. and Mrs. F. Kainz and sons, Frank and Emil, Clarence Stageburg, Bob Oski, Ewald and Oscar Pomerenke, and Hans and John Clausen.

The German Lutheran Ladies' Aid met at the home of Mrs. Emil Ristau Wednesday. A good attendance is reported.

GOODRIDGE BUILDERS ATTENTION!

THE LITTLE WIND.

As I stepped out to meet the morn
A friendly little wind came by,
And nudged me in the heart, and it laughed,
And whispered to me on the sly;
In his sweet breath there was a hint
Of happy hills where he had fed,
And suddenly my heart was keen
To go where life is comforted.
Oh, where the clover blossoms smile
A lonely heart may learn to play—
Dear little wind, I'll follow you,
It's time that I was on the way.

We note that most of the paper salesman have stationery smiles.

FARM WANTED.

If you have a good farm suitable for general farming and stock raising, write me with description and lowest price. William L. Myers, Fosston, Minn. 23-4t

Attention, Livestock Shippers!

Farmers and others who have stock to ship will find it worth while to notify Oscar Stenvick. Direct 'phone from Goodridge. OSCAR STENVICK, Manager, Reiner Shipping Assn. 4t

Sell Your Cream at the Creamery

There is a big advantage in disposing of your dairy products at the creamery, chief of which is the fact that the local institution is founded upon he co-operative basis and you therefore receive its advantages. You get as much—and more—here for your cream than from independent buyers.

10,600 POUNDS OF BUTTER MANUFACTURED LAST MONTH

Help swell the total next month by selling all your cream to us. Only by your co-operation can the creamery exist and remember we are always willing to meet competition from all outside sources.

State Board of Health

FARMER, DESPONDENT, HANGS SELF IN STABLE

Holds Auction, Squares Accounts, Then Commits Suicide.

About one o'clock Saturday afternoon, last week, the lifeless body of Amund P. Fliserum was found hanging from the roof in his stable in the town of Ross. The gruesome find was made by Ingebret Olson, neighbor of the unfortunate man, who had come according to agreement to help Fliserum move an old house which he had planned to have fixed up since he had sold his farm. It is thought that he had carefully planned his exit out of the world. He recently held an auction, disposing of practically all his personal property. Friday, last week, he was in Badger and affected settlement all around. A short time ago he disposed of Liberty bonds, and placing the money in the bank. He had in all approximately $9,000 in cash in banks and securities. Neighbors say that he complained of loneliness and for years back, when things went wrong, had threatened to hang himself. No one, however, suspected that he had any serious intentions in that direction. He was 52 years old and has been living alone since his mother died a year ago. An only brother, Carl, survives him, and he, too, is a single man living at Cooperstown, N. D. He arrived Tuesday after being advised of the sad happening.

The body, after being taken in charge by the authorities, was prepared for burial at Roseau. The funeral was held Tuesday afternoon and burial made in the Free church cemetery north of Badger, Rev. Huglen officiating.

Mrs. Kirklie Entertains.

Mrs. O. S. Kirklie informally entertained on Monday evening at a six o'clock dinner party. Those present were: Miss Muriel Clasey, Mr. and Mrs. P. O. Tvedt and Miss Eunice Tvedt.

19-YEAR-OLD GIRL TAKES LONG RIDE IN AUTOMOBILE

A 19-year-old girl residing at Comstock, Clay county, tells a strange tale: She says that Jas. Brinton and F. C. Moore forced her to accompany them west in a car stolen at Fargo. At Miles City, Mont., the men were sentenced for robbery and the girl wrote home for aid. She returned home last week. She says they slept on the prairies and in woods on their journey west.

GOODRIDGE SCHOOLS TO OPEN ON SEPTEMBER. 4

According to announcement, the Goodridge schools will open on Monday, September 4, everything being practically in readiness for commencing the new school year with the exception of the new addition now in process of construction by carpenters.

Monday, September 4, being Labor Day, a holiday, registration will be the principal activity and the regular school work will begin on the following day.

The Goodridge school board has informed The Banner that the school is now in all respects an accredited high school. All the teachers for the ensuing year have been engaged with the exception of one, whose final selection has not yet been made.

Refused Peaches, Convicts Threaten to Stage Mutiny

Trenton, N. J.—Six hundred convicts, denied extra peaches for dessert during New Jersey's Peach Week, howled and strummed in their cells and threatened to smash their way to freedom. Extra deputies were rushed to the state prison, after the prisoners had shown their desperation by refusing to be quelled by drawn revolvers turned upon them by officers and troops.

The deaf man is in luck when some one asks him for a loan.

GOOD SHOWING BY CREAM PATRONS

Goodridge Dairymen Market Generous Amount of Products.

Although the warm weather during July and August has to a certain extent effected the supply of cream received at the Goodridge Co-operative Creamery, the showing is, nevertheless, a good one. Several producers of dairy products have nearly attained the $100 mark for the month. The list follows:

Stuart McLeod	$100.28
O. N. Urdahl	83.10
Ed Kivle	82.07
Ed Eells	76.87
T. Halvorson	76.20

Steel Corporation Boosts Wages of Labor 20 Pct.

New York—The United States Steel Corporation has announced that the wage rate of day labor at all its manufacturing plants would be increased 20 per cent September 1, and that other rates would be equitably adjusted.

POOR SHOCKING ALWAYS COSTLY

Much Waste of Grain Is Caused by Poor Work in the Fields.

Every season there is much waste of grain caused by poor shocking. The man driving the binder can help the shocker by making timely adjustments, so that all the bundles are of proper size and shape and the band placed in the proper position on the bundle.

The shock that will dry sufficiently for threshing or stacking in the shortest time is the long shock built two and two extending north and south with the ends open. This shock should not be over 10 or 12 bundles long, for in longer shocks the bundles tend to slide past each other and the shock falls. In building this shock place half the pairs of bundles on each end. This braces the shock both ways.

If the grain is to stand some time the shock should be made by setting three pairs of bundles, the second and third pair on opposite side of the first pair, then filling the spaces on each side of the shock with a pair of bundles. This makes a ten-bundle shock.

If capping is desired, it can be done by either one or two bundles. If this shock is properly built it will have ventilation space its full length. This type of shock should stand indefinitely.—L. B. Bassett, division of farm crops and farm management, University Farm.

ASK DIVISION OF BELTRAMI COUNTY

Vote on Separation Will Be Held at General Election in November.

Formal petition for the division of Beltrami county and the establishment in the northern portion of the Lake of the Woods county, to be the 87th county in the state was filed with Mike Holm, secretary of state, last week.

The proposed new county will include all of the second commissioner district of the present county with its southern boundary beginning at the northeast corner of township 157 and extending across the county almost on a straight line west. The proposed boundary is several miles north of upper Red Lake.

The filing of the petition is the near realization of plans long contemplated by persons in the north part of Beltrami, which is one of the largest counties in Minnesota. The two principa lvillages, Beaudette and Spooner, directly across from each other on a short arm of Rainy River, have agreed by a specially arranged election that Beaudette is to be the county seat and that village is named in the petition as such.

The vote on the separation will be held at the general election in November. Governor Preus will shortly issue a proclamation calling for the vote to be taken at that time and the issue will be placed on the ballot by Secretary of State Mike Holm.

Both Beltrami county and the district to comprise the proposed new county must give the proposal a majority vote.

According to the petition, which is signed by 2,385 voters in the two counties, the district has all of the qualifications for a county. It has an assessed valuation of more than $2,500,000; an area in excess of 400 square miles and more than 2,000 inhabitants, Beltrami is the only county effected by the change.

Williams is the only village in the area except Beaudette and Spooner.

Haynes' Resignation Is Demanded by Secretary

Washington—Immediate removal of Federal Prohibition Commissioner R. A. Haynes on the grounds that he is defrauding the government, was demanded of Secretary of the Treasury Andrew Mellon by Representative J. Philip Hill, Maryland, Republican, on Monday. Haynes is defrauding the government in that he is using and causing to be used the official mail frank of the Treasury department for the sending out of personal political propaganda in the interest of himself and his associates, the Anti-Saloon League, Hill charged.

Special bulletin No. 43, by A. D. Wilson, former chief of the University's division of agricultural extension, has some valuable information for every farmer. He deals in information concerning silo building—if you are interested. If you're not, you should be. Write the Office of Publications at University Farm, St. Paul, and have them mail you a copy. Do it today.

Dudes wouldn't be dudes any longer if they smeared their faces with axle grease instead of cologne water.

[illegible]

The heavy rain which visited Goodridge and surrounding territory last Sunday came at an opportune time and crops have vastly benefited, particularly potatoes, corn and other late grain. It is said that almost an inch of rain fell and the ground received a thorough soaking. While it delayed threshing operations for a few days, most of the outfits commenced operations yesterday and today.

MISS ETHEL HALVORSON IS HOSTESS TO GIRL FRIENDS

Miss Ethel Halvorson was hostess on Wednesday afternoon to a number of her girl friends whom she entertained, the occasion being her eleventh birthday anniversary. Those attending were: Edith Gunderson, Myrtle Strand, Myrtle Stephenson, Eunice Thoreson, Alice Reson, Hazel Thoreson, Florence Halvorson, Tina Gaudland, Violette Edseth and Ruth McDonald. The afternoon was spent in playing games and at five o'clock a delicious lunch was served.

THE ROYAL TITLE.

When baby lips are pressed to mine,
And baby hands are in my hair,
And baby eyes are all ashine,
My heart forgets all worldly care;
And in the harbor of a dream
That fades not on the dying day,
I find life's holiest comforts gleam
About the hour of baby play.

I envy not the rich and great,
I would not trade with any king;
My cabin is of royal state
The while I hear my baby sing;
I have no wealth, I have no fame,
But I am greatly proud and glad
To own an even nobler name;
I am a happy youngster's dad.

A fat man has to be good natured—he can neither run nor fight.

RIVER DEEPENING UP TO COMPANY

Conservancy Board Places Project Squarely Up to Users of Water.

At a meeting of the Conservancy Board held Tuesday at Thief River Falls to consider further action on the Red Lake-Clearwater project, it was decided to put the entire matter squarely before the water power companies in the hope that their assistance may be secured.

The discovery has been made that no assessment can be made against the companies as the law is now constituted, so the companies will be asked to put up $150,000 in advance, not as an assessment or contribution, but an amount which they will be credited with for the use of the water when their power plants have been established.

The recent hearing developed much opposition, and it is expected that the next meeting to be held in October will definitely determine final action on the project. The power companies have promised their return to the board on September 10th.

Eats Stolen Melon and Pays $10 for Privilege

Mankato—"The man who knowingly partakes of stolen fruit is as guilty as the man who steals it, and this holds true in the theft and consumption of a watermelon as in the robbery of a bank." Thus spoke Judge Hiram S. Goff in sentencing Sylvester Tshol to pay a fine of $10 for eating a slice of a watermelon stolen from John La Duc by Percy Kiffe. The latter, who confessed to stealing the melon, was let off with a $5 fine on a petty larceny charge.

If money talks, we wish we knew the language.

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

FLOCK TO CANADA

Immigrants of High Order Settling on Western Plains.

Removal of Restrictions Necessary During the War Has Shown World's Faith in Dominion's Future.

For a period during the late war, and for a while after its close, there was put into operation by the Canadian government legislation restricting certain classes and people of the countries which were not lined up with the allied nations from being admitted to Canada. This was quite necessary, and the reasons for it will be so apparent that they need not be given. However, the time came, in the early summer of this year, when it was deemed possible to remove some of these restrictions. It was found that there were many who came under their ruling that were of a class that Canada needed and who needed Canada. The restrictions, doubtless, were drastic, but were needful. The news of their removal, sent broadcast, has met with such a response as to give ample evidence that they had not killed interest in Canada, and that faith in the Dominion as a country where a new existence, happy and fruitful, was as complete as ever. As has been stated by one writer dealing with this subject, "the opening of the doors a little wider has but disclosed the dammed-up state of the stream, which, given freer release, is pouring in fuller force over the Dominion."

As to the moral effect of the legislation that enabled these restrictions to be carried out, it showed that while Canada was seeking settlers, its lands and its homes were not intended as a shelter for those unable to meet the standard set as Canada's laws of civilization, the concessions which have removed these restrictions still have in view the maintenance of this standard, and those who are still allowed in are subject to the same requirements that have prevailed for years. As pointed out by the writer previously quoted, "Canada has successfully impressed on those countries from which she draws her people that her prime and crying need is for those who will go on land, and of those entering the country the bulk is composed of agriculturists. Every country which has formerly contributed to Canada's population has resumed its mission to its shores.

"The lowering of the barriers has had a farther-reaching effect than the entry into the country of many formerly debarred by reasons of financial stringency. It has had a moral effect. The restriction was rightly regarded as an indication of Canada's internal economic condition, and many persons and families of comfortable means contemplating Canadian settlement were discouraged from doing so. In the removal is seen the first blush of the dawn of better days, and consequently many of those arriving are in a condition to establish rapidly and securely.

"Though Canadian immigration falls broadly into the two classes, British and American, many European peoples have contributed in a large measure to the agricultural development of the Western provinces, and it is gratifying to note the same healthy interest in Canada evinced by the most desirable of these.

"Amongst those from the European countries are Serbians, Poles, Swiss, Roumanians, Dutch, Jugo-Slavs, French, Danish, Norwegians, Swedes, Finns and Lithuanians. All have constituted fine, desirable citizen-building material, as the few detentions and lesser deportations bear testimony. Furthermore, the disturbed industrial conditions of the New England states have resulted in the commencement of an exodus of French-Canadian families back to their old homes, which may reach an appreciable size.

"On all sides this awakening of interest is evident. It is a new faith borne on the crest of the wave of brighter prospects, the dawn of a fuller realization, in the continued inability of many other countries to emerge from the economic slough into which the war plunged them, of the desirability of Canada as a country more rapidly throwing off its post-bellum depression, and its great place in the world's immediate future.

"British migration is of a healthy and desirable order, of sturdy composition, and frequently heavily capitalized. Many Scottish farmers have already arrived this year."

Every state in the Union is contributing its quota, and joining with those who have been in Canada for a number of years in the work of reclaiming the virgin prairie of the great plains of the West and converting them into immense fields of golden grain, or its grasses into fodder for the dairy cow or the fattening steer.—Advertisement.

Swat 'Em Now.

One pair of flies effectively swatted early will avert the possible plague of 324,000,000 potential descendants next autumn.

Cuticura Soothes Baby Rashes

That itch and burn, by hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

Bobbed Hair Hurts Industry.

Leominster, Mass., an important center of the comb and hairpin industry has been hard hit as a result of the prevailing fad for bobbed hair.

CHAPTER VIII—Continued.

—12—

"Ah, here are Fell and Ansley!" exclaimed Maillard, almost with relief. "I—ah—my friends, I don't suppose you've seen Bob recently?"

Ansley was silent. Jachin Fell, however, responded with a cold nod of assent.

"Yes," he said in his peculiarly toneless manner. "Yes, we have. At least, I believe it was he——"

"I'm worried," said Maillard, anxiously, hurriedly. He made an expressive gesture of despair. "He's in costume, of course. I've been given to understand that—well, that he has been—well, drinking."

"He has," said Jachin Fell, without any trace of compassion. "A number of the Krewe are occupying one of the rooms in the building, and they must have been visiting it frequently. I trust for your sake that the fact hasn't become generally known inside?"

Maillard nodded. Shame and anger lay heavily in his eyes.

Judge Forester, in his kindly way, laid his hand on the banker's arm.

"Tut, tut, Joseph," he said, gently, a fund of sympathy in his voice. "Boys will be boys, you know; really, this is no great matter! Don't let it hit you so hard. I'll go with you to find the room, of course. Where is it, Jachin?"

"We'll all go," put in Ansley. "We'll have a little party of our own, gentlemen. Come on, I believe we'll be able to discover the place."

The four men left the foyer and started through the corridors.

"I hear," said Judge Forester to Doctor Ansley, as they followed the other two, "that there has been astonishing news today from the Midnight Masquer. It seems that a number of people have received back property this afternoon—loot the bandit had taken. It appears to have been some sort of a carnival joke, after all."

"A poor one, then," responded Ansley, "and in doubtful taste. I've heard nothing of it. I wouldn't mind getting back the little cash I lost, though I must say I'll believe the story when I see the money——"

He broke off quickly.

As they turned a corner of the corridor to the four men came realization that they had attained their goal. From one of the rooms ahead there sounded snatches of a boisterous chorus being roared forth lustily. As they halted, to distinguish from which door the singing proceeded, the chorus was broken off by an abrupt and sudden silence. This silence was accentuated by the preceding noise, as though the singers had checked their maudlin song in mid-career.

"D—n it!" muttered Maillard. "Did they hear us coming? No, that wouldn't matter a hang to them—but what checked them so quickly?"

"This door," said Fell, indicating one to their right. He paused at it, listening, and over his features came a singular expression. As the others joined him, they caught a low murmur of voices, a hushed sound of talk, a rattle as a number of chips fell from a table.

"Cursed queer!" observed Jachin Fell, frowning. "I wonder what happened to them so abruptly? Perhaps the deal was finished—they're having a game. Well, go ahead, Joseph! We'll back you up as a deputation from the blackcoats, and if you need any moral support, call on Judge Forester."

That gentleman flung open the door, and Maillard entered at his side. They then came to a startled halt, at view of the scene which greeted them.

The room was large and well lighted, windows and transom darkened for the occasion. Tobacco smoke made a bluish haze in the air. In the center of the room stood a large table, littered with glasses and bottles, with scattered cards, with chips and money.

About this table had been sitting half a dozen members of the Krewe of Comus. Now, however, they were standing, their various identities completely concealed by the grotesque costumes which cloaked them. Their hands were in the air.

Standing at another doorway, midway between their group and that of the four unexpected intruders, was the Midnight Masquer—holding them up at the point of his automatic!

Maillard was the first to break the silence of stupefaction.

"By heavens!" he cried, furiously. "Here's that d—d villain again—hold him, you! at him, everybody!"

In a blind rage, transported out of himself by his sudden access of passion, the banker hurled himself forward. From the bandit burst a cry of futile warning; the pistol in his hand veered toward his assailant.

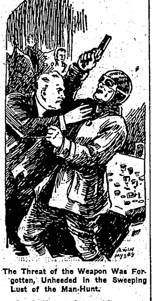
This action precipitated the event. Perhaps because the Masquer did not fire instantly, and perhaps because Maillard's mad action shamed them, the nearer members of the drinking party hurled themselves at the bandit. The threat of the weapon was forgotten, unheeded in the sweeping lust of the man-hunt. It seemed that the fellow feared to fire; and about him closed the party in a surging mass, with a burst of sudden shouts, striking and clutching to pull him down and put him under foot.

Then, when it seemed that they had him without a struggle, the Masquer broke from them, swept them apart and threw them off, hurled them clear away. He moved as though to leap through the side doorway whence he had come.

With an oath, Maillard hurled himself forward, struck blindly and furiously at the bandit, and fastened upon him about the waist. There was a surge forward of bodies as the others crowded in to pull down the Masquer before he could escape. It looked then as though he were indeed lost—until the automatic flamed and roared in his hand, its choking fumes bursting at them. The report thundered in the room; a second report thundered, deafeningly, as a second bullet sought its mark.

Like a faint echo to those shots came the slam of a door. The Masquer was gone!

After him, into the farther room, rushed some of the party; but he had vanished utterly. There was no trace of him. His complete disappearance confused the searchers. After a moment, however, they returned to the lighted room. The Masquer had gone, but behind him had remained a more grim and terrible masquer.



The Threat of the Weapon Was Forgotten, Unheeded in the Sweeping Lust of the Man-Hunt.

In the room which he had just left, however, there had fallen a dread silence and consternation. One of the masqued drinkers held an arm that hung helpless, dripping blood; but his hurt passed unseen and uncared for, even by himself.

Doctor Ansley was kneeling above a motionless figure, prone on the dirty floor; and it was the figure of Joseph Maillard. The physician glanced up, then rose slowly to his feet. He made a terribly significant gesture, and his crisp voice broke in upon the appalled silence.

"Dead," he said, curtly. "Shot twice—each bullet through the heart. Judge Forester, I'm afraid there is no alternative but to call in the police. Gentlemen, you will kindly unmask—which one of you is Robert Maillard?"

Amid a stunned and horrified silence the members of the Krewe one by one removed their grotesque headgear, staring at the dead man whose white face looked up at them with an air of grim accusation. But none of them came forward to claim kinship with the dead man. Bob Maillard was not in the room.

"I think," said the toneless, even voice of Jachin Fell, "that all of you gentlemen had better be very careful to say only what you have seen—and know. You will kindly remain here until I have summoned the police."

He left the room, and if there were any dark implication hidden in his words, no one seemed to observe it.

CHAPTER IX.

On the Bayou.

At three o'clock on the morning of Ash Wednesday the great white Maison Blanche building was deserted and [illegible] out swiftly ebbing tide. A [illegible] of the building was, however, [illegible]. A single suite of offices with carefully drawn blinds, was lighted and occupied.

They were not ornate, these offices. They consisted of two rooms, a small reception room and a large private office, both lined to the ceiling with books, chiefly law books. In the larger room were sitting three men. One of the three, Ben Chacherre, sat in a chair tipped back against the wall, his eyes closed. From time to time he opened those sparkling black eyes of his, and through narrow-slitted lids directed keen glances at the other two men.

One of the men was the chief of police. The second was Jachin Fell, whose offices these were.

"Even if things are as you say, which I don't doubt at all," said the chief, slowly, "I can't believe the boy did it! And darn it all, if I pinch him there's goin' to be a h— of a scandal!"

Fell shrugged his shoulders, and made response in his toneless voice: "Chief, you're up against facts. Those facts are bound to come out and the newspapers will nail your hide to the wall in a minute. You've a bare chance to save yourself by taking in young Maillard at once."

The chief chewed hard on his cigar. "I don't want to save myself by putting the wrong man behind the bars," he returned. "It sure looks like he was the Masquer all the while, but you say that he wasn't. You say this was his only job—a joke that turned out bad."

"Those are the facts," said Fell. "I don't want to accuse a man of crimes I know he did not commit. We have the best of evidence that he did commit this crime. If the newspapers fasten the entire Midnight Masquer business on him, as they're sure to do, we can't very well help him. I have no sympathy for the boy."

"Of course he did it," put in Ben Chacherre, sleepily. "Wasn't he caught with the goods?"

The others paid no heed. The chief indicated two early editions of the morning papers, which lay on the desk in front of Fell. These papers carried full accounts of the return of the Midnight Masquer's loot, explaining his robberies as part of a carnival jest.

"The later editions, comin' out now," said the chief, "will crowd all that stuff off the front page with the Maillard murder. Darn it, Fell! Whether I believe it or not, I'll have to arrest the young fool."

Chacherre chuckled. Jachin Fell smiled faintly.

"Nothing could be plainer, chief," he responded. "First, Bob Maillard comes to us in front of the opera house, and talks about a great joke that he's going to spring on his friends across the way——"

"How'd you know who he was?" interjected the chief, shrewdly.

"Gramont recognized him; Ansley and I confirmed the recognition. He was more or less intoxicated—chiefly more. Now, young Maillard was not in the room at the moment of the murder—unless he was the Masquer. Five minutes afterward he was found in a nearby room, hastily changing out of an aviator's uniform into his masquerade costume. Obviously, he had assumed the guise of the Masquer as a joke on his friends, and the joke had a tragic ending. Further, he was in the aviation service during the war, and so had the uniform ready to hand. You couldn't make anybody believe that he hasn't been the Masquer all the time!"

"Of course," and the chief nodded perplexedly. "It'd be a clear case—only you call me in and say that he wasn't the Masquer! D—n it, Fell, this thing has my goat!"

"What's Maillard's story?" struck in Ben Chacherre.

"He denies the whole thing," said the worried chief. "According to his story, which sounded straight the way he tells it, he meant to pull off the joke on his friends and was dressing in the Masquer's costume when he heard the shots. He claims that the shots startled him, and made him change back. He swears that he had not entered the other room at all, except in his masquerade clothes. He says the murderer must have been the real Masquer. It's likely enough, because all young Maillard's crowd knew about the party that was to be held in that room during the Comus ball—"

"No matter," said Fell, coldly. "Chief, this is an open and shut case; the boy was bound to lie. That he killed his father was an accident, of course, but none the less it did take place."

"The boy's a wreck this minute." The chief held a match to his unlighted cigar. "But you say that he ain't the original Masquer?"

"No!" Fell spoke quietly. "The original Masquer was another person, and had nothing to do with the present case. This information is confidential and between ourselves."

"Oh, of course," assented the chief. "Well, I suppose I got to pull Maillard, but I hate to do it. I got a hunch that he ain't the right party."

"Virtuous man!" Fell smiled thinly. "According to all the books, the chief of police is only too glad to fasten the crime on anybody—"

(TO BE CONTINUED.)

Goes on Forever.

Netley—Was Boresom still talking when you left the club?

Miller—Really, I don't know. His conversation is so unimportant that when he stops talking I always fail to notice it.—Answers.

[illegible] Foreign Demands Are Improved—Dairy Products Advance.

U. S. Bureau of Markets, Washington, D. C. for week ending August 18, 1921.

GRAIN—Grain prices lower for week on restricted foreign demand. Buying support was lacking. Liverpool market also weak. Only firmness shown Aug. 16 and 17 when foreign demand was somewhat improved and hedges were removed against sales to seaboard. Premiums for cash grains also were lowered. Chicago Sept. wheat 4c lower; Chicago Sept. corn 1¼c higher. On Aug. 18, grain prices on down grade from start. Bulge last two days reduced short interest and this weakness in coarse grains led to general selling and decline. Corn led decline today and support lacking on way down. Country offerings old corn fairly large early but dropped off when market broke. Closing prices in Chicago cash market: No. 2 red winter wheat $1.03; No. 2 hard winter wheat $1.04; No. 2 mixed corn 62c; No. 3 yellow corn 63c; No. 3 white oats 32c. Average farm prices: No. 2 mixed corn in central Iowa 49¾c; No. 2 hard winter wheat in central Kansas 85c; No. 1 dark Northern wheat in central North Dakota 95c. Closing future prices: Chicago Sept. wheat $1.00¾; Chicago Sept. corn 59⅝c; Minneapolis Sept. wheat $1.04; Kansas City Sept. wheat 94c; Winnipeg October wheat $1.02.

DAIRY PRODUCTS—Butter markets firm with price tendency upward. Receipts lighter and the markets further strengthened because of limited supply of fancy goods due to the effect of hot weather on quality. Some export inquiry and a little business reported. Closing prices, 92 score butter: Chicago 34½c. Cheese markets steady following slight declines at Wisconsin early in week. Business increased but at the close the actual movement of goods has slowed up considerable and trading is limited to a few styles. Prices at Wisconsin primary cheese markets Aug. 17: Daisies 18¾c; Young America 19c; Longhorns 19¼c; Square prints 21¼c.

LIVESTOCK AND MEATS—Chicago hog prices showed net declines ranging from 15 to 60c per 100 lbs. for the week, light hogs declining most. Beef steers were 10 to 15c higher and butcher cows and heifers firm to 25c higher; feeder steers were steady while light and medium weight veal calves advanced $1 to 1.50. Fat lambs and yearlings were 35 to 50c higher, feeding lambs steady to 25c lower and fat ewes unchanged. On Aug. 18 light hogs were fairly active at steady prices compared with Thursday's average, other grades slow and 15 to 25c lower. Beef sters and butcher cows and heifers generally steady. Veal calves weak to lower. Fat lambs steady to 15c higher with feeding lambs and sheep steady. Aug. 18, Chicago prices: Hogs top $9.65; bulk of sales $7.50 to 9.55; medium and good beef steers $8.10 to 10.50; butcher cows and heifers $3.90 to 9.25; feeder steers $5.40 to 7.75; light and medium weight veal calves $11 to 12.75; fat lambs $12 to 13; feeding lambs $11.50 to 12.50; yearlings $8.75 to 11; fat ewes $3.50 to 7.65. Stocker and feeders shipments from 12 important markets during the week ending August 11, were: Cattle and calves 84,395; hogs 3,278; sheep 54,580. Eastern wholesale fresh meat prices were generally higher for the week. Beef ranged from 50c to $2 higher, mutton from $1 to $2 higher and fresh pork loins from $1 to $1.50 higher; veal advanced generally $1 while lamb was firm to $1 up per 100 lbs. On Aug. 18 better grades of beef ranged from weak to $1 lower while common grades declined generally $1 compared with Thursday's average.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 1.14@1.22; No. 1 northern, 1.08@1.14; No. 1 dark hard, 1.12@1.14; No. 1 hard, 1.01@1.02; Na. 1 am. dur., 90c@95c; No. 1 durum, 81c@90c. Corn No. 2 yellow, 53c@58c. Oats No. 2 white, 27@30c. Barley, choice to fancy, 47c@49c. Rye No. 2, 66c. Flaxseed No. 1, 2.46@2.48.

South St. Paul Live Stock.

So. St. Paul—Sters, $5.50@6.50; veal calves, $9.25@10.25; cows and heifers, $3.50@6.00; hogs, $6.50@9.25; sheep and lambs, $4.00@14.00.

EGGS—Country receipts, rots out, per case, $6.00; No. 1 candled, good extras, free from rots, small dirties and checks out, per dozen, 22c; small dirty and held stock, rots and leakers out, dozen, 15c; checks, rots and leakers out, 14c; quotations on eggs include cases.

LIVE POULTRY—Not advisable to ship turkeys under 7 pounds in weight. Hens, 4 lbs. over, 18c; hens, under 4 lbs., 13c; cripples and culls, unsalable; ducks, fat, 13c; ducks, young, 18c; geese, fat, 8c; turkeys, fat, over 8 lbs., 25c; turkeys, thin and small, 15@20c, cripples and culls unsalable; roosters, 12c; No. 1 broilers, per lb., 20c; leghorns, all sizes, 17c.

Major Reed Becomes Solon.

Washington—Maj. David Reed of Pittsburgh, was sworn in today as senator from Pennsylvania to succeed the late William E. Crow, succeeding by executive appointment.

Live Stock Shipping Reduced.

Chicago—The first effect of recent embargoes on live stock as a result of the rail strike was felt at local stockyards when live stock receipts fell to the 9,000 mark.

WORN OUT AFTER SHE COOKED A MEAL

Took Lydia E. Pinkham's Vegetable Compound—Read the Result

Cincinnati, Ohio.—"I suffered for a year with nervous troubles and irregularities before I took Lydia E. Pinkham's Vegetable Compound. My back pained all the time and I was unfit for housework. I was worn out if I cooked a meal, and was unable to do my washing. My girl friends and my sister told me if I would take your Vegetable Compound and Liver Pills I would be relieved. After taking the first bottle I felt better, and neglected it awhile, but found I could not do my work until I was stronger. So I took the Vegetable Compound again and now I am the mother of a 19 months old boy. He is fat and healthy and I am sure I could never have carried him if it had not been for your Vegetable Compound. I recommend your medicine to all women although I am young to be advising some one older."—Mrs. CHRIST. PETROFF, 818 W. Liberty St., Cincinnati, Ohio.

Lydia E. Pinkham's Vegetable Compound contains no harmful drugs and can be taken in safety by any woman.

Definitions.

The Woman likes to pass Saturday afternoon with the schoolma'm. Usually there are two or three occurrences in term time which have helped to form the silver lining of the week's drab cloud.

During the spelling lesson the teacher had asked the children to form sentences containing the words that occurred in the lesson.

"Ivan," she asked a little son of Russia, "can you give me a sentence with the word 'plight?'"

"Please is p'lite," responded Ivan, with a smile that denoted the pride of work well done.—Chicago Journal.

Police!

But He Did!

Otto Kahn, the New York financier, objects to the modern girl's bathing attire—a maillot or one-piece suit, no skirt, no stockings.

"Look there!" he said one morning at Coronado, as a very pretty girl in a black silk maillot ran down the beach. "You could never say that girl had a rapt look now, could you?"

Looked the Part.

He—"She made me feel like a fool."
She—"I could tell how you felt by the way you looked."

ALMOST WRECKED STATES R. R. MAN

Stomach Trouble Had Him Nearly Past Going, Declares Mowrer.

"Tanlac has helped me to gain ten pounds," said J. E. Mowrer, 157 Park St., Akron, O., well-known railroad man.

"My stomach was in such bad fix that for several days at a time I could hardly retain any food. I had no appetite and often the very sight of food made me sick. I was intensely nervous, too, could not rest at night, felt tired and worn out all the time, and lost weight and strength until I was almost a wreck.

"Tanlac has made me feel like a different man. My appetite is enormous and I haven't a sign of indigestion left. I never felt stronger. Tanlac certainly does the work."

Tanlac is sold by all good druggists. —Advertisement.

Had Missed Something.

We had been living in the suburbs for five years, and had just moved back to the same house that we had lived in before. Our little girl, who is six years old, was saying "that she was borned in this house."

Her little brother said he was, too. Sister said, "No, you were in heaven then."

"If I was," John retorted, "I don't remember of seeing Jesus."—Chicago Journal.

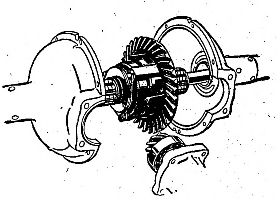
Strong Rear Axle Gears
of the
New Superior

CHEVROLET
for Economical Transportation



One of the many reasons why the New Superior Chevrolet is outselling all other makes of standard automobiles is the high-grade equipment it offers in a low-priced car.

A leading feature of this equipment is the spiral bevel rear axle gears. They represent the best modern automobile engineering practice. The gears are so designed that *two teeth* of the pinion gear are always engaged with the ring gear, greatly increasing the strength of the set, and eliminating the noise common to the old type of straight tooth gear.

The New Superior Model Chevrolet has so many superior features that we invite comparisons, because comparisons sell Chevrolets.

Ask any dealer to tell you why.

RAIL EXECUTIVES ARE WEAKENING

Trainmen At Donville Kentucky On Southern Division Give Notice Of Walkout.

U. S. TROOPS ON GUARD

Firemen at Princeton Out on Second Strike—Orders Annulling Trains Between Louisville and St. Louis Given.

Louisville, Ky.—Official notice of a walkout of the "big four" brotherhoods of trainmen on the western division of the Southern Railway company from Danville, Ky., to St. Louis, Mo., was received by officials of the company here following a second strike of firemen at Princeton, Ind. Orders were given for the annullment of trains between Louisville and St. Louis until further notice.

Washington—Rapidly growing deterioration in railroad equipment, threatening paralysis of transportation, is causing leading rail executives who wanted to fight to the finish in the shopmen's strike, to adopt a conciliatory attitude, according to information to government officials.

This is one of the main facts underlying the hopes in administration circles that a settlement of the strike soon will be reached.

Railroad workers on strike are "fighting the fight of all workers" and "should have all the moral and financial assistance which the labor movement can give them," a statement issued by the executive council of the American Federation of Labor declared.

Salisbury, N. C.—All the eight companies of troops sent here last week on account of the tense situation developed from the strike of 1,700 workers in the Southern railway shops at Spencer, three miles north of here, were placed on guard duty at the shops and the Salisbury postoffice.

BONUS BILL TAKEN UP AGAIN

N. D. Legionaires Confident of Passage of Soldiers Bonus Bill.

Fargo.—Officers high in the circles of the North Dakota department of the American Legion can see no reason why the impending action on the bonus bill will not result in its passage.

"Congress has awakened to the justice of the adjusted compensation measure and the bill will pass, although the New York interests will put up a hard fight to prevent it," J. P. Williams, state adjutant of the Legion said in regard to the legislation.

State Legion officials are hesitant to state their opinions as to the disposal of the measure if sent to President Harding.

Washington — Senate Republican leaders continued negotiations for a unanimous consent agreement for a final senate vote on the soldiers' bonus bill, but apparently with little prospect of immediate success. Some progress was reported, but it was understood that four or five senators objected to an agreement at this time.

COAL STRIKE NEARING END

Operators Insist on Old Wage Scale and Long Term Contract.

Washington—A determined filibuster to delay legislation requested by President Harding for meeting the industrial upheaval was launched by a group of Democrats in the house.

Representative Huddleston of Alabama, Democrat, demanded a roll call as soon as the house was called to order and followed it through with repeated points of "no quorum" when Republicans sought to take up for consideration legislation on the unanimous consent calendar.

The filibuster may delay but cannot prevent action on the president's program since Republicans have mustered enough members to guarantee a quorum.

Harding's Strike Speech Held Unfair.

President Harding's address to congress dealing with industrial troubles was characterized in the house by Representative Huddleston, Democrat, Alabama, as "an unfair, unjust and prejudiced statement" against working men who had "used the strike, the only instrument known to them."

Mr. Huddleston declared that working people felt they had been dealt with "unjustly." He added that the president's speech was calculated to "irritate the other side" and insisted that "the president stay inside the constitution."

Forest Fires Under Control.

Duluth, Minn.—With the forest fire situation reported well in hand, a concentrated effort was begun by forest rangers and others to reduce the menace of peat bog fires which been mainly responsible for the early season fires in the woods in northern Minnesota. Armed with 500 shovels, the rangers were digging in the peat bogs to get at the main source of these fires and then pour water into them with the aid of pumps.

The World's Greatest Baking Powder

MR. DINGLE'S SOOTHING SIRUP

Surely No Excuse for His Better Half's Nervousness After That Reassuring Speculation.

Mrs. Dingle was filled with nervous alarms whenever she traveled, and Mr. Dingle always had his hands full in trying to quiet and reassure her.

"Albert," said Mrs. Dingle, waking her husband from a sound sleep in a southern railway car. "Albert! I want you to find out why we are going at this fearful speed. The car is bumping and swaying till I can scarcely see out of my eyes."

Mr. Dingle sat up and looked out of the window at the moonlit landscape.

"See that bridge ahead on the curve?" he asked sleepily. "Well, we have to go over that in a minute, and probably it isn't very strong and they want to go over it with as little strain and as quickly as possible. Now go to sleep."—Milwaukee Sentinel.

Just Plain Lonesome.

One day last week the young husband had occasion to go over to the West side. On the street he saw a young woman and behind her a crying child of about three years. The woman turned and in an impatient tone demanded: "What are you crying about?" The tot, looking up, replied: "I want a tiss." The woman bent down and gave the desired kiss. Thereupon the tears were dried and the world was again full of sunshine and gladness.—Chicago Journal.

Today's radicals are tomorrow's mossbacks.

FORESEES VOYAGE TO MOON

Frenchman Predicts That in Near Future the Trip Can Be Made in Forty-Nine Hours.

M. Esnault-Pelterie of the Paris Aero club predicts that the utilization of the intra-atomic energy will enable men in the near future to travel from the earth to the moon in 49 hours. The first 31 minutes, it seems, will be very agreeable, but during the 48 hours and 29 minutes of the second part of the course one will have the sensation of a terrible fall in the void.

And this reminds one of the charming story told by Mark Twain:

One morning when standing at the window he perceived a human body falling through the air.

"How do you do?" asked Mark Twain gracefully.

"So far," the other replied, "I'm all right. But when I reach the ground floor it will be all wrong!"

He Forgot; It Cost Him.

E. C. Reed, a captain of the Erie railroad police, had a twenty-dollar bill when the assessor called on him.

The assessor did not have change to take out his dog tax and suggested that Reed pay the tax at the central office. Reed forgot about the matter until this week when a constable served him with a warrant for failing to pay. He paid $17 in the court of G. W. Stults, justice of the peace, and admitted the joke was on him.—Indianapolis News.

Whatever good work you undertake, master it.

Up-to-Date Youngster.

Whether the generations advance or not may be undecided, but they certainly change. Recently a Portland mother explained to her early-teen son that certain guns and baseball equipment and radio addenda could not be bought, as the family exchequer was limited and "Daddy has to work hard to get the money we live on and we have to make it go a long way." In "daddy's" Sunday school books, of course, the boy would have said: "Then, my dear mamma, cannot my next suit be made from papa's old seatless trousers?" or "Next Christmas, my dear mamma, I shall do without lollipops." But this Western-American, Twenty-first-century lambkin replied:

"Well, why can't pop get more money?"—Portland Oregonian.

Reversed.

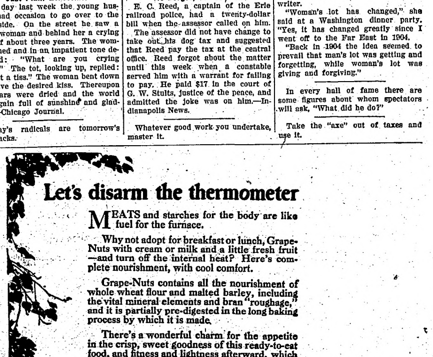
Eleanor Franklin Egan of the advisory committee for the disarmament conference is noted as a brilliant talker no less than as a brilliant writer.

"Woman's lot has changed," she said at a Washington dinner party. "Yes, it has changed greatly since I went off to the Far East in 1904.

"Back in 1904 the idea seemed to prevail that man's lot was getting and forgetting, while woman's lot was giving and forgiving."

In every hall of fame there are some figures about whom spectators will ask, "What did he do?"

Take the "axe" out of taxes and use it.



Let's disarm the thermometer

MEATS and starches for the body are like fuel for the furnace.

Why not adopt for breakfast or lunch, Grape-Nuts with cream or milk and a little fresh fruit—and turn off the internal heat? Here's complete nourishment, with cool comfort.

Grape-Nuts contains all the nourishment of whole wheat flour and malted barley, including the vital mineral elements and bran "roughage," and it is partially pre-digested in the long baking process by which it is made.

There's a wonderful charm for the appetite in the crisp, sweet goodness of this ready-to-eat food, and fitness and lightness afterward, which meet summer's heat with a smile.

Your grocer will supply you with Grape-Nuts!

EDITORIAL

A PLEA FOR BALANCED FARMING.

There may some day be an end to iron mining in Minnesota, but there must be no end to agriculture. So declared Walter C. Coffey, dean of agriculture at the University, in his thorough study of the problem in The Minneapolis Journal last Sunday. But soil fertility will be maintained and farm production will reach its maximum only as Minnesota farmers avoid the mistakes that have brought agriculture low elsewhere.

Diversified cropping and livestock raising, now widely practiced in this state, mark a great advance over the earlier one-crop practice. Minnesota is particularly well adapted to both of these new branches, for it is easy to grow forages and roughages.

Dean Coffee, however, does not see complete salvation for Minnesota farmers in either dairying or soil fertility. The heart of his message relates to the necessity for balanced farming as the basis of any sort of agricultural specialization.

Just because this is so generally overlooked, certain heavy wastages are weakening the practice of agriculture in this state. Manure fertilizer, for example, is not adequate to maintain the fertility of every soil, although this is the common practice and belief. Different soils have different replenishment needs, and these must be known with exactitude.

Again a common source of wastage is the failure to maintain efficient stock. A "boarder" is as expensive as a self-binder that leaves a fourth of the grain in the field. Good stock are worthy of their keep and should be kept in accordance with their quality.

But lack of balanced farming is the cause of the greatest loss. If dairying is the specialty, it should be supported by careful grain farming—and vice versa. Back of special activities should be a farm program in which the resources of the farm supplement each other.

This necessitates a type of farmer both scientific and businesslike in putting a program through. And back of the farm and the farmer should be a country life that develops a high type of ability and character.

Dean Coffee holds out an agricultural ideal that is challenging, but not impracticable. Present practices move toward its realization, but these will be greatly aided by just such a conscious ideal as Dean Coffee presents. By its aid Minnesota agriculture will have a development rich and promising beyond compute.

A SILO'S VALUE.

Have you a silo? If you haven't, why not build one this fall? There is yet time!

A silo on every farm which produces corn and upon which cattle are maintained is strongly recommended by authorities on diversified farming everywhere.

The silo furnishes storage place for a large amount of rough feed which relatively, at least, has been produced easily and cheaply.

It has been repeatedly demonstrated that silage is an economical ration for either dairy or beef cattle. It maintains the milk flow from the dairy herd and makes them fat when fed to baby beeves and steers. All classes of farm animals relish it.

Silage is apple pie a la mode or strawberry shortcake to every living, breathing thing of four legs that inhabits the barnyard, outside of possibly the dog and cat.

Silos mean better feed and sometimes a large saving of feed. By their use it is possible to save corn that otherwise might be largely wasted because of immaturity. Frost-bitten corn does not make the best silage but it can be saved in a silo and fed to advantage.

If your farm is without the advantages of a silo, The Banner would strongly urge you to consider the matter of getting one somewhere, borrow one—or steal it!

"GROW ALFALFA" CAMPAIGN.

In an effort to get 500 Wadena county farmers to grow at least one acre of alfalfa each year, the Agricultural Division of the University and the Wadena County Farm Bureau are co-operating in inaugurating a county wide "grow alfalfa" campaign to continue all fall and winter.

Meetings have been held in every township with Ralph Crim, extension agronomist, and S. B. Cleland and F. J. Brown, assistant county agent leaders at University Farm, as the principal speakers. A farm to farm canvass is under way. Farmers are being assisted in every possible way and are being provided with seed, lime and all necessary materials at minimum prices through the co-operation of seed companies and business concerns of the county.

Each farmer is being asked to sign a card agreeing to put in one acre of alfalfa under certain standard requirements in order to insure a successful crop. These, according to Mr. Cleland, require the land to be fall plowed, the soil to be tested for acidity and limed if necessary; Grimm seed to be used to be sown without a nurse crop when seeding is done next spring.

THE SPUD SITUATION.

H. G. Larson, one of the potato field men of the state, in an interview given at Grand Rapids last week, has the following to say in regard to the spud situation in Minnesota. He believes the farmers will be offered very low prices for their potatoes at digging time, and that this would be a good year to hold a large portion of their crop, if so situated that it could be done.

He also said that particular attention should be paid to grading the potatoes this year, so that only the very best would be offered on the markets, thus securing the very best price that would be paid.

"There will be few large buyers in the market when digging opens," he said. "There are too many potatoes raised this year in North Dakota, and these potatoes must go right from the field to the cars and be sold, for there are no storage facilities in North Dakota for potatoes."

Mr. Larson also stated that the estimated crop for North Dakota this year was far in excess of what it had ever been before, and that these potatoes, dug at the same time as Northern Minnesota potatoes, would depress the market, making it advisable to hold wherever possible. With the exception of a strip in the central part of the state, where the weather has been too dry for good potato growing, a fine crop can be expected all over the state. The prices on Early Ohios are lower now than anticipated even a few weeks ago, and this variety is now offered on the Minneapolis markets for 60 cents a hundred.

Yesterday must have been a terribly quiet day in both Minneapolis and St. Paul. Nobody was murdered and so far as we know neither the street car company nor any of the officials down there got away with more than a million dollars.

Every once in a while Thief River Falls finds itself in a serious predicament. The latest is the report that "Doc." Kirby is to set up "practice" there. Some fear he'll come and others fear he won't.

The "A. B. C.s" of successful farming for Minnesota, The Banner believes should read something like this:

A—Alfalfa raising.
B—Businesslike methods.
C—Cow keeping.

Keep away from moonshine. It manufactures episodes that make work for the coroner. And it must be awful to have to die in this hot weather.

The girls might think Bill Hart is a good actor on the screen, but we believe he's a bad one at home. His wife is suing for divorce. On what grounds? 'Tis said, cruelty.

The fellow who waits for business to come to him has more patience than sense and hereafter The Banner is going to take that fact into consideration.

A lot of politicians who stand on their records as a means of seeking re-election have the slack wire performers cheated to death.

The Minneapolis Journal states the Mankato Golf Club is out of coal to heat its shower bath water. The suffering is terrible.

PREMIUM LIST (Continued Page 4)

25c; relief map of S. A., first, 50c; second, 25c.
Central school, story booklet, 7th grade, first, $1; composition booklet, 7th grade, first, $1; produce map of S. A., first, 50c.

C., and 72-inch reflector telescope through which he recently discovered and measured twin suns of immense size. 3—Dedication of monument on Argonne battlefield to those who perished there.

NEWS REVIEW OF CURRENT EVENTS

Strike of Bituminous Miners Settled Temporarily and in Feeble Manner.

BOTH SIDES CLAIM VICTORY

Negotiations Between Railway Executives and Shopmen Resumed—Violence by Strikers Exasperates the Public—France Ready to Enforce Sanctions Against Defaulting Germany.

By EDWARD W. PICKARD

ONE of our great strikes—that of the bituminous miners—was settled last week, partially, temporarily, and after a fashion. The agreement reached at Cleveland by the miners' officials and operators representing perhaps 60,000,000 tons annual production means there will be enough coal to get through the fall and winter, though conservation and rationing probably will be necessary. But the old wage scales and working conditions are to continue in effect until March 31, 1923, which means the high prices for coal that have prevailed for several years will be maintained by the dealers, if they can do it, and also that next April the disputes and probably the strike will begin all over again. To be sure, the agreement provides for the creation of machinery to avert further strikes and to bring some order into the chaotic coal industry, but the public must not count too much on this.

Both the miners and the operators claim to have won a victory at Cleveland, the former because their wages and work conditions are unchanged, and the latter because the miners signed agreements with individual operators and also because the tribunals to be set up solve the issues revolving around the question of arbitration, which the miners oppose.

The agreements were with operators of all the bituminous states except Illinois and Indiana, but the prospects for resumption of mining in those two states also was excellent.

Already the coal profiteers are getting in their work. Senator Borah of Idaho called this to the attention of the federal fuel committee and announced his intention of seeking legislation to check them. At the same time Fuel Distributor Spencer asked the railroads to refrain from competitive bidding for coal, the result of which had been to force the price above the limit set by Secretary Hoover. It was stated in Washington that President Harding would ask congress to pass legislation giving the federal fuel committee legal powers to control the distribution and regulate the price of coal as a safeguard against hardship and profiteering. It is quite evident that unless the government does come to the rescue, the settlement of the coal strike will be an expensive thing for the consumer.

HIS final suggestion for settling the strike of railway shopmen having been rejected by the union, and only accepted by the railway executives with reservations, President Harding lost nearly all the wonderful patience with which he has been dealing with that problem.

On Friday the President laid the whole matter before congress. After declaring the right of employer and employee alike to conduct their business must be recognized, he said he was "resolved to use all the power of the government to maintain transportation and sustain the right of men to work." He said the Esch-Cummins act was inadequate and recommended action to make the railway labor board's decisions "enforceable and effective against carriers and employees alike."

He scored severely the strikers for their acts of brutality and their contempt for law, and announced his intention to invoke laws, civil and criminal forbidding conspiracies hindering interstate commerce and requiring safety in railway service.

The President, asserted a national investigation of the coal industry was necessary and recommended a federal commission to advise as to fair wages and conditions.

In discussing coal the President referred to what he termed the "shocking crime at Herrin, Ill., which so recently shamed and horrified the country," and added the incident was "butchery of human beings outright in madness."

WARNINGS of brotherhood officials that alleged faulty equipment and the employment of armed guards would result in many sporadic strikes of members of their unions were fully justified. Engineers, firemen and trainmen in numerous instances abandoned their trains and service, especially in the Far West, was badly crippled. Passengers were marooned for days in small towns in the desert regions and women, children and invalids suffered greatly from heat and lack of milk and ice. In some cases the sending of relief trains was prevented or delayed by the strikers. The government, the railway heads and the entire American public were thoroughly exasperated by these methods, and the brotherhood chiefs, realizing the great mistake their men were making, ordered them back to work. The heads of the "big four" still insist that equipment is so degenerated that the lives of the trainmen are endangered, and they were pleased to read that President Harding had written to Chairman McChord of the interstate commerce commission insisting that the federal laws relating to inspection of rolling stock and safety appliances must be strictly enforced, regardless of the public inconvenience which might ensue.

As for the employment of armed guards, the striking shopmen and their sympathizers have by their actions destroyed completely the argument of the unions. They have mobbed, killed and maimed many nonunion shop workers in most cowardly fashion; they have set fire to shops; they have torn up tracks, they have bombed trains, and they have blown up at least one railway bridge. Wherever railway property and workers are not well protected by armed guards or state troops, acts of violence are perpetrated. Over and over again, in scores of places, the striking shopmen are proving themselves to be brutes and cowards. Their only excuse—if it be an excuse—lies in the statement of Attorney General Daugherty that Red agitators and I. W. W. leaders are exceedingly active in fomenting troubles.

IN ACCORDANCE with its arranged plan, the senate voted Saturday on the tariff bill devised by its committee on finance, accepting it by a fair majority, and the measure is now in conference. During the final days of debate several important amendments were adopted, one of them authorizing the establishment of foreign trade zones in American ports where foreign goods may be brought in without payment of duty to be stored, exhibited, mixed with domestic products and reexported. Logs of fir, spruce, cedar and western hemlock were transferred to the free list, and so were scientific instruments for educational purposes. The Democrats failed to get a reduction of the rates on aluminum, and Senator Harreld (Rep., Okla.) lost his fight for duties on crude petroleum and fuel oil.

MISSISSIPPI Democrats staged a pretty contest Tuesday in their senatorial primaries. The real fight was between former Senator James K. Vardaman and Hubert D. Stephens. A third contestant was Miss Belle Kearney. She polled only about 17,000 votes, but that was enough to prevent Vardaman from getting the required majority; he received over a thousand more than Stephens. Under the state law it is necessary to hold a second primary on September 5 to determine which of the two men shall be the nominee. Some time ago former President Wilson stated that he hoped Vardaman would not be sent to Washington again.

UNABLE or unwilling to recede from the position he had taken regarding Germany's failure to pay, Poincare returned to Paris and the allied conference in London broke up without result unless it be the momentous one of a rupture of the entente and the wrecking of the treaty of Versailles. The French premier summoned his cabinet and it unqualifiedly indorsed all he had done and said in London. It also decided the government was competent to handle the situation without convening parliament, unless conditions become much worse. Though fully prepared to put into force the French sanctions against Germany, the cabinet decided to await the action of the reparations commission concerning a moratorium. Germany meanwhile defaulted in the war debts due on Tuesday, declaring in a note to the allies that this was due to the demand for foreign currency to pay for urgently needed necessaries of life and to the fall in the value of the mark. The reparations commission was trying to devise some way of tiding over the situation until November or December when, it believes, another meeting of the allied premiers will have to be held to consider the whole question of German debt and finances and the interallied war debts.

The break-up of the London conference caused another great decline in the value of the mark, and at the same time came a series of farm strikes throughout the country led by the communists and seriously threatening the harvests. Chancellor Wirth, in a statement to press correspondents, said:

"Germany cannot pay in gold. Ten million gold marks, paid this week, were drawn from money set apart to buy wheat this month. The first duty of the German government is to give bread to our sinking people.

"In Austria, which is less densely populated than Germany, the authority of the state has been endangered. Germany is now heading under full sail into parallel conditions. What can France gain from her policy? Our inability to pay in gold will be followed by inability to pay in anything. What comes after that is not politics—it is social revolution. We of the German republic have restored harmony in central Europe, where formerly an entire upheaval threatened. We are today sitting at the deathbed of our work."

THOUGH expected for some time, the death of Lord Northcliffe, the famous British journalist and leading publicist of the world, came as a real shock. America feels the loss only less than Great Britain, for he was often in this country, knew thoroughly its people and its ideals and was the greatest force in the promotion of close friendly relations between the two nations. His power in British politics was tremendous, and there is no one to fill his place. Viscount Northcliffe was buried in Westminster Abbey Thursday with all the honors that could be bestowed. Eminent persons, including many ambassadors, filled the edifice and the humbler folk thronged the streets outside.

IRISH insurgents, having been almost totally routed in the South, broke into renewed activity in the North and among other exploits captured Dundalk in a surprise attack. But they were unable to hold the place more than a few days. When the regulars reoccupied it they took hundreds of prisoners. Regular riverboat service has been re-established between Cork and Queenstown and normal conditions almost restored in that district. The Marconi radio station at Clifden on the coast north of Galway has been rescued from the rebels.

The new Irish Free State lost one of its wisest and strongest supports in the death of Arthur Griffith, president of Dail Eireann, on August 12. Irish and English alike mourned him and his funeral in Dublin was the occasion of a very remarkable demonstration.

OVER in China a peace parley actually was begun, the agents of Gen. Wu Pei-Fu, war lord of the North; and of General Chang, dictator of Manchuria, and Sun Yat-Sen, former head of the southern government, getting together in Shanghai. Representatives of President Li and others also were present. Doctor Sun, who reached Shanghai from Canton via Hongkong, said he had no personal ambitions and would obey parliament and support whomever it chose as president.

News of Minnesota

EVENTS of the week throughout the State of "Ten Thousand Lakes" told in brief form

Duluth—Public schools of Duluth and scores of downtown office buildings, will face complete shutdowns this winter unless coal receipts are quickly speeded up and the production at the mines gets under way.

Moorhead—Miss Sarah Wolfe won the $500 scholarship in the Minneapolis Art institute as a prize for the best drawing submitted in a high school contest.

Winona—The Shrine club of Caledonia entertained 400 Masons of Caledonia and neighboring towns at a picnic on the grounds of the Caledonia hospital.

Beulah—Mr. Thompson, crossing tender, fell heir to a fruit farm near Beulah, Mich., and resigned to take charge of the 40 acre tract, valued at more than $25,000.

Hibbing—George Wood, local game warden, is in a local hospital recovering from injuries received when he went to the shack of a settler to arrest him for game violations.

Winona—Pieces of ivory, which are parts of an elephant's tusk, have been found in a gravel pit near here indicating that the body of an elephant was buried there thousands of years ago.

Minneapolis — Corcian Canadian, aged 36, a car repairman employed by the Milwaukee railroad, fell from the roof of a boxcar near Twenty-eighth street and Minnehaha avenue and broke both legs.

Chatfield—Guy Empy, aged 86, a great-great-grandfather, has just purchased an automobile. He declares he is going to learn to drive the "contraption." Mr. Empy has 22 great-grandchildren and 4 great-great-grandchildren.

St. Paul—Poultry dealers and breeders met in St. Paul, to discuss plans for an international poultry show to take place in the Twin Cities in connection with the National Dairy show, Oct. 7 to 14.

Madison—A fire in the oatfields of Martin Hanson, a mile east of here, burned a large quantity of grain. Investigation has shown only one cause, a small piece of glass, which may have focused the sun's rays on one spot long enough to start the fire.

Duluth—John C. Davis, former chief of police and first city controller of Duluth, died at his home here. Davis, who was 64 years old, had been a resident of Duluth since 1881.

Austin—The University of Southern Minnesota at Austin has arranged a "get acquainted picnic" for students to take place shortly after the opening of the fall term.

St. Paul—Coal on its way to Minnesota is being held at prices double the Hoover price of $3.50, the federal fuel administrator was informed in a message from Ivan Bowen.

Lake City—Funeral services for Joseph Merritt Underwood, president of the Jewell Nursery Company, of this city, who died at his home here, were held at St. Marytin's Episcopal church.

Shakopee—J. W. Black of Minneapolis is the president of two new state banks. Charters were granted to the Shakopee State bank at Shakopee and the Marshall County State bank at Holt, Minnesota.

Eveleth—Three girls of Eveleth, who left their homes on Sunday, August 6, are still being sought. They are Jennie Lindstrom, 15; Tillie Mayerle, 16, and Ina Makinen, 17. On the morning they disappeared they were going to a picnic.

Bemidji—Dorothy Borgen, aged 9, was badly injured when she was struck on the head by a maul swung by a patron of a strength-testing machine at the Northern Minnesota fair.

Itasca—Porcupines are girdling many trees within Itasca state park, killing them so that they have to be cut to save the timber, State Forester W. T. Cox says that 1,100,000 feet of timber was cut from the state land last winter, about one third of which had been girdled.

Minneapolis—O. P. B. Jacobson, state railroad and warehouse commissioner, notified the Interstate Commerce Commission that the states of Minnesota, North Dakota and South Dakota will require 260,000 cars for the shipment of potatoes and grain this fall.

Minneapolis—Steps towards the organization of an art club whose purpose will be the encouragement of young artists of the twin cities has been taken.

Minneapolis—Rapid growth of extension work of the University of Minneosta in the last several years has resulted in opening of offices at 312 Security building. F. C. Austin is resident manager.

Albert Lea—A storm which struck this section of the state did much damage to crops and the entire east wall, 100 feet in length, of the Odd Fellows building, in the course of construction here, was blown down.

Duluth—The third child to die in a motor accident in 16 hours in Duluth occured, when Robert, the five-year old son of Arthur Carlson was killed.

St. Paul—Minnesota took the lead as the hottest place in the United States and although St. Paul was not the point, it stood well to the front. The palm went to Campbell, Minn., with 99 degrees.

[illegible] nounced by [illegible] manager of the band.

Owatonna—Steele county's delayed rural school commencement exercises for 1922 will be conducted at Mineral Springs Park, Saturday, Aug. 26.

Brainerd—State Forester W. T. Cox has wired Ranger John Nelson that all permits for any kind of burning had been revoked.

Hastings—Dakota County Health association conducted a free clinic at the community club rooms here. The clinic is for children and infants.

Campbell—Investigation showed that the four children, John, Ralph and Albert Stevens and Edgar Wray, whose bodies were taken from a barn following a fire, died of suffocation.

Luverne—Cracksmen entered two Standard Oil stations here and blew the safes at both places and escaped with approximately $400. They also broke into the Ford garage.

Moorhead—Rev. J. C. Craig, St. Paul, was the principal speaker at the exercises marking the laying of the cornerstone of the Grace Methodist church here.

Crookston—Rube Lukkason, former star hockey player, is held in the Polk county jail here. Lukkason was arrested on a charge of stealing an automobile owned by H. P. Packard of Minneapolis.

Jackson—Reinhold Miller, a clam fisher on the Des Moines river near Brownsburg, reported finding a clam containing six pearls. The pearls are a fairly good size and good lustre.

Albert Lea—H. C. Jensen, one of Albert Lea's oldest settlers, died at his home here. Mr. Jensen built the fifth house in this place.

West Duluth—N. P. Willner of West Duluth is great sachem of the Minnesota council of the Improved Order of Redmen, following election of officers at the conclusion of the annual convention of the order.

St. Paul—A few hours after he had reunited his parents in their home at 421 Capitol avenue, St. Paul, Theodore Bambenek, 15 years old, was drowned.

Shakopee—A joint picnic of the Scott County Farm Bureau association was given at Simpkins Grove, Prior Lake.

Sauk Rapids—Sauk Rapids held a real bang-up celebration marking the completion of the paved highway from the twin cities to Sauk Rapids.

Albert Lea—The large barn, its contents and the silo on the farm of E. P. Greeley, west of here, was destroyed by fire with a loss estimated at more than $8,000.

St. Paul—Theodore, 15-year-ol. son of Mr. and Mrs. Phillip Bambenek, 421 Capitol Ave., St. Paul, was drowned while swimming at McCarron lake. The lad sank despite the efforts of a number of other swimmers to save him.

Montevideo—The Montevideo Masonic association will take over the property of the Windom college here, paying $5,000 for the property. The place will be remodeled into a Masonic temple.

Minneapolis—Members of the Minneapolis Business Men's association took 28 foreign born boys to the Y. M. C. A. Americanization camp at Bush lake. They will act as hosts to the youngsters all week.

St. Cloud—A triple wedding was solemnized in St. Augustine's church here when the three sons of Mr. and Mrs. Paul Held took the marriage vows. Henry Held was married to Miss Claire Lent of Cold Springs; Bernard to Isabelle Niehaus of Richmond and Julius to Sophia Bettin of Sherburne. The three couples will make their home here.

Mankato—Pioneer men and women who have weathered the storms of the many years since the founding of this state, together with their descendants, gathered at the picnic grounds in Sibley park Aug. 10th to enjoy a reunion and picnic.

Minneapolis—F. L. Reidy and Charles Hume, postoffice inspectors, returned to Minneapolis from New York, where they participated in the roundup of three men in connection with the million-dollar mail robbery in that city.

Red Wing — Announcement was made here that stockholders of the Red Wing Telephone company had transferred their holdings to the Tri-State Telephone company.

Hibbing—The body of Frank Godessa, missing since July 15, was found in an unused part of the Webb open pit mine, one mile from here by members of a locomotive crew. Godessa apparently had fallen over the edge of the pit, a distance of about 50 feet.

Minneapolis—C. S. Haymes of the Charles S. Haymes company, realtors, announced the purchase of a 100-year lease on the Phelps building, 913-915 Nicollet avenue, and the ground covered by the building, by Kelly Brothers.

Willmar—Treshing is now in full swing in this vicinity. The yield of all grain is good and most of the returns are running overweight. Wheat weighs 63 pounds to the bushel, oats 35 and 40 and barley 50 and 55.

Austin—Heirs of John Wagner by his first wife have begun a fight for a share of his estate. Wagner was found murdered in his home at Grand Meadow, July 12, and his wife died several days later from wounds.

Minneapolis—Ten million dollars will be available within 30 days for the purchase of the Northwest crop on a co-operative basis by the Northwest Wheat Growers' association, according to announcement by J. F. Adams, auditor of the Minneapolis office.

Winona—Damages of $20,000 are asked of S. B. Qvale, prohibition enforcement chief, for injuries alleged to have been suffered as the result of a raid by dry agents, in a suit brought by Mrs. Elizabeth Malewick. The action is believed to be the first of it kind in Minnesota

Timely Comments on Agricultural Topics for Our Readers

PROPER METHOD OF FLY CONTROL IS TO PREVENT MULTIPLICATION

(Prepared by the United States Department of Agriculture.)

Fly-traps have a distinct place in the control of the house fly and other noxious fly species, although the limitations of fly-traps must be recognized and other methods of control also practiced. The bureau of entomology, United States Department of Agriculture, points out that the logical method of fly control is to prevent multiplication, by proper attention to breeding places.

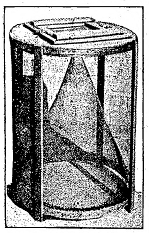
The two main ways in which fly-traps are valuable are by catching flies that come to clean premises from insanitary places and by capturing flies that have escaped from other means of destruction. Nearly all fly-traps are made on the same general principle, although they may appear quite different. The flies are attracted by bait, odors, or light into a cage with a large entrance and an exit too small to be easily found, which is often made by using a cone-shaped passage.

Two Chief Classes of Flies.

There are two chief classes of flies that can be caught in traps—those that breed in animal matter or become a pest to live stock, and those that breed in vegetable as well as in animal matter. The former consist mainly of the so-called blow-flies, including the screw-worm fly; in the latter group the house fly is by far the most important. It is attracted to almost any moist material, especially that having an odor.

The general principle involved in nearly all fly-traps is modified to fit different conditions, as in the window trap, which catches the flies as they endeavor to enter or leave a building; The garbage can trap, and the manure box trap, which retains flies bred from infested manure already in the box. Light is an important factor in the success of all traps, for flies have a marked tendency to go toward the light.

While many commercial traps are on the market, anyone with a few tools can construct traps at a small fraction of the sale price of ready-made ones. The conical hoop trap, which appears from extensive tests to be most effective, durable, easily made, and repaired, can also be made quite cheaply. It consists of a screen cylinder with a barrel-hoop frame containing a screen cone inside. The total cost of the material, if bought new at retail prices, is about $1. If only wire and tacks are bought the cost should not exceed 80 cents.



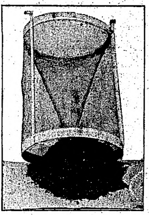
Flies Enter This Trap at Bottom Where There Is a Shallow Pan of Bait.

A modification of this trap that can be made more quickly and with fewer tools is suggested. The tent trap is not considered as effective as the conical type. Any good trap may be used over a manure box, which must have a hole cut in the top. The trap is fitted closely over this hole to catch flies bred in the manure.

A Trap for the Window.

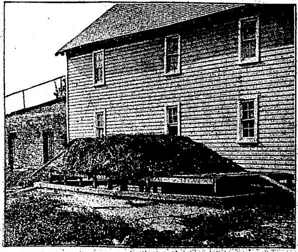
A type of modified tent trap may be used in a window. It is adaptable also to barns and buildings where foodstuffs are prepared. It is advised that properly baited traps to catch screw-worm flies be used near watering places and where cattle congregate.

In choosing bait for fly-traps it should be remembered that fermentation renders the material attractive. A mixture of cheap "black-strap" molasses and water is an economical and effective bait for the house-fly. One part molasses is mixed with three parts water. Sugar-beet or "stock molasses" is fairly attractive in regions where it is produced. Brown-sugar sirup allowed to ferment is good if mixed in the proportion of one part brown sugar in four parts of water. A small amount of vinegar added hastens fermentation. If honey bees are attracted by this bait some other kind should be used. Milk on dairy farms is the next choice to cane molasses as a cheap and convenient attractant. The curd from the milk combined with brown sugar and water is a very good bait. The best bait containers are broad and shallow rather than deep. Traps must be properly cared for and placed in suitable locations. The bait containers must be kept well filled and also frequently washed out. Traps should be emptied of dead flies at least once a week.



A Good Catch

Sticky fly papers and poisoned baits have their uses in fly control as well as traps, and it is advised that Farmers' Bulletin 851 be consulted for further information on house-fly control, and Farmers' Bulletin 857 for additional measures to be used against the screw-worm fly and other flies infesting wounds in stock and those that blow soiled wool in sheep.



A Fly-Trap Kills the Larvae—The Manure Is Stored on a Slatted Rack Above a Concrete Pit Containing Water—Larvae, Following Their Tendency to Burrow Downward, Pass Through Manure and Fall Into Water

Where Theory Is Wrong.

Theoretically, one can run a successful farm without live stock. Practically, it can't be done. Just another one of the things that are lustrous in theory, but drab in operation.

Weeds Increase Harvest Cost.

Weeds increase the cost of harvesting the crop by requiring more time more power or more labor; and by increasing the wear and tear on machinery.

Work of Wise Poultryman.

The wise poultryman is paying strict attention to his growing stock disposing of the slackers, practicing thorough sanitation. Are you one of them?

LIVE STOCK NEWS

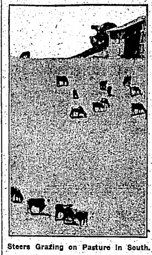
LIMIT TO USE OF MOLASSES

Test Made by Department of Agriculture in Co-Operation With Alabama Station.

(Prepared by the United States Department of Agriculture.)

That there is a limit to the quantity of blackstrap molasses which can be added with economy to a ration of 5.4 pounds of cottonseed meal and 46 pounds of corn silage for fattening yearling steers was shown in a test made by the United States Department of Agriculture in co-operation with the Louisiana experiment station.

Two lots of nine 700-pound steers were fed for 112 days. Forty-six pounds of silage per steer per day was practically the limit of their capacity. Lot 1 was fed 5.42 pounds of molasses per steer daily, while lot 2 was fed 8.07 pounds of molasses per steer daily. As lot 1 gained 2.48 pounds per steer daily, while lot 2 gained only 2.41 pounds per steer daily, it is evident that 2.65 pounds of molasses was wasted daily per steer in lot 2. The results in lot 2 might have been more favorable to the use of so much molasses had the cottonseed-meal ration been reduced to 3.5 or 4 pounds. In the test, lot 1 consumed 1,880 pounds of silage, 218 pounds of cottonseed meal, and 218 pounds of molasses per 100 pounds gain, while lot 2 required 2 per cent more silage, 3 per cent more cottonseed meal, and 54 per cent more molasses to produce 100 pounds of gain.



Steers Grazing on Pasture in South.

ROOTING NATURAL FOR HOGS

While It Probably Helps Make Muscle It Is Otherwise of No Particular Benefit.

Why do hogs root? Will rings or other means of prevention have any detrimental effect on the health and progress of the animal? Experts at the Nebraska State College of Agriculture say rooting is just one of the natural proclivities of swine. While it probably does help make muscle, it is otherwise of no special benefit and has no particular significance. The fact that hogs show a strong tendency to plow up alfalfa fields or tear out foundations of the buildings is no indication that they are not getting proper feed. There is no basis for the statement that rooting results from lack of mineral or protein in the ration. Hogs root for worms, roots and other food, but they seem to thrive just as well when a check is placed on the extensive use of their snouts. They also root to make a cool bed on a hot day. There is no reason why rings should not be used where hogs do material damage rooting.

EFFICIENCY OF WORK HORSE

One of Chief Factors During Hot Weather Is Quantity and Quality of Feed Received.

One of the factors that materially affects the efficiency of the work horse especially in hot weather is the feed he receives and the manner in which he receives it. In order that a horse may do a full day's work regularly throughout the summer months and yet maintain a presentable condition he must be fed just about to his full capacity. In order to do this and not injure his health, care and judgment must be exercised in the selection of feeds used.

The feeds best suited to form the principal components of the ration are good bright clean timothy or upland prairie hay and bright, clean, sound oats. The average horse weighing 1,500 pounds will require about 20 pounds of hay and 22 to 24 pounds of oats a day.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

PIT SILOS CHEAP AND EFFECTIVE SUBSTITUTE FOR LARGER SILOS

The following listed points have been gathered together as essentials of a good pit silo:

First, the walls must be smooth. If they are not smooth the ensilage will not settle well and there will be more or less spoiled near the edge.

Second, to insure maximum durability the silo should be built of indestructible materials.

Third, the walls must be rigid to withstand any inward pressure such as action of frost or trampling of livestock.

Fourth, the silo cannot be dug below the ground water line with safety. On account of the large expense it is impractical to attempt to make the walls sufficiently tight to keep the water out In other words the silo must not be subject to the inflow of ground water.

Fifth, good ventilation is especially important at filling time and there should be provision for thorough ventilation at all times. It is best, nevertheless, to have it covered well in winter to prevent freezing.

Sixth, there must be adequate provision for hoisting the ensilage out of the pit silo.

Put Rim Around Top.

One of the most important points in building the pit silo is to make a curb or ring of concrete at the surface. This should be 10 to 14 inches thick and not less than 18 inches deep. Just dig a trench for the concrete, the soil serving as a form. Let the concrete set at least 12 hours, then dig out the earth to a depth of five or six feet, making the walls smooth and plumb. Then plaster with concrete, one part cement and two and one-half parts sand. When this has set dig another five or six feet and plumb and plaster that.

The pit silo is especially adapted to the western part of the state. Its low cost and effectiveness place it within reach of many who could not afford the more expensive above-ground silo. The big advantages of the pit silo are the low cost of construction, ease of construction, the fact that it can be built largely in the wintertime when there is no other work to do, and that it is frost proof and is permanent.

Silos Are Not Expensive.

The pit silos can be put in for a cash outlay of not more than $25 in addition to labor. They will keep the corn as long as occasion will ever arise. Dr. Shepperd warns that the place of the silo should be marked so that settling dirt gathering over it for a year or more will not hide the location. Working in the pit silos is not dangerous if the trampers wait until the cutter has been working a few minutes to allow the air to get in motion to chase out the "damps" and gases.

The above-ground silos are regarded as near necessities now for use in feeding direct to the stock, especially during the winter, and farmers who have no silos and are trying to raise cattle are urged to erect silos if possible. Corn is the crop that is most commonly put in the silo although millet can be put into the silo but strong odors are quite likely to develop. Corn that is green makes a sour, watery ensilage while corn that is nearly ripe makes a sweet, nutritious ensilage. The latter has the most food value.

CONTROL OE SPARROWS EASY AND ECONOMICAL

More than 1,400 dead English sparrows were collected and a decided decrease in the number of the birds was noted by officers of the experiment station as a result of 16 hours work in distributing poisoned bait on a station grounds between February 2 and March 4," said R. S. Zimmerman, biologist in charge of rodent control in North Dakota in reporting this phase of his work for the year.

"Poisoning this pest in order to limit its activities in destroying the seed plots at the experiment station was undertaken during the month of February but due to extreme stormy weather the work could not be carried on only at intervals," said Mr. Zimmerman.

"It is evident that this killing had a pronounced effect in the number of young sparrows available to attack our present grain crop. Had we started a week earlier I think we would have influenced the number of sparrows still more.

"These little pests are almost as destructive to our experimental work as an equal number of rats or gophers," commented H. L. Bolley, biologist at the A. C., in a letter to Mr. Zimmerman.

"Our experimental work in destroying the English sparrow," said Mr. Zimmerman, "has resulted in proving that the English sparrow can be poisoned in large numbers, that the bait coated with strychnine will poison sparrows, and that it is necessary to scatter this bait in refuse piles where the birds are accustomed to scratching, and on piles of stable dressing in the barn yards, because the birds are too wary to be poisoned from boxes or special feed racks."

A self feeder for the spring pigs gets 'em to market before it is glutted with those that grow slowly because they are fed by hand.

Fires "of unknown origin" could often be traced to electric light wires hung over nails, or to oily rags thrown in corners.

"Get 'em early, treat 'em rough, and tell 'em nothing" is not a bad slogan for the home gardener out on a weed rampage.

Unbel Ab says: Money counts but don't let it count too heavily; I'd rather be rich in friends than in dollars.

Replacing the low producing cows with better ones and later with purebreds is only one of the ways in which a dairy improvement association helps a community.

POULTRY

FEED AND CARE FOR PULLETS

Most Common Mistake to Give Fowls Free Range and Compel Them to Hustle for Living.

When should an April pullet begin laying? Generally the statement is made that Leghorn pullets should begin when five to five and one-half months old; Rhode Island Reds and Wyandotte pullets take a month longer and Plymouth Rocks still another month.

An investigation made by Purdue university developed the fact that many flocks are not doing as well as they could if the young pullets were properly fed and cared for. They are often crowded in the coops at night for the little brood coop that is big enough in the spring is crowded by late fall and the chicks sweat.

The most common mistake is poor feeding. The pullets are allowed free range over the farm and compelled to gather most of their living. They may grow, but it is a slow growth. To hurry this growth, plenty of mash should be kept before them at all times. A very simple mash for the older pullets can be made by taking 50 pounds bran, 50 pounds shorts, and 30 pounds of high-grade tankage. This should be placed dry in a self-feeder, or trough, and the pullets induced to eat all they will of it. Some grain should be fed in addition, that the pullets may be in good flesh when ready to start laying.

In Addition to Free Range Pullets Should Be Given Plenty of Mash.

KEEP YOUNG STOCK GROWING

Succulent Green Feed, Variety of Grain, Fresh Water and Shade Are of Importance.

So long as the young stock have plenty of succulent green food, a variety of grain, fresh water, shade and exercise, together with well-ventilated sleeping quarters, they will grow like the proverbial weed, but if the growth is stunted by the lack of any one of these essentials, gain is slower even when conditions become normal than it would have been. The poultry grower gets tired; surely the chickens ought to be all right for one night—but that very night is the night the chickens take to pile up. Morning finds the half-grown stock gaunted; a day or so shows them with the dirty nostrils that come when the catarrhal discharge has filled with dust.

A cold from crowding soon becomes a roupy cold unless prompt action heads it off, and one night's neglect has cost dearly.

Keep them growing by giving more room through culling market stock as fast as it develops, and by providing shade.

POULTRY NOTES

Cockerels to be kept for breeding purposes should be handled in a similar manner to pullets.

* * *

Young stock will do better if not compelled to pick their living with the old. There will also be less trouble from lice.

* * *

Misshapen eggs are always penalized by the market and bring an inferior price to smooth, even, perfectly shaped eggs.

* * *

If one bird of the flock is left untreated after lice and mites have became bad, that one chicken will reinfest the whole flock.

* * *

A coat of whitewash properly prepared and applied to poultry houses aids in reducing disease germs and mites

Sell Your Cream at the Creamery

There is a big advantage in disposing of your dairy products at the creamery, chief of which is the fact that the local institution is founded upon he co-operative basis and you therefore receive its advantages. You get as much—and more—here for your cream than from independent buyers.

10,600 POUNDS OF BUTTER
MANUFACTURED LAST MONTH

Help swell the total next month by selling all your cream to us. Only by your co-operation can the creamery exist and remember we are always willing to meet competition from all outside sources.

Goodridge Co-Operative Creamery

The Goodr[illegible]

“Devoted to the Agricultural Interests of the [illegible] Dairy Section of Minnesota”

VOL. XVI. NO. 24. FRIDAY, SEPTEMBER 1, 1922. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA [illegible] PER YEAR

State Board of Health

CREAMERI[illegible] MINNESOTA ARE FAC[illegible] ANOTHER COMPETITION

Co-Opera[illegible]on Made Minnesota Greatest Dairy State, Says A. J. McGuire, General Manager of Creameries Association—Now Being Threatened.

For 25 years Minnesota has been recognized as the greatest butter state in the Union. Minnesota won this distinction chiefly through the quality of butter produced. Minnesota has made high quality butter because of its 600 co-operative creameries.

Other states built co-operative creameries at the same time Minnesota was building its creameries, but in the other states the co-operative creameries have been largely killed off. In Minnesota they have survived, but they are by no means safe.

Twenty-five years ago the co-operative creameries manufactured practically all the butter that was made in Minnesota. At the present time there are 2,000 cream stations scattered throughout the state and owned by the centralizers.

The centralized system is what killed off the co-operative creameries in other states and they are now making every effort possible to get control of the butter industry in Minnesota. To this end one of the largest centralizers in the United States has announced its plan to establish sweet cream creameries in Minnesota. It is doing this in order to be able to compete with the co-operative creameries on the New York and Philadelphia markets where the consumers demand high quality butter. The centralizers have practically all the other butter markets of the United States, and they are now making a drive to get these two important markets.

The establishment of sweet cream creameries in Minnesota by the centralizers is putting into effect the most dangerous weapon the farmers' creameries have yet had to go against. The co-operative creameries in Minnesota have kept in the lead because they have made better butter than the centralizers; but now, with the centralizers taking the field for high quality butter, the co-operative creameries will have to put forth exceptional effort to hold the ground that they have made during the past 25 years.

The Minnesota Co-operative Creameries Association, Inc., has seen this competition coming, and, fortunately, for the creameries, it is prepared to meet it; 335 co-operative creameries have become members of the state association, and through this combined power they are going to be able to wage a successful battle.

The association has organized the whole state with the exception of but five counties. During the flush, June and July, 72 cars of butter were shipped weekly on which there was a net saving of $180 a car.

The association has a New York office for the distribution of the butter, and through this office as high as 1[illegible] cars of butter have been distributed in a day. The association has been distributed in a day. The association has been successful financially from the beginning. It has never been a dollar in debt, and the $19,000 that has been paid in by the 335 member creameries in capital stock is practically all in the treasury of the association, making the capital stock worth 100 cents on the dollar. The association is financially able to take up any work the member creameries want to have done.

In 15 national buttermakers' contests, the buttermakers in the Minnesota co-operative creameries have won 13 times. There is a national contest on again this fall in connection with the National Dairy Show, October 9 to 14 at the state fair grounds.

It is highly important that the Minnesota co-operative creameries should win the national banner again this fall and to assist in this important work, the Minnesota Co-operative Creameries Association is offering 500 dollars in cash, to be pro-rated among the creamery operators whose butter scores 95 or above at the National Dairy Show.

Dairy farmers as well as the creamery operators should be interested in the winning of the national banner. It will not only mean valuable advertising for their product, but it will result in a higher price for all the butter produced in the state.

When the little co-operative creamery in Southern Minnesota exhibited butter at the world's fair in Paris a number of years ago and won first prize in competition with the whole world, that one stroke of good work on the part of the creamery operator may be said to have brought hundreds of thousands of dollars to Minnesota. It made Minnesota co-operative cream butter known as the best butter in the world. We must keep this reputation.

IT WAS HORSE OF ANOTHER COLOR

The following story is told about a big business man of the west—a wealthy ranchman and farmer—of how he nearly became a mail order trader.

As The Banner remembers it, the story goes something like this:

This wealthy farmer was in urgent need of a gasoline engine for one of his farms. His foreman, noticing an illustration of a likely looking engine in a mail order catalog and which was listed at a reasonable price according to description given, suggested that one be ordered at once by wire.

The Boss, who was accustomed to doing business in a business-like manner, immediately carried out this suggestion by sending the following telegram: “Send engine No. 1336. If good, will send check.” In due time he received the following telegram from the mail order house: “Send check. If good, will send engine.”

Half Million Pounds of Wool Go to Pools

More than 500,000 pounds of Minnesota's 1922 wool clip have gone to the various farmer-owned marketing agencies which are co-operating with the Minnesota Farm Bureau federation. Reports from the three sales agencies suggested by the Minnesota wool marketing committee early this year show that in spite of reduced production, the amount of wool pooled by Minnesota farmers this year is equal to the largest amount marketed co-operatively in any other year.

No man should consider himself “out” in the game of life until the Great Umpire gives the decision.

GOODRIDGE TO HAVE POTATO WAREHOUSE

M. G. Thoreson to Take Over Tessum Company Warehouse This Week.

M. G. Thoreson, one of the most progressive business men in Goodridge, formerly connected with the Goodridge Mercantile Company in the capacity of secretary, is shortly to open the warehouse formerly conducted by the Tessum Company of Thief River Falls, which was closed last year, and will conduct a potato warehouse, thereby affording local potato growers a ready market for their product.

Mr. Thoreson, who maintains an office in a building one door east of the Goodridge hotel, where he is in the machinery and machinery supply business, dealing in twine, lubricants, etc., will be open for business in the Tessum Company warehouse next week.

Owing to the fact that there is an unusually large crop of spuds in this section of the county this year, it is believed he will meet with a large measure of success, and will be in position to sort and grade potatoes and thereby be able to ship in carload lots. Ample storage facilities are available in the large warehouse, which is conveniently located.

Gold Medal flour, a nationally advertised product and one known to almost every housewife, will also be dealt in by Mr. Thoreson. He feels himself fortunate in securing this famous brand of flour, which has for so long been known as the “Eventually, Why Not Now?” product, and anticipates large sales.

Mr. Thoreson will be the authorized agent of the Tessum Company in this village henceforth. The Tessum Company, newly reorganized in Thief River Falls, is one of the best known dealers in fruit, grain, seed, flour, feed, baled hay, potatoes, etc., in the Northwest.

SKELETON OF INDIAN TELLS SCALP RECORD

Winnipeg.—Faint evidence of his prowess as a warrior and scalp hunter were found in the skeleton of an Indian, uncovered from a shallow grave near Somerset, Man., recently. A bowie knife with eight notches in it was found lying beside the bones, as well as evidence of scalps around the waist. Roots of scrub trees had grown through the bones, indicating the skeleton had been lying there for many years. An Indian pipe and a small pot containing a quantity of vermillion paint, in a semi-liquid state, also was discovered.

OATS NEAR ST. HILAIRE GO 72 BUSHELS TO ACRE.

The best yield of oats so far reported from any threshing in this vicinity is that from the N. E. Beebe farm. A 49-acre tract produced over 3,300 bushels of oats, or about 72 bushels to the acre. The oats are of excellent quality.

Every community has its noted resoluter who is usually named as chairman of the committee on resolutions. In the old convention days there was one in Franklin county. At one particular convention where as usual, he was named to save the country, he majestically arose and in a deep and what kind of resolutions do you want? Do you want to point with pride or view with alarm? I have both kinds in my pocket.”

McLEOD PRODUCES FIELD OF ALFALFA

Progressive Young Farmer Points Way to Better Farming Here.

Stuart McLeod, one of the leading farmers of Eastern Pennington County, this year produced on his 160-acre tract, located a little more than two miles from Goodridge, one of the most productive fields of alfalfa ever seen in the Northwest. The field will be in position to have its second crop of the luscious forage cut some time late this fall.

Mr. McLeod, who is a close student of crops and crop possibilities, already has harvested one crop from his six-acre tract and it averaged in the neighborhood of six tons to the acre, with the additional crop still to be cut.

Instead of marketing his alfalfa, he will feed it to his dairy cows, thereby receiving, in his opinion, the very top price.

Mr. McLeod declared last week to The Banner that he believed the time had come for a more fixed idea of farming as it pertains to this section of the county, believing that the farmer should come to realize that his best interests lie in the raising of corn, alfalfa and forages of various kinds—and the feeding of dairy cattle. He did not wish to go on record as intimating that the raising of small grain was a mistake, as it is known that many of them can be grown to advantage. He did, however, state that he believes there is altogether too much of it done and that if farmers here would gradually taper off to the industries above referred to, it would work decidedly to their advantage.

Mr. McLeod thinks that every farmer should plant at least an acre of corn and a certain amount of forage. He is joined in his opinion by numbers of other farmers and students of agricultural success for Pennington county, who are a unit in the belief that real success lies in the proposition of raising feed—and actually feeding it—to cows.

JOHN NYSTUL TAKES BRIDE AT McINTOSH

Marriage Takes Place at Home of Bride on August 23.

(From McIntosh Times)

A quiet wedding was solemnized at the home of Mr. and Mrs. Iver Aaseng yesterday afternoon, when their daughter, Ida, became the bride of John Nystul, of Goodridge, Minn.

Rev. L. J. Njus spoke the words which bound them together for life.

The bride has grown to womanhood in this community, and is a graduate of the McIntosh high school. For the past three years she has held a responsible position with the Northwestern Telephone Company in Fargo.

The groom has for the past several years been the principal of the consolidated schools of Goodridge. He is a graduate of Concordia College at Moorhead.

The newlyweds will go to housekeeping in Middle River, where Mr. Nystul will take charge of the school as superintendent.

Only immediate relatives of the contracting parties were present at the ceremony.

BETTER MAIL SERVICE PROMISED BY POSTAL INSPECTOR ON TOUR

Major Adam E. Otto Makes Personal Investigation of the Mail Facilities Available to Patr[illegible]s Lying to East and Southeast of Goodridge and Sta[illegible]s “They Are Entitled to Something Better”—Will Make Report to P. O. Dept.

Major Adam E. Otto, postal inspector of the St. Paul division, whose home is at Bemidji, but who makes his headquarters at St. Paul, last week visited the various postoffices in this section of the county, including Grygla and other points to the north and east of that village and incidentally made a personal investigation of the inadequate mail facilities afforded a large number of farmers living to the east and southeast of Goodridge.

Mr. Otto met with a number of farmers and business men in Goodridge on Thursday afternoon and he had the aggrieved point out to him the various defects in the service complained of, and it was shown that many farmers living, along what is known as the Torgerson route, eminating out of Erie, were subjected to a great deal of unsatisfactory mail delivery, necessitating long delays in receiving important market and news reports and in personal mail service.

Others complained that they had been compelled to pay substantial demurrage charges on freight cars assigned them because of the fact that the railway companies had been unable to communicate with them and advising that their cars were here and at their disposal. Several farmers complained that they received their newspapers two and three days late and that The Goodridge Banner, entered in the postoffice in Goodridge on Thursday afternoons, fails to reach them until over the week-end and that for this reason they were unable to receive notice of church and business meetings in time to be of service to them.

A map of the proposed route was exhibited and Mr. Otto was apparently impressed with the necessity of better service. He admitted that the present facilities were inadequate and that the development of the country had far exceeded the mail service extended by the postoffice department.

“The present service,” said Mr. Otto, “was established a number of years ago, when this section of the county was far less developed than it is at the present time. I can see the necessity for something better, but I will have to figure out how this may best be brought about without crippling the service now available to farmers in the Erie section.”

Mr. Otto, who is a former major of the Sixth Pioneer Infantry which saw service overseas and an “outfit” that knew the smell of powder in France, in company with S. V. Arneson, editor of The Banner, on Friday made a tour of the proposed route. Frank Race, living eight miles southeast of Goodridge, a strong advocate of the route and who has been influential and active in the matter of better service for his section, pointed out to Mr. Otto the available roads and the number of farmers affected, as well as showing him the number of farmers that would be patrons of the new route. Every foot of the ground was gone over, and it is believed Mr. Otto was favorably impressed and recognizes that a real emergency exists.

At the meeting in Goodridge Thursday afternoon, farmers were emphatic in their appeal for a rural route that would take care of their just deserves. They laid particular stress upon the fact that they had agitated for the route for a number of years, that they had made personal appeals by letter to the postoffice department without avail, that petitions containing the names of upwards of sixty names had in several instances gone forth from this point to Washington pleading the cause of “something better.” They declared that their patience had become almost exausted and that unless the department saw fit to grant them the service sought, they would feel themselves impelled to take their mail to Goodridge and discontinue rural delivery to their farms altogether.

Most of the farmers admitted, however, that they felt that up to this time they had been unable to get the ear of the right parties until the visit of Mr. Otto, whom they believed would be entirely fair in the matter and whom they felt would see to it that recommendations would reach Washington relieving the present contingency, guaranteeing to them the service sought and placing an end for all time to the agitation which has for so long continued.

RED LAKE ROAD LAUDED BY OTTO

Postal Inspector Believes Establishment of Highway Real Boon.

Major Adam E. Otto, postal inspector, whose home is at Bemidji and who spent last Friday and Saturday here in the interests of the postoffice department, is another strong advocate of the Red Lake road and believes that its completion will mark one of the most important projects ever undertaken in this section of the state.

The promoters of the Red Lake road, in the opinion of Mr. Otto, are entitled to the greatest credit for their progressive spirit, not to mention the privilege that will be afforded people from all over the country to visit the largest and most beautiful sheet of fresh water wholly within the boundaries of the United States.

“Perhaps you people out here have not yet come to realize what this undertaking will mean to you? The road will lead hundreds of tourists through your country every week during the summer months, bound for the great resort that Red Lake will undoubtedly become shortly after the completion of the highway. As a result, people will become better acquainted with your country, and that is the best advertisement that you can possibly receive from any source,” said Mr. Otto.

The postal inspector is a real Red Lake fan. He has done considerable duck hunting near the outlet and has visited the lake upon various occasions, going to Red Lake Agency and Redby in the interests of the postoffice department.

48 MEN ENTOMBED IN BURNING MINE

Employes Ordered To Break Bulkhead Between Kennedy And Argonaut Mines.

RESCUE SEEMS FUTILE

Air Supply Is Restored to 2,800-Foot Level and Is Being Extended to the 4,500- and 4,800-Foot Level to the Men.

Jackson, Cal.—Mine rescue crews worked without avail in the Argonaut gold mine in which 48 men were entombed by a fire. The men were thought to be between the 4,500 and 4,800 foot levels while the main body of the men was more than 1,000 feet above them.

Employes of the mine were sent into the Kennedy mine which connects with the Argonaut mine through a tunnel, but which is closed by a concrete bulkhead, with instructions to break down the bulkhead and enter the Argonaut.

Air Supply Assured.

It had been reported that the Kennedy tunnel had collapsed but the report was not verified. V. S. Garbarini of the Argonaut succeeded in restoring the cut off air supply to the 2,800 foot level and efforts were continued to extend the air supply.

The Argonaut recently was drained of flood waters that were poured in the mine when it was set on fire, and the state industrial accident commission announced that the soft dirt in the mine was nearly as great a menace to the firefighters and rescuers as the fire itself, if the fire burns the timbers down.

The Argonaut mine, one of the famous gold producing mines in California, was opened 25 years ago. The mine is controlled by New York men and is a short distance from Martell, in Amador county. The Kennedy mine adjoining was opened in the '60's and always has been productive.

CAR SHORTAGE HITS FARMER

Grain Shipments Are Held Up for Lack of Cars.

Huron, S. D.—The railroad shopmen's strike is beginning to affect the farmers throughtout this state keenly. Numerous elevators in various sections are refusing to accept grain except for storage, very little buying going on for the reason that lack of transportation facilities prevents the elevators from shipping.

Farmers who have the finances to back them are building granaries on their own farms, while others are stacking their grain for future threshing when the strike is settled. Other farmers are finding it impossible to pay their threshing bills, with the result that the threshers are finding themselves in hard straits. Several threshers have adopted the policy of giving a 10 per cent discount for cash at the completion of threshing, and this plan is enabling the farmers to borrow money from the banks to meet their threshing bills.

HARDING OPPOSES GOVERNMENT CONTROLS

President Returns From Mayflower Conference, Reveals Intentions.

Washington—Not only will President Harding refuse to take any steps toward government operation of the railroads and coal mines during the present administration, but an influential group of leaders in the senate and house are erecting obstacles to the passage of legislation authorizing such action, became apparent with the return of the president from a conference with several of his principal advisers, held aboard the presidential yacht Mayflower.

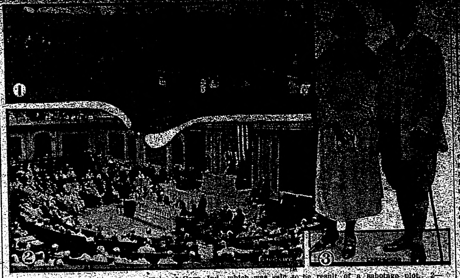
Administration leaders have laid aside proposals for government operation and are centering their efforts on less drastic measures to meet the present emergency. Leaders aboard the Mayflower are inclined to believe that the coal strike problem is solving itself and turned their attention to plans for moving products of the mines.

Committees Report.

Meantime committees in both branches of congress reported out for passage later in the week, bills recommended by the administration to strengthen its agency and by giving to the Interstate Commerce commission broader power over priority shipments. In the house the bill will be taken up under a rule providing for six hours of debate.

Amundsen Boat Icebound.

Nome, Alaska—Captain Roald Amundsen, who last month transferred to the schooner Holmes from the Maud on his Arctic expedition, is now at Wainwright, 100 miles southwest of Point Barrow, according to a message from Captain S. C. Cochran of the coastguard cutter Bear. It is thought here that Captain Amundsen and his party have transferred to the Bear from the Holmes, due to heavy ice and that they may be planning to start at Wainwright the airplane flight.



1—Scene of wreck of express train at Gary, Ind., which was said to be result of a sabotage plot. 2—President Harding addressing joint session of congress on industrial situation. 3—First photograph to reach this country of George J. Gould and his new wife at Deauville, France.

NEWS REVIEW OF CURRENT EVENTS

Seniority Again Blocks Efforts to Settle the Railway Shopmen's Strike.

BERT JEWELL NOT HOPEFUL

Illinois Miners Resume Work and Profiteers Boost Prices—House Passes Coal Commission Bill —Senate Acts Swiftly on Soldiers' Bonus—Slaying of Michael Collins.

By EDWARD W. PICKARD

SENIORITY rights were still blocking a settlement of the railway shopmen's strike as last week drew to a close, and though peace efforts were continued, their success was worse than problematical in view of the uncompromising stand of both sides on the chief point in dispute. On Wednesday the Association of Railway Executives, by a vote of 254 to 4, rejected the proposal of the chiefs of the brotherhoods, acting as mediators, that the strikers be reinstated with seniority unimpaired. The brotherhood leaders, after conferring with heads of other rail unions, suggested the possibility of separate agreements with the railroads, and the executives said they would test the sincerity of this proposal, but with the distinct understanding that any individual settlement would have to conform to the understanding of seniority reached at the general session of the executives. Most of the railroads also refuse to agree to take back all of the strikers, as consistently demanded by the union.

Bert M. Jewell, spokesman for the strikers, was pessimistic as to a peaceful settlement. He issued a statement saying:

"The association of railway executives has closed the door. The unions have offered every concession within reason to end the strike and to save the public from a breakdown of transportation, but the association has made none. On the contrary it has, since the strike began, raised an entirely new and irrelevant issue of its own—seniority; and by its refusal to recede from its position has made a settlement impossible at this time. The responsibility for what will happen now rests wholly upon it.

"The shop craft employees voted in June for a strike to establish a living wage and decent working conditions. The association of railway executives have now voted for a lockout to smash unionism on the railroads and to eliminate collective bargaining from the industry.

"The 400,000 striking employees accept the challenge of the association. We redouble our efforts, confident of success."

FROM the American Federation of Labor came an appeal to its four million members to give their moral and financial support to the striking shopmen. It attributes to "the small but powerful group of bankers who control the finances of the railroads" the adoption of a policy by the railroads of "bitter antagonism to the organizations of the workers," reasserting what many unprejudiced persons believe, namely, that there is a deliberate plan to destroy the unions.

Most of the sporadic strikes of brotherhood men soon came to an end, but last week the Southern railroad was badly tied up by walkouts of train and engine men. The situation became so serious that the superintendent of mails in the southern district planned to handle mails by motortruck service, with the possibility of calling on the army to handle and protect the trucks.

Secretary of War Weeks said he did not believe the administration would make further attempts to settle the railway strike, and added: "The government is not going to permit transportation service to break down."

COAL miners and operators of Illinois reached an agreement on the lines of that adopted at Cleveland, the men winning all their contentions. Production was resumed at once, but in that state as elsewhere, and as was to be expected, the profiteers also resumed and prices began to climb, to the dismay of the consumers From various sources protests against this reached the authorities in Washington. Congress, having been urged to action by President Harding, showed it was alive to the situation. The house took up the administration bill for a coal commission reported from the committee on interstate and foreign commerce and speedily passed it, only reducing the salaries of the commissioners from $10,000 to $7,500 and the appropriation for its expenses from $500,000 to $300,000. In accordance with the desire of the President, the bill prohibits the appointment of any operator or miner as a member. In the senate a similar bill introduced by Senator Borah was passed, and the two measures went to conference for adjustment of the small differences.

Negotiations for the settlement of the anthracite strike were broken off, their failure seeming to be complete. Official statements indicated that the duration of a contract and the submission to arbitration of any differences were the stumbling blocks that could not be overcome by the negotiators. Representatives of the mine workers insisted upon a contract at the old wage rate, to extend to April 1, 1924, while the operators would not agree to a continuation of the old scale longer than next April. The miners maintained their stand against arbitration.

JOHN SHANK, secretary of the trades and labor assembly of Sioux City, Ia., is authority for the statement that plans are maturing for a general nation-wide strike of organized labor. He says various union organizations have called on the executive council of the American Federation of Labor to call such a strike. Probably this need not be feared while the more conservative element remains in control of the council. However, the activities of the Reds and radicals are increasing. Last week those chronic disturbers held a rather secret conference in Berrien county, Michigan. Federal and state agents of justice watched them a few days and then made a raid. The radicals had been warned, however, and only 17 were caught. William Z. Foster, one of their leaders, was arrested in Chicago. Much Red propaganda was seized and the officers said they had broken up a huge plot to foment violence in connection with the railroad strike. Michigan's syndicalism law, which has never before been used, was invoked against the prisoners. It was said other radicals would be arrested, among them Rose Pastor Stokes. According to the raiders, the propaganda seized in Michigan included pamphlets advocating the overthrow of the government and the establishment of a soviet regime.

SENATORS who are opposed to the soldiers' bonus seemed to have given up hope last week, or else they merely were in a hurry to get through with the bill and go home. Anyhow, they were so supine that the senate broke its speed records in adopting the finance committee amendments and taking up consideration of individual suggestions of changes. That the measure would be passed within a few days was conceded, and Senator McCumber said he did not believe the President would veto it, since the conditions that caused Mr. Harding and Secretary of the Treasury Mellon to seek delay last year have been met. Mr. McCumber placed emphasis on the points that the annual outlay for payment of the bonus has been reduced to such a figure that the argument of the inability of the treasury to bear the strain no longer holds good, and that the financial condition of the government and the country is quite capable of withstanding the burden which the bonus will impose.

THE administration ship subsidy bill will not be considered further by congress until the December session. This delay has been urged by the Republican leaders, and now President Harding in a letter to Representative Mondell has given his consent. In this letter the President refers to the unfavorable effect of the question of the sale of liquor on American ships on the subsidy legislation, and also refers to opposition which has arisen to the feature of the bill which provides tax exemption to shippers of freight on American ships equal to a percentage of the money paid for such shipments. The fact that it will be difficult to keep a full attendance during the campaign period, he indicates, also enters into the situation.

THERE is some reason to believe that the civil war in China is about over and that the country will be united under one or another of the strong men who have been leading the factions. The conferences at Shanghai lead to the prediction that this man will be Dr. Sun Yat-Sen, lately head of the southern government. President Li Yuan-Hung has said he will resign in favor of Doctor Sun if the parliament approves, and General Wu, the north China military leader, has pledged his support to Sun's policy for reorganization of the government. He also has the backing of the labor organizations, and of large delegations from various cities.

TRULY a martyr to the cause he served, Michael Collins, head of the Irish Free State and commander of its armies, was slain last week by the republican rebels. In his death and that of Griffith Ireland has lost her two strongest leaders, but others will endeavor to carry on the work of establishing a government and restoring peace. Collins with a guard of a dozen men was making a tour of inspection in County Cork and was ambushed by a party of several hundred irregulars. The fight lasted an hour until the general fell, shot through the head. He lived for 15 minutes, cheering on his comrades and firing his revolver. Collins was scarcely thirty years old and was soon to be married. He was beloved by the Free Staters and highly respected by all Great Britain. He had labored earnestly to placate the republicans and was planning to redraft some sections of the Irish constitution to which they objected. William T. Cosgrove is now acting head of the Irish provisional government.

PREMIER POINCARE, in an address at Bar-le-Duc, reiterated and emphasized the intentions of France concerning Germany. He said France was determined to make Germany pay for the devastation she wrought in the war and that if necessary she would act alone. He asserted that France would not consent to a moratorium of any character for Germany unless the German state mines of the Ruhr and the national forests are placed in the hands of the allies as a guarantee, and, no matter what happens, France will not depart from this policy. He denounced as false the claims that France sought to enslave Germany in revenge, but gave figures to show that Germany was responsible for her own collapse and that her failure to live up to the demands of the reparations commission had been deliberate. He said the execution of the treaty and the payment of reparations were vital to France, while Great Britain, finding its industries paralyzed and its people out of employment, was obsessed with regaining its markets. He added:

"We are greatly disposed to aid other nations in the effort to restore the world. We know the world does not end at our frontiers. We welcome a broad and generous European policy. We fervently desire to remain allies of our allies and friends of our friends. We ask nothing better than to resume with our enemies of yesterday pleasant and courteous relations. But we wish to have our ruins repaired—and they will be."

IN A month or so Great Britain, France and Italy are going to hold a conference on the Near East in Venice and they have instructed Greece and the two Turkish governments to send representatives there to present their respective claims. Just to put themselves in the strongest possible position before this meeting the Turks have begun a great offensive against the Greeks in Asia Minor. Soviet Russia, it is said, is giving aid to the Turkish nationalists, not desiring peace there this fall

[illegible]

Willmar—Willmar is to install a new street lighting system this fall. The contract for the work has been awarded to the Power Equipment company, Minneapolis.

Austin—The Rose Creek consolidated school will be the first of the rural schools of Mower county to employ motor buses to haul pupils to and from school. Three buses will be used.

Northrop—Northrop's new $12,000 creamery, the most modern in Martin county, has opened. The creamery is owned by farmers.

St. James—Anton Torkelson of this place was elected president of the Watonwan-Brown county branch of the University Farm Alumni association at a meeting attended by 250 University farm graduates and students at Fort Hill.

Montevideo—The fuel situation in Montevideo is very serious. Dealers have practically no stock on hand and few individuals have their winter supply in the bins. The local board of education has made no arrangements for its winter supply of coal.

Two Harbors—The Two Harbors Rod and Gun club is planning to hold a marksmanship tournament here.

Moorhead—Fred R. Prusha, Cedar Rapids, Iowa, will be physical instructor at the Moorhead state teachers college for the coming season, succeeding Wallace Russness, resigned.

Willmar—The Salvation Army is laying the foundation for a new hall at Willmar. The building will be a two story brick structure and will cost approximately $14,000.

Minneapolis — Two men were seriously injured when a Chicago, Great Western engine, upon which they were working at the company's roundhouse on Boom Island, ran wild and crashed through the brick wall of the building.

Crookston—Richard L. Spiering, manager of the Crookston Gas company has been named receiver of the company by the United States district court.

St. Paul—Effective Oct. 15, Chinese ring neck pheasants will be protected by a proclamation issued by Governor J. A. O. Preus. It will be unlawful to capture, kill or have in possession any considerable number of the species.

Albert Lea—For the first time in Freeborn county, tickets good for one free admission at the county fair will be distributed at the schools in the city of Albert Lea and at the rural schools of the county.

Minneapolis—Axel B. Dahl, city attorney of Nashwauk, Minn., is named in disbarment proceedings referred by the state Supreme court to the board of law examiners for preliminary investigation and report, Verne Pidgeon, secretary of the board, announced.

Fertile—Nels Clementsen, aged 65, a farmer living a few miles west of here, was seriously injured when backing a tractor to a threshing separator. Four ribs were broken and he was internally injured.

Duluth—Most of the 400,000 tons of coal scheduled to arrive in Duluth and Superior this week will go to these two ports, it was announced. This movement from the Lake Erie ports is the first since the strike.

Red Wing—At a meeting of the Goodhue Dairymens association, it was decided to raise the price of milk and cream to local consumers. Milk that has been 10 cents a quart hereafter will cost 11 cents.

Slayton—Fire destroyed the $3,000 barn, 30 tons of clover hay, a hoghouse, granary with 1,500 bushels of oats and three stacks of straw on the farm of C. M. E. Johnson, northwest of here.

St. Paul—A statewide campaign to interest potato growers in grading the 1922 crop will be launched at the Minnesota State Fair, Sept. 2 to 9, by the state department of agriculture, the state agricultural college, and the potato growers' association.

Big Falls—Eleven rifles, and seven pistols greeted federal dry agents when they visited the home of Allen N. Curtis, near Big Falls, Minn., last night, according to reports received at headquarters.

Minneapolis—Joseph E. Link, known as the "Enoch Arden of Minneapolis," is entitled to a pension from the Volunteer Firemen's association, City Attorney Neil M. Cronin has ruled.

St. Paul—Coolidge day, in honor of Vice-President Calvin Coolidge, will be observed at the state fair Wednesday, Sept. 8, when the vice-president will attend and deliver an address.

Wessingon Springs, S. D.—More than an hour's rain fell here, the first in six weeks. The moisture was needed for potatoes, corn and pastures The rain was accompanied by some hail, which caused little damage.

Fort Ridgely—Twenty defenders of Fort Ridgely, who fought the Sioux Indians 60 years ago, met members of that tribe and their chief, Moses Columbus, here at the celebration commemorating the raising of the siege in 1862.

Hibbing—What is believed to be the first albino porcupine ever seen has been presented to the "zoo" in Bennett park. Thomas Simpson caught the animal while on a prospecting trip. The "porky" is a pure albino, its hair, quills and skin being milky white, the pupils of the eyes bright red and its pink.

[illegible]

Winona—Evidence of a discovery, which are parts of an elephant's tusk, have been found in a gravel pit near here, indicating that the body of an elephant was buried there thousands of years ago.

Minneapolis — Corcian Canadian, aged 36, a car repairman employed by the Milwaukee railroad, fell from the roof of a boxcar near Twenty-eighth street and Minnehaha avenue and broke both legs.

Chatfield—Guy Empy, aged 86, a great-great-grandfather, has just purchased an automobile. He declares he is going to learn to drive the "contraption." Mr. Empy has 22 great-grandchildren and 4 great-great-grandchildren.

St. Paul—Poultry dealers and breeders met in St. Paul, to discuss plans for an international poultry show to take place in the Twin Cities in connection with the National Dairy show, Oct. 7 to 14.

Moorhead—The world's first aerial policewoman is now patrolling the air above Moorhead. She is Mrs. "Chubby" Watson, wife of a stunt flyer.

Winona—The Shrine club of Caledonia entertained 400 Masons of Caledonia and neighboring towns at a picnic on the grounds of the Caledonia hospital.

Beulah—Mr. Thompson, crossing tender, fell heir to a fruit farm near Beulah, Mich., and resigned to take charge of the 40 acre tract, valued at more than $25,000.

Duluth—Public, schools of Duluth and scores of downtown office buildings, will face complete shutdowns this winter unless coal receipts are quickly speeded up and the production at the mines gets under way.

Shakopee—J. W. Black of Minneapolis is the president of two new state banks. Charters were granted to the Shakopee State bank at Shakopee and the Marshall County State bank at Holt, Minnesota.

Eveleth—Three girls of Eveleth, who left their homes on Sunday, August 6, are still being sought. They are Jennie Lindstrom, 15; Tillie Mayerle, 16, and Ina Makinen, 17. On the morning they disappeared they were going to a picnic.

Madison—A fire in the oatfields of Martin Hanson, a mile east of here, burned a large quantity of grain. Investigation has shown only one cause, a small piece of glass, which may have focused the sun's rays on one spot long enough to start the fire.

Minneapolis—Rapid growth of extension work of the University of Minneosta in the last several years has resulted in opening of offices at 312 Security building. F. C. Austin is resident manager.

Bemidji—Dorothy Borgen, aged 9, was badly injured when she was struck on the head by a maul swung by a patron of a strength-testing machine at the Northern Minnesota fair.

Itasca—Porcupines are girdling many trees within Itasca state park, killing them so that they have to be cut to save the timber, State Forester W. T. Cox says that 1,100,000 feet of timber was cut from the state land last winter, about one third of which had been girdled.

Minneapolis—O. P. B. Jacobson, state railroad and warehouse commissioner, notified the Interstate Commerce Commission that the states of Minnesota, North Dakota and South Dakota will require 260,000 cars for the shipment of potatoes and grain this fall.

Hibbing—George Wood, local game warden, is in a local hospital recovering from injuries received when he went to the shack of a settler to arrest him for game violations.

Duluth—John C. Davis, former chief of police and first city controller of Duluth, died at his home here. Davis, who was 64 years old, had been a resident of Duluth since 1881.

Austin—The University of Southern Minnesota at Austin has arranged a "get acquainted picnic" for students to take place shortly after the opening of the fall term.

Minneapolis—Mrs. Mary T. Scriver, 603 River road, widow of Hiram A. Scriver who died at Ely, Minn., Aug. 9, leaving $200,000 in property, is the sole beneficiary of the will which was opened upon a petition by Mrs. Scriver to probate the will. There are five children.

Winona—C. Morgan, an itinerant solicitor, was being held by Winona police pending investigation of his activities in obtaining money from hundreds of persons for a book, the "Bubble," which he asserts he intends to publish.

Minneapolis—Steps towards the organization of an art club whose purpose will be the encouragement of young artists of the twin cities has been taken.

St. Paul—Coal on its way to Minnesota is being held at prices double the Hoover price of $3.50, the federal fuel administrator was informed in a message from Ivan Bowen.

Lake City—Funeral services for Joseph Merritt Underwood, president of the Jewell Nursery Company, of this city, who died at his home here, were held at St. Marytin's Episcopal church.

Thief River Falls—Corn promises the heaviest yield of any crop, and there is amuch larger acreage than ever. One farmer reports that a 15-acre tract of white dent will yield 60 bushels to the acre.

Lake City—Mrs. Mary McCahill of Lake City, Minn., who since the death of Mrs. James J. Hill has been rated as Minnesota's wealthiest woman, died at the Weilheim hospital, Germany, of injuries suffered in an automobile accident. She had come to Europe on her annual pilgrimage to the grave of her son, Louis, who lost his life in the World war.

The Farmer's Own Page

Timely Comments on Agricultural Topics for Our Readers

HIGHEST PRICES FOR MARKET HAY

Farmers' Bulletin Discusses Merits of Consignment and Straight-Sales Methods.

MANY DETAILS ARE EXPLAINED

Shipper Must Consider Conditions and Determine Which Course Is Most Advantageous—Simple Rules to Keep in Mind.

(Prepared by the United States Department of Agriculture.)

The merits of the consignment method and the straight-sales method of marketing hay are discussed in Farmers' Bulletin 1265, Business Methods of Marketing Hay, by G. A. Collier, recently issued by the United States Department of Agriculture. In addition, chapters are devoted to trade rules, when and where to sell hay, billing and invoicing shipments, and loss and damage claims. Explanations are given therein for some of the principal trade terms and suggestions are offered as to how the various aids to marketing may be applied by the producer or shipper.

Two Methods Explained.

The consignment method consists in shipping to brokers or commission merchants, who act as the shipper's representative in selling his hay on the market. By the straight-sales method the shipper sells his hay at a fixed price, either at the point of shipment or point of destination at a certain specified time. The shipper must consider conditions and decide which method is the more advantageous to use.

It is important to know the preferences of the various markets, for it is the buyer's preference that prevails. In general, New England and Eastern markets prefer large five or six-wire bales weighing from 175 to 215 pounds. Southeastern, Southern, and Southwestern markets prefer small two or three-wire bales weighing from 75 to 100 pounds, and ranging in size from 14 by 16 inches to 17 by 22 inches by about 36 to 48 inches in length. In the Central Western markets the 17 by 22-inch bale is probably the most generally used, and on the Pacific Coast both this size and the large bale prevail almost exclusively.

Hay Loader in Operation.

Best Time to Market.

The time of marketing makes a great deal of difference in the price received for hay. Statistics compiled by the department and tabulated in this publication show that for a period of ten years ending in 1921 the highest average prices at two large markets were reached in April for prairie and alfalfa hay, and in May for timothy. The months of highest price are just before the new crop begins to come on the market.

DAIRY COWS ARE IMPROVING

In 45 Cow-Testing Associations in Nine Western States, 9,484 Make More Than 40 Pounds.

Dairymen in the 45 cow-testing associations in the nine western states now own 9,484 cows that have made more than forty pounds of butterfat in a month. Not many years ago a 40-pound cow was a rarity. There is much room for improvement, however, in the general run of herds in all parts of the country, says the United States Department of Agriculture.

Too Many Scrubs.

Despite all that has been done to eliminate scrub and grade stallions, far too many of such sires are still offered for service. They can never beget the high-class of draft horses required for work on our farms.

Roughage for Young Stock.

Oat straw, buckwheat straw and wild hay, when supplemented with corn silage and some nitrogenous concentrate, make satisfactory roughage for young growing stock.

RED CLOVER MILDEW SERIOUS THIS YEAR

Severe Infestation Has Appeared in Several States.

Department of Agriculture Anxious to Secure Reports From Various Sections, Particularly as Affecting Horses.

(Prepared by the United States Department of Agriculture.)

The first severe infestation of mildew on red clover in this country has appeared east of the Mississippi from Wisconsin to Georgia this year. This mildew makes the plants look white. Last fall it was quite prevalent in the South and is worse there this summer.

The amount of harm it does is a question yet unanswered. Some reduction in the yield of hay is due to it, but this is not great. There are rumors, however, that the eating of mildewed hay causes inflammation in horses' mouths. The Ohio experiment station reports a quotation from a German writer stating that mildewed clover hay causes stomatitis in horses.

Turning Under Red Clover to Improve the Soil.

Unfortunately the exact identity of the mildew on American red clover has not yet been determined. When American seed is planted side by side with European seed, the mildew appears on the plants from American seed while only a trace of mildew appears on those from European seed.

The United States Department of Agriculture would be glad to get reports regarding the mildew in different parts of the country. It is particularly interested in learning if horses eating the mildewed red clover hay are affected.

FEED-FARMING IS IMPORTANT

Department of Agriculture Has Established Project Which Deals With It Exclusively.

Owing to the importance of feed-farming industry, the United States Department of Agriculture has established a project which deals with it exclusively. It furnishes information to prospective breeders, as well as to those already engaged in the industry, which helps them to overcome obstacles and avoid pitfalls.

BEET TOP SILAGE FOR EWES

Material Will Increase Flow of Milk at Lambing Time—Gradually Increase Feeding.

Beet top silage will increase the flow of milk of ewes at lambing time. It is best to start feeding only about one pound per head daily and gradually to increase the quantity to three pounds per day. The udder may become feverish if this caution is not observed.

ROAD IMPROVEMENT YOUNG

Eighty-Five Per Cent of American Highways Are Yet to Be Improved in Some Way.

While highway improvement has made tremendous strides in the United States in recent years it is still in its infancy. Eighty-five per cent of American roads are yet to be improved. It is not now so much a question of raising the money required to build good roads as it is the problem of spending wisely the large sums available in every state for this purpose.

Give Colt Good Start.

Close attention to the colt in every other way, such as exercise for itself and its mother, and careful and regular feeding and watering of the mare, will be found helpful in giving the colt a good healthy start.

Destroy Hessian Fly.

Bury the Hessian fly by plowing under deeply as soon as practicable after harvest, all wheat stubble, except fields in which there is a good stand of clover.

DAIRY

REPLACING OLD DAIRY STOCK

Oregon County Organization Striving to Save Animals From High-Producing Stock.

(Prepared by the United States Department of Agriculture.)

While calves from low-producing cows are saved to maintain the herds on some farms, on other farms and in other sections, where higher-producing cattle are kept, calves from 300-pound cows by purebred bulls are often vealed because no market is found for them as dairy stock. This is an economic waste which, according to reports received by the United States Department of Agriculture, the extension organization of Coos county, Ore., is striving to eliminate.

Economic Waste to Veal Calves From High-Producing Cows.

About thirty calves from the best stock in Coos county were saved last year by arrangements made with farm bureaus of other counties to take them when two weeks old at $12 a head, crated and delivered at the express office. Arrangements also were made recently for a representative of the Klamath county extension organization to spend 30 days locating newborn calves of good stock and finding a dairyman to feed them for two weeks before shipment to farmers in his own county.

The reports also say that calves two weeks old are shipped safely as far as 500 miles, or for 36 hours' travel; day-old calves can rarely be shipped.

PUREBREDS AID MILK YIELD

Tribute to Value of Improved Sires Is Contained in Statement by J. C. McDowell.

A tribute to the value of purebred sires is contained in a recent statement made by J. C. McDowell, of the dairy division of the United States Department of Agriculture, who pointed out that the average production of 38,000 grade cows in cow testing associations in 1920 was 5,980 pounds of milk and 300 pounds of butter, while the average production of all cows in the United States was 4,000 pounds of milk and 200 pounds of butter. The average milk and butter yield of grade cows was 50 per cent higher than the average for all grades and scrubs taken together. The economy of production was over 100 per cent greater.

INCREASE FAT ECONOMICALLY

Best Plan Is to Put Cows on an Abundant Ration That Is Rich and Easily Digested.

In a herd of well-fed cows it is not practical to try to produce milk containing more fat by giving rich feeds; that is a pretty well-settled fact. In a herd of poorly-fed cows, though, the percentage of fat can be increased by putting the cows on abundant ration that is rich and easily digested. Tests in New York showed an increase of one-quarter of 1 per cent of fat, when the cows were kept on good feeds for two years. The increase was economical, too. There was 50 per cent increase in amount of milk produced.

WAY TO AVOID LEAKY TEATS

Good Plan to Apply Collodion After Each Milking—This Closes Up the Opening.

The only way to prevent leaky teats is to smear collodion on the end of the teat after each milking. This closes up the opening and before the next milking it must be removed. This is bothersome, but may be used to good advantage where the cow loses a quantity of milk.

INDIVIDUALITY IS ESSENTIAL

In Selecting Cow It Is Important to See That Strain Is of Large Producers.

Breed is of less importance in selecting the cow than is individuality, for in every breed there are good individuals and poor individuals. It is important, not only that the breed, but the strain or family represented be noted for large and economical production.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

STRAW WORTH MORE THAN CASH IT BRINGS

(By Max Morgan, State Dairy Extension Specialist)

An Ohio farmer was recently offered $1.50 a ton for his straw, the buyer to bear all expense of baling and hauling. If he did not need it for his livestock, was that a good offer? Considered from the standpoint of fertility alone, a ton of oat straw is worth $5 at present prices of fertilizers F. O. B. factory.

Within the next few weeks the sky will be illuminated in thousands of places in this state by the burning of straw stacks. Every fall sees many of them go up in smoke. Straw has sold as high as $15 a ton in some sections of the state the past winter, yet men throw a match as carelessly under a pile of straw as does a bald headed man throw a quarter down for a fine tooth comb.

The extensive use of fertilizers in this state, thank heavens, is not yet necessary, but soil experts are agreed that it will take considerable care even with livestock farming to maintain soil fertility indefinitely.

Straw, when used in a livestock system of farming, is worth from $10 to $15 a ton. It is through the use of manure that crops get their earlier start and outstrip the growth of weeds. It is straw and plenty of it, put under the dairy cow (not inside) that keeps her warm, clean, and comfortable so that she will produce economically.

It is through the same use that our hogs and beef cattle make big gains; our colts and calves mature rapidly, and we often keep ourselves comfortable at night between the bed ticks.

Oh, there are a hundred beneficial uses for straw and he who finds it necessary to burn one straw stack is practicing a system of farming which is unsystematic, undiplomatic, and unprofitable.

HARDY NEW VARIETY OF RYE BEING PROPAGATED

Dakold winter rye is a hardy variety and survives winter conditions better than other popular varieties, when sown on fall plowed land, while less hardy varieties, when sown very late, need the winter protection of stubble, according to experiments by Dr. H. L. Walster, agronomist.

"In the fall of 1921, the agronomy department seeded winter rye on four different dates and in two different ways," said Dr. Walster. "Each variety was seeded on both fall plowed land and also stubbled in on oat stubble.

Dakold, a winter rye which previous experiments had taught us was the hardiest winter rye available in the state; Russian No. 9, a winter rye of only a moderate degree of hardiness; and Rosen, a rye of Michigan origin and one having practically no winter hardiness, were used in these trials.

"In the fall of 1921, definite areas of each of the three varieties under trial, under both of the conditions as to seeding, were counted as to the number of plants. They were again counted in the spring of 1922 and the percentage of survival determined accurately.

"On the fall plowed land, 98½ per cent of the August 25 seeding of the Dakold survived the winter, while 98 per cent of the September 10 seeding and 70 per cent of the October 8 seeding survived.

"In the case of the Russian No. 9, on fall plowed land, 93 per cent of the August 25 seeding survived, 85 per cent of the September 10, and only 38 per cent of the October 8 seeding.

"In the case of the Rosen rye, only 33 per cent of the August 25 seeding survived on fall plowed land, only 19 per cent of the September 10 seeding and just 1 per cent of the October 8 seeding.

PROFIT COMPARISON ON KOTA AND KUBANKA WHEAT

Yields of 21½ bushels per acre of Kota wheat and 27½ bushels of Kubanka durum were secured at the state demonstration farm near Lakota, according to Th. T. Kristjanson, county agent and assistant superintendent of the farm, who reports threshing completed here.

The Kota wheat, which is a new variety of rust-resistant, hard, red spring wheat, weighed 61 pounds to the bushel while the Kubanka durum weighed 62½ pounds. English Abundance oats at the same place yielded 65 bushels. The Kota wheat was seeded on a field that had wheat on it in 1921, and was planted at the rate of three pecks per acre. The Kubanka was seeded on corn ground at the rate of five pecks per acre.

"While we expected the Kubanka to yield higher than the Kota, we believe the difference would have been less if the Kota had been seeded at the rate of one bushel per acre and on corn ground," says Edgar I. Olsen, superintendent of state demonstration farms.

"Grain prices indicate that the Kota would give practically as great an acre return as the Kubanka, as No. 1 dark northern sold for $1.02 and amber durum 83 cents per bushel. At 14 cents per bushel, the difference in cost of threshing the two fields would be 84 cents per acre. Figuring the smaller amount of seed used per acre, the cost of twine, threshing, storing and hauling, would give a result indicating the net acre returns from the two crops to be about the same."

Painting roosts and nests with a coal tar disinfectant will rid the hens of troublesome mites.

Generally speaking, the shallower the cultivation the better, as long as weeds are killed.

One housewife uses a piece of glass, just the size of her opened cook book to keep it open and protect it from being soiled.

Boiling the silverware in an aluminum kettle cleans it fine and is lots easier than scrubbing it by hand. A granite kettle will do if it contains a teaspoonful of salt, one of soda and a small piece of zinc in addition to the silver and boiling water.

PRODUCING FINE NEW EARLY TOMATO FOR N. D.

Efforts are being made to produce a new and earlier variety of tomatoes by crossing the Livingston globe and the June pink, according to Oliver Strand field horticultural foreman at the A. C.

"Both the Livingston globe and the June pink are standard pink tomatoes," said Mr. Strand. "The Livingston is a real smooth pink tomato, of good size, but late. The June pink is as early as the Earliana, but is rough and inclined to crack at the stem end. It has an especially good flavor. Both are good quality tomatoes.

"The cross is made with the idea of obtaining a tomato as early as the June pink and as good in shape as the Livingston globe. The third generation are maturing this summer with the results that some rough tomatoes are still evident but a heavy and early yield has already been obtained. The new tomatoes matured this season just a few days later than the Earliana.

"Another cross is being made between Sunrise and Earliana with the idea of obtaining an earlier variety than Earliana. Sunrise tomatoes are earlier than Earliana, but are small.

"Seed will be distributed after the new varieties become stabilized which will probably be about four more years. The Earliana is the best present obtainable tomato for the Northwestern states."

If you know how, you can look over the flock now and pick out the poor layers. Somebody in your neighborhood knows how to cull, and can tell you how.

The boys are entitled to the companionship of a dog and most families need such a friend.

Uncle Ab says: Take an interest in the boys, even to goin' fishin' with them, and they'll keep their interest in the old place.

"I went by the field of the sluggard and lo, it was grown all over with thorns. So shall poverty come as a robber and want as an armed man."—Prov. XXIV, 29.

If the fireless cooker doesn't cook, maybe it is because the steamvalve is stopped up. A few drops of ammonia poured into the top of the valve and caught as it runs through will clean it.

POULTRY

TERM STANDARD-BRED FOWLS

Means That Bird Referred to Conforms to Standards of Color, Markings and Weight.

A purebred, whether it is a hen or a cow, means that the animal comes from a definitely recognized breed and that the parents were purebred animals of the same breed. If an animal has lineage of pure breeding, which can be definitely proved, and thus makes the animal eligible for registration, it is then a purebred animal. There is the added stipulation that an animal must be healthy, vigorous and a creditable specimen of its breed in order to be purebred.

In reference to poultry breeding, perhaps the best terms of all to indicate 100 per cent blood is the expression "standard-bred." This means that the fowl referred to as standard-bred is one which conforms to the standards of form, color, markings, weight, etc., for the various breeds under the standard of perfection of the American Poultry association. Standard-bred is a term which is growing in popularity among those doing business in the purebred poultry field, and is perhaps a more distinctive expression than any other which might be used with reference to poultry. Of course, there are standard-bred horses which refer to a distinct breed of light horses, including both trotters and pacers eligible to registration in the trotting registry.

DUCKS FOR MEAT AND EGGS

Pekin Breed Is Kept Almost Exclusively for Green Ducks—Runner Is Good Layer.

"The Pekin breed is kept almost exclusively by producers of green ducks, and also on many farms where they are grown for meat," says H. W. Sanborn, extension poultry husbandman, United States Department of Agriculture. "They fatten rapidly and may be fed on rations recommended for chickens, but better results are usually secured by feeding more green and vegetable feeds and a larger proportion of mash.

"For the general farmer who is more interested in obtaining eggs than producing meat, the Runner is a good breed. This duck holds the same relative position in the duck family that the Leghorn does in the chicken family. It lays a good-sized white egg considerably larger than a hen's egg, and is declared to be a small eater, a good forager, and hardy. The introduction of this bred is helping to build up a trade of first-class duck eggs. These eggs should be marketed frequently, as they depreciate in quality more rapidly than hen's eggs."

Pekin Ducks About Seven Weeks Old in Fattening Pen.

HEN NEEDS SHELL MATERIAL

Tests Show Decrease in Number of Eggs Where Oyster Shell and Grit Are Lacking.

Tests made at the University of Wisconsin experiment station, where the feeding of hens could be watched closely, show that hens have a tendency to cut down on the number of eggs they lay when they run short of material which goes into the egg shell. Some believe that soft shells come as a result of not having sufficient oyster shells or ground bone material, but tests do not bear it out. So, for keeping up the number of eggs, it is essential that hens running free on the farm have a supply of oyster shells, ground bone or some other mineral grit, near where the flock is fed.

EDITORIAL

THE RED LAKE ROAD

Goodridge citizens and farmers living in the neighborhood of this village are somewhat inclined to underestimate the value of the Red Lake highway which is now under course of construction and which will—all things being equal—be ready for traffic some time next year.

A few people think that because of the fact that we are located a mile and a half north of the proposed Red Lake route, we will be placed at a disadvantage and that we cannot expect any material benefit.

The Banner is inclined to view the matter in an entirely different light. We are altogether too optomistic to believe that a great undertaking such as this, which will route hundreds and thousands of automobiles, containing tourists from far-away points and pleasure-seekers from various sections of Northern Minnesota each year will pass us up like that.

People are going to come in and see what we're like. They're going to loiter in and find out for themselves whether we are a settlement of pigmies or a collection of monkeys from the Amazon that has moved in here in order that it might escape the aggression of stronger and more ferocious enemies. They're going to swing in if for no other purpose than to determine to their satisfastion whether or not we are as white as we appear to be from the road.

Oh, they'll come in all right. People bound for Red Lake will be just as curious about Goodridge as they are about any other village of like proportions.

They'll drive in if for no other reason than to buy a nickel's worth of fishhooks of a package of safety pins for the baby. Johnny may want an all-day sucker, and the Banner hopes to state right here that Goodridge is as good a town as the next in which to buy such a pacifier. And in this case there will be no "next" unless some [illegible] than brains [illegible] establishing another townsite [illegible] east of us—a prospect which should cause but slight worry on our part, at least for the present.

And they will come in for "big stuff," as they say. Campers who will go to Red Lake for touring, hiking, boating, fishing, hunting, camping, or just loafing, will need have the implements and supplies with which to partake of these highly enjoyable forms or recreation. Folks must have tires with which to tour, boots to hike in, oars to row a boat with, cartridges and shells and fishing paraphernalia with which to kill and catch, and even though others may go there just to loaf, they must have foodstuffs with which to appease their hunger. These tourists won't all of them go there loaded to the fenders with these things, but it is only fair to assume that they will but at least a small portion of them in Goodridge.

Surest thing you know, they'll come in to see us from time to time and whether they return to visit us again will largely be up to us.

Anyhow, let's live in hopes.

THE STAR HAS FALLEN.

The Star, published at Strathcona, has fallen from the skies! Its flickering light will no longer shed its humble influence over the life and progress of that little village.

The Star has starved to death!

The only thing left for its publisher to do is to seal the coffin and give it a decent burial, and this Otto Paulson, its editor, proposes to do this week when he prints in its columns the information that unless a buyer is found for the Star this week, it will succumb to the elements of chance—which are two-to-one that no purchaser will be found.

Nobody cares to buy a corpse, and that is precisely what the Star is today. It is deader than a door nail so far as Mr. Paulson is concerned.

Through no fault of its editor, the Star died from lack of nourishment. Born a little more than twenty months ago, the frail limbs of the Star carried it through a somewhat tempetuous existence until its demise this week. Mr. Paulson is going to Winger, Minn., and he won't take the Star with him. He has purchased the Winger Enter- [illegible] receives a reasonable [illegible] in the enterprise and that people who read it pay their subscription price when it becomes due.

No newspaper can long exist without the united support of a community. In order to be of service a newspaper should—and must—have the co-operation of every man and woman living in the place from which it is published, including the surrounding territory. This is particularly true in the smaller villages, where a newspaper's field is naturally limited and where it is handicapped and hemmed in by the likes and dislikes of a few.

While the Star was not the best newspaper in the world, it was much too good for Strathcona. The chances are that the Star editor realized his mistake soon after establishing the newspaper, but it was then too late to transplant it. We are not in position to know the character and generosity of Strathcona's business men, but if they possessed the latter quality, The Banner was unable to distinguish it, as the columns of the Star appeared bare as a bone.

Most folks like the home town newspaper, but few indeed are willing to share in its trials. They like to pour over its columns containing the news of the village, but they don't like it nearly so well when its publisher calls upon them to pay for the pleasure and the privilege. The same people will gloat and chuckle over the fact that the home town newspaper is fighting their battles, but when the end of the years rolls around and the time comes for them to assist in a small way by paying up their subscription, the chances are that if the newspaper dares confront them with a statement for a measly dollar or two, they will swear on a stack of Bibles that they never ordered the paper and that they don't intend to pay for it.

The portals of the grave have opened for the Strathcona Star and it has entered.

And the mourners hum: "Oh, Death, where is thy sting; and Grave, thy victory!"

GO AFTER IT—GET IT!

If The Banner fights a good fight and gets licked, we don't mind it.

If this newspaper fights a wrong proposition and gets whipped, we don't mind that either. A bloody nose and a black eye are pretty tough things to bear, we know, but, as the saying goes: "You can't blame a fool for what he don't know."

The battle of the farmer is The Banner's fight, and the business man of Goodridge—or any other city or village—that owes his success to the prosperity of the farmer, that will not stand with his back to the wall and see to it that the agriculturist gets a square deal is unworthy of the slightest measure of success.

Right now the battle of the farmer is the passage of the rural credits law, which has been placed on the ballot for the November elections as Amendment No. 1 to the State Constitution, a statute which would insure the farmer securing adequate credit facilities with which to conduct his business.

Not only that.

The law would do something more:

It would give the man who contemplates getting into the farming game an opportunity to get started in business. Agriculture perhaps is not the most profitable game in the world, but there are plenty who are willing and ready to take a fling at it should the chance come.

Under Amendment No. 1, the state would not guarantee to set a farmer up in business, but is designed to give many of those who are wholly worthy of credit and need the money badly an opportunity to get a proper "grip" on their holdings or the necessary assistance.

Mr. Voter, you will find the rural credits amendment on the ballot at the fall election as Amendment No. 1. It requires a majority of the voters eligible to vote to insure its passage, thereby setting free hundreds of agriculturists who are merely hanging on "by the skin of their teeth."

If you believe in the farmer, you believe in Amendment No. 1. If you fail to vote, it will amount to the same thing as voting against it.

The amendment requires a majority. Don't make any mistake about it.

And if any office-seeker comes out your way, ask him what his stand is on Amendment No. 1. If he says he hasn't made a decision, tell him that you have and that your "X" this fall won't follow his name.

Losing some subscribers is like losing a sore carbuncle on your neck. And probably a carbunckle is the more honest of the two, generally paying you up in full.

Here's some good news for the kids: "School opens Tuesday."

[illegible] things to require the men who [illegible] out of what to pay for it. Those who remained at home made enough over here in the United States to enable us to pay many times over the debt we owe to the men who fought our battles.

Thief River Falls has a curt way of telling you what it means in a very few words. Coming into the city from the east, a sign post tells you that you are there and that the speed limit is 15 miles an hour. A few feet further on an enterprising undertaker's advertisement stands gawking at you from the roadside. Stuff like that is what makes the autoist stop to do some thinking.

The French army, after 1925, will contain 330,000 men, including 80,000 colonial troops. That's enough men to start any man-sized war, but still some folks maintain that France is far from being a militaristic nation. We'd like to know what they want 'em for if they don't intend to use 'em. Self protection, most likely.

The zebra sharks, man-eaters of the Indian ocean, are said to attain a length of 16 feet. If they had wings they would be almost as bad as Northern Minnesota mosquitoes.

[illegible] The [illegible] Democrat tells the world that a prominent minister in Gary, Ind., in a sermon recently declared that the word "bunk" is a fine word to use in many particulars. Going further he said in part: "A luscious spicy word that damns pretension in its utterance, and rebukes with a smacking gesture the vacuity of the spell-binder. More power to it! May its use increase, not as the mere coup de grace of conversational retort, but as the critical estimate of good people of this smoke screen of empty words that hangs around us. There was a time when handing out the bunk was limited to a few choice spirits who worked at it with artistic fervor and some skill. We could stand it then for it was well done and we were not surfeited. Now hewever, there seems to be no limit to the number of those who would use it, and no restraint to their zeal. As a result that resources of language were wasted by these steam shovel intelligences who heap up words onto a foundation of truth that sometimes is pretty thin."

BRING THE SMELLING SALT!

From Saskatoon, Sask., comes this fish story that Ike Waltons hereabouts can chew on: "Many strange tales have come out of the north country, but the following fish story tops them all. Its veracity is not contested, but it has yet to be corroborated. It is credited to Dougal Mackenzie, a Scotch fisherman who hails from the sturgeon fishing grounds at the mouth of the Torch river in northern Saskatchewan. Dougal had twenty-six [illegible] them pull him to Cumberland House where they were reshipped by larger steamer to The Pas. The twenty-six fish were attached to two lines, one on each side for Cumberland. At first it appeared that the powerful fish would capsize the boat with their commotion, but presently they were flocked in a down stream direction, the way sturgeon travel at this season of the year, and a record trip was made to Cumberland. Here they were dispatched and the fisherman was saved the loss of fish others suffered."

Glory is a good thing in its place—but it's well to remember that you can't trade it for ham and eggs.

Wisdom comes as the result of profiting by the mistakes of the past.

NORWEGIAN LUTH. CHURCH.

Sunday, Sept. 3. Norwegian services with catechizing of the confirmants at Erie at 11 A. M. The Y. P. S. of Erie will meet in the grove at the home of Mr. and Mrs. Ole Lykken Sunday afternoon at 2 P. M. Good program. A speaker will be present. The Y. P. S. of Torgerson will also meet Sunday afternoon. The pastor will be present. English services at Goodridge Sunday evening at 8 o'clock and Sunday school of Goodridge at 10 A. M. This being the first Sunday of the Sunday schoo lyear, we urge all teachers and children to be present. The confirmation classes meet as usual. You are welcome to all our meetings. V. O. Aaker, Pastor.

World's Greatest Features
at the
MINNESOTA STATE FAIR

SEE that feature of features—Sig Haugdahl, world's greatest auto racer, in his new world's record car, 20 inches wide and 20 feet long, racing against time.

See Lillian Boyer, the Chicago school girl, passing from auto to aeroplane, hanging by one foot from a rope ladder, and throwing herself from the plane hanging only by her teeth.

See the world's greatest circus stars, featured by two teams of daring aerialists, and Dr. Carver's wonderful diving horse leaping from a scaffold 40 feet high into a pool of water eight feet deep.

See America's greatest race horses competing in four days' of fast racing for $22,000 in purses, added money.

See "Mystic China," greatest fireworks spectacle ever staged in the Northwest, seven nights.

Bands without number; a midway show that is a fair in itself; auto polo; aeroplanists battling in mid-air at night; livestock worth $2,500,000; eighty acres of machinery; the work of 10,000 school children interested in club work. These and scores of other features.

Reduced Rates of Fare and a Third on All Roads

A Triumph for Value

IN the past two months Firestone has built and marketed more tires than in any similar period in its history.

This steadily increasing public preference is proof of the recognition by car owners of the greater values offered by Firestone. It is a tribute to Firestone men—all stockholders in the company—all actuated by the operating principle of Most Miles per Dollar.

The high average performance of Firestone Cords is without equal in the annals of tire making and is reflected by the general tendency to specify Firestone for hard service. Taxicab and bus lines, buying tires by the mile, are universally equipping with Firestone Cords.

There are many reasons for the high quality of Firestone tires but chief among the special manufacturing processes are double gum-dipping, thus eliminating internal friction by insulating each cord strand, and air-bag cure, insuring a well-balanced and perfectly shaped product.

Don't speculate in tires—you will find the right combination of price and quality in Firestone. Come in and let us tell you about the service these Cords are giving other car-owners whom you know.

Sell Your Cream at the Creamery

There is a big advantage in disposing of your dairy products at the creamery, chief of which is the fact that the local institution is founded upon he co-operative basis and you therefore receive its advantages. You get as much—and more—here for your cream than from independent buyers.

10,600 POUNDS OF BUTTER MANUFACTURED LAST MONTH

Help swell the total next month by selling all your cream to us. Only by your co-operation can the creamery exist and remember we are always willing to meet competition from all outside sources.

Goodridge Co-Operative Creamery

3,000 Farmhands Sent Out By Free Service

Nearly 4,000 farm laborers were sent into the harvest fields in August by the public free employment service, operated by the state industrial commission in co-operation with the federal government. The employment service is co-operating with the Farm Bureau to furnish help for Minnesota farmers promptly and efficiently. Actual farmers, recommended by the federation, are employed to help select the best farm workers.

War has its heroes—but how about the fat man who is trying to diet?

[illegible]

Plan to Be Adopted After Amendment No. 1 Is Passed Will Not Cost Taxpayers a Penny.

State farm loan machinery to be authorized by the Minnesota legislature after Amendment No. 1 (rural credits) is adopted on November 7th, will be operated without a cent of expense to taxpayers, according to J. F. Reed, chairman of the farmers' committee that is urging favorable action on the amendment.

"While it would be presumptive, as well as unwise, to contemplate the details of legislative action, there are certain fundamental features that are sure to be included," says Mr. Reed. "One of the most important of these is that taxpayers shall not pay a cent of expense incident to operating the system. In loaning money to farmers the interest charged will be just enough higher than that paid on bonds to take care of necessary overhead expense. One half per cent should be sufficient.

"Another feature that surely will be recognized is an amortization plan for repayment; that is, payments will be extended over a long period—30 to 35 years. Each installment will be for the same amount, to be met annually or semi-annually. Of each such payment a part will go to meet interest charges then due and the remainder will apply on the principal. The older the loan, therefore, the greater will be the payment on principal, so when the term expires, the loan is paid automatically."

Lady Bruce of Clovercrest Has Good Start For Record

Animal Purchased at Local Sale Has Butter Record of 750 Pounds For Ten Months.

Lady Bruce of Clovercrest, 3-year-old Guernsey in the herd of F. B. Conklin, has started out to make a record for milkers in her class. She was started on test on Feb. 20, and if she maintains her average to date she will have produced 759 pounds of butterfat in the 10 months during which the test was conducted. For the month of June this heifer produced 79⅝ pounds of butter under ordinary farm conditions, which would run her production up in the neighborhood of 900 pounds of butter in a year. This is a remarkable record for a Guernsey even under most favorable conditions and is the best showing ever made by a cow of any breed in the country. Experts declare that, given two additional years, it should be possible to place this cow in the 1,000 pound class, which would come very near being a record. Among purebred Holsteins there are a number of 1,100 pound cows, but such production even by the larger breed is uncommon.

Lady Bruce was purchased from L. Jensen of Clearbrook at the sale held here last fall, the price paid for her being $280. She will prove a great addition to the already splendid herd of purebreds owned by Mr. Conklin and will probably head the list as a producer.

JOBS OPEN FOR VALUATION ENGINEERS AT $3,600 TO $4,800

The collection of the income tax becomes a complicated affair after it passes the point of figuring the return of the average wage earner.

That part, of course, is simple. The technical staff of the Bureau of Internal Revenue at Washington is in need of valuation engineers in general mining, coal mining, oil and gas, and the forestry industry. The positions pay from $3,600 to $4,800 a year. The United States Civil Service Commission will receive applications until October 1. No written examination will be given; the ratings will be based upon education, training experience and physical ability.

The duties involve estimation of quantities, market values, value of equipment, cost of development, etc.

Full information and application blanks may be secured from the United States Civil Service Commission, Washington, D. C., or the civil service board at the postoffice or customhouse in any city.

CREAMERIES OBTAIN ANOTHER REDUCTION IN FREIGHT TOLLS

Freight rate concessions that will mean material savings to shippers of butter, wool, potatoes and other farm products where producers at several shipping points combine to obtain carlot rates, have been announced by A. J. McGuire, general manager of the Minnesota Co-operative Creameries Association. What are known as "stop" charges have been lowered more than 65 per cent.

The reduction was ordered at a hearing in Chicago last week, which was attended by Mr. McGuire. When the creameries association began combining part-car shipments for movement east, the rate for stopping at a station, without taking the car from the train was $7. A request for a reduction cut the "stop" charge to $6.30, effective July 1. The association considered even this rate too high and a renewal of the protest lowered the charge to $2.50.

The new rate, which applied to all concentration shipments, becomes effective October 1.

A man doesn't have to be a second Christopher Columbus in order to find trouble if he is looking for it.

What has become of the old-fashioned man who used to use a curling iron on his whiskers?

[illegible]

Resignation of Neil H. Swanson, director of the news service and investigation department of the Minnesota Farm Bureau federation, was announced today. Mr. Swanson resigned to become city editor of the Minneapolis Journal.

S. E. Elliott, formerly editor of the Farmers Dispatch, and recently associated with the U. S. Grain Growers, Inc., has been elected to succeed him in the Farm Bureau organization.

Mr. Swanson organized the news and investigation department of the state federation and founded the Farm Bureau News Service, which serves more than 500 "home town" newspapers every week with news of Minnesota's co-operative marketing and agricultural organizations. According to J. F. Reed, president of the federation, the department has been built up until it is recognized as the strongest and most successful maintained by any state federation.

"The country newspaper has been the best friend the Minnesota farmer and his organization have had," Mr. Swanson said. "It would be impossible to give the home town paper too much credit for the part it has played in making co-operative marketing a success in Minnesota. It deserves the gratitude and support of every farmer and every farm organization."

Mr. Elliott has been intimately associated, as a newspaper man, with the work and policies of farm organization for nine years.

LIFE SAVED BY DOG.

There is a Shepherd dog at the Wm. Krouss home in Beauford and there is nothing too good on the place for him. He spends most of his time lying before the barn door with his ear cocked for instant attention. And there is no doubt but for the faithfulness and quickness of the little animal, both Mr. and Mrs. Krouss would have been killed Friday when attacked by an angry bull. Mr. Krouss was taking the bull into the barnyard when the animal turned on him, knocking him down against a post in the woven wire fence. The animal gave him two terrific blows with its head when Mrs. Krouss attempted to assist her husband. The dog, however, came to the rescue just in time and leaped upon the infuriated animal, forcing him away from his victim. Mr. Krouss, with the assistance of his wife, managed to reach the barn door and escape. It was found that Mr. Krouss had suffered a badly dislocated right arm. The muscles and ligaments were torn and it was thought there might be internal injuries, as he was bruised from head to foot.—Mapleton Enterprise.

SAVING MONEY ON COFFEE AND ON ADVERTISING

A good story that has been vouched for comes to The Tribune to the effect that a group of people sent for 300 lbs. of coffee and sold it out to neighbors at 27 cents per pound. The same coffee is sold in our local stores as well as in any grocery store in any other city at a regular price of 25 cents per pound. In addition to this the man who had the coffee at his home had to advance the money and dish out in lots from one pound upward to his neighbors who came in.

No one is to blame much for the fact that these people were losing money on their coffee. It comes from the fact that they are not posted on the various grades of coffee and the prices. Merchants "save money" in much the same manner by refusing to advertise their stocks and prices. "Everybody knows we keep coffee," says the merchant, who takes too much for granted while his customer gropes around in his ignorance in an effort to save a cent or two per pound on the necessaries of life.—Dassel Dispatch.

Production of table sirup of high quality and value from sweet corn stalks, now a waste on 20,000 acres of Minnesota farm supplying commercial canneries, is predicted in the second year of operation of a newly equipped special investigational laboratory now operating at a canning company near Wells, under direction of the division of agricultural biochemistry of University Farm, St. Paul. The experiments are being carried out under a special two year appropriation of $5,000 per year made by the last legislature. Addition of a new glass lined vacuum pan costing $1,000 is expected to aid materially in the solution of the problem. Cooking the sirup at high temperature under reduced pressure, it is thought, will yield a product of excellent table quality and mild flavor. According to Dr. R. A. Gortner, chief of the division of agricultural chemistry, sweet corn sirup will become an important by-product of canning factories in the near future.

It is the fellow that has to be told again and again to do the right thing that needs to worry about his job. The man that has to be told only once is safe and the man that can do it without being told at all will be the head of his department.—Youth's Companion.

Ever notice that is the gent who wears the No. 6 hat who gives the most advice about running the government?

The penitentiaries are full of men who thought that the world owed them a living.

Somehow or other the hand-spanked kid usually succeeds later in life when the pampered one fails.

[illegible]

Nearly [illegible] agricultural organizations in Minnesota were called on this week to rally to the support of the rural credits amendment—Amendment No. 1.

In letters to the leaders of farmers' elevators, co-operative shipping associations, co-operative creameries, county Farm Bureaus, township Farm Bureau units, farmers' clubs, boys and girls clubs, and other organizations, the state rural credits campaign committee called on the farmers of the state to vote solidly for the amendment.

"Vote Yes," is the slogan adopted by the committee headed by J. F. Reed, president of the Minnesota Farm Bureau federation. "Get Your Neighbor to Vote Yes," is another.

"The rural credits amendment, or Amendment No. 1, is the most important issue that has been before the voters of the state in years," the call says. "It should be talked over in every public meeting. Every agricultural community, town as well as farm, should see to it that its solid vote is cast for the amendment. Passage of Amendment No. 1 will enable the legislature to establish a rural credits system that will build up the prosperity of the whole state by building up its basic industry without one penny of cost to the taxpayers."

The hunting season is approaching, and sportsmen should remember that it is illegal to carry a gun in an automobile, except as provided by law, as follows: "No person while in an automobile shall take game, nor discharge any firearms therefrom at any protected wild animal, nor carry a gun or other firearm, except a pistol or revolver, in a motor vehicle unless the same be unloaded in both barrels and magazine and taken apart or contained in a case."

[illegible]

Savings in freight rates [illegible] of butter shipped through the Minnesota Co-operative Creameries association in [illegible] year of active marketing work amount to $180,000.

The association announced today that economies in freight charges brought about by shipping in car lots amount to more than twice the total cost of operating the organization. In other words, according to A. J. McGuire, general manager, the savings in freight rates already have paid back to the co-operative creameries and their patrons more than the cost of the state agency, so that the other activities of the organization actually cost the farmers nothing at all.

The membership of the association totals 335 co-operative creameries. The state aegncy, launched last year, already covers all but five of the 86 counties in Minnesota. Fourteen expert field men are at work helping creameries to improve the quality of their product to command higher prices, and to market in carload lots at lower transportation costs.

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

CHAPTER IX—Continued.

—13—

"Books be d—d!" snorted the chief, and leaned forward earnestly. "Look here, Fell! Do you believe in your heart that Maillard killed his father?"

Fell was silent a moment under that intent scrutiny.

"From the evidence, I am forced against my will to believe it," he said at last. "Of course, he'll be able to prove that he was not the Masquer on previous occasions; his alibis will take care of that. Up to the point of the murder, his story is all right. And, my friend, there is a chance—a very slim, tenuous chance—that his entire story is true. In that case, another person must have appeared as the Masquer, which seems unlikely—"

"Or else," put in Ben Chacherre, smoothly, "the real original Masquer showed up!"

There was an instant silence. Jachin Fell regarded his henchman with steady gray eyes. Ben Chacherre met the look with almost a trace of defiance. The chief frowned darkly.

"Yes," said the chief. "That's the size of it, Fell. You're keepin' quiet about the name of the real Masquer; why?"

"Because," said Fell, calmly, "I happen to know that he was in the auditorium at the time of the murder."

Again silence. Ben Chacherre stared at Fell, with amazement and admiration in his gaze. "When the master lies, he lies magnificently!" he murmured in French.

"Well," and the chief gestured despairingly, "I guess that lets out the real Masquer, eh?"

"Exactly," assented Fell. "No use dragging his name into it. I'll keep at work on this, chief, and if anything turns up to clear young Maillard, I'll be very glad."

"All right," grunted the chief, and rose. "I'll be on my way."

He departed. Neither Fell nor Chacherre moved or spoke for a space. When at length the clang of the elevator door resounded through the deserted corridors Ben Chacherre slipped from his chair and went to the outer door. He glanced out into the hall, closed the door, and with a nod returned to his chair.

"Well?" Jachin Fell regarded him with intent, searching eyes. "Have you any light to throw on the occasion?"

Chacherre's usual air of cool impudence was never in evidence when he talked with Mr. Fell.

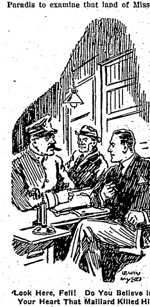
"No," he said, shaking his head. "Hammond worked on the car until about nine o'clock, then beat it to bed, I guess. I quit the job at ten, and his light had been out some time. Well, master, this is a queer affair! There's no doubt that Gramont pulled it, eh?"

"You think so?" asked Fell.

Chacherre made a gesture of assent. "When the tree falls, the kid can climb it! Any fool can see that Gramont was the man. Don't you think so yourself, master?"

Jachin Fell nodded.

"Yes. But we've no evidence—everything lies against young Maillard. Early in the morning Gramont goes to Paradis to examine that land of Miss Ledanois' along the bayou. He'll probably say nothing of this murder to Hammond, and the chauffeur may not find out about it until a day or two—they get few newspapers down there.



"Look Here, Fell! Do You Believe in Your Heart That Maillard Killed His Father?"

"Drive down to Paradis in the morning, Ben; get into touch with Hammond, and discover what time Gramont got home tonight. Write me what you find out. Then take charge of things at the Gumberts place. Make sure that every car is handled right. A headquarters man from Mobile will be here tomorrow to trace the Nonpareil Twelve that Gramont now owns."

Chacherre whistled under his breath. "What?"

Jachin Fell smiled slightly and nodded. "Yes. If Gramont remains at Paradis, I may send him on down there—I'm not sure yet. I intend to get something on that man Hammond."

"But you can't land him that way, master! He bought the car—"

"And who sold the car to the garage people? They bought it innocently." A peculiar smile twisted Fell's lips awry. "In fact, they bought it from a man named Hammond, as the evidence will show very clearly."

Ben Chacherre started, since he had sold that car himself. Then a slow grin came into his thin features—a grin that widened into a noiseless laugh.

"Master, you are magnificent!" he said, and rose. "Well, if there is nothing further on hand, I shall go to bed."

"An excellent program," said Jachin Fell, and took his hat from the desk. "I must get some sleep myself."

They left the office and the building together.

Three hours afterward the dawn had set in—a cold, gray and dismal dawn that rose upon a city littered with the aftermath of carnival. "Lean Wednesday" it was, in sober fact. Thus far, the city in general was ignorant of the tragedy which had taken place at the very conclusion of its gayest carnival season. Within a few hours business and social circles would be swept by the fact of Joseph Maillard's murder, but at this early point of the day the city slept. The morning papers, which today carried a news story that promised to shock and stun the entire community, were not yet distributed.

Rising before daylight, Henry Gramont and Hammond breakfasted early and were off by six in the car. They were well outside town and sweeping on their way to Terrebonne parish and the town of Paradis before they realized that the day was not going to brighten appreciably. Instead, it remained very cloudy and gloomy, with a chill threat of rain in the air.

Weather mattered little to Gramont. When finally the excellent highway was left behind, and they started on the last lap of their seventy-mile ride, they found the parish roads execrable and the going slow. Thus, noon was at hand when they at length pulled into Paradis, the town closest to Lucie Ledanois' bayou land. The rain was still holding off.

"Too cold to rain," observed Gramont. "Let's hit for the hotel and get something to eat. I'll have to locate the land, which is somewhere near town."

They discovered the hotel to be an ancient structure, and boasting prices worthy of Lafitte and his buccaneers. As in many small towns of Louisiana, however, the food proved fit for a king. After a light luncheon of quail, crayfish bisque, and probably illegal venison, Gramont sighed regret that he could eat no more, and set about inquiring where the Ledanois farm lay.

There was very little, indeed, to Paradis, which lay on the bayou but well away from the railroad. It was a desolate spot, unpainted and unkempt. The parish seat of Houma had robbed it of all life and growth on the one hand; on the other, the new oil and gas district had not yet touched it.

Southward lay the swamp—fully forty miles of it, merging by degrees into the Gulf. Forty miles of cypress marsh and winding bayou, uncharted, unexplored save by occasional hunters or semi-occasional sheriffs. No man knew who or what might be in those swamps, and no one cared to know. The man who brought in fish or oysters in his skiff might be a bayou fisherman, and he might be a murderer wanted in ten states. Curiosity was apt to prove extremely unhealthy. Like the Atchafalaya, where chance travelers find themselves abruptly ordered elsewhere, the Terrebonne swamps have their own secrets and know how to keep them.

Gramont had no difficulty in locating the Ledanois land, and he found that it was by no means in the swamp. A part of it, lying closer to Houma, had been sold and was now included in the new oil district; it was this portion which Joseph Maillard had sold off.

The remainder, and the largest portion, lay north of Paradis and ran along the west bank of the bayou for half a mile. A long-abandoned farm, it was high ground, with the timber well cleared off and excellently located; but tenants were hard to get and shiftless when obtained, so that the place had not been farmed for the last five years or more. After getting these facts, Gramont consulted with Hammond.

"We'd better buy some grub here in town and arrange to stay a couple of nights on the farm, if necessary," he said. "There are some buildings there, so we'll find shelter. Along the bayou are summer cottages—I believe some of them rather pretentious places—and we ought to find the road pretty decent. It's only three or four miles out of town."

With some provisions piled in the car, they set forth. The road wound along the bayou side, past ancient 'Cajun farms and the squat homes of fishermen. Here and there had been placed camps and summer cottages, nestling amid groups of huge oaks and cypress, whose fronds of silver-gray moss hung in drooping clusters like pale and ghostly shrouds.

Watching the road closely, Gramont suddenly found the landmarks that had been described to him, and ordered Hammond to stop and turn in at a gap in the fence which had once been an entrance gate.

"Here we are! Those are the buildings off to the right. Whew! I should say it had been abandoned! Nothing much left but ruins. Go ahead!"

Before them, as they drove in from the road by a grass-covered drive, showed a house, shed, and barn amid [illegible] doors and windows [illegible].

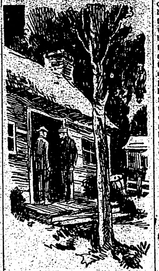
Leaving the car, Gramont, followed by the chauffeur, went to the front doorway and surveyed the wreckage inside.

"What do you say, Hammond? Think we can stop here, or go back to the hotel? It's not much of a run to town—"

Hammond pointed to a wide fireplace facing them.

"I can get this shack cleaned out in about half an hour—this one room, anyhow. When we get a fire goin' in there, and board up the windows and doors, we ought to be comfortable enough. But suit yourself, cap'n! It's your funeral."

Gramont laughed. "All right. Go ahead and clean up, then, and if rain comes down we can camp here. Be sure and look for snakes and vermin. The floor seems sound, and if there's plenty of moss on the trees, we can make up comfortable beds. Too bad you're not a fisherman, or we might get a fresh fish out of the bayou—"



"Think We Can Stop Here, or Go Back to the Hotel?"

"I got some tackle in town," and Hammond grinned widely.

"Good work! Then make yourself at home and go to it. We've most of the afternoon before us."

Gramont left the house, and headed down toward the bayou shore.

He took a letter from his pocket, opened it, and glanced over it anew. It was an old letter, one written him nearly two years previously by Lucie Ledanois. It had been written merely in the endeavor to distract the thoughts of a wounded soldier, to bring his mind to Louisiana, away from the stricken fields of France. In the letter Lucie had described some of the more interesting features of Bayou Terrebonne—the oyster and shrimp fleets, the Chinese and Filipino villages along the gulf, the far-spread cypress swamps; the bubbling fountains, natural curiosities, that broke up through the streams and bayous of the whole wide parish—fountains that were caused by gas seeping up from the earth's interior, and breaking through.

Gramont knew that plans were already afoot to tap this field of natural gas and pipe it to New Orleans. Oil had been found, too, and all the state was now oil-mad. Fortunes were being made daily, and other fortunes were being lost daily by those who dealt with oil stocks instead of with oil.

"Those gas fountains did the work!" reflected Gramont. "And according to this letter there's one of those fountains here in the bayou, close to her property. 'Just opposite the dock,' she says. The first thing is to find the dock, then the fountain. After that, we'll decide if it's true mineral gas. If it is, then the work's done—for I'll sure take a chance on finding oil near it!"

Gramont came to the bayou and began searching his way along the thick and high fringe of bushes and saplings that girded the water's edge. Presently he came upon the ruined evidences of what had once been a small boat shed. Not far from this he found the dock referred to in the letter; nothing was left of it except a few spikes protruding from the surface of the water. But he had no need to look farther. Directly before him, he saw that which he was seeking.

A dozen feet out from shore the water was rising and falling in a continuous dome or fountain of highly charged bubbles that rose a foot above the surface. Gramont stared at it, motionless. He watched it for a space—then, abruptly, he started. It was a violent start, a start of sheer amazement and incredulity.

He leaned forward, staring no longer at the gas dome, but at the water closer inshore. For a moment he thought that his senses had deceived him, then he saw that the thing was there indeed, there beyond any doubt—a very faint trace of iridescent light that played over the surface of the water.

(TO BE CONTINUED.)

Cleaning Hint.

When you're cleaning house sprinkle the clothes closets with a little water in which tobacco has been steeped and then sprinkle with a little spirits of camphor. The latter destroys the odor of the former and together they will prevent annoyance by moths.

[illegible]

Dominant [illegible] Among [illegible] in Western Canada

Despite "Newness" of the Country There Are No Better Institutions of Learning Anywhere.

There is frequently hesitation expressed by those whose minds are almost made up to move to the agricultural lands of Western Canada, that the children will not enjoy the school privileges afforded them in their present surroundings. This is a reasonable doubt. The country is new. It is within the memory of many who will read this that the bison roamed these prairies at will, that there were no railroads, no settlements beyond that of some of the Hudson Bay posts, a few courageous ranchmen and Indians. It was a country of unknown quantity. It is different today, and it has been made different in that short time because of the latent stores of wealth hidden in the land, which has been made to yield bountifully through the daring enterprise of the pioneer and the railways that had the courage to extend their enterprising lines of steel throughout its length and a great portion of its breadth. Villages and hamlets have developed into towns and towns into cities, supported and maintained by those who, coming practically from all parts of the world, and many, yes, thousands, from the neighboring states to the south, have taken up land that cost them but a trifle as compared with what they were able to dispose of the holdings upon which they had been living for years. These people brought with them a method in life that electrified and changed the entire Canadian West. Today things are different, and a trip to Western Canada ill show a country new but old. New because changes have been wrought that give to the newcomer the opportunity to become part of a growing and developing country—it gives the chance to say what shall be made of it; old because there has been brought into its life those things that have proven useful in older countries, while there has been eliminated everything that would tend to a backward stage. A writer, dealing with social matters, treats of the schools, and says:

"Everywhere the school follows the plow. Cities which a few years ago were represented by scattered shacks are proud today of their school buildings. The web of education is being spread over the prairie. Lately, however, a new policy has been adopted. Instead of many rural schools, big central schools are being established, each serving an area of fifty square miles or so, and children who live a mile and a half away are conveyed thither in well-warmed motor cars. In the summer, of course, they come on "bikes" or ponies.

"And the young idea is taught to shoot in many directions. The instruction is not limited to the three R's, but nature study and manual crafts are taught, in order that the future agriculturist may have his educational foundation laid. Many rural schools have pleasant gardens attached, with flower and vegetable beds, and the visitor to one such school deep in the country says she will never forget the pride with which a little lad showed her the patch of onions in his plot. Thrift is also taught in the schools by means of the dime bank.

"Following the primary schools there are secondary schools, where training is free. This includes classics, modern languages, science, mathematics, advanced English, and often agricultural, commercial, and technical subjects, and—but this concerns the girls—household economics. For three years this lasts, and then comes matriculation into the university, a matriculation which admits direct to the arts or science degree, or the education may be completed by a course in some special subject at a technical institute."—Advertisement.

Curiosity Satisfied.

A neighboring family, with relatives from a distant city, drove away in an automobile one morning for the country.

On their return I asked the father if they had had an enjoyable time.

"We have just been to bury my father," he replied.—Chicago Tribune.

Cuticura Soap for the Complexion.
Nothing better than Cuticura Soap daily and Ointment now and then as needed to make the complexion clear, scalp clean and hands soft and white. Add to this the fascinating, fragrant Cuticura Talcum, and you have the Cuticura Toilet Trio.—Advertisement.

"Potential Energy."

Potential energy is that which exists by virtue of position as opposed to motion; that is, nonactive energy. Water stored in an elevated reservoir represents potential energy, as its liberation to a lower level may be utilized to effect work.

Plan to End Soapstone Waste.

An eighth or ninth of the soapstone quarries in the United States is waste, but it is planned to utilize this waste as a substitute for low grade talc.

He Was Wise.

Raymond is half-past two. He lives on the boulevard near Brookside park.

A few days ago Raymond's papa said, "Let's go around in the back yard, Raymond, and look for the kitty."

Raymond willingly acquiesced. But on reaching the back yard, a thought of the "tricks of the trade" came over him and he anxiously inquired:

"Where is mamma going, daddy?"—Indianapolis News.

SET THE STANDARD TOO LOW

National Motion Picture Director Gives His Opinion as to Mistakes Made by Producers.

Will Hays, the new motion-picture director, said the other day in New York:

"Too many motion-picture people think that everything really good is highbrow. Their standard is too low. They are like the chorus girl.

"A chorus girl married a rich man after a stormy courtship of about a week, and the Sunday morning following the wedding, when she came downstairs to breakfast, she found her young husband engrossed in the two or three hundred enormous pages of the city's yellowest newspaper.

"Before this spectacle the chorus girl started back aghast.

"'Heavens,' she said, 'I've married a highbrow!'"

True Respect.

Many of the old darkies in the South handle a violin bow with considerable skill. One such had an employer with similar tastes.

One day he and the aged servant were fiddling together, and as they finished the piece the employer said:

"You handle the bow pretty well, Joe, but you are always a bar or so behind. Why is that?"

"Out of def'fince to yo', Colonel," said Joe.—Philadelphia Ledger.

While human progress is the slowest thing in the world, it does go forward.

Don't make a nasty muss of blowing out your brains; if you want to kill yourself drink lots of ice water.

YOUNG GIRLS NEED CARE

Mothers, watch your Daughters' Health

Health Is Happiness

From the time a girl reaches the age of twelve until womanhood is established, she needs all the care a thoughtful mother can give.

The condition that the girl is then passing through is so critical, and may have such far-reaching effects upon her future happiness and health, that it is almost criminal for a mother or guardian to withhold counsel or advice.

Many a woman has suffered years of prolonged pain and misery through having been the victim of thoughtlessness or ignorance on the part of those who should have guided her through the dangers and difficulties that beset this period.

Mothers should teach their girls what danger comes from standing around with cold or wet feet, from lifting heavy articles, and from over-working. Do not let them over-study. If they complain of headache, pains in the back and lower limbs, they need a mother's thoughtful care and sympathy.

A Household Word in Mother's House

writes Mrs. Lynd, about Lydia E. Pinkham's Vegetable Compound.

"My mother gave me Lydia E. Pinkham's Vegetable Compound when I was 14 years old for troubles girls often have and for loss of weight. Then after I married I took the Vegetable Compound before each child was born and always when I felt the least run down. Both my sister and sister-in-law take it and have only the highest praise for it. It has been a household word in my mother's house for years." — Mrs. KATHERYN LYND, 2431 Gladys Ave., Chicago, Ill.

A Little Book Helped Her to Decide

Milwaukee, Wis.—"My daughter took Lydia E. Pinkham's Vegetable Compound as she was so weak and did not feel like going to school. She was like that for a whole year before taking your Vegetable Compound. I found a little book of yours in our mail-box and decided to give her your medicine. She is now strong and well and attends school every day. We recommend your Vegetable Compound to all mothers with weak daughters. You may use this letter as a testimonial."—Mrs. E. KLUCZNY, 917 20th Ave., Milwaukee, Wis.

"I was always feeling tired and sleepy, was losing in weight and would faint at times. I had other troubles too, that made me feel badly. I read your little books and heard friends talk about the good Lydia E. Pinkham's Vegetable Compound had done them, so I have taken it too. The results are most satisfactory, for I have gained in weight and my bad symptoms are gone. I recommend your Vegetable Compound to all my friends and you may make whatever use you like of this letter."—GLORIA RAMIREZ, 1116 9th Ave., Tampa, Florida.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Co., Lynn, Massachusetts. This book contains valuable information.

FREEDOM FROM LAXATIVES

Discovery by Scientists Has Replaced Them.

Pills and salts give temporary relief from constipation only at the expense of permanent injury, says an eminent medical authority.

Science has found a newer, better way—a means as simple as Nature itself.

In perfect health a natural lubricant keeps the food waste soft and moving. But when constipation exists this natural lubricant is not sufficient. Medical authorities have found that the gentle lubricating action of Nujol most closely resembles that of Nature's own lubricant. As Nujol is not a laxative it cannot gripe. It is in no sense a medicine. And like pure water it is harmless and pleasant.

Nujol is prescribed by physicians; used in leading hospitals. Get a bottle from your druggist today.—Advertisement.

GAMES NOW PLAYED BY RADIO

Checkers Only One of the Many Amusements That Lend Themselves to the Wireless.

"Playing games by radio is the new sport," writes William Telher in the July St. Nicholas. "The boys in and around New York city who have small radio-telegraph sets, are having a great deal of fun nowadays in carrying on contests and tournaments through the air. Folks who are listening in hear conversations like this:

"It's your move, John. I just jumped from twenty to twenty-seven.'

"'All right, Tom; I'm moving from ten to fourteen.'

"If we did hear a conversation like this, we should at once know that a game of checkers was being played. Checkers is only one of the many games that lends itself to radio. Playing radio checkers is just as easy and almost as fast as playing the game in the ordinary manner. In fact, it is more exciting than the usual game, because we are always playing an invisible opponent."

Too Obedient.

The devout mother and her five year-old daughter were seated in church. When the service began the mother said in an undertone: "Sit on the edge of the pew, dear, and bow your head.

The child obeyed and the mother turned her entire attention to the service. The whole congregation was respectfully quiet.

Suddenly the little girl's voice echoed through the stillness: "Hold onto me, mamma, I'm slidin' off!"

Burglar Theory Falls Down.

After the federal records in the post office at Vicksburg had been locked up for five days in a safe with a balky combination lock, an expert was called from Grand Rapids to open the safe. Evidently, then, our belief that burglars open all combination safes at least once in three days was without foundation.—Detroit News.

A farmer has little faith in any advice, because he has had to deal with the weather for so long.

RADIO

AUDIO FREQUENCY AMPLIFIER UNITS

Construction of Two Is Described, With the Materials That Must Be Purchased.

Theoretically any number of transformer coupled stages of audio frequency amplification can be used. However, due to the amplification of static disturbances, power line induction, tube noises, etc., three stages are about the practical limit. If more than three stages are used the noises become so loud in comparison with the signal that it is difficult to hear the signal.

Since audio frequency amplifying transformers can be purchased at any radio shop and the simplest method of coupling, the construction of two audio frequency amplifier units will be described.

The first unit will be arranged to be used in conjunction with the vacuum tube receiver mounted on the eight-inch square horizontal base board, previously mentioned in this column. The second unit will be mounted on a vertical panel four inches wide and six inches high to "match up" with the six-by-eight vertical panel vacuum tube described recently in this column.

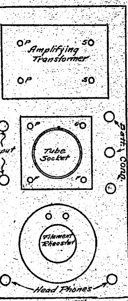

Fig XXXII

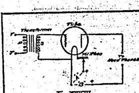

Fig XXXIII

The following standard apparatus will have to be purchased at a radio supply store in order to construct an amplifier unit to be used in conjunction with either receiver.

One amplifying transformer, cost about $5.

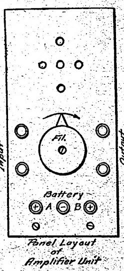
One vacuum tube (for amplifier), cost $6.50.

One vacuum tube socket, cost $1.

One filament rheostat, cost about $1.

Seven binding posts, cost about 70 cents.

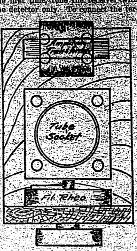
The amplifier unit to be used with the eight-inch square horizontal baseboard is mounted on a base three inches wide and six inches long. The tube filament rheostat is mounted in the front, the amplifying transformers in the back and the tube in the center.



Panel Layout of Amplifier Unit Fig. XXXIV

Fig. XXXII shows the relative position of the transformer tube socket and filament rheostat when mounted on the baseboard. A diagram of connections of the amplifier unit is shown in Fig. XXXIII. The input coming from the terminals of the re[illegible] to [illegible] transformer [illegible] amplifier [illegible] is connected to the grid, and the other side of the secondary to the filament and common battery lead. The filament rheostat is in series with the positive side of the filament. The plate terminal of the tube socket is connected to one side of the phone, the other side of the phone being connected to the positive side of a 40-volt "B" battery. Use a "hard" tube as an amplifier.

When using the amplifier unit for the first time, tune the receiver with the detector only. To connect the terminals T-T from the amplifier unit in place of the phones in the plate circuit of the amplifier, adjust both the filament rheostats until the signal strength is maximum.



Amplifier Unit Fig. XXXV

If it is desired to still further amplify the incoming signal two amplifier units can be constructed, the output of each unit being connected to the input of the next, and the phones being placed in the plate circuit of the last amplifier tube.

In constructing the second unit make the panel and the baseboard of the same thickness, kind of wood, and finish as used for the receiver. The panel should be four inches wide and six inches high, the baseboard three inches wide and four inches deep to "match up." Use the same kinds of binding posts and filament rheostat that were used on the receiver.

Fig. XXXIV is a plan view of the amplifier unit, and Fig. XXXV is an elevation of the front view of the panel. The diagram of connections is, of course, the same as for the previously described unit and is shown in Fig. XXXIII.

These amplifier units can be used in conjunction with any radio receiver. The same units connected electrically as shown in Fig. XXXIII can be mounted to suit the builders' own taste.

SEEKS STANDARD APPARATUS

National Radio Chamber of Commerce Is Negotiating With Federal Departments.

The National Radio Chamber of Commerce is negotiating with the various government departments, such as the bureau of standards, Department of Commerce, United States signal corps and United States Navy department, with a view to co-operating with these departments in the standardization of radio apparatus, methods of manufacture, methods of testing, etc. The National Radio Chamber of Commerce intends to work with these departments and assist them in their radio problems.

TIPS FOR FANS

A radio amateur in France has tough luck. He can't send at all and is not permitted to listen in on certain government transmitting stations.

A condemned murderer in a Boston jail is spending his remaining hours in the construction of a radio receiving set so that the inmates may enjoy programs during their hours of unemployment.

Despite all advice to the contrary, people still insist on using dry cells for the filament supply of vacuum tubes. The batteries will hold up for about five minutes and then they will slowly die down, until nothing at all can be heard.

Secretary Wallace has announced completion of plans for broadcasting weather, crop and market news by radiophone from Memphis, Tenn.; Jacksonville, Fla.; Roswell, N. M., and Milwaukee, Wis., thus giving the Department of Agriculture 41 stations throughout the United States from which agricultural news may be disseminated.

A radio aerial well grounded will take all of the joy out of lightning rod salesmanship. Run a No. 4 copper wire down from your lightning arrester, as specified by the new regulations of the underwriters' code compiled in Washington recently, and your home will be amply protected from lightning—if you have gone deep into the earth in making your ground.

P[illegible] Castoria. [illegible] the nursery, and knowing this [illegible] motherhood [illegible] that we call attention to the [illegible] set before them.

It is to all motherhood everywhere that we send out the warning to beware of the "Just-as-good". For over thirty years Fletcher's Castoria has been an aid in the upbuilding of our population, an aid in the saving of babies.

And yet there are those who would ask you to try something new. Try this. Try that. Even try the same remedy for the tiny, scarcely breathing, babe that you in all your robust womanhood would use for yourself. Shame on them.

Children Cry For
Fletcher's
CASTORIA

Your Friend, the Physician.

The history of all medicines carries with it the story of battles against popular beliefs: fights against prejudice: even differences of opinion among scientists and men devoting their lives to research work; laboring always for the betterment of mankind. This information is at the hand of all physicians. He is with you at a moment's call be the trouble trifling or great. He is your friend, your household counselor. He is the one to whom you can always look for advice even though it might not be a case of sickness. He is not just a doctor. He is a student to his last and final call. His patients are his family and to lose one is little less than losing one of his own flesh and blood.

Believe him when he tells you—as he will—that Fletcher's Castoria has never harmed the littlest babe, and that it is a good thing to keep in the house. He knows.

DAIRY COW FURNISHES MOST ATTRACTIVE FARM PRODUCT

Through No Other Channel Can the Farmers' Products and Labor Be Converted Into Cash as Readily and Yield the Same Steady and Sure Income and Profits.

By W. E. BRIGGS,
Vice-President of the Northwestern National Bank.

Of all the products of the farm, the dairy cow furnishes the most attractive and dependable one because the most profitable. Through no other channel can the farmers' products and labor be converted into cash as readily and yield the same steady and sure income and profits. The milch cow furnishes cash for paying the family and farm expenses as no other product of the farm does or can, and furnishes it regularly and consistently.

In other lines we would call it poor business where expenses for operating and the overhead were constantly piling up, with the opportunity for meeting them and showing a possible profit in the business coming but once a year. Yet this is what the grain farmer does. Worst of all, he is dependent upon the elements and his whole operation is a gamble. The cow helps very materially to stabilize the business.

Doubled Output Held Possible.

The education for more and better cows on the farm is fine, and I believe in it. By better cows on our farms, Minnesota's dairy output—last year about $200,000,000—could easily be doubled. By simply a few more dollars invested in the cow when purchased and more intelligent care and feeding, this result could be reached.

But to accomplish this, or in fact to show any profit in the business, requires intelligent buying and intelligent operation. I am afraid that as a result of this constant agitation for more and better cows many farmers are getting the idea that all they lack is cash or credit to buy an expensive cow and then place her on the farm and continued prosperity is assured, and the greater number he can buy of this kind the greater profits and the nearer he is to the coveted goal of riches and independence.

Must Be Equipped for Venture.

With some farmers, and I might say a great many, no greater mistake can be made. Every farm should have enough milch cows to supply the needs of his own family, but beyond that the business venture commences, and he should be equipped for it. For instance, the average farmer should never buy more cows than he and the members of his family can milk and care for. If he goes beyond that and because of an increased number he must hire help, he is trying to run a dairy farm, and that is a specialized industry that all do not succeed at.

I think it is a mistake to encourage the average struggling farmer to buy pure bred cows. He should, however, buy good quality grade cows and a registered bull. With this neucleus toward a better herd, by raising his female calves, he soon will have surrounding him better producing cows that cost no more to keep and give at least double the pounds of milk and butter fat that the average scrub cow does, and consequently he will double his income from each cow.

More and Better Cows Needed.

The needs of the farmer in this state are far more and better cows, but he should not have more cows if it means more or hired help. Better cows if the price is within reason. For the average farmer to pay fancy prices for a grade cow I think is a mistake and a poor investment, for only by good luck and careful management and a continuation of present prices for the product can he win out.

The tendency will be toward lower prices for milk and butter as production increases, and it will increase as long as the industry shows the present profits. However, if the farmer goes into this cautiously and not beyond his depth, milch cows on the farm, with hogs, will bring satisfactory results and yield better returns than anything else he can raise.

Every farmer who owns cows for an investment should go to school this fall. There he will find every argument answered in a way he cannot fail to understand, and from there he will go fully determined to improve his herd. He will get an inspiration that will last for the balance of his life, and he can hand it down to his children.

PUPILS RETURN TO STUDIES TUESDAY

Good Attendance Marks the Opening Day of 1922-1923 Season.

The Goodridge schools opened Tuesday morning after a vacation period of a little more than three months. Enrollment for the year is considered good by school officials and it is believed that there are still more pupils who will take up studies here when the busy season is completed on the farms.

The new addition to the school has been completed and placed at the disposal of teachers and students.

The Faculty.

E. J. Erickson, superintendent.

Mrs. E. J. Erickson, high school principal, home economics,

Mrs. Fore, high school teacher.

Miss Madga Nelson, 7th and 8th grades.

Miss Minnie Lundbloom, 5th and 6th grades.

Miss Adelina Davidson, 3rd and 4th grades.

Miss Pearl Bergeson, 1st and 2nd grades.

To Attend School at Thief River.

Miss Maggie Johnson of Highlanding, who has been The Banner's correspondent at that place, this week left for Thief River Falls, where she will attend the Thief River Falls high school. Miss Johnson formerly was enrolled in the local schools.

Mr. and Mrs. M. O. Seavey, Mrs. George Stephenson, Mrs. A. Josephson and Mildred Seavey shopped in Thief River Falls Saturday afternoon.

Most any normal lad would rather own a candy store than to be governor.

RAYMOND STEPHENSON IS SURPRISED BY FRIENDS

Twenty-two friends of Raymond Stephenson tendered him a surprise party Friday afternoon, the occasion being his twelfth birthday anniversary. The juvenile guests played outdoor games and at 6 o'clock a delicious lunch was served. The following were present: Vera Larson, Alice Stephenson, Martha, Ida, and Hattie Bundhund, Dorothy Sund, Edith Gunderson, Florence Halvorson, Violette Edseth, Murial and Laurel Stephenson, Frenly Josephson, Harold Olson, Westley Ferdinandsen, Johnny Anderson, Hirium Halvorson, Sidnid Stephenson, Myrtle, Adeline and Vernon Stephenson and Kenneth Olson.

THE RETAINER.

A speeding motorist was brought before a local judge and fined $15. Without demur, the culprit placed 3 $10 bills on the bench and started to walk out.

"Here," the justice called after him, "there are $30 here."

"I know that," replied the autoist, "but that's all right. I'm going out of this blamed town a dawgone sight faster than I came in, you bet!"

A DOUBLE PREDICAMENT.

Two acquaintances met in a polling booth on the day of the municipal election and both proceeded to examine the list of candidates.

"George," remarked one voter. "I don't want to vote for any of these men—I don't know one of them."

"I'm in the same position, Joe," replied the other sadly. "I know them all."

SPEAKING OF DRY CELLS

"Yes, we do have some pretty long dry spells here," said the old desert rat to the inquiring tourist. "Fact of it is that after some of them we have to teach the fish to swim again, but what makes it sad is that so many of 'em drown learnin'."—Legion Weekly.

HIS BLACK RECORD.

The Judge: "Have you had a criminal career?"

The Prisoner: "Yes, your honor."

The Judge: "Where?"

The Prisoner: "At Tours, France."

The Judge: "And what was the charge?"

The Prisoner: "Being on the street with my coat unbuttoned."

St. Cloud Newspaper Is Robbed; Also Threatened

"Beware of Strike; Next Time Dynamite," Is Warning Left at Scene By Robbers.

St. Cloud police are puzzled by a mysterious robbery of the St. Cloud Times plant, accompanied by a threat of dynamiting. All the linotype machines were stripped of their spacebands. The robbers left a note reading: "Beware of strike. Next time dynamite." The reference to a strike is believed to be a blind, as the Times has never had a strike and employs union laobr. Besides stripping the machines, the thieves took from the editorial room a few boxes of pencils, two or three pairs of scissors and two letter openers. Other articles of greater value were left untouched.

PREPARING A PLACE

A certain minister who had been asked by his congregation to turn in his resignation selected as his text for his farewell sermon, the following:

"I go to prepare a place for you, that where I am you may be also."

A stranger, noting the disapproval with which the text was received by members of the congregation, turned an inquiring eye on the man sitting beside him. He received back this answer, delivered in a hoarse whisper:

"He's going to be a chaplin at the state penitentiary."

LADIES' AID MEMBERS TENDER SURPRISE TO MRS. V. O. AAKER

Members of the Ladies' Aid society tendered a surprise party to Mrs. V. O. Aakre at her home Saturday afternoon. A delicious lunch was served at 5 o'clock by the guests, after which a beautiful set of dishes was presented to Mrs. Aakre. Those present were Mrs. V. O. Aaker, honor guest, Mrs. G. Gunderson, Mrs. O. S. Kirklie, Mrs. M. G. Thoreson, Mrs. Theodore Tandberg, Mrs. E. Halvorson, Miss Lena Reson, Mrs. A. Halvorson, Mrs. O. Wiseth, Mrs. M. Olson, Mrs. B. Johnson, Mrs. George Johnson, Mrs. H. A. Halvorson and Mrs. Theodore Gilbertson.

PRACTICAL USE.

Eight-year-old Walter, reading a book far beyond his years, had just had the word "diplomacy" defined to him by his father as "doing the right thing at the right time." For a moment he was silent and then exclaimed:

"Well, then, I guess I used diplomacy last night. It was dark when mother came in with the castor oil, and I rolled Johnny into my place, and then when she got to the other side of the bed I rolled him back again."

Poultry Show Fused With Dairy Exhibit

Poultry fanciers and dairymen of this country will join forces in an effort to bring the message of well bred poultry and cattle to people by holding in connection with the National Dairy Exposition at the Twin Cities, Oct. 7 to 14, a National Poultry Exposition. This fusion comes as a result of a belief on the part of the farming interests that the dairy cow and hen go together for the upbuilding of more prosperous agriculture.

The Minnesota State Fair board has palced at the disposal of the National Darly Association, under whose auspices and management the Poultry Show will be held, the agricultural building on the fair grounds for the poultry exhibit.

In spite of the addition of the poultry show to the dairy exposition the previously announecd admission price of 50c and 25c will be retained, and people will see two shows for the price instead of only one.

Mrs. R. E. Holmgren, Holt, Falls Down Elevator Shaft

Drop of Fifty Feet Results in Broken Leg and Dislocated Knee at Roseau Elevator.

Mrs. R. E. Holmgren of Holt while in Roseau Sunday afternoon with her husband visiting her brother-in-law, J. L. Hagberg, met with a serious accident which might have resulted fatally. They were inspecting the new elevator, and while Mr. Hagberg went to close the engine room door, Mrs. Holmgren stepped into the man-lift and released the brake. Not being quite heavy enough to balanec the weight, the lift sped upward and struck the top with such force that the cable came loose. The lift then shot downward again, a drop of 50 feet, striking the floor with the result that Mrs. Holmgren had a leg broken and a knee dislocated. She was taken immediately to the hospital at Roseau for treatment and it is hoped that she received no permanent injury.—Roseau Times-Region.

ANCIENT LORE.

Do you remember the fable of the hare and the tortoise?"

"I do," replied Mr. Chuggins, "and it's all old stuff. A modern version would have the hare arrested for speeding."

F. J. DUDLEY FAMILY NARROWLY ESCAPE WITH LIVES WHEN FIRE RAZES PALACE CLOTHING HOUSE

Early Tuesday Morning Flames Practically Destroy the Building and Furniture and $16,000 Stock of L. L. Cohn Is Eaten Up in One of Hottest Fires Seen Here in Several Years—Entire Structure Is Badly Gutted by Blaze.

Alarm Sent in at 4:30 o'Clock Is Quickly Responded to by Firemen and Veritable Furnace of Fire Is Quenched in Time to Save Adjoining Buildings—Cause is Generally Attributed to Lightning Bolt.

(From The Tribune.)

An early Tuesday morning fire which practically destroyed the building belonging to F. J. Dudley, occupied by the Palace Clothing Company, of which L. L. Cohn is the proprietor, and which for a time perilled the lives of Mr. Dudley and his two daughters, Katherine, age 18, and Merita, age 13, who were asleep in the two front rooms on the second floor, was quenched by the Thief River Falls fire department after it had gained such headway that some of the business houses adjoining seemed in imminent danger.

A heavy electrical storm which visited this section Tuesday morning, with its accompanying sharp flashes of lightning, is thought to have struck the building and started the fire. Another view held is that defective electrical wiring may have been to blame.

An alarm was sent in at 4:30 A. M. and the fire department responded promptly. When they arrived, the entire top and back of the building was a seething mass of flames, which had gained such headway that it was necessary for the men to play three streams of water into the hold of the building.

The building, a frame structure of two stories, is adjoined on the north by the Farmers & Merchants Bank building and on the south by the Cosgrove billiard parlor, both fireproof structures, and this rendered the fire fighting extremely difficult, the Dudley building being "sandwiched" in between the two, closely abutting the two fireproof structures.

Because of the headway gained, a veritable furnace had resulted and firemen were obliged to reach the top of adjoining buildings and poured thousands of gallons of water into the structure before the fire was finally quenched at about 6 o'clock.

Mr. Dudley and his two daughters occupied adjoining front rooms on the second story. The fire was first discovered by the youngest daughter, Merita, when she was awakened by rain coming in through a window and onto her bed. She closed the window, when she sensed the smell of smoke in the room. She looked toward the rear of the building and saw the flames lapping their way out of a skylight over the rear end of the building. The structure had a one-story storage addition and where this joined the two-story part are two windows. Through these windows the fire already was eating its way and the heat was terrific.

She immediately awakened her father and older sister and appraised them of the danger and so hot had the fire become that they were unable to collect nothing only their street apparel. Mr. Dudley and his daughters hurried to the street with their clothing on their arm and were compelled to complete their dress in the stairway and at the entrance to the Farmers & Merchants Bank building. On her way to the stairs Katherine snatched up several articles of wearing apparel, and these were the sum total of the personal belongings of the family that were saved.

Mr. Cohn's loss is covered by insurance of $6,000, which represents about 50 per cent of the loss, according to reports. Mr. Dudley carries $5,400 insurance on the building and $3,000 on his household belongings.

Nothing remains of the building excepting the front, where plate glass in the show windows as well as numerous articles on display, are still intact, being damaged only to the extent done by smoke and water. The inside, however, is a twisted mass of wreckage, good grade clothing, such as overcoats, suits, hats, caps, shoes, etc., scorched and heavily soaked with water. The entire roof toward the rear of the building collapsed onto the first floor with a mass of half-burned clothing underneath.

Mr. Cohn, who was on the scene of the fire, shortly after its discovery, made several attempts to gain entrance to the building, but was cautioned by Paul Midderigh, fire chief, that great danger attached because of the fact that the gradual progress of the flames had rendered it extremely dangerous. Mr. Cohn, however, was able to save the books of the company.

A fireproof box, containing several thousand dollars in securities and notes, the property of Mr. Dudley, was found yesterday mroning in the fire ruins. They had fallen through a hole burned in the floor and were lying amidst the smoldering merchandise in the store, partially destroyed and many of the papers burned beyond recognition.

Crowds of people, aroused from their beds by the fire siren at the electric light plant and the heavy electrical storm, watched the progress of the fire and the efforts of the fire department. They stood for two or three hours in the downpour.

Several days ago the Palace Clothing House had received in the neighborhood of 150 garments, valued at several thousand dollars, consisting of fur-collared overcoats, etc., which were in the storage room in the rear of the store. No insurance was carried on the new shipment and represents a total loss.

ALL PARTIES BACK RURAL CREDITS ACT

Politics Plays No Part in Campaign For Amendment No. 1—Every Platform For It.

Minnesota voters this year will have the unusual experience of passing judgment on a measure that is sponsored by every political party in the state.

This measure is a constitutional amendment, which comes up at the general election Nov. 7. Amendment No. 1, the rural credits amendment, has the outspoken endorsement of every party. The platforms of the Republican, Democratic and Farmer-Labor parties approve it in unmistakable terms. Politics plays no part in the campaign now under way in Minnesota to obtain passage of the amendment.

Leaders in the campaign for the amendment are emphasizing that the measure is designed to develop the prosperity of the whole state, without one cent of cost to the tax payers.

The fellow who waits for business to come to him has more patience than sense.

NEWS REVIEW OF CURRENT EVENTS

Distribution of Coal and Curbing of Profiteers Are Pressing Problems.

MORE VIOLENCE BY SHOPMEN

Senate Adopts Two Important Amendments to Bonus Bill—Results of California Primary Election—Italy and Little Entente Near Clash Over Austria.

By EDWARD W. PICKARD

PREDICTIONS that the public would have to pay for actual and imaginary losses due to the coal strike are already being fulfilled. The operators and dealers, many of whom must be classed among the conscienceless profiteers, are raising prices of fuel, despite the efforts of public officials, the threats of congressional action and the protests of the miners that the mine owners have suffered little, if any, loss because of the stoppage of production. In some sections of the country the fuel shortage already is becoming acute; in others there is plenty of coal. The railroads, it is asserted, are not able to supply enough cars, but that is always the case as winter approaches, which is one of the results of the wretched lack of organization of the coal industry.

The coal famine is especially threatening in New York and the Atlantic coast region generally, because the anthracite strike has not yet been settled. But at this writing there is a fair chance that the hard coal miners will soon be back at work. Senators Pepper and Reed of Pennsylvania drew up proposals for resumption of work, and the plan was submitted to the operators and the miners' scale committee at separate meetings. It was understood that the proposed agreement required the return of miners to work on the basis of pay rates and working conditions as they were last April, while the operators would be required to withdraw their insistence that arbitration be adopted as a method of fixing future wage scales. This, apparently, would be almost as complete a victory for the miners as was that won by the bituminous miners, and as temporary a settlement of the troubles and disputes.

Distribution of the coal is considered by the administration the great present problem and President Harding intends that all government agencies shall be utilized to speed up transportation of fuel. Secretary Hoover is studying the capacity of the railroads to meet the emergency. Heretofore, he said, the best continuous coal movement accomplished by the railroads was on the basis of 13,500,000 tons a week. There are at present, Mr. Hoover declared, between 20,000 and 25,000 cars of coal on the sidings throughout the country and one of the greatest problems is to get this coal delivered. There is, he added, 600,000 tons of coal loaded under special priorities for the Northwest, which has not moved in three weeks.

Federal coal committee officials are discussing with the interstate commerce commission plans for supplying the Northwest with coal this winter. If total facilities could be utilized it would be possible to move 1,200,000 tons a week to the Great Lakes before the close of navigation, and it was planned to supplement the port dumpings with all-rail shipments during the winter to furnish the necessary fuel for the Northwest.

PASSAGE by the house of the administration's federal fuel distributor bill was assured, despite considerable opposition. Its constitutionality was attacked by Sanders of Indiana, Graham of Pennsylvania, Goodykoontz of West Virginia and others, while Robinson of Kentucky said if the mines were given cars enough for four weeks, the price of coal would tumble. Newton of Minnesota said the measure was the only practical way to prevent extortionate prices, and Mondell of Wyoming declared he would vote for the bill because of his desire to curb profiteering, though he did not believe that kind of legislation would wholly perform its expected purposes. It was understood that the Cummins bill with the same objects would be taken up by the senate as soon as the bonus bill was disposed of.

In order to make clear the administration's policy in the matter of the railroad and anthracite strikes, President Harding authorized the announcement that he thinks it desirable and necessary that congress, before adjournment, should authorize him to take over the railroads and mines to meet a great national emergency should one develop. Such legislation must come voluntarily from congress, however. Mr. Harding will make no formal request for it.

HENRY FORD has announced that his entire plant at Dearborn, Mich., will be shut down on September 16 because of the coal situation. He says he could get plenty of coal—if he were willing to pay the price. But he declares he will not stand for the profiteering of the dealers and that he feels he better than most manufacturers can afford to make this form of public protest against extortion. If he is sincere the American public will be with him in this action, just as Mayor Couzens of Detroit says that city will support him in it. Ford's enemies, in Wall street and elsewhere, say he is bluffing, or is planning to shut down because of decrease of demand for his cars, or is making a grand stand play because he hopes to run for the presidency or some lesser office. Ford earnestly denies all these charges.

FURTHER instances of violence and several short and unauthorized strikes of trainmen marked the progress of the railway shopmen's strike. Trains of the Alton were tied up for several days at Roodhouse, Ill., until the trainmen, threatened with loss of their charter, went back to work. Attempts were made to blow up several of the Alton's bridges. Dynamite and bombs were used by the strikers in Florida, Alabama, Illinois and elsewhere, and in various places attempts were made to wreck passenger trains by pulling up rail spikes.

Striking shopmen under arrest for wrecking a Michigan Central train at Gary, Ind., have confessed, implicating others, and have admitted that the climax of the reign of terror that was planned was to have been the wrecking of the Twentieth Century Limited near Elkhart, Ind.

E. F. GRABLE, representing the Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers, last week petitioned the railway labor board to establish a new wage scale for railway workers and in doing so to recognize the principle of a "living wage." The board refused to do this, the majority holding that a "just and reasonable wage," as conceived by the board, is a "living wage." Thereupon Mr. Grable wired Chairman Cummins of the senate interstate commerce committee, asking that the transportation laws be so amended as to insure railroad employees a minimum "living wage."

BEFORE the senate passed the soldiers' bonus bill it adopted two important amendments. The first, offered by McNary of Oregon, Republican, provides for the appropriation of $350,000,000 for the reclamation of arid and swamp lands to provide farms for ex-service men. The second, by Simmons of North Carolina, Democrat, provides that the interest on the foreign debt shall be used to pay the bonus. Both of these amendments will make more difficult the task of adjustment between the house and senate bills, and for this reason they were supported by many senators who are avowedly opposed to the bonus. The Simmons amendment is directly contrary to the wishes of the administration as expressed often by President Harding and Secretary of the Treasury Mellon. Probably the bill will be got out of conference as speedily as possible, as the congressmen who support it wish to reap the political benefits in the fall campaign, but the feeling in Washington at this time is that President Harding is likely to veto the measure.

CALIFORNIA'S primary election attracted the interest of the country last week. On the face of incomplete returns, Senator Hiram Johnson won his fight for renomination, defeating C. C. Moore; all the incumbent congressmen were renominated: State Treasurer F. W. Richardson beat Gov. W. D. Stephens for the Republican gubernatorial nomination; District Attorney T. L. Woolwine was nominated for governor by the Democrats. Some of these results may be upset by later returns.

In Montana partial returns indicated that W. D. Rankin had been nominated for senator by the Republicans and B. K. Wheeler by the Democrats. In South Carolina Cole L. Blease, former governor, was leading T. G. McLeod for the gubernatorial nomination, but as he seemed not to have a majority over the other five candidates it was considered certain a second primary would have to be held.

AUSTRIA, bankrupt and in every way distressed, has become a bone of serious contention between Italy and the little entente. Plans for an economic union between Italy and Austria, which might result later in the virtual absorption of the latter, have been put forward, and are said to have the approval of Great Britain and France. The scheme would relieve Austria's most pressing needs and give her an outlet to the Adriatic, and would satisfy the growing Italian sentiment for expansion. But Jugo-Slavia, Italy's rival for control of the Adriatic, doesn't want Italy strengthened, and furthermore she wants to grab the Austrian district of Klagenfurt. Rumors that Serbian irregulars were about to invade that region stirred up a lot of excitement in European capitals, and Jugo-Slavia was constrained to deny any intention of invading the district and to promise to restrain the irregulars. The Czechoslovaks were credited with a hankering to seize the northern provinces of Austria in case of dismemberment of the succession republic. Budapest heard that both these little entente nations were planning to send troops through Hungarian territory into Austria, and Count Andrassy, chairman of the Hungarian foreign affairs committee, declared Hungary would resist this, adding that Hungary, though weak, "may prove dangerous in case of such an insult."

PROBABLY before this reaches the reader it will be known whether the allied reparations committee has come to a decision on the question of a moratorium for Germany, but during the latter days of the week the situation was decidedly confusing. Berlin made one offer of guarantees which France rejected. Then new plans were suggested by Britain, by France and by Germany, all of which were cast aside by the commission. It seemed possible the scheme proposed by Delacroix of Belgium, though admittedly a temporary compromise, might be adopted. This provided for:

1. Issue of short-time promissory notes by the German government, countersigned by three big German banks and payable to Belgium within six months.

2. Transfer of 300,000,000,000 gold marks ($71,400,000,000) from the reichsbank to the coffers of some foreign bank outside of Germany, to be held as security for the paper notes.

3. Guarantees to France for payment in kind.

4. Convocation of another premiers' conference in November to take up the whole problem of reparations and war debts of the allies.

SEVERAL great disasters occurred last week. An overloaded Chilean vessel sank near Coquimbo and 316 persons were drowned, only six being saved. The Japanese cruiser Niitka went down in a typhoon and it was believed the loss of life was heavy. In a gold mine at Jackson, Cal., 47 miners were imprisoned in the lower levels by a fire in levels above them, and at this writing it is believed none of them will be rescued.

DESPITE the assistance of American reformers, the prohibitionists of Sweden were defeated when the question of whether the country should be wet or dry was submitted to a popular vote. The cities especially voted wet by huge majorities.

News of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Dellwood—A death car driver who sideswiped another automobile, overturning it, and drove away leaving one man dead and another injured, pinned in the wreckage, is being hunted by police.

Montevideo—During a severe electrical storm the barn of the farm of Haldor Bratsberg, northwest of this city, was fired and completely destroyed with all its contents.

St. Cloud—Wendell A. Holt, 20 years old, admitted to police here that he had stolen two automobiles. He said he stole a car at the Fergus Falls State hospital and came to St. Cloud where he abandoned it, and took a better one from a local garage.

St. Paul—Pronouncing the school situation in St. Paul deplorable, plans of L. R. S. Ferguson, commissioner of education, providing for the expansion and development of the school system by issue of $5,000,000 of bonds, have been accepted by Mayor Arthur E. Nelson's citizen advisory committee without alteration.

Minneapolis — The Minneapolis Trades and Labor assembly showed its sympathy for the Foster radicals in the American labor movement when it voted $1,000 toward the $10,000 bail demanded for William F. Dunn.

Hibbing—For the first time in the history of the St. Louis County Fair association, the fair management has decided to take out rain insurance. The amount is $3,000 and the premium to be paid is $300.

St. Paul—St. Paul was selected as headquarters for the farmer-labor party for the coming campaign.

Albert Lea—Jacob John Karpen, who allowed the world to believe he was dead, has been found working on a farm near Albert Lea. Karpen was traced by Sheriff Brown through the aid of the sheriff at Albert Lea.

Duluth—Charles D. Pattinson, aged 77, pioneer resident of Duluth, died in Richmond, Va., according to word received here. Mr. Pattinson had been a resident of Duluth for 40 years.

Duluth—Plans for the Mille Lac county courthouse to be built at Milaca, were filed with the Duluth Builders' exchange.

Duluth—One thousand gallons of liquor were poured into the city sewers by federal prohibition agents.

Cass Lake—Gathering of the mahnoh-min crop, or wild rice, got under way by Indians in the rice beds along the rivers here. The crop is gathered in much the same way that Hiawatha and Minnehaha gathered it.

Duluth—Notices of trials in six cases instituted by the Massey Steamship company against insurance companies throughout the United States were filed in district court.

Hibbing—Burglars who robbed the safe of Arcade Billiard parlor here of $100, returned $17 of the loot and notified the proprietor that the balance would be returned soon.

Bemidji—Bemidji will have a real basketball team in the field during the coming winter and it is the intention of the promoters of the team to cop off the championship of the Northwest.

Crooked Lake—Holes in one are made occasionally, but on a short hole, under 150 yards. J. A. Curtis of Crooked, Lake, Minn., an amateur, while playing over the Mountain Lake course with Harvey Curtis and Fred J. Keiser, made the eleventh hole in one, a distance of 190 yards.

Mankato—That a "flapper" dressed in boy's clothes was concerned in the theft of a car from Mankato which was found abandoned at Albert Lea is the belief of local police.

Redwood Falls—As the result of a visit by State Auditor Ray P. Chase to this city, a plan may be worked out whereby the city park will be deeded to the state of Minnesota and made a portion of Ramsey state park.

Ely—Evidence that early French voyagers into the wilderness of central North America were in Minnesota, came to light with the discovery of an old flint rock rifle on the Kawisshwi river.

Minneapolis—Selmer Jacobson of Minneapolis, a "stunt man," was killed when he dropped 500 feet from an airplane flying over Lyndale Airport. The accident was witnessed by 2,000 spectators.

Minneapolis — Twenty-one Northern Pacific trains discontinued July 21 were restored and 10 other trains will be restored soon making the service 100 per cent normal, G. F. McNill, asst. passenger agent, announced.

Red Wing—Red Wing's milling district was menaced by fire which swept the J. E. Danielson elevator. The elevator, closed for three years, was being put in shape for reopening. The loss is estimated at $20,000.

Duluth—Considerable damage has been caused to the roads between Kelsey and Meadowlands by the peat bog fires burning in that vicinity, according to John J. Harrison, district engineer of the fifth district.

Waseca — Waseca county poultry breeders will enter into a county-wide egg laying contest. The contest is sponsored by the Waseca county farm bureau.

Waseca—Lack of state funds is declared to be the cause for the decision of the local board of education to discontinue the teacher training depart-

[illegible] Lewiston on Saturday nights are forbidden by an ordinance passed by the village board.

Austin, Minn.—Albert F. Knapp, whose escape from the Rochester state hospital for the insane Thursday alarmed residents of Dexter, his old home, has been captured.

Gilbert—The Genoa Mine, the oldest producer in this section, is to close down Aug. 31st.

Minneapolis—Thomas Van Lear, former mayor of Minneapolis, was named as a candidate for county treasurer by the Working People's Nonpartisan league, and announced that he would make the race.

Austin—Crochet work by boys constitutes part of the school exhibit at the county fair this year.

Virginia, Minn.—Miss Dorothy Connor of Gilbert is winner of the popularity contest stated in connection with the American legion convention here.

Duluth—Dr. John J. Eklund, who was shot to death in his office by an insane man recently, left an estate valued at $194,445. Dr. William J. Eklund, a son, is the only heir.

Fergus Falls—The body of Mrs. Carl Formo, living near Alton, south of here, was found in a small lake near her former home.

St. Paul—Official tabulation of livestock entries by the entry department of the Minnesota State Fair, shows the biggest entry of stock and poultry ever received by the fair.

Jordan—Police continued their search for the occupants of a car which was mysteriously wrecked in a field near Jordan. The car was badly wrecked and with blood stains on the seats and floor.

St. Paul—The honeymoon of Tony Scandald and Susan Vilano, married in St. Paul recently was interrupted when George Quinn, 21 years old, was shot during a fight that followed the intrusion of uninvited persons at the wedding party.

Red Wing—One woman was critically injured, another woman and a man badly hurt and two others escaped unhurt when a party of five automobilists en route from Ellsworth, Wis., to the Twin Cities, turned completely over.

Minneapolis—Mrs. Earle Brown, wife of Sheriff Brown of Hennepin county, sailed for Europe on the Majestic for a six weeks' visit in England and on the continent.

Minneapolis—A 12-year-old boy routed two bandits from his father's grocery store by grabbing a revolver and firing at the men as their backs were turned.

Minneapolis—With both legs broken as result, it is believed, of being kidnapped, carried 75 miles in an automobile and kicked against a speeding freight train, Warren Cogswell, 11, was taken to the General hospital on his arrival from Olivia.

Stillwater, Minn.—One thousand children under the age of 12 are to be guests of the local Elks lodge at a picnic at Crocus park.

St. Paul—Judge William Louis Kelly, senior member of the Ramsey county district court bench, celebrated the eighty-fifth anniversary of his birth at his home in St. Paul.

Hastings, Minn.—Miss Alma Gunderson of Ellsworth, Wis., was injured in an automobile accident near Miesville. Her condition was considered grave by attending physicians.

Red Wing—Barney Steiner and a Miss M. Palpal, both of Ellsworth, Wis., were injured in an automobile wreck near here. They received treatment in a Red Wing hospital.

St. Paul—Failure of any of the 200,000 tons of coal allotted to the northwest by the federal fuel administrator to reach Lake Erie points has caused C. P. White, federal fuel distributor for the northwest, to send out telegrams of investigation.

Hibbing, Minn.—Dedication of the new home of the Hibbing Masonic lodge tomorrow will be made the occasion of one of the largest gatherings of Masons in years.

Minneapolis — Pieces of jewelry which had been obtained from different parts of the world were stolen by a burglar who ransacked the home of Mr. and Mrs. G. H. St. Clair.

Moorhead—Judge C. A. Nye of Clay county district court, announced the appointment of W. E. Granthan of Bismarck, as official court reporter of the seventh district, to succeed Edward H. Hagen, resigned.

Winona—Pine Island won first honors in the band tournament here under the auspices of the Winona Municipal band.

Minneapolis—In refutation of the grand jury charges that gamblers and bootleggers operated in Minneapolis without molestation from the police, Superintendent of Police A. C. Jensen will publish statistics of police activities against law violators.

Duluth—The new wing of the St. Mary's hospital, costing $300,000, was officially opened when Bishop John T. McNicholas of the Duluth Catholic diocese blessed the edifice.

Duluth—Two steamers, carrying combined cargoes of 645,000 bushels of rye for export cleared from Superior over the week-end.

Osseo—Dedication of the new St. Vincent de Paul Catholic church at Osseo took place in the presence of hundreds of former and present parish members.

Red Wing—Dr. Kretzschmar, a physician from Munich, Germany, is coming to Red Wing to join the St. John's hospital clinic. Dr. Kretzschmar will arrive here this fall.

Winona—Boiling sulphuric acid was thrown into the face of Edward H. Duls, part owner of a battery company here, when a battery he was repairing exploded. His face was severely

HANDY JACK—One man changes, heaviest racks, boxes, etc., from ground onto wagon and off. F. LOVERING, Fremont, Nebr.

She Changed Her Mind.

A gentle-minded Cleveland woman, arriving in New York one day, gave the porter at the station a dime. The porter in a fury threw it on the ground. The Cleveland woman picked it up. At the same time she explained gently that this was the only coin she happened to have in her purse, and in parting with it for a tip she had condemned herself to walk two miles to her hotel instead of taking the bus.

This explanation mollified the porter. "In that case, lady," he said, "I'll take the tip."

"No, never mind," sad the Cleveland woman in her gentle way. "I think I'll take the bus."—Cleveland Plain Dealer.

Make It Dorothy.

A young man informed John L. Duvall, president of the Marion County State bank, recently, that he wished to start a savings account for his little son. Mr. Duvall, seeing the smile on the man's face, guessed that it was a new baby and offered his congratulations, which the patron smilingly acknowledged. The account was opened in the regular way with the father as trustee for Arthur ——. Several days later the young man entered the bank and approached Mr. Duvall.

"Say, Mr. Duvall," he said, "I'd like to change the name on that account I opened for Arthur a couple of weeks ago. Make it Dorothy."—Indianapolis News.

Freshen a Heavy Skin

With the antiseptic, fascinating Cuticura Talcum Powder, an exquisitely scented, economical face, skin, baby and dusting powder and perfume. Renders other perfumes superfluous. One of the Cuticura Toilet Trio (Soap, Ointment, Talcum).—Advertisement.

Word of Hope.

A railway lawyer tells of a malingerer who finally got into a real wreck. He was rushed to a hospital in an unconscious condition and was operated on at once. After the operation, still dazed from the anesthetic, he said feebly:

"What is this place?"

"You have," the house surgeon announced, "been badly injured in an accident on a street car, but you will recover."

"Recover!" said the man, bracing up. "Recover! How much?"—Pittsburgh Dispatch.

The spectator often sees better than the actor.

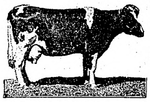
North Dakota Agricultural College

BIGGER COWS MORE PROFITABLE THAN SMALLER IN ANY BREED

(By Max Morgan, State Dairy Extension Specialist)

We should develop our cows into larger dairy animals. A Jersey cow should weigh 1,000 pounds, a Guernsey cow should weigh 1,100 pounds, and a Holstein 1,250 pounds.

The 40,000 cow testing associations scattered over the United States have compiled records showing that within the breed the big cows win. They produce more milk and butterfat per cow and have a larger average income over cost of feed.

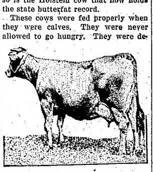


A Fine Big Type of Holstein Cow.

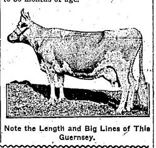
This is true for every breed and for every age of every breed so far as the records have been tabulated. The records, however, do not show that the larger breeds are either more or less profitable producers than the small breeds. They do show that the large cows of each breed do better in every respect as compared with the small cows of the same breed.

The Jersey cow, for instance, which will no doubt hold the North Dakota state butterfat record for all breeds when she finishes her record, is a cow that weighs 1,200 pounds. The state Guernsey record holder is a big cow, so is the Holstein cow that now holds the state butterfat record.

These cows were fed properly when they were calves. They were never allowed to go hungry. They were developed into cows during the first 18 months of their lives, after which time they were bred to freshen at from 27 to 30 months of age.



A Big Jersey Cow of Championship Caliber.



Note the Length and Big Lines of This Guernsey.

PRODUCE BETTER CREAM AND GET MORE FOR IT

Farmers of Bottineau county, through co-operative selling, have reduced the cost of handling their product at the local cream station from 10 cents a pound to 2.4 cents a pound, thereby netting the farmer approximately 5 cents per pound more for their butterfat, according to figures made public by the Bottineau County Cream Producers' association.

County Agent C. B. Aamodt called the dairymen living in the vicinity of Bottineau together in February to discuss the cream marketing situation and to organize a cream producers' association that would cut down the wide margin the dairymen were paying to maintain several local buyers who represented large centralized creameries.

The Bottineau Cream Producers' association was incorporated and the 18 farmers each bought a $10 share to help purchase equipment. A manager was employed and at the end of the first month the books showed a total of 2,033.4 pounds of butterfat sold and a net return to the association of $709.44. The manager operated on a margin of 4 cents per pound and at the end of the month 2 cents per pound was prorated on the basis of cream bought which showed the total operating expenses to be 2 cents per pound.

This success, small as it was, proved to the farmers that they could get more for their cream by marketing it co-operatively and a phenomenal growth of the organization occurred in the next three months. At the close of the books on June 30, 250 members were enrolled who had marketed a total of 21,041.1 pounds of butterfat. The manager was operating on a 4.7 cent margin and turning back approximately 2.3 cents per pound in patronage dividends.

Asa Blair, who is the manager of the association, has considered it part of his duties to help educate his patrons in producing a better quality of cream.

During the first two months a large percentage of the cream brought to the station tested below 35 per cent, a point at which it sours quickly. Mr. Blair says that now practically all of the cream brought to the station tests between 40 and 45 per cent, which has greatly improved its keeping qualities.

In discussing the Bottineau Cream Producers' association, J. A. Toms, president, said: "The association as well as being a financial benefit to the cream producers in the vicinity of Bottineau has an educational value in that it helps to inform the cream producers as to the value of producing a better quality of cream. While shipping directly to the centralizers is a satisfactory method for some producers, the association affords greater convenience because the farmers coming from a distance can get cream tested, receive their check and take the cream check back with them. On the whole a good live cream producers' association, such as we have in Bottineau, helps to develop the dairy industry of the community and is a vital factor in the progress of our community."

Bottineau county boasts of four other cream producing associations, all of which are doing practically as well as the Bottineau association.

The time to take a vacation is before you need one.

Don't worry about the color of cheese. Cheeseologists say color has little to do with flavor or quality.

"When milk is allowed to work its magic for the human race we shall have citizens of better physique."

MARKETS ARE STEADIER

Meat and Wheat Remain at Last Week Level.

U. S. Bureau of Markets, Washington, D. C., for week ended September 1, 1922.

GRAIN: Grain prices fluctuated within narrow limits during the week and average lower on selling influenced by weakness in Liverpool, liquidation and hedging pressure. Corn higher for week on bullish crop reports from corn belt. Chicago December wheat down 1¼c; Chicago December corn up ⅝c. Wheat prices averaged higher on the first on short covering and buying influenced by strength in corn. Movement spring wheat rapidly increasing. Private reports suggest spring wheat crop 270,000,000 bushels or 7,000,000 bushels more than government August estimate. Bank of Montreal report estimates crop in Canadian provinces 350,000,000 bushels, compared with 281,000,000 bushels last year. Corn had strong undertone due to buying, influenced by private report estimating corn crop 2,830,000,000 bushels or 187,000,000 bushels less than government August figures. Closing prices in Chicago cash market: No. 2 red winter wheat $1.11; No. 2 hard winter wheat $1.11; No. 2 mixed corn 63c; No. 2 yellow corn 63c; No. 3 white oats 33c. Average farm prices: No. 2 mixed corn in central Iowa about 50c; No. 2 hard winter wheat in central Kansas 85c; No. 1 dark northern wheat in central North Dakota 83c. Closing future prices: Chicago December wheat $1.02; Chicago December corn 55⅞; Minneapolis Dec. wheat $1.01⅜; Kansas City December wheat 94¾; Winnipeg Dec. wheat 95⅛.

DAIRY PRODUCTS: Butter markets firm during the week. Decrease in production in evidence and along with lighter receipts on markets percentage of top grades is becoming lighter. Undergrades do not share fully in firm condition of markets. Closing prices, 92 score butter: N. Y. 38½c; Chicago 37c. Cheese markets barely steady during week. Business has been very quiet with feeling of buyers that prices are high. Rain and cooler weather in Wisconsin favorable to production. Prices at Wisconsin primary markets Aug. 31: Twins 19¼; Daisies 20; Double Daisies 19⅝; Longhorns 20; Square Prints 21¼.

LIVESTOCK AND MEATS: Chicago hog prices ranged from firm to 30c net higher for the week. Beef steers were generally 50-60c higher but butcher cows and heifers ranged all the way from 10c lower to 40c higher. Veal calves averaged 50c higher and feeder steers were unchanged. Fat lambs were 25-40c lower and fat ewes weak to 15c lower. Feeder lambs were firm to 25c higher and yearlings unchanged. On Sept. 1, light weight and butcher hogs opened 10-15c higher but all grades closed weak. Beef steers and butcher cows and heifers were slow with prices steady to 15c lower than Thursday's average. Veal calves and stocker steers were steady. Fat native lambs were slow and weak to 15c lower. Feeding lambs were steady and sheep weak. Sept. 1, Chicago prices: Hogs, top $9.90; bulk of sales $6.75-9.80, medium and good beef steers $8-10.50; butcher cows and heifers $3.75 to $5.40; feeder steers $5.50 to $8.00; light and medium weight veal calves $11.25-12.75; fat lambs $12 to $13. Feeding lambs $11.50 to $13; yearlings $8.75 to $11.25; fat ewes $3.50 to $7.50. Stocker and feeder shipments from 12 important markets during the week ending Aug. 25 were: Cattles and calves 99,197; hogs 5,905; sheep 47,842. Eastern wholesale fresh meat prices were not materially changed during the week. Lamb and pork loins were steady to $1 lower.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 1.07@1.14; No. 1 northern, 1.03@1.10; No. 1 dark hard, 1.08@1.12; No. 1 hard, 95c@1.03. No. 1 am. dur., 95c@97c; No. 1 durum, 88c@93c. Corn No. 2 yellow, 57c@58c. Oats No. 2 white, 29@3c. Barley, choice to fancy, 50c@53c. Rye No. 2, 64c. Flaxseed No. 1 2.18@2.19.

South St. Paul Live Stock.

So. St. Paul—Steers, $5.25@5.75; veal calves, $3.00@10.00; cows and heifers, $3.25@5.60; hogs, $6.25@9.00; sheep and lambs, $7.50@12.00.

EGGS—Country receipts, rots out, per case, $6.30; No. 1 candled, good extras, free from rots, small dirties and checks out, per dozen, 24c; small dirty and held stock, rots and leakers out, dozen, 15c; checks, rots and leakers out, 14c; quotations on eggs include cases.

BUTTER—Extras, 33½c; first, 30c; packing stock, fresh, sweet, 26c; staye gods, 5c; grease, 1c.

LIVE POULTRY—Not advisable to ship turkeys under 7 pounds in weight. Hens, 4 lbs. over, 18c; hens, under 4 lbs., 13c; cripples and culls, unsalable; ducks, fat, 13c; ducks, young, 18c; geese, fat, 8c; turkeys, fat, over 8 lbs., 25c; turkeys, thin and small, 15@20c, cripples and culls unsalable; roosters, 12c; No. 1 broilers, per lb., 20c; leghorns, all sizes, 17c

BATTLE AGAINST BARBERRY PLANT

Digging Must Be Complete and Thorough in Order Not to Leave Pieces of Roots.

BUSHES DIFFICULT TO KILL

Large Number of Seedlings Sometimes Are Found Growing Under Dead Plants That Were Dug When in Fruitage Stage.

(Prepared by the United States Department of Agriculture.)

In carrying on the fight against the common barberry, the plant that harbors stem rust of wheat, the United States Department of Agriculture has found that it is very important to do the job of digging thoroughly and to destroy plants having berries, even though they are only partly matured. The bushes are hard to kill, and seeds from plants that were dug August 1 produced a high percentage of seedlings.

After the bushes are taken out the tops should be separated from the crown and balls of earth shaken from the roots. Grubbed bushes, lying on the ground, have been found producing green leaves. In such cases one or more roots were in contact with the soil. Some of the grubbed bushes were completely severed from the soil, but there was enough earth left on the roots to hold moisture until secondary roots were formed. This condition happens most frequently in wet weather or in moist woodlands.

Seedlings Under Dead Bushes.

Great numbers of seedlings sometimes are found growing under dead bushes that were dug when in fruit. The last of September berries were collected from bushes dug August 1, and 1,000 of them (about 2,000 seeds) were scattered on loose earth and lightly covered with dirt and leaves. The following June there were 282 seedlings on this area. The same number of berries were collected from standing bushes at the same time and sown under similar conditions. The following June there were 307 seedlings on the area, showing that the immature seeds were almost as viable as the matured ones. It is probable that seeds from bushes grubbed out even before August will grow, and for this reason it is important, says the department, to destroy them.

The Proper Way to Remove Barberry Bushes Is to Dig Deep Enough to Remove All the Roots.

Advisable to Watch Sprouts.

It also is advisable to watch the sprouts that may come up where old barberry plants have been taken out. These sprouts produce seed much earlier than bushes that grow directly from seeds. Bushes were dug in the fall of 1920. That same fall sprouts were produced, and during the following year they grew vigorously. By 1922 these plants were bearing flowers in abundance. This summer, therefore, special attention must be given to places where bushes were dug in 1920 or earlier, says the department.

HENS HAMPER GRASSHOPPERS

Make Better Showing on Infested Nebraska Farm Than Poison—Fowls Bring Profit.

(Prepared by the United States Department of Agriculture.)

On the Scottsbluff reclamation project, Mitchell, Nebraska, where the grasshopper pest has been particularly bad this year, various methods of control have been tried out. One of the most successful methods observed so far was used by a farmer who has a quarter-section of land.

Chickens on Free Range Devour Many Harmful Insects.

Five hundred chickens divided into lots of 100 were kept in colony houses on 80 acres of the farm and moved about as occasion required. As a result, on the half of the farm where the chickens were pastured there were only about 20 per cent as many hoppers as on the other 80 acres. This is a better showing than has been made on most of the fields where poison was distributed.

The owner and the renter found the method profitable. After they had used what they needed of the poultry for domestic purposes, and after the weasels and coyotes had taken their toll, the rest were marketed and brought in about 75 per cent of the original investment. This year the owner is stocking the farm with 1,000 chickens as insurance against the grasshopper pest.

KEEN INTEREST IN POULTRY

Between 50 and 75 Letters Seeking Information Received by Animal Industry Bureau.

Many requests for information on poultry raising—averaging between 50 and 75 letters a day since early in the year—are reported by the bureau of animal industry, United States Department of Agriculture. In addition the supply of poultry literature distributed by the division of publications has surpassed the records of all previous years.

The department's literature on poultry raising is unusually complete, ranging from discussions of the principal breeds of poultry to management, housing, incubation, brooding and culling. The department's poultry publications include more than thirty bulletins for general distribution and many others of technical character on special phases of poultry work.

Sandy soil makes the best poultry run.

WALNUT AND HICKORY TREES HURT BY PEST

Species of Snout-Beetles Attack Immature Fruits.

Methods of Controlling Nut-Infesting Curculios Include Burning Fallen Nuts and Spraying With Arsenate of Lead.

(Prepared by the United States Department of Agriculture.)

Several species of snout-beetles nearly related to the common plum curculio attack the immature fruits, tender shoots and leaf petioles of walnut and hickory trees. A discussion of four such species, all belonging to the genus Conotrachelus, which closely resemble one another in appearance, habits and seasonal activities, is given in United States Department of Agriculture Bulletin 1066, Curculios That Attack the Young Fruits and Shoots of Walnut and Hickory, by Fred E. Brooks, entomologist.

Special characteristics of the butternut curculio, the black-walnut curculio, the hickory nut, the hickory-shoot curculios are separately described. Methods of controlling nut-infesting curculios include burning the fallen nuts, spraying the leaves which they eat with arsenical poisons, and spraying the nut trees with lead arsenate. While the dropping of curculio-infested walnuts and hickory nuts before the larvae in them mature affords an opportunity for destroying the young insects by collecting and burning or otherwise disposing of the fallen nuts, this method is successful only in cases of isolated trees or plantations. Lead arsenate applications on the stems, leaves and fruit, soon after growth starts in the spring, can be counted on to give good results in reducing injury from butternut and black-walnut curculios. Spraying walnut trees with lead arsenate at a strength of six pounds to fifty gallons of water is an effective method of controlling the butternut curculio.

POULTRY

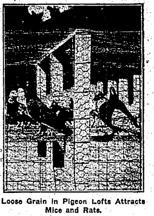
FEEDING PIGEONS IN LOFTS

Most Popular Method Is to Have Stated Hours for Placing Grain Supply in Troughs.

Self-feeding hoppers are seldom found nowadays in the lofts of veteran pigeon breeders. Their argument is that they have not found it profitable to have several days' supply of grain within reach so the birds may help themselves at will. There are two reasons for this: First, inferior squabs are raised in lofts where feed is constantly before the birds, as there is no regularity among the breeding pigeons in feeding their young; second, this continual picking at the grain eventually leads to poor appetites, resulting in the squabs suffering.

Another disadvantage in having feed lying around, is that it attracts mice and even rats, and when once these enemies get in a loft there is great loss of young birds.

The most popular method for feeding is to have stated hours for placing the grain in the troughs. These troughs are placed in the center of the floor, so that there will be plenty of room for all the birds to gather around it. Galvanized iron drinking vessels are preferred to stone fountains.



Loose Grain in Pigeon Lofts Attracts Mice and Rats.

There are three open boxes in each loft, measuring 12 inches in length, three inches in width, and three inches in depth, and these boxes contain oyster-shell, grit and charcoal.

A bathtub is placed in the aviary of each pen. These are made of galvanized iron and of convenient size for handling. During the winter the birds are given a bath about once a week, but only on bright clear days. In summer it may be given twice a week. These pans are filled about eleven o'clock in the morning and allowed to remain for about two hours, when they are emptied and turned upside down. If the water is not emptied shortly after the birds are through bathing, they may drink of it and become sick.

LIME OF GREAT IMPORTANCE

Mineral Element Is Essential for Egg Production and Development of Young Chicks.

Provision for an adequate supply of lime in the ration should be made by poultry raisers, for if this important mineral element is lacking in the food a drain is made on the reserve supply in the bones and soft tissues of the animals which interferes materially with egg production in mature hens and in the proper development of the growing chicks.

BIG VALUE OF ANIMAL FEED

Experiments Made at Purdue University Showed Great Increase in Egg Production.

Animal feeds have a decided value in the ration of laying hens and pullets. Experiments made by the Purdue University showed an average egg record of 140.2 eggs in a year from a pen of pullets fed skim milk; 135.9 eggs from those fed meat scrap; and 61.2 eggs from those that received no animal feed of any kind.

Working Off Excess Fat.

Working off excess fat on laying hens is a process that will require considerable time and attention, but should be the only means used, if the hen has been a good layer or has the indications of having been a good one.

Grass Range for Goslings.

Goslings do not need as much food as do turkeys or chicks, and their growth is so rapid that they soon reach the age when a good grass range is all they need.

ARE WE ON THE RIGHT TRACK?

In the face of low prices for farm products such as wheat, oats, barley, rye, corn, potatoes and the several other kinds of grain raised by the average farmer of the Northwest, the question arises: "Are We on the Right Track?"

When the business man discovers that the kind of trade in which he is engaged is not profitable and that he is unable to make his receipts meet the cost of doing business, he soon detours and gets on another track, or figures out the means by which he can extend his business in order to make it profitable—or quits the field entirely.

As The Banner views it, the farmer is pretty much in the same boat as the man who was compelled to quit business because there wasn't any business.

We are raising altogether too much grain and there seems to be slight demand for it. Economists tell us that without demand there can be no high prices, and if there is no other way to stabilize prices than to cease glutting the market's of the world, we'll have to quit raising it, that's all. We might as well quit now while we're all in one piece than to be forced out or starved to death.

If there is no other way to guarantee a "living" price for grain, let's a few of us cease raising it and when the time again comes that the farmer can secure such guarantee, there is nothing that can possibly prevent him from again getting back into the grain raising game.

A straight grain-raising policy has long since been declared a disastrous policy for any agriculturist to follow. An annual pay-day is not enough. He must have at least a half dozen or a dozen—the more the better—and the only way a farmer can get into that class is to diversify his business by raising forages, cows, sheep, hogs, poultry and the many other marketable products that are sure to net him a "living" wage.

The Banner guesses no one will dispute the truthfulness of its statement when it says that Minnesota was made a great agricultural state via the dairy cow route. Funny thing how she done it, but she did. Some will tell you that it was wheat that brought her fame, but such is not the case.

Minnesota gained her appropriate motto through the great diversified farming sections of southern and western Minnesota. Won it hands down because of the foresight of the great agriculturists who many years ago sensed the trend of the times and realized they would have to arrange for more than one pay-day every 12 months. They raised forages and feed and fed it to cows, pigs, sheep, and poultry, realizing thereby a steady year-round income.

Right now is the time to detour and get on another track. We can do it if we set our minds to the task. We've got the land in abundance to produce the finest feed in the world, and so our greatest problem then, is to get the cattle.

Here's one way:

Sixty-five head of pure-breds are shortly to be placed on sale by one of Pennington county's cattle breeding associations. They are not going to ask spot cash for them, but stand ready and willing to sell them to farmers on the best possible terms. The sale should commend itself to every progressive farmer in this section of the country who really wants to stand astride of the times and grow with the community.

SHALL WE HAVE COSSACKS IN MINNESOTA?

That is the question—and a mighty important one, at that.

We will if certain influential daily and weekly newspapers of the state can exert enough influence upon the next Legislature to bring it about.

In other words, they want to bring Cossacks into Minnesota.

They used to have 'em over in Russia once upon a time. And The Banner had always thought that we didn't want anything over here that smacked of autocracy typical of Russia and the czar.

They had 'em in Pennsylvania, too, and a bloody lot of history concerning the "State of Brotherly Love" has been written about them since. Enough of it, in fact, to make William Penn turn over in his grave and crack old Liberty Bell up both sides and down the middle.

As though we need a state constabulary in Minnesota! As though the state were overrun with highwaymen, cutthroats and horse thieves. While it is true that we have an over-supply of bandits, safe-blowers and other forms of criminals, we don't need to establish a state constabulary to drive them from the state or into the penitentiary.

If Minneapolis and St. Paul are unable to take care of their criminals, we'll could possibly send down a few husky lumberjacks from these northern parts to turn the trick for them. If the three largest cities of the state, from which the agitation for a state constabulary eminates, are incapable of taming their gunmen, holdup artists and whisky runners, let them increase their police force with the best available material and put them on a regular "beat."

Why tax the people of the entire state for a state constabulary when it is only the larger cities agitating for it. We're bearing our share of taxation as it is without heaping on any more. An entire troop of state police couldn't have stopped the parole board from releasing Schafer from the "pen," nor deterred Hanke, Hennepin county stealer of public funds, from getting away with $285,000 in perfectly good coin.

How many newspapers published in the rural sections of Minnesota can think back and truthfully say that law enforcement is clearly beyond the ability of their city and county officials to handle? The instances are few, indeed, yet the press of the state seems loud in its clamor for law enforcement by organized state troops, without considering the whys and the wherefores.

It must make the big dailies chuckle to see how well the country brethren are following up. They are leading better to halter with each succeeding day.

"Cossacks for Minnesota!"

Nix! Things don't look tough enough for that yet.

BLOODSUCKERS GALORE!

The more one analyzes the coal situation the stronger grows the feeling against the operators. Now that soft coal is again to be mined, the coal kings are going to take advantage of the situation and ask exorbitant profits.

And we suppose they'll get what they ask. As long as we've got a ten-cent piece in our pockets we'll have to "poney-up" to this horde of bloodsucking profiteers and probably be glad to do it because we can't expect to stalk through the winter without their product.

The only difference The Banner can see between a profiteering coal operator and Jesse James is that the latter rode a horse and carried a six-shooter.

The coal barons are taking advantage of a deplorable situation in the coal trade. A long drawn out battle between the miners and operators has depleted the supply to such an extent that scores of factories have shut down and the railroads are using up their reserve stocks in order to keep trains moving.

And now the coal operators are "putting the boots" to us and making us like it. Talk about unholy profits. They're going to ask a bonus of three dollars a ton at the mouth of the mine before a single piece of it comes to the surface.

Who wouldn't extend the wage scale to the workers one year with that kind of a deal. Of course, they're doing it in order to help the country out of its trouble, so that ought to pacify us for a time. And, then, too, they're going to have a fact-finding committee to determine the cost of coal. That's another consolation for the consumer.

What's the matter with this Congress of ours, anyhow? They ought to take their mines away and then charge the barons a million dollars a pound for coal with which to heat their mansions and clubrooms.

The Government could then get into the proteering class itself and buy fuel with the excess profits and stock up the bins of the poor!

ANDY RUNS FOR CONGRESS.

The biggest political sensation of the year has been sprung.

Andy Gump is running for congress.

The Banner hopes for his success, he's such a sensible fellow, always open to conviction and apparently awake to the needs of the people.

While he hasn't so far announced a definite platform, we feel confident it will contain many important planks calculated to be of vast benefit to humanity.

Anyhow, we're pretty sure that if the people see fit to send Andy to Washington, those congressional slickers down there will have a hard time slipping anything over on him. Even though folks hand Gump the sticky end of things once in a while, he seems to have as much intelligence as the next guy.

Another thing, Andy Gump won't get all swelled up over the fact that he is a real, honest-to-goodness congressman—if he's elected. If there is anything in this world he dislikes it's prudishness and flattery, and this fact alone should win him a lot of votes.

Andy Gump's hat is in the ring.

"Oh, Min!"

The Banner believes the people are expecting too much of Senator Cabot Lodge of Massachusetts in framing the new tariff law. How can they expect him to know anything about coarse and unwashed wool, etc. The senate conference committee should have given him something easier to tariff, say silk hats, spats, walking canes and buttonniers.

Two state tickets are said to be considering forming a fusion ticket, having practically given up hope of putting their candidates over. And then they ought to get busy and light the fuse and blow it up before election time comes around.

Manufacturers have made the automobile mechanically fool-proof, says the Minneapolis Journal, and urges the courts and the people to co-operate in banishing from the highways the fool driver.

It is said that down in Iowa they have started a coal fact-finding expedition of their own. That's fine and dandy, but we don't believe facts burn worth a damn.

The Army is in need of several hundred second lieutenants, according to reports. If they are the fellows they used to call "shave-tails" over there, we don't think we care to apply.

Mr. Jack Dempsey has been offered $200,000 to fight in France. That's by far a more flattering offer than he received in 1917, so he'll probably accept.

Republicans claim the record of Uncle Truman Newberry is an open book. Probably meaning a check-book.

THE PAL'S GREETING

What is so good when the day is all dreary,
When life is a gloom, and your heart is a-weary,
To suddenly hear ringing out loud and cheery:
"Good Morning, Old Pal."
Things will go wrong, and some job you are doing
Will bust; and the dream that your heart is pursuing
Will break; but you suddenly stop all your rueing
At "Hello, Old Pay."
Life would be futile and barren and broken
If out of kingdom of Love ne'er were spoken
The word that is friendship's best symbol and token:
"God bless You Old Pal."
Thank God for the pals who are never forgetting,
Who just at the moment our sad hearts are fretting,
Put an end to our gloom and our dreary regretting
With "Cheer Up, Old Pal."
Some day when the heart turns forever to dreaming,
And over our eyes Heaven's glory is streaming,
How good it will be mid the stars' deathless gleaming
To hear "Welcome, Old Pal."

Bible Thoughts for This Week

Sunday.

THE RESURRECTION: — Jesus said unto her, I am the resurrection and the life: he that believeth in me, though he were dead, yet shall he live; and whosoever liveth and believeth in me shall never die. —John 11: 25.

Monday.

DEATH OR LIFE:—To be carnally minded is death; but to be spiritually minded is life and peace. —Romans 8: 6.

Tuesday.

JOY FOR WEEPING:—His anger endureth but a moment: in his favour is life: weeping may endure for a night, but joy cometh in the morning.—Psalm 30: 5.

Wednesday.

GIVE GOD THE BEST:—Honour the Lord with thy substance, and with the first fruits of all thine increase.—Proverbs 3: 9.

Thursday.

HAVE ALL GOOD:—The young lions do lack, and suffer hunger: but they that seek the Lord shall not want any good thing.—Psalm 34: 10.

Friday.

AN UNLIMITED SUPPLY:—If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you.—John 15: 7.

Saturday.

THY KEEPER:—The Lord is thy keeper: the Lord is thy shade upon thy right hand.—Psalm 121: 5.

poem by UNCLE JOHN

EARLY RISING

I love the crispy mornin' air, about the hour of five, when the other birds is up to greet the sun. . . . There ain't no safer by-law for to keep a man alive, nor holds more satisfaction, when it's done. It don't take no alarm clock to yank me out of bed, when the honey-dew is whisperin' out of doors,—when the delicate machinery that's inside a feller's head, informs him that it's time to do the chores. . . . O, the medderlark, an' sapsuck, and the sassy little wren—and the oriole, a-swingin' in her tree, has never claimed the credit of knowin' more than men, but that's the way the fact appears to be! So, I get up in the mornin' when the dawn begins to peep,—afore the other neighbors is aware. There ain't no insperation in an overplus of sleep, like there is in breathin' early mornin' air. . . . I can taste the sperit in it, that invigorates the soul, lots higher that a "bonded" liquor can. It produces exultation that is allers in control, yet, makes a common plug a superman! . . . When heaven uncorks her demijohn of early-mornin' booze, and passes it around afore it's light, a feller's conscience tells him it's the only sort to use, and his appetite confirms it that he's right!

Yr Uncle John

HOMEY PHILOSOPHY for 1922

AUTOCASTER

REMEMBER those hoop skirts—how quaint and winsome the girls looked, and then the skirts so tight they had to trip instead of walk? How fascinating they were as they pit-a-patted along. Soon came those long and sweeping lines, that all concealed yet half revealed the grace and beauty of the pretty miss, and then of evenings those majestic trains and that bewitching Princess gown, displaying every curve and undulation of the form divine—all so wonderful. Now, oh boy! they're prettier still, and tomorrow they'll be longer and still prettier. Styles change, but the ability to make styles always the best ever is the thing that counts.

RANDOM THOUGHTS

The man who is self-satisfied is easily pleased.

The college graduate probably hopes to rise by degrees.

Speaking about close races—which nation would you nominate?

The successful man early in life learned the value of a smile.

Perhaps the self-made man could do better if given another chance.

Why not pattern after the sun and see the bright side of everything?

About the only thing some people will share with you is their troubles.

If the mountain peaks and the ocean piers you can't blame the canary for peping.

Those who are opposed to tobacco can't find much fault with the cigars these days.

Probably the reason why the goose laid the golden egg was because she was a goose.

A lot of politicians who stand on their records have the slack wire performers cheated.

Judging by the tales we read, we should judge that even an old salt will sometimes get fresh.

The chap who says, "Let's go!" is more apt to succeed than the fellow who says, "Let's wait."

What has become of the old-fashioned woman who used to wear skirts that trailed in the dust?

Job was a patient man—but he never palled with a smoker who always wanted to borrow a match.

Why is it that the neighbor's chickens always seem to think that the best feed is on your side of the fence?

One of the troubles of the world today is that there are too many show places and not enough work places.

If it were not for those who try to beat the trains to the crossings, the undertakers wouldn't be such busy men.

Our favorite pest today is the gink who insists on loudly whispering to the fellow next to his at the picture show.

It takes all kinds of people to make a world—including the fellows who think they are always getting the worst of it.

If only men were as afraid of shoddy hearts as of shoddy clothes.

$150,000 IS SAVED BY PRICE SLASH

State Prison Binder Sales Doubled When Farm Bureau Urges Support of Public Institution.

Price reductions on farm machinery manufactured at the Minnesota state prison, granted in response to a request by the Minnesota Farm Bureau federation, have saved farmers $150,000 this year.

A report from the state prison machinery plant shows that 7,108 farm machines have been sold this year. These sales include 2,379 binders, 3,028 mowers and 1,701 rakes. They represent an increase of 131 per cent in the sale of binders, 38 per cent in the sale of mowers, and 10 per cent in the sale of rakes, over the number of machines sold last year.

The price reductions obtained by the Farm Bureau has saved approximately $150,000 for the farmers who bought these machines.

"As a result of the co-operation of the Farm Bureau, farmers have gained more confidence in the state prison machinery," Myer Bernstein, manager of machinery sales, said in an official report. "Very few more, if any more, harvesting machines were sold to farmers in 1922 than in 1921, but we did receive a larger percentage of this business, and for this credit is due very largely to the Farm Bureau."

There is no gift so greatly to be prized as the ability to be just to others regardless of their attitude toward us.

The man who makes his life a part of humanity knows the thrill of victory whenever a comrade has good luck.

Even a large yellow necktie will not forever distract attention from a faker's heart.

"The wurst is yet to come!" cried the wife, as the butcher boy told her he had forgotten to bring the sausage.

Etiquette was invented to prevent folks from getting enough to eat at the dinner table.

Sell Your Cream at the Creamery

There is a big advantage in disposing of your dairy products at the creamery, chief of which is the fact that the local institution is founded upon he co-operative basis and you therefore receive its advantages. You get as much—and more—here for your cream than from independent buyers.

10,600 POUNDS OF BUTTER MANUFACTURED LAST MONTH

Help swell the total next month by selling all your cream to us. Only by your co-operation can the creamery exist and remember we are always willing to meet competition from all outside sources.

Goodridge Co-Operative Creamery

A KODAK ON THE HIGHWAY

In an effort to avoid publicity many men become bridegrooms.

A day truly lived is added to, not taken from life.

We always have one day of grace—and that's today.

The man who courts a widow is not rushing in where angels fear to tread—for one angel at least has been ahead of him.

If a mustard plaster were applied to your head would anything come out except hair?

The fact that Brutus had a noble motive in the slaying of Caesar, did not help the mighty Julius any, nor change the effect of the murder on the state of Rome.

"What is that noise?" the good wife asked,
In sudden terror quaking;
Her husband soothed her: "Do not fear
'Tis but the dawn a-breaking;"
"Alas, alas," the wife cried out,
"That hired girl needs a thumping;
She'll have us out of house and home,
She's always dropping something."

AN EXPERT

Council: "The cross-examination didn't seem to worry you at all. Have you had any experience in that line?"

Client: "Married three times."—Legion Weekly.

JUST RIGHT FOR THE TRAIN

When in Thief River Falls, go to the Thief River Cafe for your noon meal.

SPECIAL 35c DINNER

THIEF RIVER CAFE
E. M. Stanton, Prop.

Join the People's Party!

We believe that the two old political parties have outlived their usefulness and that they are not in sympathy with the great majority of the voters of this country. The present economic conditions and the welfare of the nation demands the organization of a tihrd party.

The following plan of organization has been adopted:

A mass meeting will be held at every county seat at which delegates will be chosen to a state convention.

At each state convention a member of a Comimttee of Forty-eight will be elected. This Committee will meet at Chicago for the purpose of adopting a platform and taking entire charge of this campaign.

If you are in sympathy with this movement we earnestly request that you call a meeting of your neighbors. Elect a Chairman and forward to this office names and addresses of those present together with a copy of any resolution that is passed, also the time and place of your next meeting.

This will be a party that cannot appeal to the vested interests of Wall Street for support. We are asking for volunteers who will contribute now or pledge at least 25 cents a month to edfray the expense of this campaign.

Adress all correspondence to:

J. H. Chandler, National Organizer
500 FIFTH AVENUE, NEW YORK CITY.

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

Auto Wreck at Red Lake Falls

Frank Doyea, Formerly of Red Lake Falls, Charged With Leaving Scene.

Adolph Mueller and Wife of Mankato Injured in Spill East of Crookston.

Frank Doyea, 33 years of age, of Bemidji, formerly of Red Lake Falls, who is charged with failing to the scene of an automobile accident, was bound over to the Polk county district court by Judge J. A. Hendricks in municipal court last Thursday afternoon. Doyea is alleged to have been the driver of the car that struck the Adolph Mueller automobile of Mankato, throwing it into the ditch and injuring Mr. and Mrs. Mueller.

The accident occurred Wednesday evening on the Maple Lake road four miles east of Crookston. Tragic details were connected with the accident. As the speeding car left the scene without stopping Mr. and Mrs. Mueller were tangled in the wreckage of their car. Only Kenneth, the ten-year-old son of the couple, was unhurt.

Thrown clear of the wrecked automobile, Kenneth landed unhurt. As he regained his feet he was met by the sight of his father and mother lying battered and silent in the tangled mass. In the distance the car which had knocked them into the ditch was speeding away. Alone and afraid the youngster bravely tried to aid his parents but his efforts were without avail.

Turning his back on his helpless parents the lad trudged down the highway valiantly trying to keep back the tears which insisted on welling to his eyes. It was nearly a mile to the George Bond farm home, where the youngster told in trembling voice the story of the accident.

A telephone call for help to town went forth from the Bond home and then inmates there hurried to the scene of the accident. They rescued Mr. and Mrs. Mueller from the tangled ruins of the car. By the time first aid had been administered a car from town had arrived and the couple was taken to St. Vincent's hospital.

According to the testimony introduced at the hearing at Crookston the accident occurred four miles east of Crookston on State Road No. 8 about 7 o'clock Wednesday evening. The Mueller automobile was headed toward Crookston and the colliding automobile was headed in the same direction. As the second automobile came from behind the Mueller car was turned toward the right side of the road and as the other automobile whisked by its rear wheel hit the front wheel of the Mueller auto, the state testimony claimed.

The first witness at Doyea's hearing yesterday was Mrs. Ethel Mueller, wife of Adolph Mueller. Mrs. Mueller came to the court room with her arm bandaged up and attended by a nurse. She told how she had heard the honks of a horn of an automobile and looked back and saw a car coming at a "fast" speed. She stated that her husband was driving on the left side of the road, the well traveled part, and on hearing the horn moved over to the right side. The speeding car came along side them for an instant and Mr. Mueller hugged the right side of the road as closely as possible to avoid being hit. Mrs. Mueller said that they were crowded to the side of the road and as the car passed them they went off into the ditch. She thought that the rear wheel of the other car caught their left front wheel. Mrs. Mueller stated that she saw two people in the front seat. Mrs. Doyea was identified as one of them.

After a five minutes recess Robert Rae of Bemidji was called to the stand. Rae said he was given a ride to Crookston by Doyea from Bemidji. He told of passing a car four miles east of the city and of hearing the scraping of the fenders of the two cars as they passed. Rae was in the back seat of the Doyea car and after passing looked back but did not see the Mueller car coming and remarked about it to Doyea, he testified.

"We must have hit 'em," he asserted he said. Doyea remarked that he had tooted the horn several times and that if they could not go any faster than he, they should leave him pass. Rae stated that a bottle of "moonshine" was in the car and that he and Doyea had drank about a pint of the stuff on the trip from Bemidji. Doyea, who has been bound over to the district court, charged with not having returned to the scene of the accident, has been reelased from custody on placing $1,500 in cash with the authities as bail money.—Red Lake Falls Gazette.

Ten Thousand Lakes Are Wonderful State Asset

Speaker Urges Unity of Action in Letting Outsiders Know Their Great Possibilities.

"Don't fire away promiscuously, every man for himself and every organization for itself.

"Concentrate your fire into broadsides, and watch the people in other states sit up and take notice.

"No, it isn't a lesson in gunnery. Rather it applies to lakes—Minnesota's famous Ten Thousand."

Asahel Curtis of Seattle was the speaker. Mr. Curtis, prominent in the promotion of recreational and civic work in the Pacific Northwest, is in Minnesota [illegible] pictures [illegible] on Minnesota's lakes and resorts.

While there he called at the office of the Ten Thousand Lakes association and inquired into the methods of advertising, which yearly attracts thousands of people from other states to Minnesota lakes.

"That name—The Land of Ten Thousand Lakes—is a wonderful asset," he said. "It can't be beat. No other state has such a wealth of water, and the climate for summer tourists is the best in America.

"But one thing you need to do. You need to concentrate your efforts into one organization. Here in St. Paul, for instance, there are four or five organizations interested in promoting and caring for the toruist travel. It is the same in Minneapolis, and I have no doubt other large cities have the same thing.

"Now, it is fine to have all these different people interested in Minnesota's recreational development. But they ought to function through one organization, a state wide organization, such as the Ten Thousand Lakes of Minnesota Association; possibly with branches in the leading cities, but one organization. That is one thing we have learned in our tourist promotion work in the Pacific Northwest.

"You've got to concentrate your efforts to get the best results."

After visiting St. Paul and Minneapolis, Mr. Curtis went to Duluth and from there to Brainerd, Walker, Bemidji and International Falls region. He is securing pictures for an advertising campaign to be carried on by the Northern Pacific railroad.

"PARTNERS" RESPOND IN GOOD ROADS PLAN

Hundreds Advance Ideas For Inexpensive Betterments to Improve Service to Trunk Route Users.

Your choice is mine;
You are doing fine.
Get the tax on gasoline—
Tax the mileage on every machine.

The verse was the first reply to the invitation for suggestions for minor improvements and changes to make the trunk routes better and safer as recently sent out by Charles M. Babcock, state highway commissioner.

"Public interest shown in the better roads program is gratifying and encouraging—augurs for the bigger success of the big undertaking," said Mr. Babcock as scores of responses poured into the highway offices on every mail. "The purpose was to get frank criticisms from every part of the big system but the friendly tone of nearly all of the hundreds of letters and cards will stimulate the highway organization to work for better results."

The Tribune's announcement of the plan prompted many readers to give Mr. Babcock their ideas and many asked questions on various phases of the highway program. An effort is being made to acknowledge all letters and answer all qeustions, Mr. Babcock said, and highway officials hope to meet many "good roads partners" at the department exhibit at the state fair. Improvement progress on the 7,000-mile system of trunk highways is to be shown there with motion pictures and in other ways and any information concerning operations, plans and policies will be given attending members of the commissioner's staff.

The highway and other state departments this year are joining to make a big united exhibit in a large building on machinery hill to show the visitors the uses to which are put the taxes they pay to the state. Reports are that this will be one of the big features of the 1922 fair.

STATE EXHIBITS NEW STATE FAIR FEATURE

Minnesota Governmental Departments Join in Extensive Showing of Uses For Tax Funds.

Given one of the largest buildings on the grounds, Minnesota state departments this year are joining to make a special feature at the state fair. The exhibits are located in the big steel building on machinery hill and 47 state departments, including 17 under the board of control, are uniting to make the show one to attract every fair visitor—the big feature of the 1922 exposition.

A radio exhibit is to be part of the University of Minnesota showing. Messages will be sent and received, concerts will be on every program and uses of the wireless will be demonstrated to getting market quotations and evening concerts on the farm.

Wild animals, birds and fish in a big collection will make up the exhibit of the state game and fish department of Minnesota wild life.

Binder twine will be manufactured with a machine from the state prison factory, set up in one of the spaces given to state institutions under the board of control.

A miniature farm will be used in the dispaly of the state drainage and waters commission to show the benefits of proper drainage and flood control.

Free motion pictures and other features are planned by the state highway department to bring visitors to its large space. Virtually every state department is taking part in the big united eposition.

The purpose is to show the citizens of the state the returns given for taxes paid for state purposes. No admission or other charge will be made at the state department exhibits building or any part of the displays.

[illegible]

(William Allen White in the [illegible])

It is true that to precipitate a railroad strike at this time is bad business. It is also true that to join with the coal strikers and tie up American industry is not particularly patriotic. And doubtless public opinion will be fairly well lined up against the railroad boys if they go out, and they probably will go out this time. But this big important fact in the situation should not be forgotten. The boys have a kick coming.

When they went to work for the railroad labor board two years ago they went to work with the explicit agreement that a living wage was to be guaranteed to the men at the bottom of the industry, and for skill, risk and length of apprenticeship higher than living wages were to be paid.

Now the railroad board declares that the living wage cannot be paid until profits and rehabilitation have been secured. This is to say railroad labor is only a commodity like other labor. It is to be paid without respect to the fact that it is necessary to the life of the nation, and the special guarantee of a living wage is to be scrapped.

That guarantee was a contract.

Perhaps it was an unwise contract for the labor board to make. But it was a contract and the men accepted it rather than strike when they accepted it, so America got value received, which was peace for two years. So now that the contract is to be incontinently junked, the boys have a kick coming.

Therefore if they go out, and trouble occurs down in the railroad yards and freight car are tipped over and burned and we have a nasty little civil war called a strike, don't blame the boys and declare that they are led by reds and should be stood up against a wall and shot. They have their side. And when we talk so glibly about burying the hatchet in industry, don't forget that here is a case where we have buried the hatchet in the neck of labor.

[illegible] ROADS SHORTEN DISTANCE TO MARKET

Many Minnesota Farmers Find Buyers For Produce Pass Their Gates Every Day.

Increase in farm gate market stands as better roads are extended in Minnesota is noted in the current issue of the state highway bulletin. Also, it adds, shortening the road to market is one of the big services the better highways program is performing. In scores of places it already has brought the producer and consumer closer together, to their mutual advantage. Automobiles and better roads are building up farm gate markets, moving country stores to town and the city market to the farmer's home.

Roadside markets are fast becoming common in many parts of Minnesota, and those along the paved highways are regarded as a permanent addition to general marketing facilities. Fresh vegetables, ripe fruits, eggs and poultry are some of the articles most frequently offered for sale, but many other things are to be had as the automobile party drives along. Chicken dinners, light lunches and soft drinks are found in another much exploited field.

Farmers maintaining roadside markets find that products sold direct to consumers without the intervention of middlemen yield much more satisfactory returns. City residents, out on business or pleasure, are glad to buy produce they know is fresh and good. Many plan their trips into the country to buy food supplies fresh from the farms, and many are coming to know the advantages of the practice.

That wise old Scotchman, George MacDonald once said: "I begin to suspect that the common transactions of life are the most sacred channels for the spread of the heavenly leaven."

The Mardi Gras Mystery

By H. BEDFORD-JONES

Copyright by Doubleday, Page & Co.

CHAPTER IX—Continued.

—14—

"It can't be possible!" he muttered, bending farther over. "Such a thing happens too rarely—"

His heart pounded violently; excitement sent the blood rushing to his brain in blinding swirls. He was gripped by the gold fever that comes upon a man when he makes the astounding discovery of untold wealth lying at his feet, passed over and disregarded by other and less-discerning men for days and years!

It was oil, no question about it. An extremely slight quantity, true; so slight a quantity that there was no film on the water, no discernible taste to the water. Gramont brought it to his mouth and rose, shaking his head.

Where did it come from? It had no connection with the gas bubbles—at least, it did not come from the dome of water and gas. How long he stood there staring Gramont did not know. His brain was afire with the possibilities. At length he stirred into action and started up the bayou bank, from time to time halting to search the water below him, to make sure that he could still discern the faint iridescence.

He followed it rod by rod, and found that it rapidly increased in strength. It must come from some very tiny surface seepage close at hand, that was lost in the bayou almost as rapidly as it came from the earth-depths. Only accidentally would a man see it—not unless he were searching the water close to the bank, and even then only by the grace of chance.

Suddenly Gramont saw that he had lost the sign. He halted.

No, not lost, either! Just ahead of him was a patch of reeds, and a recession of the shore. He advanced again. Inside the reeds he found the oily smear, still so faint that he could only detect it at certain angles. Glancing up, he could see a fence at a little distance, evidently the boundary fence of the Ledanois land; the bushes and trees thinned out here, and on ahead was cleared ground. He saw, through the bushes, glimpses of buildings.

Violent disappointment seized him. Was he to lose this discovery, after all? Was he to find that the seepage came from ground belonging to some one else? No—he stepped back hastily, barely in time to avoid stumbling into a tiny trickle of water, a rivulet that ran down into the bayou, a tributary so insignificant that it was invisible ten feet distant! And on the surface a faint iridescence.

Excitement rising anew within him, Gramont turned and followed this rivulet, his eyes aflame with eagerness. It led him for twenty feet, and ceased abruptly, in a bubbling spring that welled from a patch of low tree-inclosed land. Gramont felt his feet sinking in grass, and saw that there was a dip in the ground hereabouts, a swampy little section all to itself. He picked a dry spot and lay down on his face, searching the water with his eyes.

Moment after moment he lay there, watching. Presently he found the slight trickle of oil again—a trickle so faint and slim that even here, on the surface of the tiny rivulet, it could be discerned only with great difficulty. A very thin seepage, concluded Gramont: a thin oil, of course. So faint a little thing, to mean so much!

It came from the Ledanois land, no doubt of it. What did that matter, though? His eyes widened with flaming thoughts as he gazed down at the slender thread of water. No matter at all where this came from—the main point was proven by it! There was oil here for the finding, oil down in the thousands of feet below, oil so thick and abundant that it forced itself up through the earth fissures to find an outlet!

"Instead of going down five or six thousand feet," he thought, exultantly, "we may have to go down only as many hundred. But first we must get an option or a lease on all the land roundabout—all we can secure! There will be a tremendous boom the minute this news breaks. If we get those options, we can sell them over again at a million per cent profit, and even if we don't strike oil in paying quantities, we'll regain the cost of our drilling! And to think of the years this has been here, waiting for some one—"

Suddenly he started violently. An abrupt crashing of feet among the bushes, an outbreak of voices, had sounded not far away—just the other side of the boundary fence. He was wakened from his dreams, and started to rise. Then he relaxed his muscles and lay quiet, astonishment seizing him; for he heard his own name mentioned in a voice that was strange to him.

CHAPTER X.

The voice was strange to Gramont, yet he had a vague recollection of having at some time heard it before. It was a jaunty and impudent voice, very self-assured—yet it bore a startled and uneasy note, as though the speaker had just come unaware upon the man whom he addressed.

"Howdy, sheriff!" it said. "Didn't see you in there—what you doin' so far away from Houma, eh?"

"Why, I've been looking over the place around here," responded another voice, which was dry and grim. "I know you, Ben Chacherre, and I think I'll take you along with me. Just come from New Orleans, did you?"

"Me? Take me?" The voice of Chacherre shrilled up suddenly in alarm. "Look here, sheriff, it wasn't me done it! It was Gramont—"

There came silence. Not a sound broke the stillness of the late afternoon.

Gramont, listening, lay bewildered and breathless. Ben Chacherre come here? Gramont knew nothing of any tie between Jachin Fell and Chacherre; he could only lie in the grass and wonder at the man's presence. What "place" was it that the sheriff of Houma had been looking over? And what was it that he, Gramont, was supposed to have done?

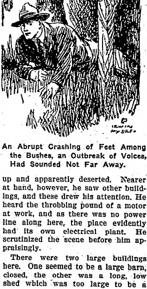
Confused and wondering, Gramont waited. And, as he waited, he caught a soft sound from the marshy ground beside him—a faint "plop" as though some object had fallen close by on the wet grass. At the moment he paid no heed to this sound, for again the uncanny silence had fallen.

Listening, Gramont fancied that he caught slow, stealthy footsteps amid the undergrowth, but derided the fancy as sheer imagination. His brain was busy with this new problem. Houma, he knew, was the seat of the parish or county. This Ben Chacherre appeared to have suddenly and unexpectedly encountered the sheriff, to his obvious alarm, and the sheriff had for some reason decided to arrest him; so much was clear.

Chacherre had nothing to do with the "place"—did that mean the adjacent property, or the Ledanois farm? In his puzzled bewilderment over this imbroglio Gramont for the moment quite forgot the trickle of oil at his feet.

But now the deep silence became unnatural and sinister. What had happened? Surely, Ben Chacherre had not been arrested and taken away in such silence! Why had the voices so abruptly ceased? Vaguely uneasy, startled by the prolongation of that intense stillness, Gramont rose to his feet and peered among the trees.

The two speakers seemed to have departed; he could descry nobody in sight. A step to one side gave Gramont a view of the land adjoining the Ledanois place. This was cleared of all brush, and under some immense oaks to the far left he had a glimpse of a large summer cottage, boarded up and apparently deserted. Nearer at hand, however, he saw other buildings, and these drew his attention. He heard the throbbing pound of a motor at work, and as there was no power line along here, the place evidently had its own electrical plant. He scrutinized the scene before him appraisingly.



An Abrupt Crashing of Feet Among the Bushes, an Outbreak of Voices, Had Sounded Not Far Away.

There were two large buildings here. One seemed to be a large barn, closed, the other was a long, low shed which was too large to be a garage. The door of this was open, and before the opening Gramont saw three men standing in talk; he recognized none of them. Two of the talkers were clad in greasy overalls, and the third figure showed the flash of a collar. The sheriff, Ben Chacherre, and some other man, thought Gramont. He would not have known Chacherre had he encountered him face to face. To him, the man was a name only.

The mention of his own name by Chacherre impelled him to go forward and demand some explanation. Then it occurred to him that perhaps he had made a mistake; it would have been very easy, for he was not certain that Chacherre had referred to him. There could be other Gramonts, or other men whose name would have much the same sound in a Creole mouth.

"I'd better attend to my own business," thought Gramont, and turned away. He noticed that the motor had ceased its work. "Wonder what rich chap can be down here at his summer cottage this time of year? May be only a caretaker, though. I'd better give all my attention to this oil, and let other things alone."

He retraced his steps to the bayou bank and turned back toward the house. As he did so, Hammond appeared coming toward him, knife in hand.

"I'm going to cut me a pole and land a couple o' fish for supper," announced the chauffeur, grinning. "Got things cleaned up fine, cap'n! You won't know the old shack."

"Good enough," said Gramont. "Here, step over this way! I want to show you something."

He led Hammond to the rivulet and pointed out the thin film of oil on the surface.

"There's our golden fortune, sergeant! Oil actually coming out of the ground! It doesn't happen very often, but it does happen and this is one of the times. I'll not bother to look around any farther."

"Glory be!" said Hammond, staring at the rivulet. "Want to hit back for town?"

"No; we couldn't get back until some time tonight, and the roads aren't very good for night work. I'm going to get some leases around here—perhaps I can do it right away, and we'll start back in the morning. Go ahead and get your fish."

Regaining the house, he saw that Hammond had indeed cleaned up in great style, and had the main room looking clean as a pin, with a fire popping on the hearth. He did not pause here, but went to the car, got in, and started it. He drove back to the road and followed this toward town for a few rods, turning in at a large and very decent-looking farmhouse that he had observed while passing it on the way out.

He found the owner, an intelligent-appearing Creole, driving in some cows for milking, and was a little startled to realize that the afternoon was so late. When he addressed the farmer in French, he received a cordial reply, and discovered that this man owned the land across the road from the Ledanois place—that his farm, in fact, covered several hundred acres.

"Who owns the land next to the Ledanois place?" inquired Gramont.

"I sold that off my land a couple of years ago," replied the other. "A man from New Orleans wanted it for a summer place—a business man there, Isidore Gumberts."

Gumberts—"Memphis Izzy" Gumberts! The name flashed to Gramont's mind, and brought the recollection of a conversation with Hammond. Why, Gumberts was the famous crook of whom Hammond had spoken.

"I saw the sheriff a while ago, heading up the road," observed the Creole. "Did you meet him?"

Gramont shook his head. "No, but I saw several men at the Gumberts place. Perhaps he was there—"

"Not there, I guess," and the farmer laughed. "Those fellows have rented the place from Gumberts, I hear; they're inventors, and quiet enough men. You're a stranger here?"

Gramont introduced himself as a friend of Miss Ledanois, and stated frankly that he was looking for oil and hoped to drill on her land.

"I'd like a lease option from you," he went on. "I don't want to buy your land at all; what I want is a right to drill for oil on it, in case any shows up on Miss Ledanois' land. It's all a gamble, you know. I'll give you a hundred dollars for the lease, and the usual eighth interest in any oil that's found. I've no lease blanks with me, but if you'll give me the option, a signed memorandum will be entirely sufficient."

The farmer regarded oil as a joke, and said so. The hundred dollars, however, and the prospective eighth interest, were sufficient to induce him to part with the option without any delay. He was only too glad to get the thing done with at once, and to pocket Gramont's money.

Gramont drove away, and was just coming to the Ledanois drive when he suddenly threw on the brakes and halted the car, listening. From somewhere ahead of him—the Gumberts place, he thought instantly—echoed a shot, and several faint shouts. Then silence again.

Gramont paused, indecisive. The sheriff was making an arrest, he thought. A hundred possibilities flitted through his brain, suggested by the sinister combination of Memphis Izzy, known even to Hammond as a prince among crooks, with this secluded place leased by "inventors." Bootlegging? Counterfeiting?

As he paused, thus, he suddenly started; he was certain that he had caught the tones of Hammond, as though in a sudden uplifted oath of anger. Gramont threw in his clutch and sent the car jumping forward—he remembered that he had left Hammond beside the rivulet, close to the Gumberts property. What had happened?

He came, after a moment of impatience, to an open gate whose drive led to the Gumberts place. Before him, as he turned in, unfolded a startling scene. Three men, the same three whom he had seen from the bushes, were standing in front of the low shed; two of them held rifles, the third, one of the "inventors" in overalls, was winding a bandage about a bleeding hand. The two rifles were loosely leveled at Hammond, who stood in the center of the group with his arms in the air.

(TO BE CONTINUED.)

Don't Fill It.

A hot-water bottle should never be really filled. If it is to be put in a bed to warm it have it only about three-quarters full.

Forty-six miles of shelving are required for the collection of 2,000,000 books in the British museum.

RADIO

VACUUM TUBE USED AS AN OSCILLATOR

Transforms Direct Current Energy Into Undamped Alternating Current of Any Frequency.

As an oscillator, a three-electrode vacuum tube has the property of transforming the direct current energy supplied to the plate circuit into an undamped alternating current of any desired frequency. By connecting the tube functioning as an oscillator in the proper electrical circuit, alternating currents have been obtained ranging in frequency from one-half cycle per second to 150,000,000 cycles per second. In fact, a vacuum tube used as an oscillator is about the only source of undamped alternating current at radio frequency available for the amateur.

Undamped or continuous wave telegraphy and radio telephony are made possible only by use of the vacuum tubes.

When the three-electrode vacuum tube was functioning as an amplifier it was explained just how operating the grid at a midpoint of the characteristic curve caused the plate current to vary synchronously with the grid potential. Not only did the plate current vary synchronously with the grid potential, but if the plate circuit were tuned the potential variation in the external plate circuit was an amplified reproduction of the change in grid circuit potential.

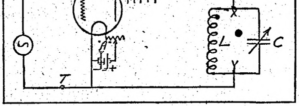


Fig XXXVI

In Fig. XXXVI is shown a three-electrode vacuum tube with an alternator furnishing an alternating difference of potential to the grid circuit at T-T. The plate circuit of the tube is connected to a circuit containing an inductance L and a capacity C, which together form a tuned circuit, between the points X and Y. By adjusting the value of the variable condenser, C, the natural period of the tuned circuit between X and Y can be made the same as the frequency of the alternator furnishing the alternating grid potential applied to the grid circuit at T-T. When this condition is reached, the tuned circuit between X and Y becomes an infinite impedance in the external plate circuit. The potential variations between X and Y are now maximum and are exact amplified reproductions of the potential variations applied to the grid circuit by the alternator.

When a three-electrode vacuum tube is used as a source of undamped alternating current, it is not excited by an alternator connected to the grid circuit. Instead some of the output of the plate circuit is coupled back to the grid circuit, thus making the tube self-exciting. Fig. XXXVII shows how this is accomplished.

In place of the alternator that was connected across the grid circuit at T-T to externally excite the tube by applying an alternating current to the grid circuit, there is an inductance l. The two coils forming the inductance l and L are placed close together so that the potential variations that exist between X and Y will be transferred from L to the grid circuit through the medium of the coil l, which has replaced the alternator.

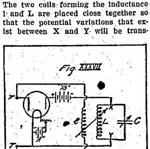

Fig XXXVII

Any disturbance in the circuits—electrically—such as the tuning of either the A or B battery will cause a change between the points X and Y. This change will be transferred from the plate circuit to the grid circuit by the magnetic coupling existing between the two coils L and l. The frequency at which the tube will oscillate will depend on the values of L and l, while the amplitude of the oscillator will be determined by the degree of coupling that exists between the two coils L and l.

The grid potential variations impressed across the terminals T-T by the coil l have the same effect in the plate circuit as a potential K (when K is the amplification factor of the tube) times as great applied directly to the plate circuit. When the plate circuit potential variations are just equal to the potential variations in [illegible] increasing and decreasing together, that is in phase, the oscillations in the tuned circuit will be sustained or undamped.

The amplitude of the oscillations will neither increase nor decrease. Should the potential variations in the plate circuit be greater than the potential operating in the tuned circuit between the points X and Y, then the oscillations in the tuned circuit will increase in amplitude until the tube becomes saturated. At this point the upper and lower bends of the characteristic curve keep the amplitude of the plate circuit oscillations from further increasing as the amplitude of the grid circuit oscillations are increased.

SOME TRUTHS ABOUT STATIC

It Exists In All Seasons and Can Be Reduced by Several Known Processes.

In an exceedingly interesting article in Radio Merchandising, John Walker Harrington discusses the question of summer static. "What are the facts of static?" he asks. "Static consists of strays or of certain electrical disturbances which must be counteracted if we would have perfect transmission. It furnishes a means of relieving the tedium of success, just as engine troubles keep the automobilist from drifting into the calm of a smug complacency. It is not well for a radioist to be too sure of himself, and static is an antidote to inflation, which is just as good in winter as it is in summer. There is static when there is snow and rain—and plenty of it when the thunder rolls. As there is usually more lightning in the hot months than in the cold ones, we are likely to have a little more static in warm weather.

"The reduction of static is a process which has its own technique and is as much a part of the game as the meeting of storm conditions is an essential factor in navigation. By making more use of the three-electrode bulb, by tuning receiving instruments more sharply, by employing directional receiving antennae so that the loop is turned toward the point from which the message is coming, static may be, and is, reduced and even eliminated. The amateur knows it thoroughly well, and the dealer knows it. It has merely become the custom to speak in awe-struck tones about this condition as though everybody would be deeply offended, if it were not regarded as something to be dreaded and feared."

TIPS TO RADIOISTS

The Buffalo News says: "By throwing a kiss by wireless a Buffalo girl will christen the new broadcasting apparatus." Who wants to be kissed in the ear?

A Freehold (N. J.) paper suggests that some genius arrange a radio set for the farmer's plow handles, so he may be entertained while covering the many weary miles of furrows.

The radio presents great possibilities in the way of travelless honeymoons. In their little nests the newlyweds can hear the roar of Niagara, the waves beating on the seashore or the clerk in a $10 a day hotel quoting rates.

An appropriation of $68,000 has been asked of the city of Chicago to purchase a further supply of radio apparatus for its police department. Chicago claims to be the first city to apply radio to police purposes, and it has found this crime-detecting utility a great success.

Recognizing the popular demand for radio outfits, plans for the construction of a new apartment house in St. Louis, Mo., call for the installation of a large receiving set on the roof, which will be connected with each turn on a switch and hear radio concerts and programs.

An estimate based on manufacturers' reports show that more than $5,000,000 a week is being spent on radio equipment in the United States. Since the new art became popular in Canada the increase in sales has increased 100 per cent each month since December, the month of April showing an estimated increase of several thousand per cent in sales over December, 1919.

The unemployment problem of engineers and electrical technicians has been solved by the radio boom, according to a report issued by the Federated American Engineering Societies. Since January 1 the society has placed in employment more than 900 engineers, and is continuing its placement at the rate of 20 a day. Electrical and mechanical engineers benefit mostly by the growth of the new industry.

STRIKER IS SHOT BY RAIL GUARD

Shot Striker in Self Defence Says That He Was Insulted.

HELD WITHOUT BAIL

Guard Is Moved From County Jail to Avoid Any Possible Violence —Victim Is Wounded Seriously.

Grand Forks, N. D.—Tom Mrachek, 117 Euclid avenue, Grand Forks, is being held without bail in the Grand Forks county jail, charged with the shooting of Adolph Purpur, 130 Budge avenue, rail striker, near the Great Northern roundhouse. Mrachek claims he shot in self defense.

Forks Thoroughly Aroused.

Grand Forks is thoroughly aroused over the affair and further trouble is feared.

According to J. E. O'Brien, division superintendent, Purpur appeared on the edge of the Great Northern right-of-way north of the roundhouse and molested Mrachek, non-union man, who was on guard duty. Mrachek said Purpur insulted him when ordered from the place.

Mrachek then gave chase and was suddenly affronted, he said, by two other picketers, who suddenly appeared from a nearby cornfield.

Was Assistant Foreman.

Purpur is 34 years old. Mrachek has a wife and five children and was assistant foreman in the roundhouse before the strike.

Attending physicians reported Purpur's condition satisfactory, although it will be seevral days before he is out of danger.

Sheriff C. C. Stewart of Grand Forks county announced that to avoid any possible violence, Thomas M. Mrachek, Great Northern railway guard, who shot and severely wounded Adolph Purpur, a striking shopman, had been removed from the county jail to another place of imprisonment where he is held without bail pending the outcome of Purpur's injuries.

RESCUERS STILL AT WORK

Answering Signals Believed to Have Been Heard From Entombed Men.

Jackson, Cal.—Jackson was still thrilled with the report that the explosions had been heard which apparently were answering signals from the 46 miners who have been entombed in the Argonaut mine for a week, although officials in charge of the work declined to discuss the matter and insisted Thursday was the earliest date on which the men could be reached.

The list of missing men was reduced to 46 by the discovery that one of the men supposedly underground in the Argonaut mine had quit shortly before the explosion and gone to work at the Kennedy mine.

Jim Davis, one of the night crew of rescuers working in the adjoining Kennedy mine, was the man who said he heard five explosions coming from the Argonaut when two signal blasts were fired on the 3,700-foot level. The miners say the sounds could not have been caused by falling rock.

By forethought at the time they were entombed, the 46 miners might have been able to save their candles and giant powder for use in helping work their way out of their rocky underground prison, experienced miners believe.

Men working from the 3,600-foot level had 27 feet left to go in the 60-foot detour they are making around a formation of hard green rock.

After completing the detour, they will have 353 feet of the tunnel to clear out and a 75-foot cut to make to the 4,200-foot level of the Argonaut, where the entombed men can be reached.

ARMY AVIATOR OFF ON CROSS NATION FLIGHT

One Stop Planned by Aviator Between Jacksonville and San Diego.

Jacksonville, Fla.—Lieutenant James H. Doolittle, army aviator, hopped off from the beach at Neptune at 10:03 p. m. for a flight by airplane to San Diego. He planned only one stop at Kelley Field, San Antonio, Texas, for fuel.

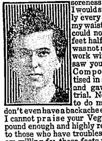
Live Oak, Fla.—Lieutenant Doolittle passed over here on his transcontinental airplane flight. Previously he had been reported over Lake City, 80 miles from the starting point, and with a brisk southeast wind quartering on his trail. He covered the 23 miles from Lake City to Live Oak in 12 minutes, or at a speed of nearly two miles a minute.

Turns Down $1,000,000 Job.

Chicago—Nawanna Micor, who in everyday life is Miss Muriel McCormick, has refused a $1,000,000 contract to appear in a motion picture, according to close friends. Miss McCormick refused to make any comment on her plans, being busy moving from the home of her father, Harold F. McCormick, who recently married Ganna Walska, the Polish Opera star, to an attic studio, three flights up, where she will pursue her operatic studies.

MRS. LULA VANN FULTON, ARK.

Suggests to Suffering Women the Road to Health



Fulton, Arkansas.—"I used Lydia E. Pinkham's Vegetable Compound for a soreness in my side. I would suffer so badly every month from my waist down that I could not be on my feet half the time. I was not able to do my work without help. I saw your Vegetable Compound advertised in a newspaper and gave it a fair trial. Now I am able to do my work and don't even have a backache every month. I cannot praise your Vegetable Compound enough and highly recommend it to those who have troubles like mine. I am willing for these facts to be used as a testimonial to lead all who suffer with female troubles, as I did, to the right road to health."—Mrs. LULA VANN, Box 43, Fulton, Arkansas.

Its this sort of praise of Lydia E. Pinkham's Vegetable Compound, given by word of mouth and by letter, one woman to another, that should cause you to consider taking this well-known medicine, if you are troubled with such symptoms as painful periods, weak, nervous feelings, miserable pains in your back, and cannot work at certain times.

Here is a woman who is so grateful and glad to be relieved from a painful and nerve racking physical condition that she wishes to tell all sick women.

Over the Telephone.

The Woman was calling a rather important business man on a morning when the telephone service seemed to be practically temperamental. She had her number and was waiting to be connected with the business man when a masculine voice cheerily called out, "Hello." "Is Mr. James in?" asked the Woman. "When did he come in?" replied the masculine voice. At that, the Woman sensed something wrong and inquired, "What number is this?" "This is the morgue," replied the voice. The Woman gave up, and decided to write a letter instead.—Chicago Journal.

This Often Happens.

"How did Blithers get a job with the government?"

"His congressman had to get him a government job or pay his railroad fare back home."

Backache Is a Warning!

Those agonizing twinges across the small of the back, that dull, throbbing backache may mean serious kidney weakness—serious, if neglected, for it may lead to gravel, stone in the kidneys, bladder inflammation, dropsy or fatal Bright's disease. If you are suffering with a bad back, have dizzy spells, headaches, nervous, despondent attacks or disordered kidney action, heed Nature's warning. Get after the cause. *Doan's Kidney Pills* have helped thousands. They should help you. *Ask your neighbor!*

A North Dakota Case

"Every Picture Tells a Story"

J. M. Russell, Cando, N. D., says: "I had trouble with my kidneys. My back ached and pained something fierce. When I stooped I could hardly straighten, my back was so lame. The kidney secretions passed too freely and were highly colored. Doan's Kidney Pills have practically cured me and I have had little trouble since."

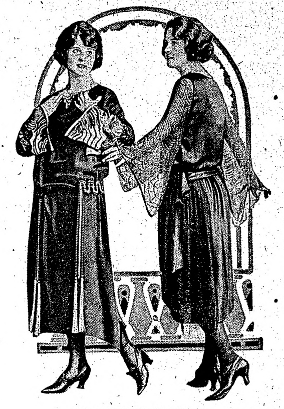
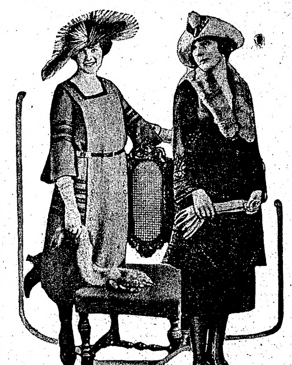
FOR AFTERNOON WEAR; STYLES IN STREET CLOTHES

A FROCK of canton crepe and one of crepe-satin, among the first contributions to the autumn modes for the afternoon, find themselves now representing styles that are assured. They could hardly help making a success, having done so well with the new points in the mode which they chose to include in their makeup.



Autumn Modes for the Afternoon.



Formal Suits in Handsome Fabrics.

The dress at the left takes advantage of the fine draping qualities of canton crepe, and uses it in black, combined with crepe de chine in a light color, to form the lower part of the flaring sleeves. The skirt slopes to points at the left side and is slashed there. Having bestowed this daring and telling touch to it, the designer centered his thoughts on the girdle and bodice and accomplished something new in each of them. Three strands of silk cord form a belt across the sides and back and fall in long ends at the front, finished with slender silk tassels. The bodice blouses over the girdle at a low waist line. An applique of black silk braid over the lower part of the sleeves is immensely effective. The round neck with a little "V" shaped slash at the front is faced back, with crepe de chine, which forms a piping for it, and the two silk buttons and loops finish it perfectly.

An afternoon dress which will do double duty if one chooses to wear it for evening, is made of crepe satin, as shown at the right of the picture. All the emphasis in this gown is placed on the sleeves of beaded georgette and a long, full panel of georgette that is placed over the skirt at the left side and hangs below the hem line. The bodice blouses over a sash of the crepe satin.

Some things are mysterious and perhaps they always will be. Among them is the mood of the mode which changes overnight, it seems, from ocean to ocean. Women, from Paris to Honolulu, wake up some fine morning all inspired by a determination to wear larger hats or longer skirts or earrings and lace mits. Maybe it is mental telepathy broadcasting the ideas of the powerful French and American designers.

This change of heart is apparent in clothes for the street, in the dresses, suits and hats that promenade fashionable avenues and they set the pace for Main Street everywhere. Taking the most important items in our wardrobes, as a starting point we consider the suit, and find that its several types are developed on lines that are dignified. The simplest suit and the most formal one have been taken seriously and their designers do their utmost to make them all that suits can be.

Very handsome fabrics and rich embroideries inspire the designer and make it easy sailing for the creators of formal suits. One of them is shown at the right of the illustration and the picture tells its pleasing story perfectly. The coat is long, with a deep border of embroidery at the bottom, the sleeves flare and are also embroidered, the wide shawl collar is of fine Siberian squirrel, in the natural color.

The attractive street dress, at the left, is made of Sorrento blue novelty fabric, resembling kasha cloth, and has wide front and back panels, with a square neck. Braid and buttons are artfully used in its decoration, the three-quarter length sleeves flare at the elbow and are split, revealing a satin facing. The belt is of leather and silver.

Indigestion and Dyspepsia Overcome

Victims of stomach trouble, indigestion, dyspepsia and their allied complaints find Tanlac an ever-ready source of relief and comfort. Thousands of people have refound the joys of health by its use after everything else they tried had failed.

"Tanlac helped me wonderfully," said Mrs. W. H. Hocker, 84 Rose Ave., Clifton Forge, Va. "For over a year I suffered tortures from indigestion, and had to live on the simplest foods. I became almost a nervous wreck. Tanlac restored me to the best of health."

Tanlac helps the stomach digest the food properly and eliminate waste. Soon the whole system is built up, the blood is purified and the entire body takes on new tone, vitality and energy. Get a bottle today and start on the road to health. For sale by all good druggists.—Advertisement.

An Interested Onlooker.

"Have you seen Zeke Dawdle lately?"

"No," said Squire Witherbee, "but Zeke's making his headquarters down where they're putting up a new store."

"Is Zeke working at last?"

"No, it ain't that serious. Zeke's kinder superintenden' th' job, along with several other gents whose wives run boardin' houses. If th' workmen were to lay a brick or raise a girder without Zeke seein' it done it would spoil his day."—Birmingham Age-Herald.

Giddap.

A modest high school girl in an Oregon town while copying a passage from Sir Walter Scott, came to the line: "The horses stepped into the stream up to their bellies."

And this is how her teacher found the line written when the copy was turned in:

"The horses stepped into the stream up to their waists."

HARD TO GET BELOW THAT

Once at Least Golfer Had a Chance to Turn in a Score His Opponent Could Not Beat.

Eugene G. Grace, president of the Bethlehem Steel company, plays a first-class game of golf. Between him and his "big chief," Charles M. Schwab, exists a keen friendly rivalry, the two playing regularly together.

In the steel trade, they tell the story of a match once played between the two. On the first hole, the story goes, Schwab, who was keeping score, asked Grace how many shots he had taken, and was told five. "I took a four," said Schwab. At the next hole, Grace had a four and Schwab claimed a three. As he holed out at the third, Schwab asked: "Gene, how many did you have?"

"One," replied Grace. "Now beat that if you can!"—Wall Street Journal.

The Leisurely Unrighteous.

"Are there any moonshiners in this part of the country?"

"Not any more," replied Farmer Corntossel.

"You run them out?"

"No. They got rich and moved away."

Human penchant for accumulating articles one doesn't want is tempered by rummage sales.

RATS DIE When They Eat STEARNS' ELECTRIC PASTE

It also kills mice, gophers, prairie dogs, coyotes, wolves, cockroaches, water bugs and ants. A 35c box contains enough to kill 50 to 100 rats or mice. Get it from your drug or general store dealer today.

For Physical Education.

Representatives of twenty-five organizations devoted to athletics, physical education, health and education called upon President Harding recently to ask his support securing universal physical education in the schools of the country. Although no new legislation was urged, the need for strong federal interest was brought out. At present only one-tenth of the school children of the United States are given physical training.

Why Free?

"Why do they call this a free country?" asked the foreign communist.

"Because," answered the respectable citizen, "you are always at liberty to leave it if you don't like it."

Western Canada Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches and schools, good markets, railroad facilities, rural telephone, etc.

For certificate entitling you to reduced railway rates, illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, etc., write

ALWAYS HIS UNLUCKY DAY

Dr. Rathenau, German Statesman, Had Dread of Saturday Which His Tragic Fate Justified.

Two weeks before his murder M. Rathenau was chatting with a few friends after dinner in the living room of his villa at Grunwald. The talk had been about the popular superstition which attaches to Friday, a day of evil repute.

"My unlucky day," M. Rathenau remarked, "has always been Saturday. Twice in my life I have nearly been killed. Once, when a child, I was badly injured in a runaway. This was on a Saturday. Then years later I was almost killed in a fall down a stairway—on a Saturday. It's my bad day."

M. Rathenau was assassinated on Saturday.—Le Petit Parisien, Paris.

Will Clean Historic Edifice.

Westminster abbey, London, is going to have its first bath for many a year.

Prominent experts in old wood carvings of the Gothic and Norman periods, have discovered a preparation which can be run over the wood of the old choir stalls and on the alabaster of tombs, which will take off the dirt, without harming the beautiful work, bringing to light the wonderful color effects of the old paints beneath the dirt layers.

A preparation of lime, which will give the historic abbey the effect of having been whitewashed when first applied, will be painted on the outside stone work of the abbey, to clean the gray stone back to its original colors. At present the outside is, in places, black.

The Men Closed In.

"Your window exhibit of bathing suits worn by live models made a hit, I hear."

"It was poor business," replied the merchant, gloomily. "Our object was to sell the suits to women. No woman got within forty feet of that window." Birmingham Age-Herald.

ROOM FOR BUT ONE THOUGHT

Quite Impossible for Glutton's Ideas to Rise Above Consideration of His Stomach.

"Henry Watterson," said a Louisville editor, "was a gourmand—a fin gourmet, as the French put it—but he hated gluttony like sin.

"Gluttons, he claimed, couldn't keep their minds off their stomachs. He said he once visited an English lord, and the smoking room of the castle was crowded with trophies of the lord's skill in the hunting field.

"A fat glutton was among the party. He, with the rest, admired the fine display of antlers—horns of the mountain sheep, the elk, the antelope, the wild goat, moose and so on. Then there were skins—bear skins, bison skins, tiger skins. And stuffed birds—pheasants, woodcock, wild turkey, wild duck.

"'My lord,' said the glutton, 'tell me—did you eat all this yourself?'"

Reasonable Conclusion.

"Going to Hamp Smather's funeral, day after tomor'?" inquired an acquaintance.

"His funeral?" surprisedly returned Gap Johnson of Rumpus Ridge. "Why, he ain't dead, is he?"

"Not presizely, but Doc Smith says he can't last another day."

"Well, then, I reckon pore Hamp's a gonner. Doc prob'ly knows what he gave him."—Kansas City Star.

Joy.

At the wedding there were three happy persons:

The father, who passed the cost of one daughter to a perfect stranger.

The preacher's wife, who got the wedding fee.

The best man, who had been rejected for the last time by the bride.—Richmond Times-Dispatch.

Question.

"The poets' corner—"

"Huh? Has somebody gotten up a corner in poets?"

Grape-Nuts
A FOOD

Maybe that hill is not there, after all—

VERY often the hill we seem to be climbing is made out of the common mistakes of diet which starve tissues and nerves and slow down energies.

How smooth and level the path seemed to be when we were younger.

Simple, natural food may level that hill to a smooth path again.

Why not try it?

Begin today with a dish of Grape-Nuts with cream or milk—and fresh or preserved fruit added if you like.

Keep on with this crisp, delicious, strengthening food in place of heavy, ill-assorted, starchy breakfasts and lunches—and see if the old-time zest and speed on the old-time level path doesn't come back again.

DIVERSIFIED FARMING WEEK PROCLAIMED IN MINNESOTA; MORE AND BETTER LIVESTOCK

Governor Preus Calls on State to Follow Path to New Wealth by Production of Milk, Cream and Butter and Beef and Pork, Mutton and Wool, Eggs and Poultry.

Gives Farmers Steady Income Instead of Seasonal and Uncertain Prosperity and Stops Depletion of Soil Fertility Which Is Certain Result of Straight Grain Policy

"Diversified Farming Week" has been officially proclaimed in Minnesota by Gov. J. A. O. Preus and commencing on September 25th and continuing until October 25th, during which time business men everywhere, county farm bureaus and everyone interested in an enduring prosperity will be asked to lend their time and assistance in making it a success.

Farmers of Minnesota have just harvested a crop that is far above the average, but as is generally the case where large yields are received, it has been attended with falling prices and the farmers' reward is necessarily greatly reduced.

"Diversified Farming Week" comes at a strategic time. Coming soon after the close of the State Fair, during which time the possibilities and opportunities open to progressive farming in this state were so conclusively proven by the large number of attractive exhibits showing the benefits to be derived through the use of more and better livestock and better farming methods and entering whole heartedly into the raising of products common to diversified farming.

The Banner For It.

The Banner is heart and soul for better and more extensive order of diversified farming in this state. It has been preaching that doctrine intensively for a long time, laying the emphasis on dairying as the big essential in the particular kind of diversified farming that is suited to the soil and the physical characteristics of not only Minnesota, but the other states of the Northwest.

We can raise small grain here, but we can't get anything for it, and the reason therefor is the most apparent thing in the world. Take barley, for instance. This kind of grain was at one time the banner crop of Northern Minnesota; it grows here in abundance, but no farmer can raise it in quantities for the market and expect to come out on top. Since the advent of the Prohibition Act there has been no strong demand for barley.

Wheat World Commodity.

Wheat is a world commodity and can be raised in almost every nation in the world. Growing wheat is the only industry in which the inhabitants engage and for that reason it is difficult to foretell the price to be paid American growers. It may be $2 a bushel or it may drop down to 50 cents. The element of speculation in wheat is largely controlled through a world supply and world demand.

The Downfall of Rye.

Rye is another of the grains that has fallen off in price during the past and there is no present indication that it will come back to a price where it could be sold at a profit. The Scandinavian and other European countries that have heretofore taken all surplus rye off our hands are unable to buy it because they have neither the money nor can they afford to withstand the wide difference in money values existing between the United States and European countries.

And so on all down the line. Everybody seems to have all the grain they can use and this part of the country that has heretofore produced food to be sent to foreign countries and sold to manufacturers in the United States is without a profitable market.

Can't Raise Prices.

We can raise anything but cocoanuts, but we simply can't raise prices. We have but one alternative—Diversified Farming—and to that principle the country is fast becoming attached. We'll have to raise our barley, corn, alfalfa, clover, etc., and feed it to our own stock—milch cows, hogs, poultry and sheep and gain for ourselves a pay-day every day in the year. A regular pay-day the same as every other business man and laborer is what we need for the farmer, because the latter is to all intents and purposes a business man and worker.

Diversified Farming Week has been set aside for the particular purpose of pointing the way to permanent prosperity for every community and not only for those who many years ago sensed the new idea and have followed it up the past twenty years and builded upon an enduring foundation.

The Banner has collected for its readers "proof of the pudding" and reprints extracts from newspapers and reports garnered from all sections of the Northwest, where diversified farming holds full and undisputed sway. We commend them to our readers as being merely plain truths and nothing more or less than facts and figures:

Mother and Daughters.

"In Douglas County, in 1917, the creameries paid 1,805 patrons $745,000 for butter fat. In 1920 they paid 2,957 patrons $1,831,000. In four years bank deposits increased from $1,470,000 to $3,512,000. Three of these were the 'lean' years in most sections."

We've all heard about Douglas county and perhaps some of us have lived there. Anyhow, the foregoing facts don't indicate that the Dairy Boss and the Creamery have wrought havoc with the country down in Douglas, do they?

What a Good Bull Did.

"John P. Nelson, farmer of Washington county, Minnesota, declares that he increased his income $17 per acre in five years through the use of a pure-bred sire in his dairy herd."

Think what this would mean applied to thousands of Northwest farms! Increasing the income of his land $17 per acre through the agency of a pure bred sire sounds "fishy," but it is a plain, unadulterated fact that Nelson did that very thing. Spreading fertilizer and manure isn't the only way to increase the productiveness of your farm.

The Little Red Hen Works.

"Poultry will add many more millions to the farm income of the Northwest, as diversified farming develops. In 1920, eggs and poultry yielded $14,644,084 in Minnesota, but with creamery organizations forming 'egg circles' as has been done at Barnum, Minn., the returns from poultry will be multiplied by several hundred per cent."

A woman near Roseau "cleaned up" $5,000 on chickens and turkeys last year and paid up the mortgage on her farm. Come into The Banner office and get her name. She'd enjoy telling you about her chickens.

Proof in the Millions.

"If you want proof of the value of diversified farming, you can find plenty of it in and around Litchfield, Minn. In 1902, the year the Litchfield Co-operative creamery was formed, Litchfield's two banks had deposits of $712,580. Today it has four thriving banks with deposits totaling $3,889,555. This is a gain of 445 per cent in community wealth."

This from a bank at Litchfield that keeps a close tab on events. A bank is the best barometer in the world of a community's prosperity and The Banner believes such is the case in Litchfield.

"20 Miles a Year—Not an Hour!"

"New wealth is not the only boon incident to diversified farming. According to 'The Farmer,' a leading agricultural paper, the destructive sow thistle has moved down on the Red River Valley and is advancing at the rate of 20 miles each year."

The sow thistle and other crop enemies can't thrive where diversified farming is highly developed. The only sow that thrives under those circumstances is the four-legged kind!

Why Banks Fail.

"In Wisconsin, where diversified farming is practiced almost universally, there has not been a bank failure in five years."

So says Tommy Mason, president of the Haugen (Wis.) State Bank, and The Banner has every reason to believe his statement because we have not heard of a single Wisconsin bank "toppling" in a coon's age. Goodness knows we can't say as much for Minnesota and North Dakota.

"Barnum Was Right!"

"The sum of the cream checks paid to farmers by the creamery at Barnum, Minn., increased from $33,515 in 1910 to $198,730 in the ear 1920. This was a gain of 493 per cent."

The Barnum territory has escaped the pinch of "hard times" felt in so many of the single-crop section of the state.

Where Capitalists Dine.

"The Waldorf-Astoria hotel in New York City pays a premium over the market price for the entire output of the creamery at Scandia, Minn," says well-known butter journal."

Most of Minnesota's butter commands a premium in eastern markets. The Minnesota Co-Operative Creameries Association is going to standardize and advertise Minnesota butter to greatly increase the present demand.

MAN SUCCESSOR TO WOMAN COP

Swinging "Night Stick" in North Dakota Village Is Man's Job.

DES LACS, N. D.—Serenity reigns in this feminine piloted village since Daniel Olson, powerful section foreman, has assumed the duties of village marshal, succeeding Mrs. Bertha Ward, named at the spring election, but who it is said found that conditions were such that she could not handle the job.

Mr. Olson now swings the billy club and sports the marshal's star and thus far no one has attempted to question his authority. In fact, he said, that he doesn't plan to make an arrest if things continue to run along in the same orderly channel as they are now.

"I guess perhaps, just as Mrs. Ward said, it's a man's job all right," said the new law officer, "but thus far I haven't had any occasions to make any arrests or even warn anyone to conduct himself in a more orderly manner."

Rev. and Mrs. V. O. Aakre, accompanied by Mrs. G. Gunderson, visited at the Ole Wiseth home Thursday afternoon.

DUCK HUNTING IS SAID TO BE GOOD

Leave Chickens Alone and Stay Out of Jail, Say Game Wardens.

Chickens are not to be taken in Minnesota this fall because of the law passed by the state legislature providing a closed season on partridges and chickens in alternate years. Partridges will provide some sport for woods hunters but not until October 15. The partridge season closes on November 30. Prairie chickens may be imported into the state, if taken in Canada or other states, according to the laws of those districts, and if the shipping rules pertaining to the shipments of game are complied with.

The daily limit of fowl which is allowed to be taken on and after September 16 until December 30, is 15 of all varieties, excepting geese, of which five is the limit. Forty-five ducks or other game birds is the total allowed to be in the possession of any one hunter at any time.

Interest in hunting this season has not seemed to have been dimmed from that of other years at the same time, judging by the number of hunting licenses issued by the county auditor.

GIRL JUMPING FROM TRAIN IS CAPTURED

ST. CLOUD, MINN.—Miss Lillian Hayek, 15-year-old girl who leaped from a moving train Tuesday night while en route from St. Paul to the Sauk Centre training school, was captured Tuesday afternoon by the St. Cloud police and taken to Sauk Centre by two of the guards who assisted in her capture. Miss Hayek received a bruise over her right eye in her fall from the washroom window of the train.

Hold Weiner Roast.

Members of the faculty enjoyed a weiner roast at the Lindstrom grove one-half mile north of Goodridge on Saturday. The party consisted of Mr. and Mrs. E. J. Erickson, Misses Madga Nelson, Pearl Bergeson, Minnie Lundbloom and Adeline Davidson.

ISAACK A. SKAUG, 81 YEARS OLD, IS DEAD

Pioneer Homesteader Near Erie Passes at Home of Daughter.

Isaack Andrias Skauge died at the home of his daughter, Mrs. Ole Ystesund, 328 Riverside Avenue South, at Thief River Falls, September 5th, at 1 o'clock P. M. He was on a visit to the home of his daughter in that city when death intervened.

Mr. Skauge was born at Stenkjer, Tronhjem, Norway, January 9, 1841, being 81 years seven months and 27 days of age at the time of his death.

When 18 ears old he came to America and settled at Lansing, Ia., where he was married to Miss Gurine Hanson, in 1867. To the marriage 11 children were born, nine of whom survive.

From Iowa he moved to Sibley county, Minn. In 1880 he moved to Polk county and took up a homestead one mile south of Fertile, Minn., at which place he lived until 1907 when he came to Pennington county and took up a homestead in Star township. He made his home with his daughter, Mrs. Gustav Iverson of Erie for the past seven years.

Deceased is survived by eight daughters, one son and 44 grandchildren. His immediate survivors are: Mrs. Gustav Iverson, Erie; Mrs. A. H. Tallerud, Fertile; Mrs. Ole Morstad, Thief River Falls; Mrs. Lewis Amundson, Pinewood; Mrs. Henry McCrehin, Leonard; Mrs. Ole Ystesund, Thief River Falls; Mrs. Bessie Mosher, Chicago; Mrs. Henry Johnson, Artland, Sask., Canada; Julius Skauge, Thief River Falls.

Funeral services were conducted by Rev. Aakre of Goodridge from the home of his daughter three miles south of Erie and at the Erie church on Wednesday, Sept. 6th, where he was laid to rest.

The relatives present at the funeral were Mr. and Mrs. Ole Ystesund, Julius Skauge and son, Albert, and Melvin Morstad of Thief River Falls, Mrs. A. H. Tollerud and son, Edward, of Fertile, Fred Iverson of Gary, Minn., and Mrs. Henry McCrehin of Leonard, Minn.

EMBARGO ON ALL BUT COAL

Railroads Issue Orders Stopping All Freight Going East Except Foodstuffs.

START PERMIT SYSTEM

Clerks and Freight Handlers Brotherhood Leaders Have Ordered Strike Vote; Management Fails to Recognize Unions.

New York.—The chief eastern railroads declared a sweeping embargo on freight competing with coal shipments, the New York Central, Erie, Lackawanna and Lehigh Valley issuing orders stopping practically all freight from the west except foodstuffs at connecting points.

This announcement, together with a threatened strike of freight handlers and station employes of the Pennsylvania system, were the most important developments in the eastern railroad situation.

Wouldn't Recognize Union.

The clerks and freight handlers' brotherhood leaders said they were ordering a strike vote because the Pennsylvania management refused to recognize the union.

The New York Central, soon after the embargo was announced, issued a statement to the effect that freight originating on connecting lines beyond its own limits had to be stopped at connecting points because of the congestion which might result from embargoes by other lines.

The statement said the "permit system" inaugurated by President Smith of the New York Central, while he was regional director during the war, again had been put into effect.

Under the permit system, the statement explained, "shippers may apply to the freight traffic manager at Chicago or the general freight agents at New York and secure authorization for the movement of shipments."

MRS. HARDING IMPROVES

Mrs. Harding's Condition Improving Says Attending Physician

Washington.—The situation at the White House remains unchanged. No official statement had been issued, and no informal statement since Dr. Carl Sawyer said Mrs. Harding was getting along very nicely.

It was understood that the patient's improvement was continuing.

Mrs. Harding was said to be "getting along very nicely," by Dr. Carl Sawyer, son of Brigadier General Sawyer. "Her improvement is continuing," he said to newspaper men as he entered an automobile for a ride with Mrs. Sawyer and Chairman Lasker of the shipping board.

President Retires.

The improvement shown in the condition of Mrs. Harding was maintained, according to the official bulletin issued by the attending physicians. The patient enjoyed a "most comfortable day," the statement said.

While her temperature remained at 100, Mrs. Harding's pulse had decreased to 90 and her respiration to 28, the bulletin showed. Surgical procedure, it was stated, had been "further deferred awaiting localization of infection."

NORTH DAKOTA RAILROADS CONDITIONS VERY HIGH

Almost $21,000,000 To Good Over the 1921 Statement.

Fargo.—Railroads of North Dakota were almost twenty-one million dollars better off at the end of July, 1922, than they were at the end of July, 1921, according to the statement of the surplus after taxes have been provided for, published in the Financial and Commercial Chronicle of New York.

The four roads which have the largest mileage in North Dakota are the Chicago, Milwaukee and St. Paul, the Great Northern, the Minneapolis, St. Paul and Sault Ste. Marie, and the Northern Pacific.

Behind Year Ago.

At the nd of August, 1921, the Milwaukee had a half a million surplus over taxes at the end of the August. The Great Northern was three-fourths of a million in the hole, the Soo was a cool million dollars behind and the Northern Pacific was failing to meet its charges for the year by two and a half million.

Each of the roads has had a little better gross earnings for 1922 over that of 1912 for the seven months for which the figures are given, but some of the increased earnings have come from a cutting down of the expenses of the road.

Man Killed in Auto Accident.

Fargo—One man is dead and three injured, one of whom is in a Fargo hospital, as the result of auto accidents at Hunter and Page. Roy Johnson, 24, son of Mr. and Mrs. F. M. Johnson of Arthur, was killed and Andrew Heckarl and Ben Fischer, both of Springfield, Minn., were badly injured when the Dodge touring car in which they were riding at a fast rate of speed turned over and chrushed them beneath it. A broken steering wheel is believed to have caused the wreck

NEWS REVIEW OF CURRENT EVENTS

Shop Crafts Policy Committee Called to Chicago; Strike May Be Settled.

RAIL EXECUTIVES SAY NO

Government Will Not Enforce Injunction Too Drastically—Ending of the Anthracite Strike—Landslide for La Follette in Wisconsin—Greeks Whipped by Turks.

By EDWARD W. PICKARD

SETTLEMENT of the railway shopmen's strike may be at hand. Last week B. M. Jewell, head of the shop crafts, called their policy committee to meet in Chicago September 11, the day set for hearings on the motion to make permanent the sweeping injunction obtained by Attorney General Daugherty. There are 90 members of the committee, and some of them said freely that it was obvious that a settlement was in sight.

President Willard of the Baltimore & Ohio was said to be working on a plan for separate agreements.

On the other hand, various railway executives flatly denied that any movement was on foot looking to an agreement with the shopmen. Their chairman, T. DeWitt Cuyler, asserted the railways already had won the strike, that on September 1 they had 305,000 shopmen at work, and are adding thousands daily to their shop forces.

Criticism of the unparalleled inclusiveness of the injunction issued by Judge Wilkerson was not confined to labor circles by any means, being shared by members of congress, many editors and other presumably unbiased persons. Probably taking note of this fact, the administration let it be known that the government had no intention of enforcing the injunction to the point of abridgment of free speech or otherwise invading the constitutional liberties of citizens. Attorney General Daugherty indicated that there would be no interference with labor meetings "held for lawful purposes," but that the government would step in if the strike meetings were for the purpose of "inciting riots" or other violation of the law. So far organized labor has practically ignored the restraining order, but the government agents, while keeping close watch on the proceedings, have done little in the way of attempting enforcement. Naturally, on Labor day, the union leaders, from President Gompers down, took the opportunity to attack bitterly the action of the attorney general. Later the labor chiefs mapped out a plan of attack on the injunction, seeking counter-injunctions.

Talk of a general strike largely subsided during the week, for all but the more radical laborites recognized that such a thing, hitherto unknown in the United States, could not succeed. They probably realize, also, that the workers, no less than the rest of the population, would be deprived of most of the necessities and comforts of life by a general strike.

OPERATORS and miners in the anthracite fields accepted the terms proposed by Senators Pepper and Reed, and the strike was settled by an agreement which, like that in the bituminous case, is alomst a complete victory for the men. The old wage scale has been extended until August 31, 1923, both sides joined in recommending national legislation creating a separate anthracite coal commission, and the continuance of production after the extension date is to be upon such terms as the parties may agree upon in the light of the report of the commission.

The senate by a vote of 40 to 7 passed the administration coal distribution and price control bill.

The grand jury at Marion, Ill., which is investigating the Herrin massacre, has indicted 39 persons so far, and more true bills are expected. President Farrington of the Illinois miners has announced that the union will stand back of every union man who is accused of participation in the murders, and already he has declared that all such are innocent. Interest of the American Legion has been aroused by the discovery that two of the murdered men were overseas veterans.

JOHN H. CLARKE of Ohio resigned as associate justice of the Supreme court of the United States, and George H. Sutherland, former senator from Utah, was appointed to fill the vacancy and confirmed by the senate. Justice Clarke gave slight reasons for his resignation except that he had reached the age for retirement. He was appointed by President Wilson in 1916 and had sometimes been criticised by conservatives because of his decidedly liberal tendencies. Mr. Sutherland, whose great legal ability is widely recognized, is classed as a liberal. He was born in England in 1862 and received his education in the schools of Utah and the University of Michigan. He is a close personal friend of President Harding.

RUNNING true to form, the Republicans of Wisconsin renominated United States Senator Robert M. La Follette in the primaries last Tuesday. No one with any knowledge of the situation expected they would do otherwise. However, "Bob's" majority was probably a surprise even to him, being well over 200,000 according to incomplete returns. It was a landslide and carried with it the entire slate backed by LaFollette, including Governor J. J. Blaine, who won by more than 150,000. Rev. W. A. Ganfield, college president and candidate of the Anti-Saloon league, was unable to detach from the senator's support many of the Republican drys although La Follette is openly wet. Then, too, the senator naturally received the votes of the large population of Teutonic origin. The one surprise of the day was the defeat of Congressman A. P. Nelson of the Superior district by H. H. Peavey. Nelson is a prominent leader of the drys and his downfall was accomplished by a combination of the LaFollette organization and the Association Opposed to Prohibition.

The Democratic nominee for senator against La Follette is Mrs. Jessie J. Hoover of Oshkosh.

In the second Democratic senatorial primary in Mississippi, according to partial returns, former Senator James K. Vardaman was beaten by Hubert D. Stephens, former congressman. Woodrow Wilson, when informed of this, expressed his satisfaction, which will be shared by the American public generally.

GREECE'S army in Asia Minor has been almost demolished by the forces of Kemal Pasha, the nationalist leader, and at this writing the latter is not far from Smyrna. The situation for the foreign colony in that city is critical and British and American warships have arrived there to protect their nationals. There have been some bloody encounters between the opposing armies, but for the most part it appears the Greeks have retired, in considerable confusion, without putting up much of a fight. The Turkish leaders are said to be much superior to the Greek commanders. It was reported that General Tricoupis, recently made commander in chief of the Greek forces, was captured by the Kemalists.

The Greek morale, both in Smyrna and Athens, seemed to have been broken. Movements were said to have been started to compel King Constantine to abdicate and there were rumors that the cabinet was about to resign and that Former Premier Venizelos would return to power. However, it was stated that the government would not consider the evacuation of Smyrna or the surrender of the Greek mandate in Thrace. Both of these things the Turks demand before they will talk of peace. The Kemalists, and the French who are friendly to them, blame Great Britain for its support of the Greeks and their claims. A rising of Turks on the south side of the Dardanelles has alarmed the British, who are concentrating on Gallipoli peninsula to check a possible march on Constantinople. Bulgaria has taken advantage of the situation by sending to Athens new demands concerning Thrace

THE assembly of the League of Nations is holding another session in Geneva and Augustin Eduards, Chilean minister to England, was elected its president. The chief matter before the league is the Austrian situation. Chancellor Seipel presented the case for the suffering little republic and tried to make it clear that unless the allies granted immediate and liberal relief, Austria might have to merge with another nation, possibly Germany—which would violate the treaty of Versailles—or preferably Czechoslovakia, or maybe Italy, which desires such an outcome. The league council, after hearing the chancellor, soothed him with honeyed words and referred to a committee the entire question of how Austria shall be aided and under what guarantees. Seipel scored the British and French banks in Vienna whose manipulations added to the downward crash of the crown and prevented the Austrian government from taking constructive measures. "Austria realizes she must submit to financial control to obtain sums necessary to her salvation, but this must not affect her sovereignty," he said.

Great Britain's seizure of the entire phosphate deposit on the island of Nauru in the Pacific was the subject of protest to the league council by the United States, and Marquis Imperiali of Italy also demanded information concerning this. The treaty of Versailles provides for equal exploitation opportunity of national resources in mandated territory by the allied and associated nations. After a heated debate Lord Balfour considered and finally consented to the "request for additional information as long as it is expressly understood there is no criticism of the British government's action."

HUGO STINNES, German industrial magnate, and Senator de Lubersac, president of the committee on French devastated regions, have made an agreement providing for the delivery by Germany of one billion dollars' worth of reconstruction material and work. To obviate the bad effect of having many Germans working in France, de Lubersac explains, it was arranged that the greater part of the labor will be utilized in Germany. The German manufacturers of the goods delivered are to have 6 per cent profit. The Socialist press in Germany attacks the whole plan as purely a selfish contract at the expense of the German government and labor, and it estimates Stinnes' profits at 45,000,000,000 marks.

Dr. Hermes, German finance minister, is negotiating with Belgium concerning guarantees for six-month treasury certificates which Germany is to give Belgium in lieu of cash. His difficulty is threefold, for he must satisfy not only the Belgians, but also the German cabinet and German financial and industrial leaders. It seems likely he will have to seek for the guarantees from foreign financiers.

SECRETARY OF STATE HUGHES and his party arrived at Rio de Janeiro, were given an enthusiastic reception and housed in a palace, and on Thursday the celebration of the one hundredth anniversary of Brazilian independence was inaugurated with impressive ceremonies and patriotic festivities. The centennial exposition is still far from complete but will be opened soon. It is interesting to note that at the presidential reception Secretary Hughes took second place to Mgr. Cherubini, ambassador from the Vatican, because Brazil is a Catholic country. Two immense Vatican guards in red uniforms and gold helmets accompanied the representative of the Pope.

Although the aviators who started from New York for Brazil in the seaplane Sampaio Correia came to grief a few days after the start and their plane was wrecked, they are proceeding on their way in another machine, and are now in Caribbean waters.

ONE eminent American died last week—Rt. Rev. Samuel Fallows of Chicago, head of the Reformed Episcopal church. He was a veteran of the Civil war, from which he emerged a brevet brigadier general and thereafter he devoted his life to religious, educational and patriotic work of the highest order.

[illegible] All the State

Condensed Notice of Happenings of the Week in Minnesota

Owatonna—Pupils of the teachers training department of the Owatonna high school will receive practical training along with their studies as future teachers.

Duluth—At a meeting of the directors of the Duluth National bank, Dr. William J. Eklund was elected president to succeed his father, Dr. J. J. Eklund, who was recently shot and killed.

Duluth—The $500,000 bond issue voted by the city of Duluth July 15, 1922, for school purposes was declared valid in a decision handed down by the state supreme court.

Mound—Funeral services for Dr. O. M. Heustis were conducted at the First Baptist church. Burial in Lakewood cemetery.

Mankato—While the officials at the Mankato Teachers' college looked for a registration of approximately five hundred in the first week of the new term, more than 650 arrived to take up work at the college.

Cokato—Aid of the Minneapolis police was asked in the search for Mrs. Edward Snodgrass, 22 years old, of Cokato, Minn., who disappeared while on her way to the Abbott hospital in Minneapolis.

Duluth—Nine vessels are unloading 75,000 tons of coal at the Superior docks and four more boats carrying 35,000 tons are reported on the way here.

Virginia—According to word received by the Chamber of Commerce, the 1923 convention of Minnesota W. C. T. U. will be held in Virginia.

Alexandria—Police here are searching for a masked bandit who held up C. A. Peterson, the station agent, and disappeared with $65.

Duluth—The Duluth American Legion band the first official band for the national organization, and 50 members of local posts will go to New Orleans for the national convention.

Minneapolis—Patricia Chapman, aged 5, daughter of Mr. and Mrs. John Chapman, 2802 Bloomington Ave., was injured in the most serious accident reported during the day. She was struck down by a truck near her home.

St. Paul—Speeding along the East River road in an automobile which police say was stolen, an unidentified driver plunged over the river bank and had a miraculous escape from death when the damaged machine caught against two trees, part way down the bluff. The car had been stolen and the driver had disappeared.

Lonsdale—Helen R. Smisek of Lonsdale, with her Poland China pig, won first premium in this class with the highest score, 94.5, in the whole exhibit. This won for her the sweepstakes prize, which entitles her to a free trip to the International Livestock exposition at Chicago in December, with all of her expenses paid.

Norwood—G. F. Dennstedt, 60 years old, a county commissioner of Carver county, has disappeared at the State Fair, the Minneapolis police were told. Relatives fear that he may be ill or the victim of foul play.

Northfield — Although graduation cost Carleton two regular ends, a tackle, a center and a halfback, Coach Claude Hunt believes that prospects for this season's team are as bright as in any recent years.

Fairmont—That feeding steers is a good investment was proved here when A. J. Driscoll, representing a St. Paul company, sold 93 head of steers within a few hours after they had been unloaded.

Mankato—Henry Meins, brought back here from Worthington on charges of stealing automobiles, in making a confession to police, alleged his wife assisted him in stealing one car here and another at New Ulm.

Mankato—The champion bread-making team selected at last year's fair is now demonstrating in Winnipeg before extension workers of Manitoba. The team is from Mankato and is made up of Leona Peterson, Evelyn Cuddy and Myra Jones.

Moorhead—Sophie Carlson, who escaped from the state insane asylum at Fergus Falls several days ago, has been captured.

Eyota—Two little 12-year-old girls, Lillian Katzung of Alden and Marcella Keefe of Eyota, captured the sweepstakes and the reserve sweepstakes prizes with their heifers in the dairy calf exhibits at the State Fair.

Pipestone—John Barton of Sioux Falls carried away two silver loving cups in the tennis tournament held on the local courts. He was one of the winners in the finals of the double play and also won the single match. Carl Stuckeman, also of Sioux Falls, was Barton's mate in the doubles. Players from Dell Rapids, Sioux Falls, Flandreau, Tyler, Lake Benton, Worthington, Windom, Slayton, Hardwick and Pipestone, took part in the contest.

Virginia—Due to cement shortage, city improvements are being held up and unless supplies arrive soon the city warehouse and garage will have to be built next year. Paving will receive first attention.

Fairmont—Between the closing of schools in the afternoon and the opening next morning men with tractors "snaked" off its foundations the school building in Rolling Green township and moved it to a new location. The school house was located 46 years ago and recently a bitter controversy arose, some patrons demanding a new location.

[illegible] independent [illegible] by a large number of farmer stockholders, announces that it will be sold as quickly as possible, and the stockholders to make up for the losses incurred during the past three years.

St. Paul—Marion Lindley, 25 years old, a painter employed by the Great Northern railroad in St. Paul, was crushed to death between two freight cars at the Jackson Street shops.

Northfield—Alumni students and former students of Carleton college now residents of Cannon Falls, Farmington and Northfield united there the 6th in the organization of a Carleton club.

Owatonna—The city council has split the first and second wards into two precincts each in order that votes cast at the November elections can be counted more quickly.

St. Paul—The directors of the Twin City Rapid Transit company authorized the payment of a regular quarterly dividend on preferred stock at a meeting held at the company's offices here. The dividend is $1.75 per share.

Duluth—Attorneys representing the United States railroad administration and claimants in fire cases, dismissed 142 cases listed on the special calendar of the Duluth district.

Winona—Martin Peterson, 18 years old, of Rochester, is being held at the Winona County jail in connection with the theft of automobile tires from a garage at Minnesota City.

Mankato—When within a block of her own home, returning from a touring trip through Minnesota and northern Wisconsin, Mrs. H. C. Kroon of this city was badly injured in an automobile accident.

Red Wing—The Hamline university piano which was used at Red Wing in 1854 has been placed in front of the speakers' platform in Portrait hall of the Territorial Pioneer's building and was used in programs during fair week.

Duluth—Although failing to deposit a $25,000 check required to insure purchase of the abandoned line of the Duluth & Northern Minnesota railroad Robert Waldron, Minneapolis, declared he had not abandoned plans for the purchase of the road.

Duluth—Legislation authorizing issuance of camping licenses to campers will be advocated at the next state legislature by the State Forestry department as a means of obtaining funds to carry out the forestry program, State Forester W. T. Cox said.

St. James—J. A. McRell, guard for the Omaha railway, was fired on here by unidentified persons who sped away in an automobile. McRell, who was injured, was guarding the home of a railway employe who went out on strike, but who returned to work recently.

Aitkin—Will B. Gwathmey, aged 60, pioneer jeweler of this city, died at his home here after several months' illness. He was a native of Faribault and a graduate of Shattuck. Interment at Osceola, Minn., beside his wife.

Buhl—Several hundred tons of iron ore from the Adams mine, in the Eveleth district, have been shipped to St. Louis, where it will be used in the manufacture of paint.

Moorhead—Buyers are offering 35 and 40 cents per bushel here for U. S. No. 1 potatoes, according to a statement by A. P. Probstfield, secretary of the Northern Potato Growers' Sales company. Demand for the tubers even at that price is slow, he said.

Virginia—An action asking $12,000 damages of the city of Virginia, filed by the A. W. Kerr company, architects, was placed on the calendar for September. The architects allege the city put them to undue expense in the preparation of plans for the new municipal building.

Hibbing—Reductions in every department of the city government will have to be made in the retrenchment campaign if the city is to keep within the law, the expenses will have to be cut more than half. The police force, now more than 50 men, will be cut to 28 and the fire department, which now has three platoons, would be reduced to two.

Excelsior—William Priebe, aged 40, and Henry Eibel, aged 74, who have a summer home at Minnetonka, were injured seriously when the car in which they were driving overturned on Superior boulevard. Both men were pinned beneath the debris.

Buffalo — Application of Henry Hahnke, of Buffalo, to operate a motor bus line between Minneapolis and Litchfield was approved by the Minneapolis city council license committee.

Crosby — Sheriffs, deputies are searching the woods here for two men who represented themselves to be federal agents and robbed the home of Frank Krawl of Cuyune, four miles from here of $800 in cash and jewelry.

St. Paul—After more than 15 years with the school and college of agriculture at University farm, Miss Estelle Cook has accepted a position with the Raymond Lull Mission school in North Africa.

Minneapolis — Forty-five persons were killed and 541 injured in 912 automobile acicdents in the 12 principal cities of the United States in a week. One was killed and 29 injured in a total of 64 accidents in Minneapolis and St. Paul 21 accidents with but two killed.

Hibbing—As the outcome of a suit to annul his marriage to Ida May Webb of Hibbing, Raymond Richards of Superior, faces a charge of perjury. He is alleged to have sworn, in obtaining a license, that he was 21 years of age, and in his suit through his mother, stated he was only 17.

New Ulm—Robert Bartel, a bartender, was arrested here charged with having smeared yellow paint on the building occupied by the Brown county Journal. He was released on bond. Other buildings, including the Catholic parsonage, were smeared with the paint at the same time

RED RIVER VALLEY IN DIVERSIFIED FARMING

Live Stock Biggest Factor in Diversified Farming

Red River Valley Making Great Advances in Live Stock Production

Forage Crops Grow Abundantly.

Northwest Experiment Station Recommends Varieties.

Crop Rotation System Necessary.

Diversified farming is a well known term. Just what it involves will probably vary with each individual and in different parts of the country. In this series of articles the members of the Northwest School of Agriculture staff at Crookston give their viewpoint gained from the work of the Northwest Experiment Farm, observation and experiences of others. Diversification has always been the watchword of the institution. It has been taught to the nearly 2,000 students who have attended the school, and the many additional thousands who have attended the annual Farmers' Week Meetings and the meetings held in all parts of Northwestern Minnesota. For diversified farming is the keynote here as well as in the older sections of the country.

Cattle, hogs, milk, poultry, corn, alfalfa, sweet clover, potatoes and sugar beets go together in the diversification program. It has been demonstrated that farm animals and the crops above mentioned grow and thrive in this section of the state. There remains the more general acceptance of the diversified farming plan.

Advocates Diversified Farming

D. D. Dayton, himself an owner of a Red River Valley farm, is a strong advocate of diversified farming. For the last 35 years he has advocated dairying as a sure means to success in farming. In a recent statement he says:

There is no danger of overdoing the dairy production for years to come. We import vast quantities of butter, cheese and eggs, all of which ought to be produced in the United States.

I know of no surer way for our young men to grow rich than to take a course at the Agricultural school and then go into diversified farming, raising cattle, hogs, chickens; selling the cream and eggs, the pork, beef and poultry—thus transforming the product of the land into that which in its concentrated form, easily can be turned into gold.

The amount of study and hard work which is necessary to win success in business in the city will produce as great, and often greater, results on the farm—and with greater safety, freedom, pleasure and comfort.

The men who are handling grain need not worry lest diversified farming lessen the volume of grain. The best way to increase the wheat yield of the northwest is to multiply the cattle for there is no way to fertilize our worn lands so successfully as scattering barnyard manure.

Forty-five years of study and observation convince me that one result of diversified farming will be more wheat to the acre and more bushels for our mills.

FARM CROPS FIT INTO DIVERSIFICATION PROGRAM

Crop Rotation System Necessary

Much has been learned of the value of rotation of crops in Northwestern Minnesota. Every system of diversified farming has for its foundation a definite rotation plan.

In this section of the state a rotation system is necessary to control weeds as fallow and cultivation are the two best methods of control.

Crops grown in rotation yield better. At the Northwest Experiment Farm continuous wheat yields 6 bushels per acre less than wheat in rotation.

Crop rotation lessens effects of crop failure or over-production as all the eggs are not in one basket.

Crop rotation helps maintain soil fertility as legumes (clovers and peas) obtain their nitrogen from the air.

Crop rotation distributes farm labor over the entire year.

Crop rotation controls diseases and insect pests.

The essentials of all rotations are (1) a cash crop; (2) a cultivated crop, and (3) a grass or legume crop.

Soil Management

1. For the heavier Red River Valley soils the most economical rate of manuring is 4 tons per acre.
2. Phosphate fertilizers increase the yields of hay on nearly all soils of the Red River Valley.
3. Phosphate fertilizers for grain do not pay on most soils of the Valley.
4. Phosphate is most important fertilizer for peat lands. Low-lime peats require nitrogen fertilizers in addition.
5. Complete fertilizers are usually too expensive for hay and grain crops.

The value of barnyard manure cannot be overestimated in cropping under a diversified farming plan.

Adapted Field Crop Varieties

Grain varieties that have proved the best are:

1. Wheat: Marquis and Mindum.
2. Winter Wheat: Minhardi and Minturki when afforded winter protection.
3. Oats: Minn. No. 281, Victory, Minota, and Iowa 103.
4. Barley: Minn. No. 184 and Svansota (a 2-row variety).
5. Winter Rye: Swedish, Minn. No. 2.
6. Flax: Minn. No. 25-7, a variety resistant to wilt to a superior degree.

Corn varieties that have proved valuable are:

1. N. W. Dent for grain.
2. Minn. No. 13 for silage.
3. Pearl Flint or Gehu for hogging off.

Culture of Grains:

1. Best rates of seeding: Wheat 5-6 pecks; barley, 8-10 pecks; oats, 8-10 pecks.
2. Best dates of seeding: Barley, early; rye, Sept. 1-10; winter wheat, Sept. 1-10.

Forage Crops Essential:

1. Alfalfa for hay. Grimm variety of seed, inoculate the soil, use well drained soil, use land free from weeds, prepare a firm seed-bed, sow in June or July without nurse crop, 12 pounds of scarified seed per acre.
2. Sweet clover for pasture, seed and soil improvement. White is heaviest yielder, yellow makes finer hay. Inoculate the soil, sow with nurse crop early, 12 pounds of scarified seed per acre. Sweet clover does not bloat cattle or sheep. When plowed under, land should be well worked up before seeding next crop.
3. Soy beans as an annual hay, seed, pasture, or silage crop. Select variety for purpose desired. Wisconsin Black, for seed or hogging off. Chestnut or Habara for hay or silage. Inoculate, sow in rows with corn planter, cut for hay when pods are well filled. For silage they may be planted alone or with corn. They furnish with corn a balanced ration.
4. Kentucky Blue Grass for permanent pasture.

Pure Seed Distribution:

Seed of recommended varieties may be obtained by addressing the N. W. Experiment Farm, Crookston. Seed grown by farmers of the Valley, certified as to purity will be on sale this year in addition to station-grown seed.

Every section of the country has its diversified farming plan. The above represents the best thought and experience for northwestern Minnesota. With corn and potatoes, sugar beets, alfalfa, sweet clover, other clovers, root crops growing abundantly, heavy grain yields on well-tilled soil fertilized with barnyard manure and enriched with clovers plowed under, this section of the state has the best possible means to grow into diversified or permanent agriculture, considered from the field crop viewpoint.

Potatoes and Sugar Beets Fit in Diversified Farming in Red River Valley

Root Crops and Fruits Have a Place Practical Suggestions Given.

Grow Trees, Fruits, and Flowers

A few acres on each farm planted to trees and fruits enhances the value of the farm and makes it a much more desirable place to live. Enough of the hardy types of deciduous and evergreen trees are adapted to northwestern Minnesota to give variety to plantings and give, in addition, financial returns that are profitable. Trees are necessary shelter for the farmstead from the hot winds of summer and the cold winds of winter. Good shelter adds directly to the returns that can be obtained from livestock production. Trees, flowers and fruits add to the joys and comforts of farm life and make life on the farm attractive.

Hints for Success

1. Plant varieties adapted to the region.
2. Arrange the species of trees in a logical order to secure quickest returns possible in shelter and financial benefits.
3. Give trees clean cultivation until they are capable of shading out grass and weeds.
4. Plant trees on land that is free from all sod or noxious weeds.
5. Plant trees in quantity, using small trees preferably.

Fruits Can Be Grown.

Small fruits such as strawberries, gooseberries, currants and raspberries and tree fruits such as plums and crab apples can with proper attention be grown profitably on a commercial scale.

Apples and grapes can be grown successfully in home fruit gardens if hardy varieties are secured and the following plan is observed:

1. Plant only hardy varieties.
2. Plant on locations sheltered from hot winds of summer and strong winds of winter.
3. Give clean cultivation to soils for all small fruits, and clean cultivation with a late summer seeding of a cover crop for tree fruits.
4. Spray fruits with all of the necessary disease and insect control spray materials.
5. Give winter cover to strawberries and grapes and raspberries when the snow cover is inadequate.
6. Apple and crab trees should be protected with wrappers to prevent injury from field mice and rabbits.
7. Prune fruits properly.

Cultivated Crops Necessary.

Potatoes, corn and sugar beets are the logical cultivated crops for northwestern Minnesota. Climatic and soil conditions in this section are ideal for the production of potatoes and root crops. Potatoes when produced free from disease yield from 150 to 300 bushels per acre, while production costs on the large level fields are reduced to a minimum. The high quality of stock produced in the Red River Valley district makes a ready market for the crops produced, hence the potato through a period of years is one of the most profitable crops grown. A secondary, yet important benefit from the potato crop is noted on grains seeded on potato land. Grain crops on potato land yield twenty-five to forty per cent more than when planted on small grain land and with potatoes in the rotation, weeds are controlled.

Experiments and demonstrations throughout the potato production section demonstrate that the following practices make for success in potato growing:

Potato Pointers

1. Grow the proper varieties. Early Ohio, and to a limited extent, Irish Cobbler, are recommended for the heavy soils of northern Minnesota. Irish Cobbler of the early, and rGeen Mountain of the late type are recommended for the lighter soils.
2. All seed potatoes should be treated with corrosive sublimate before cutting. Pure-seed plots should be grown each year in order to eradicate internal tuber diseases.
3. Short-term rotations for potatoes with clover for the grass crop and manure applied once in the rotation are conducive to the production of high yields.
4. A five-year rotation has proved most suitable in the production of clean, healthy seed. Higher yields have been obtained in the three-year rotation, but tuber diseases survive in the soil through the three-year rotation period.
5. Maximum yields can be expected when 16 and 19 bushels of cut seed are used per acre. Sixteen bushels of seed when cut in one ounce pieces and planted insure a drop in the row of 11 inches, an ideal distance for the Early Ohio variety.
6. Quartered or halved seed pieces weighing from one to two ounces produce the most profitable yields. Medium sized whole potatoes make the greatest yields, but can be used profitably only in years of very low cost.
7. A total of eight tons of manure in two applications in the four-year rotation has given higher yields than lesser or greater amounts in one application.
8. But slight increases in yield can be expected from the use of complete fertilizers on heavy soil, unless the soil is noticeably worn out.
9. Three sprayings of bordeaux mixture in combination with paris green have been profitable in controlling insects and common leaf diseases.
10. That the greatest returns are obtained by careful grading and shipping of stock produced.

Sugar Beets.

The sugar beet is fast becoming an important cultivated crop in northern Minesota. Ten to twelve tons per acre of high sugar content beets make the sugar beet a dependable cash crop.

The sugar beet fits in well with the small grain rotation and the beet tops, as a by-product, make valuable feed for stock.

Practically all sugar beets are grown under contract. The general supervision of the crops is cared for by a district supervisor. The farmer furnishes the land, housing accommodations for laborers, man and team labor necessary for planting, cultivating, harvesting and hauling the crop. The farmer pays for seed and labor indirectly out of the returns from the crop.

For greatest returns the grower should:

1. Select land free from noxious weeds.
2. Select land capable of producing large yields.
3. Be thorough in soil preparation.
4. Plant crops in season (May 10-20).
5. Keep ahead of the weeds with cultivating.
6. Provide comfortable quarters for laborers.
7. Comply with the requirements of the sugar beet company.

POULTRY PRODUCTION PAYS
No Farm Should Be Without a Poultry Flock.

Diversified Farming Week.

September 25 to Oct. 1st.

PROGRESSIVE FARMERS KEEPING IN TOUCH WITH THE AGRICULTURAL SCHOOL AND STATION AT CROOKSTON

BRANDT-HELGELAND EXPERIMENT STATION SEEKING INFORMATION FARM CLUB MEMBERS VISITING NORTHWEST

Dairying, Hog Raising, Beef Production, and Poultry Growing are of First Importance.

Big Advances Made From Days When The Buffalo Roamed Over Valley Prairies. In 1880, 76,000 head of stock; in 1920, over 800,000 Head. Room for 2,000,000 on Valley Farms.

LIVE STOCK IS TNE BASIS

While it may be said that livestock is the basis of successful farming, it is equally true that the profitable production of livestock depends on the production of a sufficient quantity of home-grown feeds and of freely feeding the crops produced to carefully selected, well bred live stock. It is not a question of breed to select nor altogether the type of livestock farming that will be followed. The selection of a breed or the kind of livestock farming are to a large extent individual factors, depending on one's liking for any particular breed and the location and adaptability of any particular farm for greatest success with the type selected.

Dairying Is Well Adapted

Dairying is a business well adapted to this region. No region holds greater possibilities for the production of swine as well. The increase in the production of feeding crops is giving the beef producer a better opportunity to send finished stock to market. Sheep should be on every farm in the northwest, whether the farm is in the prairie region of the Red River Valley or that of the timber further to the east. This type of livestock will assist in clearing the old grain farm of weeds or the timbered farm of undergrowth, which will add to the appearance of the farm, increase soil fertility and will return a profit with less care than any other class of livestock farming.

Feed Is Abundant

The abundance of feed that is produced each year on the average northwest farm and not utilized, shows the need for more farm flocks.

Problems of Livestock Management

The leading problems connected with successful management of livestock on the diversified farm may be summarized as follows:

1. Selection of the profitable kind of stock.
2. Use of the pure bred sire in breeding.
3. Growing of feeds and general management and care.

Selection of Livestock

The fundamental point is whether the animal is capable of being a profitable producer. The question of disease must also be considered. Be sure your newly-purchased animal comes from a clean, disease-free herd.

Use of Pure Bred Sire

There must be a pure bred sire on every northwestern Minnesota farm, before the progress that is possible can be made with livestock. The pure bred sire, is the most economical method to pursue in improving the quality of stock needed on the average diversified farm.

Feeding Livestock

Profitable stock farming must consider the growing of feeding crops, liberally feeding these crops to livestock and returning the refuse back to the soil, thereby building up fertility for increased crop yields, making possible the keeping of more stock.

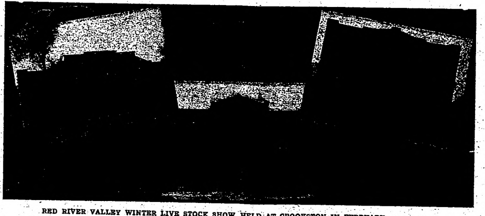
Sweet Clover, alfalfa and red clover with the help of corn, lay the very foundation for live stock industry in any country. All of these feeds are being grown with increasing success in northwestern Minnesota.

To make the feeding operation still more successful and profitable there is the need of more silos. No beef or dairy farm should be without a silo.

Live Stock Farming

Livestock farming is diversified farming. It calls for a system of crop rotation with legumes. It returns fertility to the soil. It adds interest to the work of the farm. It is the best insurance for an income. It is only through livestock production and diversification of crops and the using of our energies every day of the year that we can make a greater, richer northwestern Minnesota.

A STRONG FACTOR FOR DIVERSIFICATION



RED RIVER VALLEY WINTER LIVE STOCK SHOW HELD AT CROOKSTON IN FEBRUARY

THE RED RIVER VALLEY LIVE STOCK ASSOCIATION HAS OVER 1800 MEMBERS, WHO HAVE PROVIDED $50,000 FOR PART OF THE COST OF THESE BUILDINGS. $25,000 REMAINS TO BE RAISED THIS FALL. THE WORK OF THIS ORGANIZATION IS WITHOUT A DOUBT ONE OF THE STRONGEST FACTORS IN THE LIVE STOCK GROWTH IN THIS SECTION OF THE STATE.

NORTHWEST SCHOOL OFFERS OPPORTUNITY

NORTHWEST SCHOOL, CROOKSTON, BIG FACTOR IN DIVERSIFIED FARMING.

FALL TERM BEGINS OCTOBER 9, OPEN TO YOUNG AND OLD, NO TUITION, LOW EXPENSES

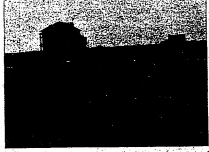
SIXTEEN YEARS OF SERVICE, 600 GRADUATES, NEARLY 2000 FORMER STUDENTS, ANNUAL WINTER SHORT COURSES, WELL EQUIPPED BUILDINGS, TRAINED INSTRUCTORS—TELL THE STORY OF THE RED RIVER VALLEY FARM SCHOOL. LARGEST FALL ENROLLMENT ON RECORD EXPECTED. STILL HAVE ROOM FOR MORE. WRITE TODAY FOR FULL INFORMATION.

Strong Courses in Farm Crops, Horticulture, Live Stock, Poultry, Farm Engineering, Music, Business Training, English and Citizenship Departments.

The Northwest School of Agriculture, a part of the University of Minnesota, is a state institution to serve the people of the northwestern part of state. It does not belong to a particular town or county, but to this section of the state as a whole.

It has four distinct lines of work:

1. As an institution of learning.
2. As an experiment station and demonstration center.
3. As an extension service center.
4. As an organization center.

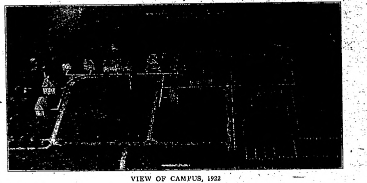


THE CAMPUS AS IT WAS IN 1906

1. As a school, it is organized with a liberal variety of courses designed to meet the needs of the various classes of young men and women seeking a training for management of the home and the farm and for citizenship in rural communities. As an institution with experienced and sympathetic men and women in charge, its courses are especially planned to meet the needs of rural young men and women. Being located two miles from the city, it retains the healthful influence of the country, and still gives the advantages of the city, with a minimum chance of its temptations. Students are surrounded with a moral influence at all times.

2. The station farm of 476 acres, fully equipped with stock and machinery in charge of competent experts, is devoted to an extensive study of the various agricultural problems of this part of the state. Reports are issued annually. Special bulletins are also issued from time to time.

3. Community work with farmers is an important part of the institution's service. The members of the staff devote much time to this work, giving special attention to cooperative work in pure-seed production among farmers and home project work among students, work in farm crops, live stock and farm management and in institute work. A monthly paper, the Northwest Monthly, is published regularly as a medium for spreading useful information.



VIEW OF CAMPUS, 1922

4. The Annual Farmers' Week and Women's Meetings, held during the Red River Valley Winter Shows Week is the school's one week short course for farmers. The Red River Valley Crops and Soils Association gives an extensive exhibit of grains, corn, clover, alfalfa, and potatoes in connection with the meetings. The Red River Valley Livestock association holds an exhibit and sale of purebred livestock in three large buildings provided by its 2,000 members for this purpose through the cooperation of the people of the Red River Valley. The school is effectively encouraging organization and cooperation along all lines of rural endeavor. Members of its faculty are officers in the Red River Valley Dairymen's Association, the Red River Valley Livestock Association, the Northern Poultry Association, the Red River Valley Horticultural Society, the Northwestern Minnesota Educational Association, the Red River Valley Crops and Soils Association, the Red River Valley Certified Seed Potato Association, and other organizations.

The school and station is sparing neither time nor effort to help the people, especially in rural communities, to make their farms more productive and their homes more attractive.

SPEAKERS FOR MEETINGS

Members of the Northwest School and Station staff are available for farmers' and women's meetings held in the interest of improving farming conditions, home, school, and community interests. Last year over three hundred such meetings were held. This service is a part of the work of the school.

NORTHWEST SCHOOL OF AGRICULTURE

ESTABLISHED IN 1906. IS A PART OF THE UNIVERSITY OF MINNESOTA. ALUMNI NOW NUMBER NEARLY SIX HUNDRED. HISTORY OF THIS INSTITUTION IS AN INTERESTING STORY

It takes a long time to grow an oak. It takes a long time also to grow an institution, especially when the planting is made in a wild duck pond. There were many who said it couldn't be done. It has been done. The growth of the Northwest School of Agriculture, moreover, has been so rapid that it has exceeded the hopes of the most optimistic supporters. Today it stands as a monument to achievement. Its record is one of unselfish service. Its influence reaches into every nook and corner of Northwestern Minnesota. It is today a permanent part of the northwest. It has created its own ideals and traditions which are being perpetuated for time to come. With nearly two thousand graduates and former students on the school roster, the bonds of love and fidelity to the school are yearly becoming more firmly cemented in the common ideal of service to which it is dedicated.

Many Have Helped

It would take much space to give in detail the events from the genesis of the school. To do so would be to mention the names of hundreds of men and women throughout the state who have played a part. Every community in the Red River Valley has labored for its success with a loyalty which cannot be surpassed. Everywhere people speak of the institution as "our school" and are willing to do their utmost for the continuance of its work.

Experiment Station in 1896

This experiment station was established in 1896 for the purpose of procuring definite and reliable data concerning the agricultural problems and possibilities of this section. The land was given to the institution by James J. Hill with the understanding that a complete series of investigations and experiments in agricultural practice and particularly in drainage in the Red River Valley would be carried out. Mr. T. A. Hoverstad was appointed as the first superintendent.

In the summer of 1903, the University secured the right to use the farm land forever for educational and experimental purposes. In 1905 the Crookston Experiment Station was placed in the charge of Mr. William Robertson. At about the same time a movement was begun to secure for this section a school where boys and girls could be given a practical training similar to that which the parent school at St. Anthony Park had been giving to hundreds of young people from Minnesota farms. This demand came for two reasons: First, because agricultural conditions in the Red River Valley differed radically in many respects from those prevalent in the southern part of the state; second, because the distance from the parent school prevented many in this section from attending that school.

Agricultural School Established in 1905.

A small appropriation of $15,000.00 was granted in 1905 for a school building, but no funds were provided for maintenance or equipment; so in 1906, when the building was completed, an interested group of citizens from Crookston and vicinity raised $2,500.00 to pay for teachers and to provide for books the first year. The school opened in the fall of 1906, with an enrollment of thirty-one students. The school consisted of only one building (now named Home Economics Building) which was a combination of dormitory rooms, a dining hall, an office and two class rooms. Both the faculty and student body acquired an enthusiasm for the aims and the work of the institution. In 1907 it was decided to erect two buildings: one a dormitory for boys, and the other an industrial building. These were completed in 1908. The boys' dormitory was named Stephens Hall in honor of Senator A. D. Stephens, of Crookston, and the industrial building was named in honor of Regent S. M. Owen.

School Enjoyed Splendid Growth

The student body was increasing every year, and during the third year there was an enrollment of over one hundred. The first class that graduated from this school was composed of three girls and five boys.

In January, 1910, a serious loss befell the school when Superintendent Wm. Robertson died. His interest and enthusiasm had been great factors in the prosperity of the school. Mr. C. G. Selvig was selected as his successor. On August first he entered his position. He came to us with high ideals and with ability to carry his aspirations into effect. Two new buildings were completed in the fall of this year. One was named Robertson Hall, in honor of Mr. Wm. Robertson. This provided a dormitory for the young ladies. The other building was called Kiehle Building in honor of Dr. D. L. Kiehle. This building contains the gymnasium, library, auditorium, and the administrative offices.

In 1911 permission was granted to use the grounds, buildings, apparatus and library of the school for a summer training school for the teachers of Northwestern Minnesota. This indeed proved to be a great benefit for teachers. In 1915 two hundred four attended.

New Buildings Provided

As the enrollment increased, it was found necessary to provide for a new building, which was to contain the class rooms. This structure was completed in 1912. It was named in honor of James J. Hill, who donated the experiment station land. In 1913 a central heating plant was installed. Another boys' dormitory was constructed in 1914, and named Senior Hall. This provided additional dormitory room for boys. In 1919 an appropriation was passed for the erection of a dining hall, which was completed in 1920. This made possible the remodelling of Stephens Hall so that the first floor could be used for students' rooms and also hospital quarters. In 1920 a concrete highway was built from Crookston to the school, and a motor bus placed in service. Alumni and former students who have vivid recollections of the days when "Casey" and "Kaiser" drove the bus through deep mud and snow can appreciate the value of this new road, perhaps more than the present student body.

Attendance Increases

The increase in buildings and equipment has not been able to keep pace with the increased attendance. The largest enrollment was 301 in 1920. Due to crop failure and financial depression this total has not been reached the last two years. However, the attendance has been satisfactory and with the return of prosperity and better agricultural conditions, additional facilities must be provided, or only a limited number may avail themselves of the privilege of attending this institution.

This briefly is an outline of the development and growth of the Northwest School of Agriculture. Alumni and former students are proud of the institution they have attended. It has been worth while to have been connected with it, to have shared in its progress, and contributed to its prominence.

WHY THE NORTHWEST SCHOOL

Alumni and former students are often asked why boys and girls should attend the Northwest School of Agriculture. This question will be asked about every institution as long as it exists. Every school must justify its existence. It must have an appeal of some kind. As an alumnus or former student you had good reasons for attending. Something about the school appealed to you. Have you thought about what prospective students want to know when they consider going away to school?

Unique Plan Followed

The Northwest School of Agriculture is a unique and interesting institution. Dedicated for service and the betterment of rural life, and maintained in order that boys and girls in Northwestern Minnesota may have equal educational opportunities, it has prospered and thrived. Its term is based on the plan of supplementing six months at school with supervised educational home work during the summer. The state schools of agriculture in Minnesota were among the first to conceive of this ideal method of instruction. If such a plan had not been developed, many thousands of young people would no doubt never have gone further than the common school. It is distinctly worth while for the state to provide this opprtunity. Hundreds who graduate from the common schools each year appreciate this institution, which fits so well with their home work. Those who have attended this school consider it a pleasure to tell others of it, that they in turn may come and benefit from the training it gives.

Many Advantages Offered

Let us briefly summarize some of the special advantages offered. First, should be mentioned the practical training that is presented by specialists in their respective subjects. This training fits the student for something worth while. The students work at the school with practical things. In live stock work the classes of stock are before them. In grain work the different varieties are on hand. In farm engineering the actual machines are taken apart, repaired, reassembled and made to run as if they are new. The girls cook actual meals for actual people after buying the supplies. They keep a record of costs, wash the dishes after the meal and talk it over afterwards to determine what could have been improved.

The girls make their own dresses. This merely illustrates the nature of the work to show that whether it is judging, nursing, sewing, cooking or what not, the work is practical and the students like it for that reason. In academic courses, also, the students have subjects that give a broader outlook on life. History, mathematics, sociology, and economics, English, civics and so on, prepare one for citizenship as a member of society and for community service. Many students from this school often refer to the training received in public speaking, the value of the literary societies, the pleasure of belonging to a musical association and the other activities that help develop personality, character and build up the spirit, creating a desire for and an appreciation of things most worth while.

Individual Initiative Fostered

Another advantage is the opportunity for developing initiative and promoting individual development. The student organizations call for leadership. This brings out potentialities in students. The Y. M. C. A. and the Y. W. C. A., the band, the orchestra, the basketball teams, the societies, the glee clubs, the class plays and other activities depend on student cooperation and enthusiasm for their success. These organizations exist because of what they do for their members.

Dormitory Life

Dormitory life represents a training in itself. It is a training for citizenship that never will be forgotten. In the dormitory is learned the lesson of respecting the rights of others and to heed their welfare as well as your own. It is really a well ordered society in which the continuance of good will and fellowship depends on each individual. Study, fellowship, friendships and cooperative effort come from dormitory experience. The lesson that it is the ability to work with others for the good of all that is really worth while, is indelibly imparted in the student homes of the Northwest School campus.

Recreation Not Slighted

It is not all work and no play at the Northwest School. All work hard, but they play as hard as they work. Good times come without interfering with school work. All the students recall the annual pow-wow, the receptions, the outdoor festival, the Thanksgiving dinner and program, the song contest, the farm crops show, the faculty program, the field meet, the parties and moving picture shows that occupy Saturday evenings. School days are pleasant days. They leave a full measure of happy recollections and memories. This all Northwest School students feel. The recreational life is permanently established. New features are added through the cooperation of both faculty and students.

Character Building

No student can attend the institution, hear the speakers at assembly, the Sunday evening speakers, and take an active part in school activities and not learn the great lessons of Christian life. The ideal of service is continually before the student body. This ideal was fulfilled on the field of battle, as the memorial and the service flag eloquently testify. In every Red River Valley community alumni and former students are taking a prominent part in community activities and community up-building. The school is as proud of this activity on the part of its students as they are proud of the training they received in fitting them for a rich community life.

Much more could be written as to why the Northwest School of Agriculture appeals to boys and girls. Much more could be said as to why those who have attended love their alma mater. Where there have been many hundreds who have attended, the number is small compared with the number who have not been able to come, or have lacked the will to make themselves better trained young men and women. The state provides the school and the instruction. Buildings, equipment and instructors are there to render service. The rest must be done by the individual. The opportunity is given, but no further can any institution go.

GIRLS ENJOY SCHOOL COURSE

The course of study at the Northwest School of Agriculture offers many opportunities to girls. During the last few years, new possibilities for employment have been offered young women. The needs and requirements of these different vocations are met in the courses offered. In addition, home training work is emphasized. Special courses in music are offered. Academic subjects are not neglected, English and literature are being given much time in the organization of the work.

At the present time the electives offered include:—

1. Home making. 2. Professional dressmaking. 3. Nursing. 4. Teaching. 5. Institutional management. 6. Music. 7. Business.

Whatever course a girl chooses, the work includes home economics work dealing with the fundamentals of food values, the preparation of food, needle work, garment making and costume designing. The opportunities provided for this instruction, as well as in the specialized work suggested above, have made the school popular with young wmen.

Practical Presentation

The instruction is presented in a practical manner. In sewing, the students readily gain much skill in garment planning and making. In the study of foods and food preparation a model home management practice house has been provided. Here the students live during a specified period, taking full charge of purchasing the food, keeping the household accounts, planning and preparing and serving the meals.

Many Study Music

Private music lessons in both voice and piano are offered. The school band, or orchestra, girls' glee clubs, quartets, and octets are open to those interested. In addition to the regular song contest, the school presents an operetta each year, in which about 100 persons take part.

Those who plan to become trained nurses find that the school courses are of much value, as preparation for later training. In the business courses practical office training is offered in addition to the regular work in shorthand, typewriting, bookkeeping, commercial penmanship, spelling and business forms.

Social Life Given Prominence

The social activities at the Northwest School center around the students' homes in the school dormitories. There many informal gatherings are held each term which leave happy memories that will remain after school days are over. In addition to these gatherings "just for girls" there are social events in which all the students participate, including field meets, festivals and parties.

Regular classes in physical training are offered for the girls. This work is very interesting and attractive. It is recreation in every sense of the word. The girls use the gymnasium for this training and for basketball.

The Y. W. C. A. offers opportunity for building up Christian life and character. Regular meetings are held on Sunday mornings and on Friday evenings. In conjunction with the Y. M. C. A. Sunday evening meetings are held at which leading Christian workers give addresses.

Through the Y. M. C. A. during the year the girls carry on welfare work. Last year they raised funds for distribution to needy families in the rural communities.

Many Sided Training Given

As will be seen from this brief sketch, the training offered for girls is many-sided. It is practical. It is interesting. It is wholesome. The meeting together of so many students from the entire section of northwestern Minnesota, and the sharing of school life and activities together cannot help but be of value to the young people who attend. The school has been a vital factor in creating ideals for better rural conditions. This is shown in the many happy homes where our students live. They carry out in homes of their own the training they have received, and live up to the ideals they formed during their school days.

A cordial invitation is extended to young women in this part of the state to visit the Northwest School of Agriculure and to share in its school life and activities. Those who find it impossible to attend the entire three years course, should plan to attend for as long a period as possible.

FARM ENGINEERING AND FARM MECHANICS

The courses offered in the farm engineering department have been developed with the idea of giving practical help in solving farm mechanics problems. Most of the students who enroll reside at a distance from town. Every farmer can do at least the elementary repair work needed, resulting in considerable saving, and stopping the loss of time needed to take his machinery to town for repairs. At this school all the boys, if they so desire, may secure instruction in blacksmithing and farm carpentry. As a result there will be found on almost every farm where our students reside, a forge and an anvil. Many have constructed their own farm buildings as well.

The ability to draw plans and to understand blue prints intelligently, has proved exceedingly useful to the Northwest School students.

Motor Courses

The application of power machinery has created a demand for trained mechanics on the farm. A thorough course is given in stationary engines, automobiles and gas tractors. The instruction in these subjects is of the most practical nature. The work done by students has received very favorable commendation. The training received has added many dollars to the farmers' income due to the more intelligent and economical operation of the motor machines. Equipment costing hundreds and even thousands of dollars requires intelligent use and care in order that it may give the greatest returns. During the last three months of the 1921-22 school year, eighteen separate machines, in addition to several tractors, were completely overhauled by students. No one can question the practical results of such work.

Farm Mechanics

In addition to these subjects, there are several courses that bear directly on the mechanical side of farming. Every farmer needs to have a practical knowledge of rope work, belt lacing, soldering and tin repairing. Babbitting, electric wiring, farm sanitation, including pipe work, are not omitted. Heating and lighting adapted to the rural home are studied. Northwestern Minnesota has its peculiar drainage problems. Northwest School students secure a working knowledge of the different methods of drainage for the varied soils in this section.

The increased cost of lumber requires that attention be given to cement construction, and proper mixtures for different needs. These are a few of the subjects that are taken up in the farm engineering department. The students learn by actual practice the things they will have to do when school days are over. To see the boys in their overalls, with black faces and hands, carrying on this class work, it is easy to perceive that they acquire practical ability to do things in the engineering classes. The students of the Northwest School are not afraid to get down and under in order to work out the lessons they are being taught.

Extension Service

The farm engineering department does much useful extension work. Assistance is given farmers in planning farm buildings. Plans for various practical buildings have been made by the department staff. They may be secured through the school. Plans are also available for installation of heating plants, water systems, ventilation systems, lighting plants and farm drainage.

It is the desire of the Northwest School to assist those having problems along these lines. Discuss them with the engineering department staff, or write them, and thereby enable the department to render the service it is prepared to give.

NORTHWEST SCHOOL OF AGRICULTURE FARMERS' AND WOMENS' WEEK AND RED RIVER VALLEY WINTER SHOWS

The Northwest School of Agriculture Farmers' and Women's Week is a means of rendering an educational service to farmers and their wives, who are unable to spend a longer time at school. Its purpose is to extend the influence of the University to as many people of the State as possible. This week, therefore, is an inspiration to all. It offers an opportunity to those interested in agriculture to get in touch with new views and ideas dealing with home and farm life.

That the course has met a need is shown by its development until it has become the largest winter farm crops and live stock show and agricultural meeting held in the northwest. Today over 2000 men and women in Minnesota own cooperatively three live stock exhibit and sales buildings that alone are valued over $70,000.

First Short Course Held in 1910

The first Farmers' and Women's week, then called the Farmers' Short Course, was held at the Northwest School of Agriculture during the week of December 19-24, 1910. The movement originated at the school, and was the result of plans made by Mr. C. G. Selvig, who had assumed the superintendency of the Northwest School and Experiment Station in July preceding. The members of the faculty joined heartily in this movement, as did the farmers and towns people of Crookston and community.

Emphasis at the first meeting was placed on the importance of pure seed. Over 300 exhibits of grains were shown in the school gymnasium. All the meetings were held in the various school buildings and many of those who attended occupied rooms in the dormitories.

Wonderful Progress Made

The second Farmers' and Women's Week, held during the week of January 7-12, 1912, as well as the third one, held during February 10-21, 1913, were also held at the school. Each year, however, had demonstrated that within a short time it would be impossible to conduct the meetings at the school and care for the enrollment and the exhibits properly. In 1914, the Farmers' Week was divided into two parts. From February 10-17 inclusive, sessions were held at the school. On February 18, 19 and 20, the sessions were conducted at the Grand Opera House, Crookston, and the pure seed exhibit held at the present location of the Commercial Hotel, in Crookston.

Since 1915, all meetings and exhibits have been held in Crookston. Special meetings for women were held in 1915 and have become a permanent part of the week's program. The Minnesota Red River Valley Development Association has cooperated since its organization in taking charge of the farm crops exhibits. This assistance has been of great value as the association is a Valley-wide organization. The farm bureaus and county agents, also, have rendered invaluable assistance.

Live Stock Show and Sales

The February meeting of 1919 demonstrated the true importance and extent of the Red River Valley Winter Shows. This was the first time that the Red River Valley Live Stock Pavilion was used. Before this time it had been the University cooperating with the farming interests of Northwestern Minnesota. Now it became a mutual cooperative organization with the farmers and business men cooperating with the University. The first building, valued at $20,000, was made possible by the sale of stock, with shares valued at $10. Permission from authorities for building the pavilion was not granted until after the Armistice was signed. The fact that the money was raised, the excavation made, and the building erected between November, 1918, and February, 1919, will always stand as a record of achievement, showing what the people in the Red River Valley can do. The success of the 1919 meetings and shows was phenomenal. The attendance was the largest in the history of the event. The exhibits of grain and stock were an evidence of the new development in agriculture. The first live stock sale ever held netted $23,359, when 115 head were sold. The record bid was $2,650 for a Holstein cow, while a Poland China boar sold for $480.

Additional Space Required

It was evident that facilities were inadequate for the large meetings and exhibits. In 1920 and 1921, two additions were built, and even these are not adequate. In 1922 the live stock show made a record in that all the exhibits were from Red River Valley farms. The importance of the Winter Shows is shown by the fact that the state legislature has increased it yearly appropriation towards the support of the organization.

This, briefly, is the history of the winter shows. Having for its beginning a small meeting held in the Northwest School gymnasium in 1910, it has grown to its present large proportions. From a local event it has become a state organization, so well known in other states that President Harding saw fit to send a personal message in 1922, expressing his wish for its success. Several large and influential organizations cooperate to make these shows and meetings the success they have attained. Besides the development association and the farm bureaus, previously mentioned, the Red River Valley Live Stock Association, the Northern Minnesota Poultry Association, the Red River Valley Dairymen's Association and others are working hand in hand with the Northwest School of Agriculture in up-building northwestern Minnesota agriculture.

The Red River Valley Spirit has spoken in terms that appeal to all. In its daily wanderings up and down this fertile valley, this spirit has touched all, resulting in making new standards of production, in creating new ideas of cooperation, and in teaching that a community life in which all work together, all live happily together, all sing together, all achieve together, is most worth while.

The Farmer's Own Page

Timely Comments on Agricultural Topics for Our Readers

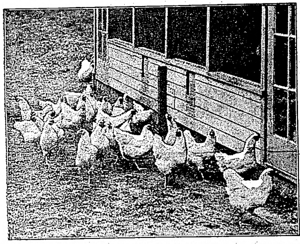
AUTUMN IS ALWAYS BEST TIME TO SELECT HENS FOR BREEDING

(Prepared by the United States Department of Agriculture.)

The improvident man who sold his heating stove in July because the circus was near and the winter far off differs only in the degree of his shortsightedness from the poultry raiser who waits until spring to select the breeding stock that is to be used to replenish his flock. This important work of picking out the superior birds must be done in the fall to get the best results, says the United States Department of Agriculture, for it is then that the greatest contrast between the profitable birds and the poor ones shows up. Of course the culling out of the poor layers should go on all through the summer and fall, but at last the top-notchers should be selected as foundation for the coming flock, which ought to be better each year.

Never Use Immature Pullets.

One good rule to follow is to keep the pullets out of the breeding flock until they are fully matured. An immature bird may be a good layer and may be from the best stock, but still it is undesirable. Eggs from pullets not yet fully developed will not produce as large or as strong chicks as those from older hens or fully grown pullets. There is no difficulty in knowing when a bird is mature enough to be used as a breeder, as at that time the eggs laid will have reached the size of the average produced by the general run of hens in the flock.



Pullets That Begin Laying Early in Fall Mature Quickest and Will Make Desirable Additions to Breeding Flock.

Young pullets always lay a rather small egg, sometimes very small at the start. Those that mature early may be picked out by keeping track of the birds that start laying first in the fall. These birds may be marked with leg bands, so that they will not become mixed during the winter with those that start their work later.

The late molters are the birds that stick to the job longer, and consequently they make up another group that should be used in forming the breeding flock next spring. Leg bands may be used to distinguish these profitable birds, or, better, the early molters may be marketed so that they will no longer have an opportunity to keep down the average egg production of the flock.

The general-purpose breeds, which include the Plymouth Rocks, Rhode Island Reds, and Wyandottes, as a rule are not profitable after the second year. It is therefore advisable to cull out all of the older birds of this class. Of these, the late molters are the ones to select for breeders, just as in the case of fowls of any other breed.

But the selection of birds on the basis of age and time of molting is not all the preparation that need be made for raising the foundation for the new flock. The health and thrift of the fowls must be looked after carefully during the winter. After selecting the breeding birds the poultry house needs close attention. Keeping it in sanitary condition is one of the important points; also the comfort of the house, which is closely connected with the health of the birds.

Fowls are very sensitive to moisture conditions, and these should be controlled carefully by ventilation. When moisture from the fowls gathers on the ceiling and walls there is apt to be trouble soon. In cold weather this moisture may collect in the form of frost, but the heat from the sun in the middle of the day will melt the frost, and the water, dripping down, will make the litter wet. Hens are a good deal like sheep in their sensitiveness to wet feet, either in the house or when outside, and they cannot be kept in good health on damp litter.

A sick hen is a hard proposition to deal with if you expect to get out with a profit on her. It is a lot cheaper to depend on dry litter than on medicines to cure colds and roup. Roup is the sequel of colds, and when it gets into a flock, as one poultryman puts it, you are on the rocks.

Plenty of fresh air in the house is a well-recognized preventive of colds in humans, and it is just as efficacious in the case of poultry. The open front house with cloth curtains is the most practical means for the average flock owner to keep the house thoroughly aired, and the fowls will not suffer from the cold if the building has been properly planned; also the egg production will keep up. By going into the house frequently in changing winter weather it will be easy to judge of the condition of the atmosphere and bring it to normal by adjustments of curtains and windows. Moisture can be kept from accumulating by opening up the house for a thorough ventilation on sunny days.

The most successful houses, as found by the experiences of hundreds of poultry raisers and by experiments of the Department of Agriculture and State experiment stations, are from 16 to 20 feet deep if the open-front plan is followed. From this point the nearer toward the front the fowls are moved the fewer eggs are produced. In smaller houses the relative proportion of openings in the front of the house must be reduced during the winter months in order to keep the fowls comfortable. Open fronts or openings covered with cotton cloth are most practical in deep houses.

DATA FOR FIGHT ON STEM RUST

Government Expert in Europe Searching for Information.

Doctor Stakman, Minnesota Pathologist, Visiting Various European Countries, Making Detailed Study of the Disease.

(Prepared by the United States Department of Agriculture.)

In the hope of finding facts that will be of value in fighting the stem rust of wheat in this country, Dr. C. E. Stakman, agent of the United States Department of Agriculture and pathologist of the Minnesota Agricultural experiment station, is spending the summer in various countries of Europe making detailed studies of the occurrence and severity of the disease, especially with reference to its appearance on barberry bushes. He is also collecting much information on rusts in general.

In France and Spain, where he visited the principal wheat-growing regions, he found no stem rust on wheat, oats, barley or rye. Although there were many barberries, few of them showed any signs of this rust, but in Spain plant pathologists informed him that the common barberry and an indigenous species are responsible for the early appearance of stem rust in the spring.

Doctor Stakman reports great interest in breeding and selection of wheat varieties resistant to this disease and emphasizes particularly the work of several eminent French investigators.

While traveling through France, Spain and Italy he found little stem rust, but this little was always associated with barberry bushes. The consensus of opinion in these countries is that, although stem rust does occur remote from the barberry, it develops later in the crop season and causes very much less damage than in those sections where the shrub is common.

POULTRY

FOWLS NEED OYSTER SHELLS

Failure to Provide Laying Hens With Proper Materials Is Sure to Cause Disaster.

"Laying hens require oyster shells and limestone grit at all times as well as mash containing animal feed," said Prof. J. G. Halpin in an address to the poultry school at the Ohio experiment station.

This statement was based on an array of valuable data gleaned from years of experimental work at the Wisconsin experiment station. The data showed conclusively that failure to provide shells and grit for the laying hens is disastrous to profitable egg production, though, contrary to popular belief, this failure does not appear to cause soft-shelled eggs.

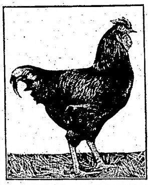
In order to get pullets in the habit of eating oyster shells and grit at an early age, it is the practice of the experiment station to keep these essentials before the birds during the brooder stage. When the pullets are out on range a quantity of the shells and grit are put on the ground near the colony.

BETTER PROGENY BY CULLING

Wise Plan to Discard All Fowls in Flock Except Most Vigorous and Prolific Layers.

(Prepared by the United States Department of Agriculture.)

That culling the poultry flock to get rid of all those birds except the vigorous, prolific layers results in noticeable improvement in the progeny is shown by recent investigations at the United States experiment farm, Beltsville, Md. The late moulters selected from a flock of 100 Rhode Island Reds in the fall of 1920 laid seven more eggs per bird during their second year than the original flock of pullets. They were used as breeders the following spring, and the first Red pullets to commence laying in the fall of 1921 were found to be the offspring of these late-moulting hens. Their pullets in a period of seven months have already averaged about two dozen eggs per bird more than the original flock.



Single Comb Rhode Island Cockerel.

But it is not alone in number of eggs that the late-moulter's progeny excel, but also in the value of the product, as the distribution was more even, a much larger proportion of the eggs being laid during the winter months. In the last seven months the daughters of the late moulters not only averaged two dozen eggs per bird more than the original flock, but the value of their product was, figuring at the same prices, about $1.04 per bird more during the same period. It is expected that this margin will increase during the next five months.

CHEAP POWDER FOR POULTRY

Mixture of Gasoline, Carbolic Acid and Plaster of Paris Will Eradicate Insects.

A cheap lice powder for poultry may be made by mixing three parts of gasoline and one part of crude carbolic acid with as much plaster of paris as the liquid will moisten. This is the suggestion of the Ohio station. The powder is allowed to dry before using. It may be kept in an air-tight container where it retains its strength for a long period. The powder is inflammable and must be kept away from fire.

Infested fowls when thoroughly dusted are soon relieved from the attacks of lice. About 125 birds may be dusted in an hour, one pound of the mixture being needed to dust ten mature fowls. For head lice on chickens, the use of blue ointment or mercurial ointment has been found effective. One part of the ointment is mixed with two parts of vaseline and a lump of the mixture about the size of a pea is rubbed thoroughly at the base of the feathers about the head.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

Profitable Things to Do On Farm in September

With the Livestock.

Sheep—Will use stubble fields to an advantage; see that all the ewes are bred. Hogs—Time for the fall farrow, watch the brood sow. Feeding Hints—Silo filling time; cut corn when ready to harvest for shock; the finer silage is cut, the better it will pack and stock will utilize more of it; seed for winter pasture. Cattle—Feeders should begin to locate stock for the winter feed lots.

Poultry.

Market all hens except those known to be good layers. Fix houses for the winter. Plan a separate house for the hens. During the winter these must be fed so as to grow their new coat of feathers, regain vitality lost through heavy egg production, put on flesh and be ready to produce strong vitality eggs in time for the hatching season. Write for extension circulars on poultry houses and culling, Agricultural College, N. D.

Dairying.

Look after cows carefully at calving time. Separate them from the herd and provide a clean comfortable box stall. Watch for milk fever.

In the Home.

September's first duty is to see that everything is in order for school. Plan ahead, and avoid the rush which sometimes attends the opening of school. If school lunches are to be prepared, see that a supply of boxes and baskets, paraffin paper, and paper napkins are on hand. Plan the winter wardrobes.

Home Grown Seed.

If they are of equal purity and germination they are better than those that may be imported. It is possible to get a good variety and improve it instead of letting it "run out." Seed corn selected in the field for yielding power, free of disease, properly dried and stored and tested for germination pays $10.00 per day for time so spent. A man with a horse and sled or wagon with box cover with slats can gather five bushels of soy beans a day. More time and attention should be given to good seed grown on the farm from a start with the right varieties.

Time Now To Pick Seed Corn

"The first two weeks in September may well be set aside for the picking of seed corn. Husks should be removed as soon as it is picked, and the corn hung up or placed in a dry, airy place," says Dr. Walster, agronomist at the North Dakota experiment station.

"Even when seed corn is apparently well dented or glazed when picked it frequently contains 40 to 50 per cent of moisture. It ought to be so rapidly cured that it will lose from one-half to two-thirds of this moisture before freezing weather comes on.

"Artificial heat is not necessary, provided sufficient protection is given, but artificial heat may be used to complete the process of drying. It provides final insurance that the germinating qualities of the ear are safely stored up in well-dried kernels on a well dried cob."

Maturity is one of the most important things to be considered, especially in the northern part of the corn belt. The late maturing varieties grow large, and make a lot of feed, but this is not so essential as it is that the corn be matured before liability of damage by frost. If the season is a little short the later varieties are frosted and do not have the feeding value of corn that matures naturally.

In selecting seed corn, pay particular attention to the shank, says Dr. Walster, in describing a good method of testing seed corn for germination. Any shanks that are pink, brown, or shredded in appearance were probably produced on a diseased stalk, and will not make a healthy growth when planted, though they may germinate. Do not take ears that were poorly covered with the husk in the field because they have been exposed to the bad effects of the weather, and may be diseased.

Good seed corn should be mature; rough, chaffy kernels indicate that the seed did not ripen properly. Varieties having long, deep kernels are not adapted to North Dakota because of their long season of growth. Good seed corn should be bright looking, and never have a dull appearance.

Each ear should be tested for germination and the seed used that shows a perfect germination.

The Delaware modified rag doll seed corn germinator is a good device. The material required to make a doll for testing 20 ears, follows: one piece of cotton toweling 14 inches wide and 48 inches long; one piece white oilcloth 14 inches wide and 54 inches long. Unbleached muslin may be substituted for the cotton toweling, and heavy wrapping paper for the oilcloth.

Seed corn should be dried out as soon as possible after picking because the damage of freezing will be greatly lessened if the corn is dry. A square mesh woven wire rack nailed on a frame of two-by-fours makes a durable and inexpensive corn drying rack. Seed corn stored in boxes or barrels will gather moisture and freeze, resulting in the destruction of the germs of many kernels.

Many progressive corn farmers select 50 of the best ears of the seed early in the spring and plant them on one side of the cornfield and next fall select their seed from these rows. They find that home-grown seed corn is much better than seed brought in from other states.

Pick six grains of corn from various parts of each ear on the rack and test their germinating qualities. Any kind of tester may be used which supplies the three essentials of germination: warmth, moisture, and air.

Ears showing strong germination should be chosen for the planting. This work can be done in February and March before spring work begins. The importance of testing is often underestimated. Each ear of seed should produce from two to four bushels of corn or from 500 to 1,000 pounds of silage. So, if one ear in 15 does not grow there is a loss of feed and time required to prepare the land and cultivate empty hills.

Hogs make efficient harvesters for corn and they do especially well when turned into fields of flint corn where the ears are low and easily reached. It is hard to beat good bundle corn for all kinds of stock, but this crop can be fed more conveniently and economically in the form of silage.

STORY FROM BULLETIN GETS WIDE READING

Scores of letters from farmers, teachers, editors, and experiment station workers commending J. H. Shepperd, animal husbandman at the A. C., for his recent bulletin on "Hogology," which deals with pig culture in story form, point to the increasing popularity of farmers' bulletins that are written interestingly and clearly.

The bulletin entitled "The Northern Pig from Birth to Market," consists in part of conversations with a herdsman at the Agricultural college on pig raising. Practical suggestions for the hog grower are contained in the dialogues as well as in the detailed summary of pig growing practices with which the bulletin concludes.

Other bulletins recently issued by the state college include:

Winter Wheat in North Dakota, Bulletin 151.

Livestock Judging Contests, Bulletin 157.

Weeds in North Dakota, Bulletin 162.

Report of Director, Bulletin 159.

Substation Reports, Bulletins 158, 160, 161, 163.

Circulars recently issued include:

Making the Paper Dress Form, Cir. 46.

Dipping Vats, Cir. 47.

Fighting the Sow Thistle, Cir. 48.

The Hot Lunch in School, Cir. 49.

Handbook for North Dakota Potato Growers, Cir. 50.

"If farmers strike," said Broker Pike,
"To starve would be our curse."
"Then folks would see," quoth "Rube" McGee,
"Who feeds the universe."

DAIRY FACTS

USE MORE REGISTERED SIRES

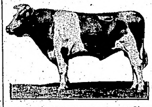
Notable Progress Is Reported in Movement to Replace Scrub Bulls With Purebreds.

(Prepared by the United States Department of Agriculture.)

There is every reason to believe that the replacement of scrub and grade sires by purebreds is on the increase. Reports received by the United States Department of Agriculture from county agents in various parts of the country show that the "Better Sires—Better Stock" movement is having a noticeable effect. A recent statement by M. G. Lewis, county agent of Rockbridge county, Va., is typical of a large number.

"The purebred bull movement," says Mr. Lewis, "is progressing rapidly. Since January 1, 16 farmers have disposed of grade or scrub bulls and are using registered bulls instead. On the other hand, there are no less than 50 men in the county who still persist in holding out against the progress and development of the live stock interests of the county by keeping inferior grade or scrub bulls. I have a list of 56 owners of such bulls. Some of these men have grades that are fairly good individuals, while others have scrubs that are the worst kind of a disgrace to the community and to the county.

"The cost of a good registered bull is so small now that it is a mystery why any farmer will keep anything else. Many records have been kept during the last few years to prove out the actual value of a purebred bull in dollars and cents."



Better Dairying Results Where Sires Like This Are Used.

Some of these actual figures were obtained recently by the Department of Agriculture through an inquiry sent out to more than 500 farmers throughout the United States. These men gave it as their opinion that in all kinds of farm stock purebreds have an earning power more than 40 per cent better than common stock. It is noteworthy that in the case of dairy cattle, whose productive power can be easily measured, purebreds were considered to be 47.8 per cent better than common cows. The lowest percentage given for any kind of stock was 36.8 per cent.

FLIES DECREASE MILK YIELD

Spraying Furnishes Means of Relieving Cow For the Time and Saves Temper of Milker.

The irritation of cows caused by flies not only lessens the milk produced, but, due to the restlessness of the cows, is a frequent cause of inefficient milking.

The fly spray furnishes a means of relieving the cow for a time at least and of saving the temper of the milkers. The following fly repellant mixture is recommended:

Four and one-half quarts of coal tar dip, 4½ quarts of fish oil, 3 quarts of whale oil, 1½ quarts of oil of tar and ½ ounce of oil of pennyroyal. Dissolve 3 pounds of laundry soap in water, add the ingredients of the spray and bring the whole up to 30 gallons with lukewarm water.

This quantity will spray 40 cows twice a day for 10 days. The spray should be applied in the morning after milking and in the afternoon when the cows are in the barn for silage or green feed.

RELIABLE SOURCE OF PROFIT

Dairy Cow Is More Dependable Than Beef Steer Because Her Products Are Steady.

The dairy cow is a more dependable source of profit than the beef steer, because her products are but slightly affected by market fluctuations and because she is a continuous source of revenue, for the cream or milk checks come in at frequent intervals. Then, too, there is an increasing demand for dairy products and for grade and purebred dairy cattle.

Most Profitable Cow.

One good cow is more profitable than several poor ones.

EDITORIAL

NEW ROAD TO PROSPERITY.

So much is being said on the front page of this issue of The Banner about diversified farming, that we feel we shouldn't shout about it any more over here in the editorial column.

But we would like to add another word or two.

During the war period and after-war prosperity, if a person had anything to sell, he could expect to receive for it almost any price that he asked. The main difficulty most of us had was getting something to sell. The farmer received upwards of $2 for his wheat, [illegible] and everything produced on the farm commanded high prices.

We had been blessed with good yields on our farms and high prices from buyers for so long that we simply had become accustomed to it, that is all. We had almost grown to believe that our path was made and that all we had to do was to follow its course.

But a new contingency has been flung in our faces. War and after-war prosperity came to an abrupt end. Other countries that had been ready to take our surplus manufactories and food either had enough of their own or didn't have the money to pay for it, so we became glutted with over-production of these things. Labor was thrown out of employment and this curtailed their buying power. Captains of industry had told them that increasing the production of workshops and factories was the only solution of the high cost of living problem, which the workers believed, with the result that they soon worked themselves out of a job.

Millions of dollars worth of war supplies and foodstuffs were thrown upon the markets to relieve the shortage of war.

Prices slumped, and so today we are facing the grim reality of either taking what we can get for our wheat, oats, rye and barley or else quit raising it. But we're not going to cease the raising of these things, altogether for there is still the opportunity of not losing on its production. We're going to feed some of it to livestock, raise forages, build silos and put in an acre or two of corn, some alfalfa, clover and the several other stockfoods that grow here so abundantly, and in a few years we, too, shall experience the same measure of prosperity that has attended other communities that have "started up the new road."

What other sections of the Northwest has done is set forth on the front page of this week's issue of The Banner. There the proof is set up in cold type, easy to read and just as easy to believe. We commend it to you and your earnest consideration.

WHAT IS LAW?

Law is the foundation stone on which all states and nations must be built and on which they must be firmly founded in order to exist. Law has been handed down to the present generation through vicissitude and nations have lived and prospered in the same measure that they have obeyed common, civic and statutory laws.

Law is founded on truth, justice and equality, and the man, state or nation that ignores or transgresses is doomed to pay the penalty.

Law is essential as life. All laws have been founded and had their inspiration and inception as prophetically written in the Book of Books and woe to the man or nation that does not abide in their mandates.

All over the world today there is a lack of tranquility, a reprehensible unrest, a murmur as of a coming storm all because of a lack of enforcement of existing laws. In the United States we have turmoil and strife while we should be basking in peace and plenty.

An essential is the faithful execution and enforcement of both common and statutory laws and a nulifying breeds contempt and disaster. It is like an infection or a contagious disease. We are nearing a usual cold Minnesota winter and at the present outlook the supply of the winter's fuel is a problem. We have laws governing the existing conditions and if they had been rigidly enforced would have assured us our supply of coal. It was a lack of the enforcement of our existing laws by a spineless administration that has placed the people of this nation in jeopardy.

It is a lack of enforcement of law by authorized officials that has started the demand for legalized hangings. It is the jackass stunts of the incompetent parole board that is encouraging the demand of mob-law on the class of Schaefer-Hanke malefactors. A lack of enforcement of law is as bad as a non-enactment.—Anoka Union.

Fred Hadley, in the Winnebago Enterprise, declares that "if the speed mania keeps on they will have to patrol the highways with hearses." And what about the road hog, Mr. Hadley? What are we going to do with him? There are so many of them that would shove us off the road that we wouldn't be able to go it alone in a hearse unless it had accommodations for two or three.

Minnesota needs a parole board just about as much as a fish needs a raincoat, says the Beaudette Region. When a criminal is sentenced to Stillwater he should be compelled to confine his meals to government cooking and his sleeping or steel-riveted boudoirs until either he or his sentence has expired.

VEGETABLE SHOW IN NEAR FUTURE

Co-Operative Move to Advertise Resources of the County.

A vegetable show will be held in the near future in the Auditorium at Thief River Falls. This is a co-operative move between farmers and business men to bring before the proper parties the advantages of the resources of Pennington County. The plan is to get everyone tributary to Thief River Falls, whether Pennington or Marshall, to interest themselves in the welfare of the county at large.

This year, particularly, we know that the products of agriculture that are raised here are extremely low in price, whereas in many parts of the country where fruit and vegetable raising is carried on, the people are receiving high prices for their products. This section can and does raise some of the finest vegetables in the state. The trouble heretofore has been that none of us have known to what extent these products are being raised in this vicinity and even though some very fine exhibits are shown at the County Fair, no accurate data as to where they were raised and the amount produced has ever been recorded. The Commercial Club plan is to secure in the next few weeks as fine an exhibit of vegetables and fruit as they can secure and complete information as to where these products are being raised and to what extent. From the total exhibit they will select and preserve some of the best for exhibition purposes, in order to demonstrate to representatives of canning factories that vegetables can be grown in this section. During the fall and winter photos and complete information of these products will be taken and sent out to different companies who have asked for information relative to the establishment of factories.

To secure the very best exhibits possible the club is offering $50 in premiums and the Merchants' Association a like sum, to be awarded to the exhibitors.

THINGS NEW AND NOVEL IN BANNER

Feminine Fancies Described in Interesting Department of Paper.

No one doubt that the women of Goodridge are right up to the minute, but did any one ever stop to think that many of the little tips in dress, jewels, procedure, household efficiency and a thousand other little things which distinguish the capable and alert woman, comes from the department in The Banner designed just for that purpose.

Everything in these departments is worth reading, and many of the articles are of permanent value and worthy of being preserved. And besides, something new and interesting is brought out every week.

YOUNG PEOPLES SOCIETY TO MEET AT LUTHERAN CHURCH

The Young People's Society will meet September 20th at the Norwegian Lutheran church. The program will be as follows:

Opening address by the president, [illegible] Aakre and Myrtle [illegible] Erickson, song; Hazel Thoreson, song; group of girls.

After the rendition of the program a business meeting of the society will be held.

It is only a few years ago, says the Milaca Tribune, that gasoline was selling at about 10 cents per gallon while now it is around 25 cents per gallon. [illegible] cents a gallon wholesale. This year crude oil brings around $2 a barrel and gasoline remains about the same. It is hard to reconcile these figures, and the only solution is that the price of gasoline is too high. The public appears to have been plundered for years, but nobody seems to do anything about it.

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

200 ACRES OF WHEAT IN BOTTINEAU GOES 40 BUSHELS TO THE ACRE

BOTTINEAU, N. D.—The best wheat crop yield reported thus far in Bottineau county comes from L. J. Dorr, residing just north of Souris, whose 200 acres of Marquis wheat yielded 40 bushels to the acre. Mr. Dorr, who has a large acreage of wheat, states that his entire crop of several hundred acres average approximately 32 bushels to the acre.

FORMER POSTMASTER AT BEMIDJI IS KILLED

BEMIDJI—Anton Erickson, aged 61, formerly postmaster here, was killed while returning in an automobile from a trip into the country. The machine turned over on a steep embankment as it struck the pavement leading into the city. Erickson is survived by his widow, one son and two daughters. Omar Olson, who was driving the car, had his right leg badly hurt when the car upset, but Peter Bergnan and Nels Lund of Black Duck, who were also in the machine, were uninjured.

FORD FIRES WORKERS [illegible] USING INTOXICANTS

DETROIT, MICH.—The 70,000 men employed by the Ford Motor company [illegible] wine and beer alone or lose their jobs. Drink among certain employees recently had caused accidents in the plants, the manufacturer said.

"From now on it will cost a man [illegible] beer, wine or liquor on his breath or to have any of these intoxicants on his person or in his home," Mr. Ford's notice said.

Making 20 Years of Racing Serve Car Owners Today

IN the early days of automobile contests, Barney Oldfield—out to win every race—studied tires. His consistent success led other drivers to ask for tires constructed to his specifications.

Twenty years of road and track victories—with a steady and increasing demand for tires as he built them—convinced Barney Oldfield that these speed tests pointed the way to a better tire for everyday use.

The enthusiastic reception of Oldfield Cords by the public proved he was right. Scores of the most prominent dealers in the country—and many thousands of car owners, experienced in the use of tires—bear witness by their decided preference that Oldfield is doing a bigger and better job of tire making.

This volume, handled in an effective way in every phase of manufacture and distribution, has resulted in price quotations far below what you'd expect on tires known to be better built and more enduring.

Practically every important race event for three years has been won on Oldfields. The Wichita Test Run in which an entire set of Oldfield Cords covered 34,525 miles on rough roads proves the mettle of the Most Trustworthy Tires Built in everyday driving.

The Master Driver and Tire Builder has given the public a new standard of tire wear and tire cost—a true economy that every car owner should know about.

Your Oldfield dealer has these facts—talk to him.

CHAPTER X—Continued.

—15—

Whatever had happened, Hammond had evidently not been easily captured. His countenance was somewhat battered, and the one captor who wore a collar was bleeding copiously from a cut cheek. The three turned as Gramont's car drove up, and Hammond gave an ejaculation of relief.

"Here he is now—"

"Shut up!" snapped one of his armed captors in an ugly tone. "Hurry up, Chacherre—get a rope and tie this gink!"

Gramont leaped from the car and strode forward.

"What's been going on here?" he demanded, sharply. "Hammond—"

"I found a dead man over in them bushes," shot out Hammond, "and these guys jumped me before I seen 'em. They claim I done it—"

IRWIN. MYERS

"I Found a Dead Man Over in Them Bushes," Shot Out Hammond.

"A dead man!" repeated Gramont, and looked at the three. "What do you mean?"

"Give him the spiel, Chacherre," growled one of them. Ben Chacherre stepped forward, his bold eyes fastened on those of Gramont with a look of defiance.

"The sheriff was here some time ago, looking for a stolen boat," he said, "and went off toward the Ledanois place. We were following, in order to help him search, when we came upon this man standing in the bushes, over the body of the sheriff. A knife was in his hand, and the sheriff had been stabbed to death. He drew a pistol and shot one of us—"

Gramont was staggered for a moment. "Wait!" he exclaimed. "Hammond, how much of this is true?"

"What I'm tellin' you, cap'n," answered Hammond, doggedly. "I found a man layin' there and was looking at him when these guys jumped me. I shot that fellow in the arm, all right, then they grabbed my gun and got me down. That's all."

The sheriff—murdered!

Into the mind of Gramont leaped that brief conversation which he had overheard between Ben Chacherre and the sheriff; the strange, unnatural silence which had concluded that broken-off conversation. He stared from Hammond to the others, speechless for the moment, yet with hot words rising impetuously in him.

Now he noticed that Chacherre and his two companions were watching him very intently, and were slightly circling out. He sensed an acquaintance among all these men. He saw that the wounded man had finished his bandaging, and was now holding his unwounded hand in his pocket, bulkily, menacingly.

Danger flashed upon Gramont—flashed upon him vividly and with startling clearness. He realized that anything was possible in this isolated spot—this spot where murder had so lately been consummated! He checked on his very lips what he had been about to blurt forth; at this instant, Hammond voiced the thought in his mind.

"It's a frame-up!" said the chauffeur, angrily.

"That's likely, isn't it?" Chacherre flung the words in a sneer, but with a covert glance at Gramont. "This fellow is your chauffeur, ain't he? Well, we got to take him in to Houma, that's all."

"Where's the sheriff's body?" demanded Gramont, quietly.

"Over there," Chacherre gestured. "We ain't had a chance to bring him back yet—this fellow kept us busy. Maybe you want to frame up an alibi for him?"

Gramont paid no attention to the sneering tone of this last. He regarded Chacherre fixedly, thinking hard, keeping himself well in hand.

"You say the sheriff was here, then went over toward the Ledanois land?" he asked. "Did he go alone, or were you with him?"

"We were fixin' to follow him," asserted Chacherre, confidently. This was all Gramont wanted to know—that the man was lying. "We were trailin' along after him when he stepped into the bushes. This man of yours was standing over him with a knife—"

"I was, too, when they found me—I was cuttin' me a fishpole," said Hammond, sulkily. He was plainly beginning to be impressed and alarmed by the evidence against him. Gramont only nodded.

"No one saw the actual murder, then?"

"No need for it," said Chacherre, brazenly. "When we found him that way! Eh?"

"I suppose not," answered Gramont, his eyes fastened thoughtfully on Hammond. The latter caught the look, let his jaw fall in astonishment, then flushed and compressed his lips—and waited. Gramont glanced at Chacherre, and launched a chance shaft.

"You're Ben Chacherre, aren't you? Do you work for Mr. Fell?"

The chance shot scored. "Yes," said Chacherre, his eyes narrowing.

"What are you doing here, then?"

For an instant Chacherre was off guard. He did not know how much—or little—Gramont knew; but he did know that Gramont was aware who had taken the loot of the Midnight Masquer from the luggage compartment of the car. This knowledge, very naturally, threw him back on the defense of which he was most sure.

"I came on an errand for my master," he said, and with those words gave the game into Gramont's hands.

There was a moment of silence. Gramont stood apparently in musing thought, conscious that every eye was fastened upon him, and that one false move would now spell disaster. He gave no sign of the tremendous shock that Chacherre's words had just given him; when he spoke, it was quietly and coolly:

"Then your master is evidently associated with Memphis Izzy Gumberts, who owns this place here. Is that right?"

Both Hammond and Chacherre's two friends started at this.

"I don't know anything about that," returned Chacherre, with a shrug which did not entirely conceal his uneasiness. "I know that we've got a murderer here, and that we'll have to dispose of him. Do you object?"

"Of course not," said Gramont, calmly. "Step aside and give me a moment in private with Hammond. Then by all means take him in to Houma. I'd suggest that you tie him up, or make use of handcuffs if the sheriff brought any along. Then you'd better take in the body of the sheriff also. Hammond, a word with you!"

This totally unexpected acquiescence on the part of Gramont seemed to stun Chacherre into inaction. He half moved, as though uncertain whether to bar Gramont from the prisoner, then he stepped aside as Gramont advanced. A gesture to his two companions prevented them from interfering.

"Keep 'em covered, though," he said, shifting his own rifle slightly and watching with a scowl of suspicion.

Gramont ignored him and went up to Hammond, with a look of warning.

"You'll have to submit to this, old man," he said, in a tone that the others could not overhear. "Don't dream that I'm deserting you; but I want a good look at this place if all three of them go away. They must not suspect—"

"Cap'n, look out!" broke in Hammond, urgently. "This here is a gang—the whole thing is a frame-up on me!"

"I know it—I was present when the sheriff was murdered; but keep quiet. I'll come to Houma later tonight and see you." He turned away with a shrug, as though Hammond had denied him some favor, and lifted his voice. "Chacherre! How are you to take this man into town? How did you get here? Will you need to use my car?"

"No." The Creole jerked his head toward the barn. "I came in Mr. Fell's car—it's got a sprung axle and is laid up. We'll take him back in another one."

"Very well," Gramont paused and glanced around. "This is a terrible blow, men. I never dreamed that Hammond was a murderer or could be one! You don't know of any motive for the crime?"

They shok their heads, but suspicion was dying from their eyes. Gramont glanced again at his chauffeur.

"I'll not abandon you, Hammond," he said, severely, coldly. "I'll stop in at Houma and see that you have a lawyer. I think, gentlemen, we had better attend to bringing in the body of the sheriff, eh?"

The wounded man dodged into the barn and returned with a strip of rope. Chacherre took this and firmly bound Hammond's arms, then forced him to sit down and bound his ankles.

"You watch him," he ordered the wounded member of the trio. "We'll get the sheriff."

Allowing Chacherre and his companion to take the lead, Gramont went with them to the place where the murdered officer lay. As he went, the conviction grew more sure within him that, when he lay there by the rivulet, he had actually heard the last words uttered by the sheriff; that Chacherre had committed the murder in that moment—a noiseless, deadly stab! That Hammond could or would have done it he knew was absurd.

They found the murdered man lying among the bushes. He had been stabbed under the fifth rib—the knife had gone direct to the heart. Chacherre announced that he had Hammond's knife as evidence and Gramont merely nodded his head.

Lifting the body between them, they bore it back to the barn.

"Now," said Gramont, quickly, "I'm off for Houma—if I don't miss my road! You men will be right along?"

"In a jiffy," said Chacherre promptly.

Gramont climbed into his car and drove away. He had no fear of anything happening to Hammond; the evidence against the latter was damning, and with three men to swear him into a hangman's noose, they would bring him to jail safe enough.

"A clever devil, that Chacherre!" he thought, grimly. "We're up against a gang, beyond any doubt. Now, if they don't suspect me—"

He turned in at the Ledanois gate, knowing himself to be beyond sight or hearing of the Gumberts place. He drove the car away from the house, and into the thick of the densest bush-growth that he could find, where it was well concealed from sight. Then, on foot, he made his way along the bank of the bayou until he had come to the rivulet where oil showed.

Here he paused, concealing himself and gaining a place where he could get a view of the Gumberts land. He saw Chacherre and Hammond there beside the body of the sheriff; the other two men were swinging open the barn door. They disappeared inside, and a moment later Gramont heard the whirr of an engine starting. A car backed into the yard and halted.

The three men lifted the body of the sheriff into the tonneau. Chacherre took the wheel, Hammond being bundled in beside him. The other two men climbed in beside the body, rifles in hand. Chacherre started the car toward the road.

"All fine!" thought Gramont with a thrill of exultation. "They've cleared out and left the place to me—and I want a look at that place."

Suddenly, as he stood there, he remembered the slight "plump" that he had heard during that interminable silence which had followed the conversation between the sheriff and Ben Chacherre. It was a sound as though something had fallen near him in the soggy ground.

The remembrance startled him strangely. He visualized an excited murderer standing beside his victim, knife in hand; he visualized the abhorrence which must have seized the man for a moment—the abhorrence which must have caused him to do something in that moment which in a cooler time he would not have done.

A Low Exclamation of Satisfaction Broke From Him as He Found What He Sought.

Gramont turned toward the little marshy spot where he had lain listening. He bent down, searching the wet ground, heedless that the water soaked into his boots. And, after a minute, a low exclamation of satisfaction broke from him as he found what he sought.

(TO BE CONTINUED.)

Extend to Include Human Nature.

A gentleman who, we imagine, bears a mental resemblance to our colleague the Nomad, left the crowded city the other day for a tramp over the hills. On his return he remarked to a friend who asked him what kind of a time he'd had, that he was glad to get back to the haunts of men. "The day was perfect," he went on to explain, "but I had a raging toothache, and the truth is I never swear in the presence of nature." Such respect for our dear other mother is commendable and we earnestly advise our golfers to adopt the same rule.—Boston Transcript.

RADIO

COUPLING CONTROLS THE OSCILLATIONS

How the Vacuum Tube Radio Receiver Can Be Made Regenerative.

If it were not for the bends in the characteristic curve, the three-electrode vacuum tube could not be made to produce oscillations of constant amplitude when self excited. It is easily seen that if the characteristic curve were a straight line, the operation of the tube would be so unstable as to render the tube useless as an oscillation generator. A third condition of relative values of potential variations can exist, that is, when the grid circuit potential variations are less than the potential variations existing in the tuned circuit between the points X and Y. When this condition exists, the oscillations in the tuned circuit cannot be maintained but the decrease in amplitude in the tuned circuit oscillations will reduce the grid excitation, and the tube will finally cease to oscillate.

Thus the coupling that exists between the plate circuit through the tuned circuit inductance L and the grid circuit through the inductance l, control the conditions that will or will not cause the tube to act as a generator of undamped oscillations.

Suppose that the coupling existing between the two coils L and l is such that the tube is generating oscillations. If the coupling be reduced, that is if the coils be moved farther apart it will require greater and greater variations in potential in the coil L to maintain the same variations in the coil l. This weakening of the plate to grid coupling causes stronger oscillations in the plate circuit. The limit is reached when the plate current reaches the saturation point. After this point is reached, further weakening of the coupling cannot increase the plate current variations so that the transfer of energy from the plate to grid circuit now decreases, and any further reduction in coupling will cause such a reduction in excitation that finally the tube will cease to function.

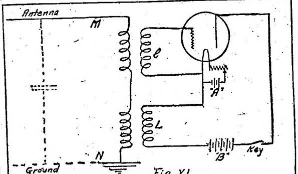

Fig XL

There is, then, a certain degree of coupling at which the tube will start to oscillate, a certain degree of coupling which will produce maximum oscillation in the plate circuit and another degree of coupling at which the tube will cease to oscillate.

From the foregoing short discussion it can be seen that a three electrode vacuum tube can be made to function as a self excited generator of an undamped alternating difference of potential at radio frequency, or by exciting the tube externally by, for example, an incoming radio signal, the amplified plate circuit variations in potential can be fed back into the grid and held to further increase the amplitude of the plate circuit variations. In the former conditions the tube is used in continuous wave telegraphy and in radiophone transmitters.

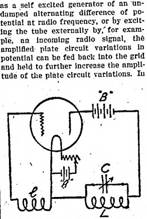

Fig XXXIX

When operating under the latter conditions, the tube is used in "regenerative" circuits of radio receivers to produce enormous amplification. When used in radio receiving circuits, of such kind that energy is transferred from the plate circuit to the grid circuit, we have the famous "Armstrong regenerative" or "feed back" circuit which is so generally used at the present time.

Any vacuum tube radio receiver can be made regenerative by arranging the circuit in such a manner that the plate circuit energy is fed back into the grid circuit. This may be accomplished by either magnetic or electrostatic coupling.

In Figure XXXVI the tube was made self exciting by coupling an inductance C connected in the grid circuit to L, an inductance in the tune plate circuit. A development of this circuit is shown in Figure XXXIX.

Here the energy, instead of being directly coupled from the plate to the grid circuit, is first necessary to an intermediate circuit, M-N, and then to the grid circuit. It is necessary of course, that the circuit X-Y and M-N have the same natural period, that is to say, they must be tuned to the same frequency. If the frequency is relatively high, the condenser C can be dispensed with, and the capacity of the plate to filament used as a portion of the oscillation plate circuit.

The circuit as shown in Fig. XXXIX is inherently the circuit used in low power undamped or continuous wave radio telegraph transmitters. By substituting in the oscillating circuit M-N the capacity of an antenna with respect to the ground, we have the continuous transmitter shown in Fig. XL.

By placing a key in the "B" or plate battery to turn the plate battery off and on the start and stop, the tube oscillating dots and dashes can be sent out by varying the coupling between the grid and plate coils l and L and the antenna circuit, the transmitter is adjusted for maximum power output. To adjust the wave length the value of the antenna inductance is varied.

SUMMER SLUMP IS BENEFIT

Both Manufacturers and Dealers in Radio Apparatus Are Learning a Needed Lesson.

"The slump in the radio business during the summer months is a boon to the entire industry," declares Joseph D. R. Freed, in an interview published in Radio Merchandising. "Both the radio dealers and the more stable and serious manufacturers are learning a well-needed lesson from this slump," he says. "For example, dealers are beginning only now to realize the truth of the fact that they cannot afford to carry a large and heterogeneous lot of odds and ends in radio apparatus in the hopes that they will be able to dispose of it. They are learning now, by a stern process, that hysterical overstocking of apparatus in an effort to meet the spasmodic demand of radio 'faddists' is not going to prove profitable in the long run. They are beginning to realize that dependable apparatus, bought to meet the varying radio conditions, is more to be relied upon than unknown apparatus that looks good in the catalogue, and is merely an ornament upon the shelves.

"Manufacturers, too, are learning their lesson from this slump. They are realizing that the time of 'order taking' is past and that the time of 'order getting' is here. They are learning now, if they didn't know it before, that in order to sell radio apparatus, they must give good value, serviceable merchandise, attractive prices and real service and dealer co-operation."

SPARKS

It is reported Doctor Marconi has obtained a speed of 200 words a minute in transoceanic radio messages.

Utah telephone companies are fighting the use of radio for commercial purposes. The old story of trying to sweep back the waves.

A San Francisco paper prints a funny picture of a young woman suing for divorce on the ground of "radio." She told the judge her husband hadn't noticed her for three weeks.

It is said the youngest licensed radio operator lives in Los Angeles, in the person of Bobbie Garcia, aged eight years. He is the son of an electrician and it is claimed helped to build the first radio station on the Pacific coast.

Three children were recently burned to death at Aiken, S. C., in a fire resulting from a short circuit in a radio transformer. The national board of underwriters is sending out warnings of the necessity for protecting radio wires from lightning and light and power currents.

Radio is co-operating with the farmers' granges in the East, giving the latest prices for fruits and vegetables, which are posted for ready reference. The farmers claim false quotations have been given them heretofore by unscrupulous dealers in the big cities, and they have in this way been defrauded of large sums.

CHANGED HER MIND SUDDENLY

Small Runaway Probably Had Good Reasons for Withdrawing Objections to Going Home.

Geneva, age three, had run away to visit her aunt, who lived across the street. The aunt visualizing accidents, in which figured little children and automobiles, lectured the little girl.

Then the aunt announced her intention of taking the runaway home at once as a punishment. All entreaties were in vain, the little guest was going to stay, and finally her aunt picked her up, her burden strenuously objecting, and started to the door. There the little girl saw her father just leaving his home on the trail of the fugitive.

Geneva's strident cries of objection died away as she stammered, "I—I must hurry back."—Exchange.

The Cuticura Toilet Trio.
Having cleared your skin keep it clear by making Cuticura your every-day toilet preparations. The Soap to cleanse and purify, the Ointment to soothe and heal, the Talcum to powder and perfume. No toilet table is complete without them.—Advertisement.

The Traitor.

Georgette—Mabel is an attractive girl, isn't she?

Cora—Yes, but you can't trust her.

Georgette—No?

Cora—No. We girls out at the tennis club all bought knickerbockers at the same time, but no one had the nerve to wear 'em out on the courts. So we got together and agreed to come out in knickerbockers all at the same time on a certain Sunday—safety in numbers, you know. And they all stuck to the agreement except Mabel.

Georgette—Backed out, did she?

Cora—No, she came out in hers the day before.—Kansas City Star.

Design Poppet-Valve Gear.

In an effort to overcome the faults common to the standard types of link-motion valve gears used on locomotives, an Italian engineer has designed a new gear that, in trials, has shown marked economy of coal and water for the power developed, says an illustrated article in Popular Mechanics Magazine. In the new system poppet valves are used to avoid the faults of both the flat slide valve and the piston valve. Advantages claimed are that no strangulation of the steam occurs and more effective use of the power of expansion of the steam is possible.

C109

These Days Are All Alike.

On the Pacific Island of Nauru the sun rises at 6 and sets at 6 the year around; there is no daylight-saving there. The only change of seasons is when the "westerlies" come in the rainy season. These tropical rains descend with great violence. In the year following the three years' drought, there was a rainfall of 150 inches, 10 inches falling in one night.

Might Have Been Accidental.

"You speak of my poem as an 'effusion.'"

"Why not?" snarled the editor.

"I wrote it laboriously. It was not dashed off."

"I'm willing to admit that it shows some evidence of thought and application on your paart. In twelve stanzas of four lines each you made twenty-four attempts to rhyme. In two instances you succeeded."—Birmingham Age-Herald.

The average girl is ambitious to make a name for herself, but she usually ends by accepting some man's.

Was This Blackmail?

Young Man—Sir, I have come to demand the hand of your daughter.

Father—Sir! What do you mean, you young—

Young Man—Her hand, sir, is the price of my silence.

Father—My! This insolence is unbearable. George, call a policeman.

Young Man—One moment, sir. I know nothing of your affairs, and do not for a moment imagine that you have been guilty of any wrongdoing. The silence to which I alluded is of another sort. I am the young man who practices on the cornet in the boarding house next door.

Father—Oh! Take her, my boy, and be happy.—London Tit-Bits.

Philosopher's Nickname.

The Patriarch of Ferney was a name given to Voltaire (1694-1778), the French philosopher, of whom Thomas Carlyle said, "Voltaire is the Eighteenth century," because he retired to the village of Ferney, near Geneva, Switzerland, where he produced much of his work.

SPRING WHEAT HIGHER

While Durum Declines Spring Wheat Soars.

U. S. Bureau of Markets, Washington, D. C., for week ended September 8, 1922.

GRAIN: The grain markets had a firmer undertone during the week and prices closed higher. Chicago December wheat up ⅜c; Chicago December corn up 2c. Strength in corn, improved foreign demand, and buying by exporters were main market influence. On the 8th wheat prices averaged higher early on strength in Liverpool and improved foreign demand but evened up later for government crop report. Spring wheat production of 277,000,000 bus. is forecast in the September 8th crop estimate. Compared with 208,000,000 bus. last year. The corn crop is forecast at 2,875,000 bus, compared with 3,080,000 bus. last year. Closing prices in Chicago cash market: No. 2 red winter wheat $1.05; No. 2 hard winter wheat $1.03; No. 2 mixed corn 63c; No. 2 yelolw corn 63c; No. 3 white oats 37c. Average farm prices: No. 2 mixed corn in central Iowa 50½c; No. 2 hard winter wheat in central Kansas 86c. Closing future prices: Chicago December wheat $1.02⅝; Chicago December corn 57¾c; Minneapolis December wheat $1.03¼; Kansas City December wheat 95c; Winnipeg December wheat 95⅝c.

HAY: Hay market generally weak. Demand very limited. Receipts largely of only fair quality. Poor hay selling at wide discounts under current quotations. Quoted Sept. 6th: No. 1 timothy New York $25.50; Philadelphia and Pittsburg $19; St. Louis $18.50; Memphis $20; Atlanta $23.50. No. 1 alfalfa Memphis $23. No. 1 Prairie St. Louis $15.

DAIRY PRODUCTS: Butter markets firm. Light receipts and scarcity of fine grades of considerable influence. Reports from creameries indicate production show relatively heavier decrease. Closing prices, 92 score butter: New York 39c; Chicago 38½c. Cheese markets advanced slightly during the week in line with trading on Wisconsin cheese boards Monday. Business slow but steady following advances. Prices at Wisconsin primary chees emarkets Sept. 7th: Twins 19¾; Daisies 20c; Double Daisies 19¾c; Young Americas 19c; Longhorns 19¾c; Square Prints 21¼c.

LIVESTOCK AND MEATS: Chicago hog prices showed mixed movements for the week, heavy hogs and medium lights ranging from 5 to 35c higher, whereas hogs weighing from 175 to 225 pounds were generally 15 to 20c lower. Beef steers 10 to 25c lower and butcher cows and heifers weak to 15c lower; feeder steers and veal calves unchanged. Fat lambs steady and feding lambs steady to 25c lower, yearlings 25 to 50c lower and fat ewes 50 to 75c lower per 100 lbs. On Sept. 8th hogs opened 15 to 25c higher but closed weak with the advance partly lost. Few good and choice steers were offered, medium grades generally steady. Butcher cows and heifers and stockers and feeders unchanged. Fat lambs firm and 10 to 25c higher; feeding lambs and sheep generally steady. Sept. 8th Chicago prices: Hogs, top, $9.75 bulk of sales, $6.90 to $9.70, medium and beef steers $7.90 to $10.40; butcher cows and heifers $3.65 to $9.25; feeder steers $5.50 to $8; light and medium weight veal calves $11.25 to $12.75; fat lambs $12 to $13; feeding lambs $11.50 to $12.75; yearlings $8.25 to $11; fat ewes $3 to $6.75. Stocker and feeder shipments from 12 important markets during the week ending Sept. 1st were: Cattle and calves 126,294; hogs 4,148; sheep 86,539. With the exception of pork loins eastern wholesale fresh meat prices were not materially changed for the week. Good beef was steady and medium grades $1 higher; veal lamb and mutton ranged from steday to $1 lower, fresh pork loins generally $2 to $3 higher, light weights advancing most. Sept. 8th prices good grade meats: Beef $15 to $17; veal $15-19; lamb $23-27; mutton $9-15.50; light pork loins $25-29; heavy loins $13-20. On Sept. 8 beef was steady to 50c higher, veal weak $1 to $2 lower.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 1.22@1.31; No. 1 northern, 1.06@1.14; No. 1 dark hard, 1.12@1.14; No. 1 hard, 1.00@1.07. No. 1 am. dur. 94c@95c; No. 1 durum, 82c@99c. Corn No. 2 yellow, 57c@58c. Oats No. 2 white, 32@34c. Barley, choice to fancy, 53@55c. Rye No. 2, 67c. Flaxseed No. 1 2.34@2.36.

South St. Paul Live Stock.

So. St. Paul—Steers, $3.25@4.00; veal calves, $4.50@10.50; cows and heifers, $3.50@5.00; hogs, $7.00@9.00; sheep and lambs, $6.00@7.00.

EGGS—Country receipts, rots out, per case, $7.20; No. 1 candled, good extras, free from rots, small dirties and checks out, per dozen, 27c; small dirty and held stock, rots and leakers out, dozen 15c; checks, rots and leakers out, 14c; quotations on eggs include cases.

BUTTER—Extras, 37c; firsts, 33c; packing stock, fresh, sweet, 28c; stale goods, 5c; grease, 1c.

Broken Auto Stops Runaways.

Glasgow, Ky.—Carolyn Shuster, 18, daughter of W. Morgan Shuster, pres. of the Century Publishing Co., New York, and William Morris, 20, son of a Glasgow merchant, were found at Goodnight village.

Office Wrecked in Blast.

Mineapolis—Fire believed to have been caused by a short circuit in the light wiring caused an explosion which wrecked the office of the Standard Sausage company, and drove out five persons living in apartments above.

Whole System Is Benefited by Tanlac

Thousands of frail, nervous people and convalescents everywhere have testified to the remarkable power of Tanlac in bringing back their health, strength and working efficiency. It seems to quickly invigorate the constitution, and is a powerful foe of weakness. Mrs. George G. Owen, of Salem, Oregon, says:

"My nerves were upset and the little I ate wasn't enough to keep up my strength, so I lost weight and became so weak it seemed I had no energy at all. Tanlac restored my health completely, and I gained twelve pounds in weight."

There is not a single portion of the body that is not benefited by the helpful action of Tanlac. It enables the stomach to turn food into healthy blood, bone and muscle, purifies the system and helps you back to normal weight. Get a bottle today at any good druggist.—Advertisement.

Apparently.

"I don't see how the people of Russia can stand for all this hashed up state of affairs."

"Well, you can get on a train and go anywhere the train is going. That seems to make up for many hardships."—Louisville Courier-Journal.

Understanding the people of our own time is a real job.

LANDLORD WANTED TOO MUCH

Under the Circumstances, Few Men Could Have Been Expected to Carry Out Threat.

"Sir," said a colored man who entered a police station, "I came here to tell you dat I was gwine to suicide."

"For what reason?" asked the sergeant at the desk.

"Bekase dar was no mo' joys at my house. Am it agin de law to jump into de river?"

"No, not exactly," was the reply. "But if you get out again that is against the law, and you also get very wet, and apt to catch cold over it. You had best find some empty old house and shoot yourself."

"Yes, sir, dat am de way," answered the colored man.

He went out to return in an hour to say:

"You see, I didn't suicide after all. I found de empty house and also found de landlord dar, and he wanted $75 a month rent and $10 extra fur holdin' an inquest."

Society to Aid Bird Study.

Thirty thousand dollars has been received by the National Association of Audubon Societies to be used in aiding teachers and pupils in the study of wild birds. Teachers who form clubs are to be given free material to help them in their work. More than 1,700,000 children are already enrolled in schools throughout the United States and Canada. The headquarters of the association is in New York city.—Popular Mechanics Magazine.

CRAMPS, PAINS AND BACKACHE

St. Louis Woman Relieved by Lydia E. Pinkham's Vegetable Compound

St. Louis, Mo.—"I was bothered with cramps and pains every month and had backache and had to go to bed as I could not work. My mother and my whole family always took Lydia E. Pinkham's Vegetable Compound for such troubles and they induced me to try it and it has helped me very much. I don't have cramps any more, and I can do my housework all through the month. I recommend your Vegetable Compound to my friends for female troubles."—Mrs. DELLA SCHOLZ, 1412 Salisbury Street, St. Louis, Mo.

Just think for a moment. Lydia E. Pinkham's Vegetable Compound has been in use for nearly fifty years. It is prepared from medicinal plants, by the utmost pharmaceutical skill, and superior methods. The ingredients thus combined in the Compound correct the conditions which cause such annoying symptoms as had been troubling Mrs. Scholz. The Vegetable Compound exercises a restorative influence of the most desirable character, correcting the trouble in a gentle but efficient manner. This is noted, by the disappearance, one after another, of the disagreeable symptoms.

Children Cry For Fletcher's CASTORIA

Special Care of Baby.

That Baby should have a bed of its own all are agreed. Yet it is more reasonable for an infant to sleep with grown-ups than to use a man's medicine in an attempt to regulate the delicate organism of that same infant. Either practice is to be shunned. Neither would be tolerated by specialists in children's diseases.

Your Physician will tell you that Baby's medicine must be prepared with even greater care than Baby's food.

A Baby's stomach when in good health is too often disarranged by improper food. Could you for a moment, then, think of giving to your *ailing* child anything but a medicine especially prepared for Infants and Children? Don't be deceived.

Make a mental note of this:—It is important, Mothers, that you should remember that to function well, the digestive organs of your Baby must receive special care. No Baby is so abnormal that the desired results may be had from the use of medicines primarily prepared for grown-ups.

MOTHERS SHOULD READ THE BOOKLET THAT IS AROUND EVERY BOTTLE OF FLETCHER'S CASTORIA

Gold Production in Russia.

The Russian trade delegation reports that Siberia produced during the first four months of the present year over 16 poods (36.1 pound per pood) of gold according to the Engineering and Mining Journal-Press of New York. This quantity is five times greater than the total output for 1921. Gold is worth approximately $10,800 per pood so that the total value is $172,800 or at an annual rate of only a little more than $500,000. This compares with a production of $22,000,000 in 1916 since which time the output has fallen steadily until this slight revival. The gold syndicate has succeeded in restarting the gold mines at Elisatevinsk, Alevandrovsk, Ivanovsk and Youthnotalginsk, which will insure an output of not less than three poods monthly.

Not to Notice It.

"John," said Old Man, thoughtfully, "I don't approve of you running around nights, with all kinds of flappers and flirts. Why don't you settle down and go with some particular girl?" "That's it, dad," said the kid, blithely, "they ain't any of 'em so very particular these days."—Richmond Times-Dispatch.

Willie Did His Best.

Teacher—Willie, who was Cyclops?

Willie—Please, teacher, he was the man who wrote the cyclopedia.

SIMPLE MATTER TO ARRANGE

All Colored Woman Had to Do Was to Go Home and Wait for Her Next Husband.

A colored woman entered a police station and asked the sergeant at the desk:

"Does you gin any advice here?"

"Sometimes we do," was the reply.

"Den I want you to gin me some. I has got a husband, but he don't amount to much. He has got it in his head dat he wants to go up in de air wid one of dose flyin' machines. If he goes up am he liable to fall?"

"Yes, he is sure to," replied the sergeant.

"An' will be killed?"

"Yes, certainly he will be killed."

"An' den I will be a widow?"

"Yes."

"An' arter a y'ar some smart cull'd man will want to marry me. Now, den, would you encourage my husband to fly?"

"Yes, I think so."

"All right, den," said the colored lady as she made for the door. "I will go right home an' encourage my husband to go up among de clouds an' den I will sit down and wait fur my next husband."—Exchange.

Couldn't Steal His Thunder.

Little Michael had been on a visit to his grandmother, who had not been very well.

His father had come to take him home and Michael, as he was leaving, felt that he must be polite.

So he looked up at his grandmother and said:

"Good-by, granny. I am so sorry you have been ill!"

"And I'm sorry, too!" his father put in.

Michael felt that this lessened the merit of his remark. So he continued:

"But my sorry is much bigger than his sorry, granny!"

Commercial Arbitration.

Commercial arbitration is making progress in Finland. A court of arbitration at Helsingfors, appointed by the Finnish Central Chamber of Commerce, began with one case in 1911 and has had a steady increase in business to thirty cases in 1921. About three-quarters of the cases turn on trade disputes and the other third raise questions of trade customs.—The Nation's Business.

A merry heart goes all the day, a sad tires in a mile.

Confirmation Services.

English services and confirmation at the old schoolhouse September 17th. Rev. Larson, pastor.

Young Friends Entertained

Misses Marie Wayne and Eunice Thoreson entertained a number of their girl friends at the Jay Payne home Monday afternoon, the occasion being Miss Marie's ninth birthday and Miss Eunice's 12th birthday. They spent the afternoon playing indoor games and at 6 o'clock a delicious lunch was served. The invited guests were: Misses Vivian Thoreson, Mabel Johnson, Ida and Hattie Bundhund, Violette Edseth, Bergeta Larson, Ruth McDonald, Hazel Thoreson, Sarah Vaughan and Tina Gaudland.

It is not so much the inconvenience and uncertainty of the winter supply of fuel that annoys us as it is the knowledge that a gang of highwaymen are permitted to pull the deal—and get away with it.—Anoka Union.

PUBLIC SALE

Circumstances compel me to quit farming and I will sell at a Public Sale, on

MONDAY, SEPT. 25, 1922

at the Southwest Quarter Section 10, Township of Steenerson, being a 1-2 miles east and 1 1-2 miles north of Thorhult, without reserve, the following property:

4 Head of Horses

1 Bay Mare, 5 yrs. old, wt. 1,100 lbs.
1 Bay Mare, 4 yrs. old, wt. 1,100 lbs.
1 Bay Gelding, 4 yrs. old, wt. 1,500 lbs.
1 Buckskin Gelding, 4 yrs. old, weight 1,500 lbs.

10 Head of Hogs

2 Poland China Boars, 5 months old.
2 Poland China Sows, 5 months old.
4 Boars, 5 months old.
1 Full Blooded Poland China Sow, 18 months old.
1 Belted Sow, 18 months old.

33 Head of Cattle

1 Red Cow, 9 yrs. old, fresh December
1 Red Cow, 9 yrs. old, fresh December
1 Red Cow, 4 yrs. old, fresh December
1 Red Cow, 4 yrs. old, fresh January
1 Spotted Cow, 7 yrs. old, fresh Dec.
1 Red Cow, 9 yrs. old, fresh April
1 Red Cow, 4 yrs. old, fresh May
1 Jersey Cow, 2½ yrs. old, fresh May
1 Graded Red Pole Bull, 3 yrs. old
3 Red Yearling Steers
1 Spotted Cow, 6 yrs. old, fresh Dec.
1 Brindle Cow, 4 yrs. old, fresh Dec.
1 Brindle Cow, 7 yrs. old, fresh Dec.
1 Guernsey Cow, 5 yrs. old, fresh April
1 Spotted Cow, 7 yrs. old, fresh May
1 Spotted Cow, 3 yrs. old, fresh April
1 Guernsey Cow, 9 yrs. old, fresh Oct.
1 Red Cow, 8 yrs. old, fresh May
1 Red Yearling Heifer
6 Heifer Calves.
6 Steer Calves.

Farming Machinery and Household Goods

1 Deering Binder, 6-foot cut.
1 Disc Harrow, 12-disc, nearly new.
1 16-inch Walking Plow, nearly new.
1 14-inch Breaking Plow.
1 10-foot Hay Rake.
1 Wide Tire Truck Wagon.
1 Set of Heavy Working Harness.
1 17-barrel Galvanized Water Tank.
1 Economy Cream Separator.
About 16 Tons of Tame Hay.
About 150 Bushels of Oats.
1 Straw Stack.
12 M. Feet of Lumber.
1 Milwaukee Mower, nearly new.
1 2-section Steel Harrow, nearly new.
1 14-inch Walking Plow.
1 3-horse Shoe Drill.
1 Wide Tire Wagon, nearly new.
2 Set of Bob Sleighs, 7-foot runner.
1 Medium Set of Harness.
1 Tank Heater.
2 Hayracks.
2 Wagon Boxes.
About 17 Tons of Wild Hay.
About 75 Bushels of Barley.
1 Grindstone.
1 Monarch Range.
1 Wood Heater.
1 Cupboard.
1 Oak Dining Table.
8 Oak Chairs.
1 Writing Desk, 1 Library Table, Chairs and other household goods.

75 Chickens, Some Fence Wire, Roofing, Paint, Potatoes, Pole Wood and Other Articles Too Numerous to Mention.

FREE LUNCH AT NOON. **Sale to Commence at 10 o'Clock Sharp.**

TERMS: All sums under $10.00 cash; above that 5 per ct. discount for cash, or bankable papers will be taken, due on Nov. 1st, 1923

D. H. FISH, Owner

ALBERT ANVINSON, Auctioneer.

VOL. XVI. NO. 27 FRIDAY, SEPTEMBER 22, 1922. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA $1.50 PER YEAR.

State Board of Health

LIGHTNING K[illegible] TWO; MU[illegible] DAMAGE

Heavy [illegible]rical Storm on Sunday Does Injury to Crops and Property.

A heavy electrical storm which swept Pennington county and this part of the Northwest Sunday proved fatal to two persons and did a large amount of damage to property and crops. The storm, which started at about 3 o'clock in the morning, continued unabated until the afternoon.

Hans Hermanson, pioneer Thief River Falls resident, who homesteaded land several years ago in the vicinity of Grygla, was instantly killed when a lightning bolt struck his home at about noon Sunday. He was reading the Sunday newspapers when the bolt struck and he fell dead. Mrs. Hermanson also sustained injuries but has since fully recovered.

Tellef Austad, a 15-year-old lad, residing near Mayfield, was killed Sunday. Young Austad was out in the pasture driving home some cattle and he was found shortly after by his parents. He had apparently been killed instantly and was found shortly after by his parents.

Several buildings in Thief River Falls were struck during the day, only one of which took fire, the residence of Philip Lundberg catching fire and partially destroyed before the fire department arrived to put out the blaze. Mrs. Lundberg and her children were home alone at the time, Mr. Lundberg being employed in North Dakota.

Lightning also struck the residence of C. W. Nelson, demolishing the chimney and burning a hole in the roof. Electric meters were burned out in several homes, but in each case the property damage was slight.

Damage to crops in Pennington county is said to have been heavy, much grain being still in shocks and awaiting threshing. The heavy rain, which continued for several hours, thoroughly soaked everything, and it is believed threshing has been set back several days.

Owing to the large amount of potatoes still unharvested, many of the spuds are rotting. The ground was in a moist condition before the advent of the storm and the latest soaking has aggravated the situation. Some communities report potatoes planted in low land will be a complete loss.

The little boy thinks of Hades as a place where soap ads threaten on every street.

There is a big and vital difference between the man who cant' get mad and the man who won't.

If you cant' hit a home run, maybe you can sacrifice—and games are won by both.

Fall Term of Agricultural School to Open October 9

The fall term of the Northwest School of Agriculture, Crookston, is to open October 9. Fully 90 per cent of last year's students will return and an unusually heavy registration of new students is expected. One new instructor in piano and violin will be secured to assist Miss Louisa Pederson, head of that department. A. M. Pilkey of Indian Head, Sask., has assumed the poultry work, succeeding H. E. Hoberg, who will complete his course at the Minnesota Agricultural College. Miss Anne Simley will have charge of the English work. All the other faculty members will be the same as last year.

DEMONSTRATION OF FINE POULTRY HERE

Palmer Tvedt's Chickens to Promenade at Show This Afternoon.

This is poultry week and demonstrations have been held during the week in various parts of the county. This evening a demonstration will be given at Palmer Tvedt's poultry yard and a meeting will be held in the schoolhouse this evening, at which time Mr. Stanchfield will deliver an address.

The annual chicken supper was held last night in the basement of the Norwegian Lutheran church at Thief River Falls. Poultry breeders donated one or two birds, the same as in previous years.

The dates for the annual poultry show were set for December 12, 13 and 14, with the 11th as entry day and up to noon of the 12th.

THE HARVEST.

The sheaves are gathered, and the empty field
Broods in contentment on it's ended task;
Waiting the rains that pledge another spring.
The barns are heavy with the harvest yield,
And quiet Autumn wears the misty mask
Of quietness that means remembering.
In the hushed loveliness of eventide,
When autumn sunsets drowse upon the soul,
May we be glad for every emptiness
Knowing our sheaves are gathered, and abide
In saving plenty by some human goal
To thrill the hearts of men with lives that bless.

Statistics show that more fire insurance is sold than tornado insurance. Who can start a tornado?

The bin is never full until the field is empty.

DIVERSIFIED FARM WEEK OPENS MONDAY

Farmers and Business Men Urged to Promote New Land Policy.

"Diversified Farming Week," set aside by Gov. J. A. O. Preus as seven days which should be given over to farmers and business men for pointing out the advantages of the new agricultural policy, is scheduled to open Monday and continue until October 1st.

The production of milk, cream and butter, beef and pork, mutton and wool, eggs and poultry, has relieved the farmers in many sections of the state from the uncertainties of one-crop farming. In other words, it has given the farmer a steady income instead of one that is seasonal and periodical and has stopped the depletion of soil fertility, which is a certain result of grain raising.

The production of the farm under diversified farming has relieved many sections of the Northwest from the pinch of hard times, yet many communities have not realized in full the benefits they might derive through using the methods best suited to the locality.

Large gatherings of farmers and business men have been arranged in many sections of the Northwest, at which time speakers will be heard on how best to swing agriculturists to the diversified plan.

The Minneapolis Tribune is devoting many pages each day to the proposition, editorially and in its news columns, and the Minnesota Farm Bureau Federation has instructed their various agents throughout the state to make the most out of Diversified Farming Week.

NOTICE.

Bids are now open for 1 to 50 cords of wood, poplar, oak and tamarac.

All and any bid subject to rejection.

Send all bids to A. B. Mandt, clerk.

GOODRIDGE CONSOLIDATED SCHOOL DISTRICT, NO. 8.

HOLSTEIN BREEDERS TO HOLD STOCK SALE

More Than 60 Head of High Grade Cattle to Be Sold on October 4th.

The Pennington County Holstein Breeders' Association will hold a stock sale at the Fair Grounds October 4th, at which time more than 60 head of high grade cattle will be sold to farmers of Pennington and surrounding counties.

The sale will be held at the livestock pavilion at the Fair Grounds at Thief River Falls, and it is expected a large number of farmers and dairymen will be on hand to look over the cattle. Livestock breeders from various parts of the country will be in attendance.

Twenty-two head of pure bred stock are to be sold and in addition there will be in the neighborhood of 40 head of high grade cows and heifers awaiting buyers.

This will be the first annual sale of the Pennington County Breeders' Association and officers are making preparations for one of the best livestock sales ever held in this part of the country. Many farmers who are now owners of Holsteins on their farms are planning on adding to their herds.

"THE HIRED MAN" SIZES UP THINGS

Communication to Banner Gives Homesteader's Version of Affairs.

In accordance with its policy of always maintaining an open forum, by which its readers have an opportunity of stating, in their own words, their ideas concerning the trend of the times and the course of human events, this week The Banner prints a communication from "The Hired Man," who has been heard from in these columns before.

This time "The Hired Man" takes a whack at the inequality of the tax problems confronting the people of Beltrami county. He thinks there is something wrong somewhere. The Banner prints the letter in full, as follows:

Editor Banner:

"The Hired Man is on the job again. He has had quite a vacation and has seen some things that are not altogether clear in his stupid mind—hence the return.

"On looking over the Bemidji paper we find so many taxes that are exonerated, and in nearly every case it is lumber companies or some other corporation. Why is this? Don't they have the same right to pay their taxes as the homesteader?

"It looks as if the auditor is whipping the horse that will pull.

"Not far from my home is another company back with their taxes, and they splurge about in a big car. But let me get behind a little with my taxes and it will soon be nearly double. One other thing: Why do we have to pay 90 cents per pound for yarn when the farmer only gets 19 cents per pound? If some one can put me clear on some of these things I will be obliged. It looks as if the dealers are trying to make the people return to the homespun and wool clothing, and I for one think they are foolish to not do that very thing. I, myself, make everything I can and hope to make all my clothing hereafter.

"Well, if I see this in The Banner, will do better next time.

"THE HIRED MAN."

WILL SAVE WINTER SHOWS FOR VALLEY

Local Men Named on Committee Seeking Funds to Complete Building.

At a well attended meeting of the Red River Valley Livestock Association, it was decided to complete the payments on the livestock pavilion buildings at Crookston owned by the association members. The 11 Northwestern Minnesota counties have been divided into 100 districts, each district being asked to sell $250 of shares in the building. Pennington county has five districts.

Peter Engelstad, Thief River Falls, was named chairman for the county. Associated with him for the campaign are the following: O. Ramstad, C. L. Hansen, W. B. Fuller, Fred Beerbower, Hans Anton and J. J. McCann of Thief River Falls; K. O. Gigstad, Pat Hall and F. S. Erdman, St. Hilaire, and Stuart McLeod of this village.

September 18 to 30 are the dates set for this work.

All the counties are going ahead enthusiastically to complete the payments and save the winter shows for the valley.

Thief River Creamery Pays $29,000 in Month to Patrons

According to a statement issued by Secretary Peter Englestad of the Thief River Falls Co-Operative Creamery Association, patrons of the concern received during the month of August approximately $29,000 for dairy products during the month. This sum will compare favorably with the corresponding month of August last year.

FIRST COMMUNITY MEETING FRIDAY

Mr. Stanchfield to Address Club Members; Band Will Play.

The first Community Club meeting of the season will be held this evening when Mr. Stanchfield will deliver an address. The latter is well known to a large number of local people and a good attendance is looked for.

The Community Club meetings, which proved such a success last spring and winter, have not been held during the summer months because few had an opportunity of attending, farmers being busy in the fields and attending to their crops.

With the ushering in of the fall season, however, a good attendance is expected and those in charge of arrangements for the meetings anticipate the most successful year in the history of the club. It is planned to hold the sessions once each month and entertainment will be provided by local talent. Speakers from outside points will come here from time to time to address the club members on timely topics.

WE HOPE IT'S A SUCCESS.

Motor Ozone, a substitute for gasoline, discovered and patented by Robt. W. Radke of New Ulm, was placed on sale to the public in limited quantities at New Ulm this week. It was sold at 12 cents per gallon and it is claimed that the Ozone is equal to gasoline in mileage and power, contains nothing harmful to the motor and causes even less carbon to accumulate in the motor. For use in gasoline stoves it is said to be an ideal fuel as it does not smoke and produces as much heat as gas. A great many motorists are trying it out for demonstration.—Redwood Falls Gazette.

It is now claimed that music is a cure for insanity. But it has also been used to drive folks crazy.

Airships can tumble, but at least they can't turn the corner on one wheel.

YEGGS LOOT MENTOR BANK; FOUR WOUNDED

Most Daring Holdup in History of Northwest Is Staged Wednesday.

Four Mentor residents received wounds from the gun-fire of four yeggmen who early Wednesday morning wrecked the Mentor State Bank and disappeared with loot estimated at $2,500.

The robbery was said by authorities to be one of the most daring ever staged in the Northwest. For four hours the burglars terrorized the inhabitants, holding them inside their homes by occasional shots, while others inside the bank systematically went about the task of blowing open the safe and vault.

Cashier Joseph Tagley, J. W. Benoy, his son, Arthur Benoy, and William Frazee, were those wounded. Frazee was struck over the head by one of the robbers, while the others received gun-shot wounds.

After the wrecking of the safe and bank fixtures and securing the loot, the robbers left town in a large enclosed automobile. It is believed they started in the direction of Fargo.

LIVE WIRE KILLS TWO THRESHERS

Machine Crossing Road Comes in Contact With Exposed Electric Light Wire.

Edward Perry and Louis Homme, threshers, were killed last week near Dwight, north of Wahpeton, when their threshing machine came in contact with a power wire of the Otter Tail Power companys' system. The wire, it appears, crossed the road at the point where the accident occurred to furnish power and light for a number of farms. Perry and Hommie, who were taking the rig along the road, apparently saw that it would not go under the wire without coming in contact with it, but did not stop it until the contact actually took place. Perry then started to climb onto the machine to lower the grain elevator so as to let it go under. As he touched ed the machine, he gave an outcry. The electricity had entered his right hand, horribly burning the arm to the elbow. Hommie started to aid him, and in some manner backed against the now highly charged machine. He was killed instantly, but the force of the current held him to the metal until he was jerked from it by the injured Perry, who was first to reach his side.

Why dont' the bald-headed men read some of those hair-raising tales?

DEFECTIVE PAGE

DEATH DEFEATS MINERS' RESCUE

Argonaut Mine Yields 47 Decomposed Corpses Despite Efforts of Rescuers.

MEN DID NOT SUFFER

Three Attempts at Bulkhead Building Futile in Face of Rapid Approach of Deadly Carbon Gasses Through Lower Levels.

Jackson, Cal.—All 47 of the miners entombed in the Argonaut mine August 27, are dead, it was announced officially, early this week. A note found on one of the bodies indicated that all men had died within five hours of the beginning of the fire, August 27, officials said.

All the miners were found behind the second of two bulkheads they had built in the crosscut 4,350 feet down in the Argonaut mine.

Federal Official Finds Bodies.

Byron M. Pickard, chief of the federal bureau of mines for this district, was the first man to go behind the bulkhead and discovered the bodies.

Pickard, on an earlier exploration behind this bulkhead, had counted 42 bodies and expressed the belief then that there were others there.

The note read as follows:

"3 A. M.—gas bad." The same note bore a scrawled figure "4" apparently indicating the same man had attempted to leave word for those who might come after of the condition of the mine at that hour.

Lives Taken in Few Hours.

Mine officials declared that the condition of the crosscut behind the bulkhead was such that life could not have been sustained there by the entombed men for more than five hours.

The bodies were found piled one on top of another and decomposition had progressed so far that identification would be impossible, Pickard reported.

The mine officials said that the actions of the men, as evidenced by the bulkheads they built and other matters, indicated they had died within five hours after being entombed.

Mute Evidence of Fight.

The officials declared the mute evidence of the men's struggles showed they were 47 of the most cool-headed men imaginable.

Sixteen of the entrapped miners removed their clothing to provide material for stuffing the cracks in the wooden barrier, hastily constructed, which was found early this evening.

Then another barrier was built of rock, earth and debris. However, the gas and fumes from the fire apparently seeped through the first bulkhead and the men fled from the site where they were building the second one, to start a third farther on.

Third Attempt Made.

This third attempt to wall off the death dealing gas was made at the end of the 435-foot crosscut in the Argonaut, but the fact that only a bare start was made at it, proved, the mine officials said, that the deadly carbon monoxide and the suffocating carbon dioxide had reached it and performed their fatal offices before the 47 unfortunates could raise even an excuse for a barrier.

Mine officials said that death had come to the entombed men painlessly. The gases, they said, would produce first a lethargy, then a coma, and finally, death.

Jackson as a whole took the tragic news calmly and courageously.

CANADA ANSWERS WAR CALL

Parliament to Act on British Call for Aid in Near East.

Vancouver, B. C.—British naval reservists, residents here, are being called up for service, it has been stated, orders having been received from London for them to report at once.

Military officers who have served in Mesopotamia and the Near East are reported to have received word to hold themselves in readiness to proceed overseas.

Ottawa—The reply of the Dominion government to the British government, following a cabinet meeting which lasted many hours, was to the effect that public opinion in Canada would demand authority from parliament as a necessary preliminary to the despatch of a contingent of troops to participate in eventualities in the Near East.

London—The British government, despite outcries in the French and Italian press, showed no signs of altering its avowed policy of defending the freedom of the Dardanelles against the Turkish nationalists.

Four Dead Under Backing Freight.

Moorhead, Minn.—Swerving his car as he started across the Great Northern tracks at a Moorhead crossing, A. O. Haroldson, 45, of Twin Valley, Minn., drove his Ford car, carrying himself, wife and three children under the wheels of a backing freight train, resulting in instant death to himself and two children, injuries to his wife which later proved fatal, and serious, if not fatal, injuries to his third child. It was an hour and a half before the mangled bodies were released from the wreckage.

NEWS REVIEW OF CURRENT EVENTS

Shopmen's Strike Is Broken By Separate Agreements With Many of the Roads.

MEN GO BACK AT OLD WAGES

Senators Lodge, Townsend and Poindexter Renominated—Republicans Win Maine Election by Fair Majority—Danger of New War in the Balkans.

By EDWARD W. PICKARD

SEPARATE agreements entered into by striking shopmen and railways representing about one-fifth of the country's mileage last week brought about a break in the strike that has lasted for some 75 days and threatened the nation's transportation facilities with demoralization. It is believed some other railways will soon make the same arrangement with the men, these including the Rock Island, the Burlington and the Northern Pacific.

Some of the big lines, notably the Pennsylvania, have not adopted the settlement plan. They assert they already have won the strike and will not make terms with the men who went out. Of the roads accepting the agreements the most important are:

New York Central lines and subsidiaries, including Michigan Central, Boston and Albany, and Big Four; Chicago, Milwaukee and St. Paul; Erie; Chicago and Northwestern and its subsidiary, the Chicago, St. Paul, Minneapolis and Omaha; Baltimore and Ohio; Seaboard Air line; Southern railway; New York, Chicago and St. Louis; The Monon; Wheeling and Lake Erie.

The agreements are, as they should be, a compromise. All the strikers, except those proven guilty of acts of violence, are to be taken back within thirty days at the prevailing pay prescribed by the federal railway labor board, and in the shops where they were formerly employed, but not necessarily at the same jobs. There is no specific provision regarding the matter of seniority rights, but it is believed this issue can be worked out satisfactorily after the men are back at work. Any controversies arising from the strike that cannot be settled otherwise are to be referred to a commission to be established, consisting of six representatives of the labor organizations involved and six representatives of the railroads. This commission is to remain in existence only until May 31, 1923, and none of its decisions nor the agreement in general "shall be used or cited in any controversy between these parties or between the railroads signing the same or any other class or classes of their employees in any other controversy that may hereafter arise." There is to be no intimidation nor oppression of the employees who remained at work or those who took the places of strikers, and all law suits pending as a result of the strike are to be dismissed.

CREDIT for arranging this agreement is evidently due mainly to S. Davies Warfield, president of the Seaboard Air line and head of a securities concern which owns large amounts of railway bonds. President Willard of the Baltimore and Ohio also was prominent in the peace negotiations; and B. M. Jewell, head of the striking organizations, proved amenable to all suggestions looking toward a fair and reasonable settlement.

Mr. Warfield, in a statement concerning the agreement, made this pertinent suggestion:

"Regional railroad labor boards should be properly and promptly established; a board named by each group of railroads that operate in each of the four rate-making districts into which the commission has divided the country; the men of each group of railroads to also organize boards to confer with the regional railroad boards. Negotiations could be successfully carried on and disputed questions settled if approached in good faith."

HEARING on the motion to have the strike injunction obtained by Attorney General Daugherty changed into a preliminary restraining order until a trial began last week before Federal Judge Wilkerson in Chicago, and the attorney general announced that it would proceed despite the partial agreements reached. The temporary injunction was extended ten days, but the court warned the government forces it would not be further extended. The government presented many thousands of affidavits telling of acts of violence and threats and other circumstances, all tending to prove its theory that a conspiracy existed, which in effect obstructed interstate commerce.

Mr. Daugherty's determination to press the case to a decision is based on his belief that the principles at stake are more important than any immediate issue or effect. The injunction, he thinks, if granted beyond the ten days now fixed by the court, will not only protect the workers who have taken places of strikers on roads not in the settlement, but will reach the question of responsibility of union leaders for acts of violence.

PRESIDENT HARDING and Secretary of Labor Davis were greatly pleased by the news of the partial strike settlement. The secretary said:

"American industry has overcome the last obstacle in the way of the greatest economic revival the nation has ever known. With the settlement of the strike on many of the trunk line railways assured, the whole industrial machinery of the country is ready for a forward movement unprecedented in our economic history.

"The disturbances in the bituminous and anthracite coal mining industries are in the past, and the 600,000 coal miners of the country are back at work. Our representatives in New England have advised me that in the textile workers' strike settlements are rapidly enabling the mills to resume operations.

"These three great industrial disputes have been the only hindrances to the nation in its rapid recovery from the industrial depression which we faced a year ago. With them out of the way progress toward prosperity will be swift and sure."

IT IS true, as Mr. Davis says, that the disturbances in the coal mining industry are ended, but the disturbances in the minds of the consumers of coal are just beginning. The dealers, greedy, unscrupulous and conscienceless, are demanding exorbitant prices for coal and the people are wailing, with little prospect of relief except in some states where the authorities have both the power and the will to check the profiteering. Meanwhile the congressional conferees have been disputing over the Cummins-Winslow coal distribution and price control bill, disagreeing as to its application to intrastate as well as interstate shipments. Henry Ford is the most vociferous of the big coal consumers, and according to the latest reports he had not altered his intention to shut down the Ford plants. He charges that the inter state commerce commission, through its control over empty coal cars, "is playing into the hands of coal profiteers under guise of regulations for the public good," and adds: "The same interests which own the public utilities, railroads and mines are using the commission as part of their scheme to fleece the public, and the scheme is so simple that nobody sees it."

CONSIDERABLY battered by results in recent primaries, the "old guard" of the Republican party resumed its smiling appearance last week after the primary elections were held in Massachusetts, Michigan and Washington. Senator Henry Cabot Lodge won over Joseph Walker by a three to one vote, and will have to contest the election with William A. Gaston, who defeated Sherman L. Whipple for the Democratic nomination. Senator Townsend of Michigan, who was opposed by three candidates, won his renomination by a plurality of about 25,000—a notable victory since he was hampered by the issue of "Newberryism." Out in Washington Miles Poindexter had little difficulty in obtaining a renomination for the senate. The Democratic nominee is C. C. Dill.

Two Democratic gubernatorial primaries in the South were of general interest. In South Carolina T. G. McLeod defeated Governor Blease, and the state is to be congratulated. In Georgia Governor Hardwick was beaten by Clifford W. Walker. Hardwick has opposed the Ku Klux Klan, which probably accounts for his defeat.

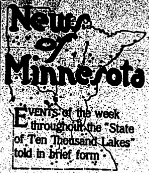
Maine's election, which used to be considered a reliable indication of results in the nation generally in November, took place Monday, and the Republicans won by what the party leaders professed to regard as satisfactory majorities, though naturally they were far below those of 1920. Senator Frederick Hale's majority over Curtis, Democrat, was about 27,000, and Governor Baxter had a slightly larger margin over Pattangall. The four Republican congressional candidates were elected, but the Democrats increased their membership in the state assembly from 15 to 40 and in the state senate from none to three. Republican leaders in Washington called the Maine results an endorsement of the administration, while the Democratic chiefs found satisfaction in the reduced size of the Republican majorities.

THE Greek debacle in Asia Minor was complete. Constantine's troops—those that were not captured—were withdrawn from the mainland in a hurry and the Turkish Nationalists occupied Smyrna in orderly manner. Then looting broke out, and on Thursday someone started a conflagration that destroyed the western part of the city. The Kemalists also occupied Brusa, burned by the fleeing Greeks, and announced that their capital would be moved to Konia. Their rejoicings over the victory were participated in by their countrymen who adhere to the Constantinople government, and there was much talk among them of recovering that city from alien dominance and of again possessing Thrace and the Dardanelles. This brought a warning from all the allies that an attack against the neutral zones of Ismid and the Dardanelles would mean war with the allies, and British and Italian troops were concentrated in those regions.

Probably the allies can restrain the Turks, but the danger in the Near East does not stop there and many wise statesmen are shaking their heads over the prospects of a new war in the Balkans. Bulgaria is massing her forces on the Thracian frontier, while Jugo-Slavia and her ally Rumania are mobilizing to give the Bulgars battle. The Serbs, who themselves want possession of Salonica, are determined that Bulgaria shall not grab Thrace and thus re-establish contact with the Turks. The Bulgarian press is urging the government to abandon diplomacy and to fight. England, which has been the friend of Greece, will not permit Turkey or Bulgaria to get Thrace and has a powerful naval force guarding the waters between the continents. Italy is most desirous of peace and is urging England to consent to a new conference on the Near East. France rejoices over the victory of the Turks, but joins with England in the determination that Constantinople and the Dardanelles shall remain neutral and under international control. All in all, British diplomacy seems to have made a mess of it, but a layman at this distance has no right to pass judgment yet. Britain's course may have been influenced greatly by the ever existent and now increasing fear of a general Mohammedan uprising against Christian domination.

ALL the country shared with President Harding his anxiety over the serious illness of Mrs. Harding, and everyone rejoiced when the news came from the White House that the crisis was passed and the gracious lady's recovery was virtually assured.

THE house sent the tariff bill back to conference because it objected to the proposed duty on potash and the provision continuing for one year the dye embargo act. The changes demanded by the house were made, and the bill was then approved by the representatives after a very brief debate.



News of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Winona—Chester Pease, 38 years old, serving in the county jail for robbery, has been released and will become an evangelist, delivering his first sermon here next week. He was married in jail last May to Miss Harriet Stahman, Winona school teacher.

Duluth—A general questionaire addresed to Duluth wood yards shows them all oversold. The demand for stove wood, which in normal times, shows a falling off during end of the summer, now shows a heavy increase over all previous years.

Luverne—The engine on an ensilage cutter on the farm of Lee English, near here, exploded, hurling parts of the machine more than 200 feet, several of them going through the wall of a concrete silo.

Crookston—Moorhead was selected as the 1923 meeting place of the ninth district convention of the Degree of Honor lodge at the close of its annual meeting here. Two hundred delegates represented Crookston, Walker, Cass Lake, Moorhead, Breckenridge, Bemidji and Fergus Falls lodges were present.

Crookston—Chicken owners in the river section of Crookston are in quandary. Mink, they declare, are nightly raiding their chicken coops and they are helpless to stop them as the mink are protected by the state game laws.

Chisholm—Three banks of Chisholm served notice on the city council that they would immediately discontinue purchasing village warrants. Funds of the city are near the point of exhaustion.

Thief River Falls—Samuel T. Johnson, 82 years old, veteran of the civil war, and pioneer in this section, is dead at the family home here.

Fairmont—The Fairmont creamery claims the 1922 canning record for Minnesota. The creamery reports an output this year of 40,000 cases of peas and 75,000 cases of corn.

Red Wing—Charles J. Nelson, flagman for the Milwaukee railroad for the past 10 years, dropped dead in his shanty at a crossing here just after flagging a train.

Owatonna—The Owatonna fuel commission has been formed here, as the result of appointments made by Mayor W. C. Zamboni with F. W. Sawyer as chairman and V. F. Leary as secretary. The commission is conducting a survey of fuel wood resources in Steele county.

St. Cloud—A delegation of 1,000 from the twin cities is expected to attend the state convention of the Federation of German Catholic societies of this city Sept. 24, 25, and 26. Seven societies from St. Paul are planning on coming in a body.

Pipestone—Carl A. Amundson of Fergus Falls has purchased the Royal hotel here and has taken charge. Mr. Amundson obtained the property from W. A. Barkley of Fergus Falls.

Northfield—Registration figures, incomplete, show an enrollment of 712 students at Carleton college, there being 349 men and 363 women. Registration is continuing.

Fergus Falls—The St. Cloud Crushed Stone company filed a bankruptcy petition in the United States court here today, placing its assets at $80,015.64, of which $78,111.64 is in buildings and machinery, and its liabilities at $164,144.35. Its heaviest creditor is the First National bank of St. Cloud, to which it owes $13,228.

St. Cloud—The city council has authorized the city attorney to prepare an amendment to the taxi ordinance dropping the property damage insurance, but retaining the personal liability feature. The ordinance, as now proposed, will require taxi operators to take out insurance costing $125 yearly, with limits of $5,000 and $10,000.

St. Paul—Immigrants to Minnesota and adjacent states shipped thirty-five carloads of livestock, poultry, machinery and household goods through the Minnesota transfer during the month of August, as reported by Oscar H. Smith, State Commissioner of Immigration. Thirteen of the thirty-five carloads were destined to northern Minnesota points, practically all being owned by settlers moving from Iowa, Illinois and Nebraska to new homes in this state. Due to the fact that farmers in the middle west and northwest states are busy completing grain threshing and commencing fall work, August is classed as one of the "low-ebb" months of the year in the matter of moving settlers to new locations, and Mr. Smith looks for an increase in the number coming to Minnesota during September and October.

Thief River Falls—Pure drinking water is assured this city after Jan. 15 next, through the awarding of a contract by the city council for a million gallon daily filtration plant, costing $35,000. C. M. Carlson, of this city, will erect the structure.

St. Paul—Scalped when her hair caught in a power shaft of the machine she was operating at Lindeke, Warner & Sons, Miss Marie Ahearn, aged 62, 240 White Bear road, St. Paul, submitted to an operation at the St. Paul city hospital in which her scalp was grafted. The operation apparently was successful.

Calumet—William Buchanan, of Calumet, committed suicide by shooting after coming home from a dance at 3 a. m. Despondency, brought on by the death of his wife and infant child several months ago is said to have been the cause.

Minneapolis—Shooing his pet chickens away from danger, Lyman Spoffard, aged 72, stepped in front of a streetcar and was fatally injured in sight of his invalid wife.

Canby—The Yellow Medicine county fair association has invited every person who lived within 10 miles of Canby through the famous deep snow winter of 1880-1881, to attend the fair on Sept. 16 as guests of the fair management.

St. Cloud—Eighty delegates representing 11 counties, organized the Sixth District Liberty league at a meeting here. The object is to secure legislation for the legal manufacture of light wines and beer.

Windom—Dr. A. M. Wright has been bound over to the district court in $5,000 bonds on the charge of having caused the death of Mrs. G. S. Redding by hitting her with his automobile.

Worthington—Fire starting from sparks from a threshing machine engine destroyed six grain stacks on the farm of Rev. J. A. Eddy.

Maynard—Water for drinking and cooking purposes is getting more scarce every day in this locality as the wells are giving out one after another, on account of the long continued drouth.

Crookston—Will Ripelle, aged 30, a farmer residing near here, was killed when he fell under the wheels of a Great Northern freight train while attempting to catch a ride. Ripelle's body was cut in two.

Thief River Falls—Orton Olson of this city, last year's winner of first and sweepstakes prizes on wheat at the Crookston farm crop show, has been awarded the blue ribbon prize on wheat at the Central Fair and Exposition, at Aurora, Ill.

Duluth—Wallace Kurki, aged 4, was run down and killed by an automobile driven by T. M. Perry. Perry was arrested, but later released.

Waterville—The Le Sueur County Baseball league has completed its schedule with the American Legion team of Waterville, winning the pennant.

Ihlen—In order to obtain the services of a resident physician, 200 people signed an agreement to pay a physician $12 a year each. Dr. Lee of Egan, S. D., will undertake the work.

St. Cloud—Mayor W. W. Matson, acting for the conservation of coal, has launched a campaign of publicity through the various local civic organizations. All residents of the city are urged to use as little coal as possible.

St. Cloud—The 21 year search of a mother for the baby snatched from her by her husband has been ended. Through the Red Cross of Pawnee, Okla., Mrs. Harry Inglearengel has found her son, now owner of oil lands in Oklahoma and wealthy.

Crookston—Members of the fourth district Minnesota Creamery Operators, will meet in this city Thursday, Sept. 21. The district embraces a number of the counties of this section of the state.

Winona—One man was shot, another was injured with a club, and three men, said to be strikers, were arrested here for an alleged attempt to interfere with the federal injunction by rioting.

Marshall—Lockjaw resulting from a slight injury on one of his heels, caused the death of Eugene Case, aged 17, of this city.

Milaca—The J. A. McDonald Construction company of Minneapolis was awarded the contract for the erection of the new Mille Lacs county courthouse here. The cost will be approximately $150,000.

Minneapolis—Alonzo P. Grace, instructor in anthropology and Americanization worker at the University of Minnesota, has resigned to take a position as head of the social science department of Forestry state normal of North Dakota, he said.

Stillwater—Residents of South Stillwater are conducting a mail ballot to decide whether to change the name of the village, the desire being to get away from the name "Stillwater." The name Andersenville is popular.

Mountain Lake—This town has no jail but a large refrigerator in a meat market has been made to serve the purpose. Its latest occupant was a Mankato salesman who was placed in the refrigerator to sober up and kept there until his friends produced $40 to settle for damages.

Winona—A reduction in Winona's gas rates from $1.79 to $1.71 per thousand cubic feet has been announced, effective for the next four months.

Pipestone—Five farm homes in one neighborhood, northwest of Pipestone, were ransacked by thieves while members of the family were in this city shopping. In each instance the robbers took only the best wearing apparel.

Winona—Recently when Miss Polzin began to play the piano at her home, a reptile known as a "pilot" rattlesnake crawled out from behind the instrument. Miss Polzin escaped without being bitten.

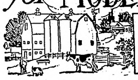
Moorhead—Shipping poor quality stock is ruining the potato market this year for the farmer, according to Leslie Welter, Moorhead, potato dealer, who says that a trip through the North Dakota, Minnesota and Canadian Red River valley assure him that there is but 60 per cent of last year's crop here despite the increased acreage.

Rochester—Quest for adventure of two girls, clad in knickers and boyish caps and sweaters, ended when police took into custody Helen Olson and Bernice Hanson of Winona, 16 and 17, and sent them back home.

The Farmer's Own Page

Timely Comments on Agricultural Topics for Our Readers

PERTINENT POINTERS for MODERN FARMERS



Prepared Under Direction of North Dakota Agricultural College

BALANCE IS ALL IN FAVOR OF DAIRYING FOR STEADY PROFIT

(By Max Morgan)

Attracted to dairying by periods of depression, many men begin without the right idea of a good cow or the permanent nature of the dairy business, with the result that these men jump back to wheat farming with a bitter impression of dairying.

Men not regularly engaged in this type of farming, attracted by the good prices of dairy products and the steady income, buy dairy cows or start milking such cows as they may already have. From the number who start dairying at such times many will continue, but at the end of a few months there will be a number who, because their cows do not produce profitably and the wheat crop looks like a 30 bushel crop, will give up dairying.

This latter class never will succeed in dairying and it is better if these kind of farmers are discouarged from entering the dairy business, as their efforts will always end in disappointment. This is important because of the bad impression such men will get and pass on of the dairy business.

Many cows are brought into milking herds at such times as these whose qualifications as dairy cows extend no further than their ability to raise their own calves. Two weeks after calving they may show large udders and have many of the indications of a good milker, but at the end of three months they start to dry off. Such cows cannot be profitable. The man who buys must make sure that the cows he buys are not in this class. He must make sure of the health of the animal and her age; then he can buy and be reasonably sure of getting something worth while.

The farmer already established in dairying is fortunate. While the present tendency is to increase the number of cows on many farms, due consideration must be given to better feeding and breeding.

While fundamentally sound, dairy farming like all other occupations has competition to meet. This year it will be the grain harvest. Some will turn a deaf ear to the dairy cow and get ready to jump back into the old system of wheat farming, drying off the cows or turning the calves with them. They will jump from the frying pan into the fire, for next year old mother nature may again take it upon herself to teach us that wheat farming alone is not any longer profitable in North Dakota.

If the elevator would return anywhere near the interest on the investment year in and year out during stormy or clear weather that the old dairy cow does, we would say to choose your own way, but experience teaches us that the farmer who gives up milking this fall and who has not sufficient feed to carry his stock through the winter will be back again in a few years asking for more credit. As it has been in every newly settled state, so it applies in North Dakota "The survival of the fittest," and he who is best fit is the man with 12 good dairy cows for 365 days a year over a period of years.

EASY AND SURE WAY TO SELECT TOMATO SEED

The tomato is one of the crops for which it often pays the farmer to save his own seed, especially when a remarkably early or good kind of tomato is noticed.

"A common way of saving tomato seed is to squeeze the seeds out on a piece of paper to dry," said A. F. Yeager, horticulturist at the N. D. A. C. "Seeds saved in this manner are all right and will grow but it is an undesirable method because it is rather messy and the seeds will have pulp and paper clinging to them.

The best way to save tomato seed is to pick the tomatoes good and ripe and squeeze the seeds into a glass tumbler with the juice and allow them to stand in a warm place for three or more days. By this time fermentation will have taken place. Fermentation separates the pulp from the seeds and at this time the contents of the glass can be stirred up and the seeds will settle to the bottom so that the juice and pulp can be poured off. Fill the glass with water several times, stir, and pour off. This process will give tomato seed just as clean as the best that can be bought.

Experiments show the wisdom of deep and early plowing for wheat.

Cleaning the tractor's air strainer daily is one way to avoid trouble.

Rinse milk tumblers in cold water before scalding.

One way to help your community is to see to it that the boys and girls who have the inclination get to college.

Water and cleaning agents weaken glue, paste and cement and may spoil fine finishes if not used carefully.

Some farmers buy all their nitrogen, others get a large part of it free. They cover-crop with legumes.

Uncle Ab says: We are mighty likely to get what we expect; might as well expect to succeed.

Says Sam: I hope by the time I die I know as much as I thought I did when I put on long pants.

The fungus disease is killing off many grasshoppers in western South Dakota this year.

But this I say, He which soweth sparingly shall reap also sparingly and he which soweth bountifully shall reap also bountifully.—II Corinthians, 9:6.

Green feed fresh from the fields in late summer and early fall helps to prevent the usual decrease in dairy production at this time of the year.

Aunt Ada's axioms: Pleasure trips into the land of thought are possible even when a vacation isn't—but everyone ought to take both.

Only a tenth of America's farmland is now artificially drained.

Drain your land before your land drains you.

If the heel of the loaf dries out so that the bread cannot be served, grind it for escallops and croquettes.

The business man keeps a careful record of his expenses and income. So does the careful housewife.

Poultry, stock, and household exhibits that take prizes at the fair are selected and conditioned early.

Says Sam: Some children worry a lot about giving their old folks the proper bringing up nowadays.

Uncle Ab says: It's a sight better better to say less than you know than to know less than you say.

Cook vegetables in as little water as possible. Leave the cover off green ones to keep their color.

The best part of health is a fine disposition. It is more essential than talent.—Emerson.

The "music of the milk pail" is the bell on the farmer's cash register. Keep it ringing.

The last census showed more than a half-million women farmers in the United States.

A few cans of sour milk in summer take the profits out of the month's cream check.

A fly-spray can make milking a peaceful occupation and if Bossy eats her grain contentedly she's more apt to keep up good summer production.

Spraying the cows to ward off flies and keep up the milk flow is as much a part of the routine on some farms as spraying the potatoes is on others.

There's a best way even to dust woodwork. Begin at one corner of the room and dust the baseboard; do the windows and doors as they come.

A meeting which begins with singing is likely to be a success. Folks who can sing together are more likely to be able to work together.

"A fair for farmers and not for fakers" is made possible by good exhibits from the farm and home. Are yours planned?

It's far better to have the cement floor of a henhouse set on a six to ten inch layer of coarse stones. Dampness is fatal to hens.

No good work is ever lost! many laborers must be content to sow; others will come to reap the harvest—Max Muller.

Varnishing the kitchen linoleum about twice a year keeps it bright, makes it easy to clean and lengthens its life.

Mowing the weeds along the road before they go to seed keeps them from seeding the adjoining fields. It also destroys the favorite hiding place of insects and diseases.

FIGHT AGAINST CATTLE PLAGUE

No Idle Dream of Overoptimistic Veterinarians, but a Practical Possibility.

EXAMPLE STIMULATES OTHERS

Work Directed Toward Eradication of Tuberculosis Now Being Carried On in 28 States—Nebraska Making Strides.

(Prepared by the United States Department of Agriculture.)

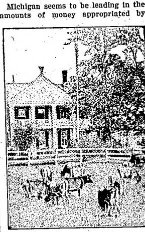
Since the area plan of tuberculosis eradication has gained headway, the end of the fight against the great cattle plague seems to be no idle dream at overoptimistic veterinarians, but a practical possibility. Many counties are now raising large amounts of money for the purpose and the clean counties have set an example that stimulates others to follow. Progressive communities are beginning to realize that they cannot have diseased herds and expect to compete with farmers and breeders in localities that are entitled to advertise that all of their cattle are free of tuberculosis.

Oregon in Lead.

A dozen states, according to records kept by the United States Department of Agriculture, now have one or more counties in which all of the cattle have been tested one or more times. Oregon now has seven counties in this class: Washington and Wisconsin four each; Michigan and Mississippi three each; Nebraska and Montana two each, and Idaho, North Carolina, Utah, Virginia, and West Virginia each have one.

One hundred and twenty-eight counties in 22 states are now doing intensified work directed toward the eradication of tuberculosis. Some of these states are going at the problem on a large scale. In this list Missouri has 18 counties; Nebraska 16; North Carolina 14; Maine 11, and New York 10. Preliminary work is being done in 256 counties and 79 communities in 33 states. Iowa has 31 counties in this list; North Carolina 30; Idaho 26; Kentucky 28; Oregon 23; New York 17, and Nevada and Wisconsin 10 each. Forty communities in Georgia, 31 in South Carolina, and a few in Louisiana and Vermont have started eradication wark.

Michigan seems to be leading in the amounts of money appropriated by county authorities to assist the federal government and the state in eradicating the disease. To date the largest appropriation made by any county in the country is the $15,000 fund voted by county commissioners of Huron county, Michigan. Other appropriations in that state are as follows: Eaton county, $8,000; Calhoun county, $9,000; Oceana, $4,000; Clinton, $8,000; Muskegon, $5,000, and Monroe $5,000. Hillsdale county, the first in the country to have all cattle tested, has made an additional appropriation of $3,500 to continue the work through the second year. A number of other counties have made additional appropriations of $1,500 each.



A Good Herd Free of Tuberculosis.

Strides in Area Work.

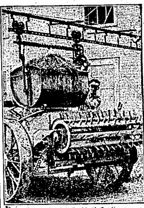
The board of supervisors in a number of counties in North Carolina have made appropriations to assist in fighting tuberculosis on the area plan. Some Kentucky counties have used money for this purpose from the general tax levy.

CONSERVE MANURE BY SPREADING ON FIELD

Not Generally Understood That It Saves Nitrogen.

Certain Forms of Bacterial Life Find Conditions in Usual Manure Pile Favorable to Development—Heating Also Occurs.

It is not generally understod just why spreading manure in the open field checks the loss of nitrogen which commonly takes place through the formation of ammonia in barnyard waste. The reason will be seen if one recalls how ammonia is produced. This is due to the activity of certain forms of bacterial life which are always present in manure and which find in the usual manure pile conditions favorable for their development. Through their operations organic matter is broken down into simpler chemical forms, one of which is ammonia. Heating of the pile also occurs. Both of these occurrences are familiar to everyone around a stable or where piles of manure are about.



The Right Way to Care for Manure Produced on the Farm—Conserve the Plant Food Which It Contains to Increase the Fertility of the Soil.

When manure is spread evenly in the open field not only are the conditions which make for the activity of the bacteria overcome, but new factors tending to check their continued operation are introduced. The mere fact that the waste no longer lies in a pile is a matter of considerable moment, for the pile, as already indicated, furnishes the physical surroundings most favorable for the operation of these organisms. Moisture, which they need, is present in just the right amount. Air in the pile supplies them with the oxygen which they require. The mass of waste holds the heat which is generated in the chemical reactions which accompany the processes of decay. This, in turn, makes possible even greater activity on the part of the bacteria.

RODENTS DO IMMENSE HARM

Loss in Measure Can Be Prevented by Use of Galvanized Metal Bins, Now on Market.

It is estimated that nearly ten per cent of all the grain grown in the country is being destroyed by rodents. This loss on the farm can be prevented in a measure by putting up fire-proof, galvanized metal bins which are now on the market and have been proven satisfactory.

SHIPPING SWINE IN SUMMER

Fat Hogs Are Liable to Suffer More or Less En Route to Market During Hot Weather.

Hogs, if fat, are likely to suffer when shipped to market during hot weather. It requires considerable care to ship during the summer, but it can be done if the owner uses good judgment and is able to secure service from the transportation company's officials.

FALL PLOWING FOR INSECTS

Multitude of Pests May Be Killed After They Have Gone Down and Prepared Winter Homes.

There are a multitude of field insects that may be killed by fall plowing if it is done after they have gone down and prepared their winter home, which they do before frost. Any time after they become dormant they may be turned up to the weather and will be destroyed, and even if they are not dormant plowing will give the birds and other natural enemies a chance at them. If the plowing is done primarily as an insect campaign it is best to wait until as late as possible. The plowing is good for the land anyway.

Keep on Feeding Fowls.

Keep on feeding the hens or they'll stop laying. Keep on feeding the pullets or they'll stop growing.

A small patch of morning glories can easily be taken care of with a hoe.

POULTRY

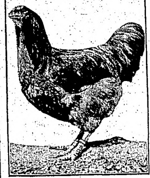
CORRECT TIME TO CAPONIZE

Impossible to Determine by Age as All Breeds Do Not Develop Alike—Watch Comb.

This is a question asked more frequently than any other by novices. It is a very important question, and the answer should be so simple that anyone could understand.

It is impossible to tell the best time for caponizing by the age, because all breeds do not develop alike; neither do birds of the same breed and hatch; some will be small of body with large comb and wattle developments, while others will show very little comb and be large and vigorous.

With any breed when the comb and wattles begin to grow you may know that the reproductive organs are growing correspondingly; when the little comb begins to redden you may know that the organs are receiving more blood for their very rapid growth; as they receive more blood the danger of an operation is greater, for the artery carrying the blood to the testicle is larger and in more danger of being ruptured.



A Well-Developed Capon.

Therefore, if you wish to operate at the perfect time watch the growth of the comb and wattles; when they are just "showing red" is the best and proper time; then there will be little danger to the life of the bird, less pain and no "setback" to speak of; while if you wait until the comb is bright red and the wattles hang considerably there will be more danger of death and more "slips."

EARLY HATCHED FOWLS BEST

Pullets Mature So That They Begin to Lay in Fall When Fresh Egg Supply Is Low.

Every fall hens take a vacation. In doing so they have very important business on hand. Typically feminine by nature, they insist upon having a new dress each fall. During their vacation they are engaged in shedding their old plumage and in growing new, and their energy is so occupied in this way that they lay few or no eggs. The process of molt or changing their plumage takes at least three months on the average, and it is due to this three months' vacation that the supply of fresh eggs is so scarce during the fall and winter. Early hatched pullets mature so that they begin to lay in the fall and early winter, and it is upon these early hatched pullets that the poultry keeper must depend for his supply of eggs during the time the old hens are molting and resting from their labors as egg producers. So if you want eggs when the old hens have quit laying, be sure that you hatch early and have a nice bunch of early hatched pullets coming along to supply the eggs at that time.

MALES FAVOR SCRATCH FEED

Better Plan to Have Medium Sized Fowls Than Too Large, Especially for Breeding.

Cockerels usually eat more scratch feed and less mash than the pullets do. Feeds which develop a medium sized bird are better than to have the cockerels develop into too large roosters, especially those to be saved for breeding purposes.

POULTRY NOTES

As the chicks grow they need more room. It does not pay to let them crowd.

* * *

Two-year-old hens had better be sent to the market. They seldom pay for their feed if kept over the third season.

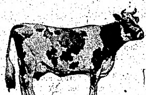
DAIRY HINTS

FEED POINTS FOR DAIRYMAN

To Obtain Maximum Milk Production Cow Must Be Attended to at Proper Moment.

If you would get a maximum milk production from your cows, feed the right feed at the right time and in the right amounts, advises M. H. Keeney, dairy specialist of the New Jersey State College of Agriculture.

Mr. Keeney gives the following practical suggestions for dairymen in feeding for milk production:



More Guernseys Have Been Imported to United States During Past 33 Years Than Any Other Breed.

1. Feed all the roughage a cow will clean up. Part of it should be a legume such as clover or alfalfa.
2. Feed some succulent feed such as silage or roots.
3. Feed a balanced ration.
4. Feed grain in accordance to milk production: For a Holstein or Ayrshire, approximately one pound of grain for each 4 pounds of milk; for a Guernsey or Jersey, about one pound grain for each 3 pounds of milk. A variety of grains in the mixture is desirable.
5. During short pastures supplement with silage or some green feed, together with some grain.
6. Feed and milk regularly.
7. Supply an abundance of pure fresh water at all times.
8. Give access to salt daily.
9. Purchase grain feeds on the basis of their protein and energy content and not alone on just the cost per cwt.

GROWING RATIONS FOR CALF

In Feeding Young Dairy Animals Material Supplied Must Be Flesh-Building—Salt Is Needed.

"There are two things to remember in feeding dairy calves," says E. A. Hanson, dairy specialist with the agricultural extension division of the University of Minnesota. "The feed must make them grow and must supply flesh-building material so they will be in good condition.

Growing feeds, he says, consist of skim milk, clover hay, oats, bran and oil meal. The fattening feeds are corn, barley and oil meal. For calves under six months old in good condition and having a soft, mellow hide a mixture of 30 pounds ground corn, 30 pounds ground oats, 30 pounds bran and 10 pounds oil meal, fed three to five pounds daily, is recommended by Mr. Hanson. A mixture of 30 pounds ground corn, 20 pounds ground barley, 40 pounds ground oats and 10 pounds oil meal, also fed at the rate of from three to five pounds a day, is advised for calves in poor condition.

"Salt improves the calf's appetite, so keep a box with clean salt in sheltered place where the calf may eat of it freely," Mr. Hanson advises. "Provide all the good clover or alfalfa hay the calf will eat up clean. Never allow the calves or yearlings to run with the herd."

NEW BETTER-SIRES EMBLEMS

Certificate of Improved Design for Recognition of Good Work in Improving Stock.

A new emblem of improved design for recognition of good work in improving live stock is ready for distribution by the bureau of animal industry of the United States Department of Agriculture. The certificate, which measures 8½ by 10½ inches, resembles a steel engraving and is suitable for framing.

A person holding an old emblem and desiring to exchange it for a new one may do so by returning the old one to the bureau of animal industry. About 7,800 of the old emblems have been issued to breeders and others working with the department in improving the utility value of farm animals, reducing the number of runts, and in other ways benefiting the live stock of the country.

Bull Is Most Important.

Have you a ready dairy bull? If not see your county agent about getting one or forming a co-operative bull association. The bull is the most important part of the dairy herd as he is the sire of your future herd.

EDITORIAL

"NOT SUFFICIENT FUNDS."

Now that President Harding has vetoed the bonus bill, the senators who voted for the "joke" ought to be able to enjoy a good night's sleep. After juggling the measure for several weeks, the senators "slipped the buck" over to Harding and he knocked it for a goal.

Everybody expected that he would and the mere formality of placing his veto to the measure was a foregone conclusion.

The country hasn't the money to pay it, says the President.

Mebbe so!

But certain amendments to the measure pointed the way to secure the necessary revenue. For example, the one that would tax the war profiteers who got away with millions listened good to The Banner.

But that probably would have hung heavily on Secretary Mellon, the capitalist of the Harding administration, and that wouldn't do.

Reports show that the United States Steel Corporation profited to the extent of a million dollars a day during the war period and stock in that concern jumped to ten times its normal value. That's quite a few millions and would go a long ways in paying off some of the poor devils that lost an arm or a leg over in France.

The half billion dollars that somebody connected with the airplane, or "flaming coffin" industry in this country got away with, would help in aiding a few of the ex-service men in this country who are now walking the streets seeking a job.

A regiment of millionaires was made in New York alone as a consequence of the war and the opportunity it afforded for robbing the government on war contracts, speculation, fat salaries, etc., but we suppose we ought to let them keep it in order that they may maintain their mansions, yachts, limousines, silken-clad women and all. It wouldn't be fair to take any part of it away and give it to some "over-fed" doughboy that didn't have sense enough to stay at home like they did.

Over in England the government taxed incomes, legacies, estates and the like upwards of 50 per cent in order that it might be enabled to give the returned soldiers something like a square deal. But that wouldn't work in the United States, because we haven't got any rich men in this country. Besides a proposition like that would be too revolutionary. The nation must be kept safe for democracy.

Canada gave the defenders of bloody Vimy Ridge $2,000 apiece and a choice of the Dominion's vast land tracts as a premium for their bravery and sacrifice. We almost gave our heroes a shot at some desert land out in Arizona somewhere and threw in a ten-to-one bet that they couldn't live there a year without thirsting or starving to death.

The richest nation in the world gave its soldiers sixty bucks and they had to buy their own ticket home.

Fall out, boys, we simply haven't got the money!

WHY ADVERTISE?

Advertising never yet drove business away, but has created quantities of it. A Thief River Falls merchant who believes in advertising recently took in approximately $1,500 on a small stock of goods on the first day of a clean-up sale. He spent something like $40 to attract this amount of business, and feels that he got his money's worth.

A store at Long Prairie is "doing" almost a million dollars a year simply because they know the value of publicity and go at it consistently and judiciously. And the store manager contemplates that he will eclipse his 1922 record via the same methods.

Sears-Roebuck spends $7 on every catalog reaching your competitor, and with no guarantee whatsoever that they will secure any business as a result of its advertising and drawing power. They merely expend $7 on every name they secure, and the last we heard of Sears-Roebuck and Montgomery Ward were doing business at the old stand.

Figuring on that basis, an advertisement costing $7 in The Banner would reach several hundred competitors of the catalog and would therefore possess several hundred times the drawing power. Sears-Roebuck and many other mail order houses would gladly pay The Banner $7 for an advertisement, but this newspaper belongs to Goodridge and when the time comes that we don't feel we can make it pay its way any longer, we'll advertise it—for sale.

Advertise and let the spiders do their spinning in the other fellow's store, where he won't be disturbed!

Men may come and men may go but the politician runs forever. But we love 'em just the same. If it wasn't for the fact that there were office-seekers, this would be a droll old world to live in.

Congress surely has a sense of humor. We wish we could say as much for "Calamity" Andrew Mellon, the man who put the jinx in adjusted compensation for the ex-service man and woman, but we can't. These senators of ours "kidded" the boys along a while, anyhow.

Keep business at home. Every time a merchant fails to meet competition, he loses a customer—and the town suffers. If it is true that business is a gamble, be a good sport and play the cards open and above board. Remember, you're not the only one that has money in the game.

[illegible] Old Lady Dairy Cow produces in Wisconsin annually a sum equal to two and a half times the entire mortgage debt on its farms down there, plus a substantial balance. She has been a life-saver in that state for the past two years. If she has proven a life-saver there, she would here.

How many counties in the Northwest are absolutely free of public indebtedness? None you will say. But there is such a case down in Carver county, where diversified farming is highly developed and where butter alone yielded a return in 1921 of $8.21 for every one of its more than 200,000 acres of land. Now figure it out for yourself.

It's pretty hard to deny a workman a living wage, although there are many who contend that they get more than they are entitled to. Does any one believe that the poor devils who were entrapped in the Arognaut mine in California were overpaid. Those subterranean heroes were called to Heaven for their just rewards!

PUT A DAIRY HERD ON EVERY NORTHWEST FARM.

Diversification of crops will bring prosperity to the Northwest. And it will stabilize agriculture, the economic back-bone of the country, against the ups and downs of business.

It is a crying need. A great deal of the land is being slowly ruined by the one crop method of farming. Those farmers who rely on the small grains exclusively lose their crops a part of the time and so are hard up in all but the good crop years.

On the other hand, there are many sections of Minnesota where livestock has been joined with the grains to produce a much larger and much steadier income. In addition the land is enriched by cattle and crop variation.

The localities which everywhere withstood the effects of the agricultural depression the best were those where the farmers had livestock products to sell when the law of supply and demand reversed itself on grain products.

Pennington county should hurry and attain the new heights of prosperity through diversification!

OUR BEAUTIFUL MARKETING SYSTEM.

Ruin faces the potato growers in the state of Washington and Idaho, says a news dispatch, because shipping dealers are refusing to purchase the potatoes other than on consignment, which means that the growers will get whatever is left after the dealers sell the potatoes and divide up with the other middlemen and transportation companies.

Rather than submit to such impossible terms, many farmers are letting the potatoes rot in the ground. Thus we see in operation another phase of our beautiful system which permits a horde of middlemen monopolists to stand between producer and consumer while food rots and people starve.—Minneapolis Star.

HOW BANKERS AND BUSINESS MEN CAN AID.

Bankers should know that the best way to make their farmer customers better and better risks as borrowers in connection with their present obligations, as well as their future credit needs, is to induce and assist them to diversify their crops. The easiest and quickest means to do this, in most cases, is dairying and diversification.

Banks should set aside the largest amount of funds possible for livestock loans. The easiest terms consistent with sound banking should be offered. The loans should be for the full cost of the cattle, or for a relatively large proportion of it. The interest rate should be low. The time should be of sufficient length to enable the farmer to repay the loans from the profits of the stock.

Farmers say they will not borrow on cattle on short time for fear payment will be called for at maturity, as has been the case sometimes in the past. The farmer should give up a part of his cream checks each month to the banker to apply on the loan.

This is meant only as a statement of the principles which should govern. Many bankers have adopted other methods which meet the farmer's situation equally as well or better.

Store owners and dealers should make themselves understand that the best way to have farmers heavier buyers and smaller and shorter creditors, is to help them get a larger and steadier income from their land and labor, by abandoning the one-crop method, with its soil impoverishment and financial risks, and adopt diversified farming, which enriches the land and provides a steady flow of cash income.

Store owners and dealers can show their farmer customers that they can afford to go farther in accommodations if both are backed up by livestock products rather than by grains alone.

Country bankers, storekeepers and dealers, all alike, can work individually and jointly to organize and finance all sound livestock buying associations proposed and to spread the gospel of diversified farming by word of mouth and by letters about it to their customers and associates.

A Thief River Falls bank last winter set aside $10,000 which farmers were permitted to loan at low interest rates for the purpose of buying high grade cattle. Acts like that is what counts in the long run.

After all, the tailor is about the only fellow you would expect to give you fits.

No matter what others may say, the clothier will strive his best to suit you.

AUCTION

Having decided to quit farming, I will sell at public sale

Thursday, September 28

at the Southwest Quarter of Section 16, Township of Goodridge, one-half mile north of the Village of Goodridge, the following property:

HORSES
One gray mare, 12 yrs. old, wt. 1200.
One gray mare, 11 yrs. old, wt. 1200.
One bay mare, 5 yrs. old, wt. 1250.
One gray colt, 3 yrs. old.

CATTLE
One red cow, 8 years old.
One red cow, 7 years old.
One red cow, 7 years old.
One red cow, 7 years old.
One red cow, 7 years old.
One red cow, 7 years old.
One red cow, 4 years old.
One red cow, 4 years old.
One red cow, 4 years old.
One red cow, 2 years old.
One red cow, 5 years old, fresh in Oct.
One red cow, 4 years old, fresh in Oct.
Two heifer calves, 10 months old.

FARM MACHINERY
One Deering mower.
One McCormick hay rake.
One bucking pole.
One Acme binder.
One buggy.
One hay rack.
Two sets of bob sleighs.
One walking plow.
One breaking plow.
One gasoline engine, new.
One Economy cream separator.
One gas lamp.
Three cream cans.
One heating stove.
One set of dump planks.
And other articles too numerous to mention.

Sale Starts at 11 o'Clock. Free Lunch at Noon.

TERMS: All sums under $10, cash; above that bankable papers will be taken, due October 1, 1923.

DEFECTIVE PAGE

God!

By Rev. H. Lutz.

Text: Psalm 53,1: "The Fool Hath Said in His Heart: There Is No God."

Romans 1,19.20: "Because that which may be known of God is manifest in them; for God hath showed it unto them. For the invisible things of Him from the creation of the world are clearly seen.

In other words: Consider this world and all that is in it, all the wonders of creation, and if you are honest, you must admit that there is a God who created it. But, there are people who will not admit this. They claim that the world came into existence without the work of God. The Psalmist calls them what they are in the text quoted above. None can expect to receive a newspaper without the work of an editor and publisher, and yet these people say the world was not created by God. Creation proves that God is, that He is mighty, wise and good.

The second proof is Conscience. Every person is convinced by his own conscience that there is a God. That is why the heathen makes idols of wood and stone, and the unbelievers worship education, or nature, or science, or riches. When the Titanic sank the band played, which shortly before had played dance music, was playing sacred music. Why? Because in the face of death their conscience had convinced them and the passengers for whom they played that there is a God, and that they were now facing His judgment. A certain person had been excluded from a Christian congregation. He had given grave offense and had remained impenitent. He became an infidel, denied the existence of God, and ridiculed the Christian religion. God had sent him a long and dreadful sickness. In his agony and pain he exclaimed again and again: "Oh, God! Help me! Oh, God, help me!" His conscience had been aroused; he now felt and feared the wrath of an offended God. Conscience convinces us that God exists.

But the best and most complete proof is found in God's own word, the Bible. Here we learn that God is triune. That is, He is three and He is one. "Hear, O Israel, the Lord Our God Is One Lord." Deut. 6,4. God is one God. "Go ye therefore and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." Matth. 28,19. God is three persons.

God is almighty. "With God nothing shall be impossible." Luke 1,37. Hence those who offend or even oppose Him have reasons to fear Him, but those who are His children in Christ Jesus need fear nothing, absolutely nothing.

God is omnipresent. "Can any hide himself in secret places that I shall not see him?" saith the Lord. Do not I fill Heaven and earth? saith the Lord" Jer. 23,23.24. So God sees and knows everything every person does, but He also sees and knows what His children need.

God is holy. "Holy, holy, holy is the Lord of hosts; the whole earth is full of His glory" Isaiah 6,3. God is without sin and hates and will punish sin.

"God is love" 1. John 4,8. God not only does love, and love strongly, and continually, but He is love. And so therefore:

God is above all reconciled to man by the death of His Son. "God so loved the world that He gave His only begotten Son, that whosoever believeth in Him should not perish but have everlasting life" John 3,16. "The blood of Jesus Christ, His Son, cleanseth us from all sin." 1. John 1,7. "For, if, when we were enemies, we were reconciled to God by the death of His Son, much more, being reconciled, we shall be saved by His life." Rom. 5,10. "He hath made Him to be righteousness of God in Him." 2. Cor. God in Him." 2. Cor. 5,21. In plain words, Jesus, the Son of God, suffered and died for us, in our stead, and thus took away our sins. And now God can forgive our sins, because they already have been punished in our substitute, Jesus. So we sinners need not fear God's wrath, but rather have all reason to thank and praise Him for His mercy and grace. Such is the God of the Christians. And, now, considering all this, are not the words of the Psalm true: "The fool haith said in his heart: There is no God!" Are not those who deny God and reject all that God is and wants to be to them, what God calls them: fools? O, Lord, make the wisdom of the unbelieving wise to naught, and destroy the counsel of the foolish! Amen.

ROSEWOOD

Sjolsvold-Hamarness.

Mrs. Thilda Sjolsvold of this place was on Sunday, Sept. 10, united in marriage to Ole Hamarness of Holt, the marriage taking place at the parsonage of Rev. George Larson, Thief River Falls. The newlyweds will reside at Holt, where Mr. Hamarness is engaged in the garage business.

Mr. and Mrs. Anton Gullseth left on Friday by car for a few days' stay at the Red Lake Agency, where they were joined by the C. and E. Eggen families of Kelliher, and enjoyed a pleasant outing. Mrs. James Thompson had charge of their confectionery during their ablsence.

Weldo Batten spent Tuesday on business at Grygla.

Sigurd Rafteseth, in company with Charles Brenna of Middle River, motored to Gatzke last Sunday to visit among friends.

John Sorenson and Herbert Carlson motored to Dresden and Nekoma last Saturday to spend a day with their girl friends, Serine Tanem and Isabelle Sagmoen.

Miss Laura Kron left on Saturday evening for Thief River Falls, where she will spend a few days visiting among friends.

A bunch of young people motored to Viking last Saturday evening and attended a dancing party.

Mr. and Mrs. Carl Christofferson and their young son of Goodridge visited on Sunday at the home of Cashier and Mrs. O. S. Hellerud.

Mr. and Mrs. James Thompson motored to Winger on Sunday and spent the day visiting among friends.

Mrs. Emil Blomberg shopped and visited at Viking between trains last Tuesday.

O. A. Flann arrived from Thief River Falls on Friday morning and is doing some work on his farm north of town.

A carload of rye was shipped from the Hanson & Barzen elevator the latter part of last week.

Swedish services at the Congregational church at Rosewood next Sunday evening, Sept. 24. Rev. Werner Drotts of Viking will speak.

O. S. Hellerud, Jas. Thompson and Adolph Haugen motored to town of Bray last Sunday morning to hunt.

Mr. and Mrs. Carl Bloom returned home Monday morning after spending Sunday with relatives at Thief River Falls and attending the Young People's rally at the Swedish Mission church.

Mrs. Helmer Ostrom and children returned to their home at Thief River Falls last week after spending some time here taking care of John Sagmoens' farm northeast of town during the latters' absence in North Dakota. Little Vernon Sagmoen accompanied them and will remain until her parents come home. Mr. and Mrs. B. P. Sagmoen now take care of John's farm.

Germantown News.

Rose Vakoch and Lena Ristau called at the home of Frank Kaing Sunday.

Mr. and Mrs. Chas. Struble were Sunday guests of Mr. and Mrs. Aug. Ristau.

Albert Johnson was a caller at the Svendsgaard home one day last week.

Emil and Henry Benttin and Joe Horeysh were Sunday callers at the Vakoch home.

Henry Klockmann called on Charlie Ptacek one day last week.

Miss Lois Struble spent Tuesday afternoon at the Joe Oski home.

Miss Tillie Ristau and brother John motored to Thief River Falls Thursday on business.

Henry Klockman motored to Erie Wednesday and returned the same day with a threshing separator for his brother-in-law, John Philipp.

Aug. Ristau spent Wednesday evening at the home of Louis Hamre.

Mrs. Mons Linvick and daughter, Synneva, spent Thursday at the H. Roller home.

Daniel Payne of Goodridge is visiting at the Will Wayne home.

Oscar Pomerenke was a Mavie visitor on Tuesday.

Mrs. Carl Habedank and daughter, Luella, motored to Thief River Falls Satrday evening.

Miss Rose Vakoch visited at the C. Boyce home one day last week.

Joe Bolangy was a Thief River Falls caller Thursday.

Mr. and Mrs. Joe Vakoch returned home from Grand Forks Sunday after a visit with their daughter, Mrs. A. Casunda.

Emil and Minnie Benttin were visitros at the Stageberg home Sunday.

Miss Rose Oski of Mavie called at the Paul Stock home Sunday.

Mr. and Mrs. Emil Ristau were delightfully surprised Tuesday evening when a number of neighbors called at their home, the occasion being their birthday. The evening was spent in cards and music and a delicious lunch was served at 11 o'clock. Among those present were Mr. and Mrs. Aug. Ristau and family, Mr. and Mrs. Henry Roller and family, Mr. and Mrs. Chas. Struble and family, Mr. and Mrs. F. Kainz and son Frank, Emil and John Clausen, Mr. and Mrs. J. Vakoch and son Joe and daughter Rose.

Miss Amanda Skomedal of Steiner was a business caller at the August Ristau home Thursday.

Miss Ruth Boyce called on Miss Bernice Struble Wednesday.

ARE YOU VIOLATING AUTOMOBILE LAWS?

Are you violating any automobile law? Do you know who has the right of way? Do you understand the law in regard to a spotlight, passing a team of horses, running with mufflers cut out? Did you know it was unlawful to hunt or fire from a car?

Ignorance of the law excuses no one and you will find it pleasanter to read the summary of the state laws below than to hear a judge read them to you and besides it wont' cost so much.

Below are the main laws regarding the driving of automobiles:

1. Motor vehicles are to be taxed annually, and the tax is to be 2 per cent of the value. The minimum tax is $12.

2. Whenever an engine has been changed or a new body is installed the owner shall file with the registrar a new blank setting forth such changes.

3. All license plates are nontransferable. Upon the transfer of ownership, destruction, theft, or in case anything else happens to an automobile, the license becomes null and void.

4. Nonresidents must register cars licensed in other states.

5. In case of loss or destruction of license plates new ones can be obtained by writing to the secretary of state and filing a sworn statement setting forth the causes and paying $2.

6. No person shall operate a motor vehicle on the public highway of the state unless it has been licensed by the state. License plates must be conspicuously displayed—one in front and one in rear—and shall be fastened tight so they do not swing.

7. Every car must be provided with adequate brakes, signalling device, and shall during the period of one hour after sunset to one hour before sunrise display two lighted lamps of not to exceed 32 candlepower. The rear light shall be placed in such a position that it sheds light on the license plate.

8. No spotlight or searchlight shall be used.

9. Vehicles must not be left standing upon any street or highway with engine running.

10. Motorists must use the mufflers while in the city limits of all towns and villages, or when passing any animal being led or driven.

11. In case a person riding, driving or leading a horse or any other draft animal shall signal by raising the hand, the person driving any motor vehicle must stop, and if traveling the opposite direction, remain stationary as long as may be reasonable to allow such horse or animal to pass. If traveling in the same direction, use reasonable caution in passing.

12. When approaching a steep hill, a cross road outside the city limits or points on the road where the view ahead is not clear, slow down and sound your horn.

13. In case a woman, child or aged person is driving a horse you shall not pass faster than 4 miles an hour and shall stop upon signal by person driving the horse.

14. In rounding corners or crossing intersections keep as close to the right side as possible.

15. If you intend to turn to the left, drive along the center of the road, slow down, and keep your arm outstretched in a horizontal position.

16. At all intersections the man coming from the right has the right of way.

17. Anyone who takes a car without the owners' consent shall be deemed guilty of felony whether the car is returned to original position before the owner knows about it or not.

18. Twenty-five miles per hour is the speed limit outside of city limits.

19. In case of accident of any kind the driver of a motor vehicle must stop, return to the scene of the accident and give his license number and name and address of everyone in the car.

20. Whoever operates an automobile while intoxicated shall forfeit any license which he may have, and shall be disqualified to operate any motor vehicle for a period of three months from the date of conviction.

21. It is against the law to hunt, take, shoot or kill any kind of game birds or animals from an automobile.

LEST YOU FORGET.

It has not been many years since the auto owner would take a careful look before he took his car out of the shed for even a short drive. And it was well, too, that he did so, for the prospects of getting pulled out of mudholes, or of not being able to get home at all, were something to consider. It is all different now. In some sections now the roads are better right after a rain than they are during a long dry spell.—LeSueur Center Leader-Democrat.

In spite of all the preacher says, there can't be much worse punishment than listening to an infant prodigy recite, "Curfew Shall Not Ring Tonight."

Son, emulate the auto! In spite of the fact that it is tired, it gets there just the same!

When men set their minds on something, there's no telling what they'll hatch out.

The sailors used to be very modest men. Anyway, we read that they often "skirted the shores."

If you intend to shear your way through life, you'll have to be clipper.

A lot of chaps who think that they are born to run things end up by becoming chauffeurs.

Remember Your

Savings Account

Every parent should start a Savings Account for his children. Deposit a dollar to their account and encourage them to save pennies, nickles and dimes to add to it.

A dollar looks mighty big to the child, and the meager start will provide him or her with the beginning of an account that may the means of their education in training for a successful life. And the saving habit that is formed in childhood will last througout life.

GOODRIDGE, - - - - MINNESOTA.

Sell Your Cream at the Creamery

There is a big advantage in disposing of your dairy products at the creamery, chief of which is the fact that the local institution is founded upon he co-operative basis and you therefore receive its advantages. You get as much—and more—here for your cream than from independent buyers.

10,600 POUNDS OF BUTTER MANUFACTURED LAST MONTH

Help swell the total next month by selling all your cream to us. Only by your co-operation can the creamery exist and remember we are always willing to meet competition from all outside sources.

Goodridge Co-Operative Creamery

AUCTION SALE

Having decided to quit farming, I will sell at public sale on

Saturday, Sept. 30

at my farm in Section 6, Township 154, Range 38, east from the Nels T. Jorgenson farm, the following described property, to-wit:

One gelding, 7 years old, wt. 1350.
One mare, 9 years old, wt. 1200.

One red cow, 10 years old.
One roan cow, 3½ years old.
One red and white cow, 2½ years old.
One red heifer, 1½ years old.
Two spring calves.

About 50 chickens.

One 7-ft. McCormick binder.
One John Deere sulky plow.
One 16-ft. Boss harrow.
One disc harrow, 12 discs.
One wide tire wagon with double box.
One set of bob sleighs, 2¼x7 ft. runners.
One King cream separator.
One No. 25 Planet, Jr., garden planter.
One Deering mower.
Two sets of harnesses with collars.
One telephone instrument.
Two heating stoves.
About 360 feet of lap siding.
About 200 bushels of oats, and other articles too numerous to mention.

Sale to Start 11 A. M. Free Lunch at Noon

Terms All sums under $10, cash; above that 5 per cent discount will be given for cash or bankable papers taken, due November 1, 1923.

CHAPTER XI

—16—

The Gangsters.

Gramont left the covert and walked forward.

He was thinking about that odd mention of Jachin Fell—had Chacherre lied in saying he had come here on his master's business? Perhaps. The man had come in Fell's car, and would not hesitate to lie about using the car. For the moment Gramont put away the circumstance, but did not forget it.

He walked openly toward the Gumberts buildings, thinking that he would have time for a good look around the place before dusk fell; he would then get off for Houma and attend to Hammond's defense.

As for the place before him, he was convinced that it was abandoned. Had any one, other than Chacherre and his two friends, been about the buildings, the late excitement would have brought out the fact. No one had appeared and the buildings seemed vacant.

Gramont's intent was simple and straightforward. In case he found, as he expected to find, any evidence of illegal occupation about the place—as the sheriff seemed to have discovered to his cost—he would lay Chacherre and the other two men by the heels that night in Houma. He would then go on to New Orleans and have Gumberts arrested, although he had no expectation that the master crook could be held on the murder-accessory charge. If this place were used for the lotteries, even, he was fairly certain that Memphis Izzy would have his own tracks covered. The men higher up always did.

He walked straight in upon the barn. It loomed before him, closed, lurid in the level rays of the westering sun. The doors in front had been only loosely swung together and Gramont found them unlocked. He stood in the opening, and surprise gripped him. He was held motionless, gazing with astonished wonder at the sight confronting him.

Directly before him was a small roadster, one which he remembered to have seen Jachin Fell using; in this car, doubtless, Ben Chacherre had driven from the city. He recalled the fact later, with poignant regret for a lost opportunity. But, at the present moment, he was lost in amazement at the great number of other cars presenting themselves to his view.

They were lined up as deep as the barn would hold them, crammed into every available foot of space; well over a dozen cars, he reckoned swiftly. What was more, all were cars of the highest class, with the exception of Fell's roadster. Directly before him were two which he was well aware must have cost close upon ten thousand each. What did this mean? Certainly no one man or one group of men, in this back-country spot, could expect to use such an accumulation of expensive cars!

Gramont glanced around, but found no trace of machinery in the barn. Remembering the motor that he had heard, he turned from the doorway in frowning perplexity. He strode on toward the long shed which stood closer to the house. At the end of this shed was a door, and when he tried it, Gramont found it unlocked. It swung open to his hand, and he stepped inside.

At first he paused, confused by the vague objects around, for it was quite dark in here. A moment, and his eyes grew accustomed to the gloomier lighting. Details came to him: all around were cars and fragments of cars, chassis and bodies in all stages of dismemberment. Still more cars!

He slowly advanced to a long bench that ran the length of the shop beneath the windows. A shop, indeed—a shop, he quickly perceived, fitted with every tool and machine necessary to the most complete automobile repair establishment! Even an air-brush outfit, at one end, together with a drying compartment, spoke of repaint jobs.

Comprehension was slowly dawning upon the mind of Gramont; a moment later it became certainty, when he came to a stop before an automobile engine lying on the bench. He found it to be the engine from a Stutz—the latest multi-valve type adopted by that make of car, and this particular bit of machinery looked like new.

Gramont inspected it, and he saw that the men had done their work well. The original engine number had been carefully dug out, and the place as carefully filled and leveled with metal. Beside it a new number had been stamped. A glance at the electrical equipment around showed that these workers had every appliance with which to turn out the most finished jobs.

As he straightened up from the engine Gramont's eyes fell upon a typed sheet of paper affixed to the wall above the bench. His gaze widened as he inspected it by the failing light. Upon that paper was a list of cars. After each car was a series of numbers plainly comprising the original numbers of the engine, body, radiator and other component parts, followed by another series of new numbers to be inserted. That sheet of paper showed brains, organizing ability, care and attention to the last detail!

Here was the most carefully planned and thorough system of automobile thievery that Gramont had ever heard of. He stood motionless, knowing that this typed sheet of paper in itself was damning evidence against the whole gang of workers. What was more to the point, that paper could be traced; the typewriting could be traced to the man higher up—doubtless Memphis Izzy himself! These men ran in cars by the wholesale, probably from states adjacent to Louisiana. Here, at this secluded point on the bayou, they changed the cars completely about, in number, paint, style of body, and then probably got rid of the new product in New Orleans.

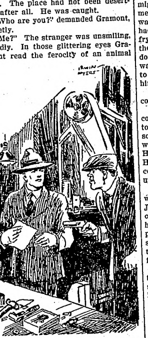
Gramont stood motionless. Surprise had taken hold of him, and even a feeling of slight dismay. This was not at all what he had hoped to find there. He had thought to come upon some traces of the lottery game—

"Seen all you want, bo?" said a voice behind him.

Gramont turned. He found himself gazing directly into an automatic pistol over which glittered a pair of blazing eyes. The man was a stranger to him. The place had not been deserted, after all. He was caught.

"Who are you?" demanded Gramont, quietly.

"Me?" The stranger was unsmiling, deadly. In those glittering eyes Gramont read the ferocity of an animal at bay. "I s'pose you would like to know that, huh? I guess you know enough right now to get all that's comin' to you, bo! Got any particular business here? Speak up quick!"



"Hurry Up! Turn Over the Name and Address."

Gramont was silent. The other sneered at him, viciously.

"Hurry up! Turn over the name and address, and I'll notify the survivin' relatives. Name, please?"

"Henry Gramont," was the calm response. "Don't get hasty, my friend. Didn't you see me here a little while ago with Chacherre and the other boys?"

"What's that?" The glittering eyes flamed up with suspicion and distrust. "Here—with them? No, I didn't. I been away fishing all afternoon. What the h—l you doing around this joint?"

"Your best scheme," said Gramont, coldly, "is to change your style of tone, and to do it in a hurry! If you don't know what's happened here this afternoon, don't ask me; you'll find out soon enough when the other boys get back. You'd better tell them I'm going to get in touch with Memphis Izzy the minute I get back to the city, and that the less talking they do—"

"What the h—l's all this?" demanded the other again, but with a softening of accent. The moniker of Gumberts had its effect, and seemed to shake the man instantly. Gramont smiled as he perceived that the game was won.

"I never heard of no Gramont," went on the other, quickly. "What you doin' here?"

"You're due to learn a good many things, I imagine," said Gramont, carelessly. "As for me, I happened on the place largely by accident. I happen to be in partnership with [illegible] named Jachin Fell, and I came out here on business—"

To Gramont's astonishment, the pistol was lowered instantly. It was well that he ceased speaking, for what he had just said proved to be open to misconstruction, and if he had said any more he would have spoiled it. For the man facing him was staring at him in mingled disgust and surprise.

"You're in partnership with the boss!" came the astounding words. "Well, why in h—l didn't you say all that in the first place, instead o' beefin' around? That's no way to butt in, and me thinking you was some dick on the job! Got anything to prove that you ain't pullin' something cute on me?"

"Do you know Fell's writing?" asked Gramont, with difficulty forcing himself to meet the situation coherently. Jachin Fell—the boss!

"I know his mitt, all right."

From his pocket Gramont produced a paper—the memorandum or agreement which he had drawn up with Fell the previous afternoon, relating to the oil company. The other man took it and switched on an electric light bulb overhead. In this glare he was revealed as a ratty little individual with open mouth and teeth hanging out—an adenoidal type, and certainly a criminal type.

It crossed the mind of Gramont that one blow would do the work—but he stood motionless. No sudden game would help him here. The discovery that Fell was "the boss" paralyzed him completely. He had never dreamed of such a contingency. Fell, of all men!

Jachin Fell the "boss" of this establishment! Jachin Fell the man higher up—the brains behind this criminal organization! It was a perfect thunderbolt to Gramont. Now he understood why Chacherre was in the employ of Fell—why no arrest of the man had been possible! Now he perceived that Chacherre must have told the truth about coming here on business for Fell. Reaching farther back, he saw that Fell must have received the loot of the Midnight Masquer, must have turned it over to Lucie Ledanois—

Did she know?

"All right, Mr. Gramont." The ratty little man turned to him with evident change of front. "We ain't takin' no chances here, y'understand. Got quite a shipment of cars comin' in from Texas, and we're tryin' to get some o' these boats cleaned out to make room. Bring out any orders?"

Gramont's brain worked fast.

By overcoming this guttersnipe he might have the whole place at his mercy—but that was not what he wanted. He suddenly realized that he had other and more important fish to fry in New Orleans. Gumberts was there. Fell was there. What he must do demanded time, and his best play was to gain all the time possible, and to prevent this gang from suspecting him in any way.

"Did you see Ben Chacherre?" he countered.

"Uh-huh—seen him just after he come. Gumberts will be out day after tomorrow, he said. The boss is framin' some sort of deal on a guy that he wants laid away—some guy name o' Hammond. Chacherre is running it. He figgers on gettin' Hammond on account of some car that's bein' hunted up—"

Gramont laughed suddenly, for there was a grim humor about the thing. So Jachin Fell wanted to "get something" on poor Hammond! And Chacherre had seized the golden opportunity that presented itself this afternoon—instead of "getting" Hammond for the theft of a car, Chacherre had coolly fastened murder upon him!

"Ben is one smart man; I expect he thinks the gods are working for him," said Gramont, thinly. "So you don't know what happened today, eh? Well, it's great news, but I've got no time to talk about it. They'll tell you when they get back—"

"Where'd they go?" demanded the other.

"Houma. Now listen close! Chacherre did not know that I was in partnership with the boss, get me? I didn't want to tell all the crowd in front of him. Between you and me, the boss isn't any too sure about Ben—"

"Say, I get you there!" broke in the other, sagely. "I tells him six months ago to watch out for that Creole guy!"

"Exactly. You can tell the boys about me when they come back—I don't suppose Ben will be with them. Now, I've been looking over that place next door—"

"Oh!" exclaimed the other, suddenly. "Sure! The boss said that one of his friends would be down to—"

"I'm the one—or one of them," and Gramont chuckled as he reflected on the ludicrous aspects of the whole affair. "I'm going to Houma now, and then back to the city. My car's over next door. Mr. Fell wanted me to warn you to lay low on the lottery business. He's got a notion that some one's been talking."

"You go tell the boss," retorted the other in an aggrieved tone, "to keep his eye on the guys that can talk. Who'd we talk to here? Besides, we're workin' our heads off on these here boats. Memphis Izzy is attending to the lottery—he's got the whole layout up to the house, and we ain't touching it, see? Tell the boss all that."

'Twould Seem So.

New York man wooed and won his bride by mail, which is the most expensive correspondence school course known.

Richard Wagner, the great composer, was the youngest of nine children.

START CAMPAIGN FOR RIGHT FOOD

Movement for Better Nourishment for Adults as Well as Children Is Inaugurated.

USE OF MORE MILK FAVORED

Plan to Alleviate Such Common Ailments as Headaches, Constipation, Irritability, Etc.—Some Superior Recipes.

(Prepared by the United States Department of Agriculture.)

A successful campaign for better nourishment of adults as well as children is being conducted in Connecticut, which the United States Department of Agriculture believes could well be extended to other states. The purpose of the campaign is to induce people to add more milk and fibrous material to the diet, with the result that such ailments as headaches, constipation, nervous irritability, and other disorders, due to faulty food habits may become less common. The recipes on this page are being used to introduce these much-needed food substances into the bill of fare of many families.

Cabbage, which is made up largely of fibrous material, is inexpensive and available to both rural and city dwellers. Both milk and the vegetables recommended in these recipes supply the vitamins essential to good health.

Cream Soups.

General rules: These soups are thickened by cooking butter and flour together. This prevents a separation of the thicker and thinner parts of the soup and is called "binding."

Heat the butter until it bubbles, add the flour and seasoning gradually and stir until well mixed, add the liquid and cook until about the consistency of good cream. Stir constantly. Add the vegetable pulp and liquid and serve hot. If too thick, thin with more milk.

Soda is added to tomatoes in cream of tomato soup to prevent the milk from curdling when it is added to the tomato. One-eighth teaspoonful soda to one cup tomato juice.

Cream Soups.

1 tablespoon flour.
1 tablespoon butter.
½ teaspoon salt.
1 cup milk.
1 cup strained vegetable pulp and juice.

Vegetables Used for Cream Soups.

Tomato
Spinach
Peas
Beans
Asparagus
Celery
Beets
Potato
Carrots
Onions
Corn
Cabbage
Cauliflower

Prunes and Other Dried Fruits.

Wash well. Soak over night in water to cover. Boil gently in the same water until tender. Add a little sugar if necessary. Prunes do not usually need sweetening.

Medium White Sauce for Creamed Dishes.

2 tablespoons butter.
2 tablespoons flour.
1 cup milk.
¼ teaspoon salt.

Make like thin white sauce for cream soup.

Foods Which May Be Creamed.

All vegetables.
Eggs.
Fish.
Macaroni.
Meats.

CABBAGE SALADS

Cabbage and Fish.

Tuna
Salmon
Any cold flaked fish.

The proportion of cabbage and fish may be varied. However, 2 cups of cabbage and 1 cup of fish make a palatable combination.

Cabbage and Pineapple.

2 cups shredded cabbage.
1 cup cubed pineapple.

Pear and Cabbage.

2 halves canned or fresh pear.
Shredded cabbage to cover.

Peanut and Cabbage.

2 cups cabbage.
1 cup peanuts (salted are best.)

Peanut, Cabbage and Carrots.

2 cups cabbage.
1 cup peanuts.
½ cup chopped raw carrots.

Cabbage and Cranberry.

2 cups cabbage.
½ cup celery.
½ cup chopped cranberries.

Cabbage and Chili Sauce Dressing.

2 cups cabbage.
½ cup chili sauce or catsup.
2 tablespoons horseradish.

Ten-Minute Cabbage.

6 cups finely chopped cabbage.
2 tablespoons butter
1 teaspoon salt.

Put cabbage in boiling salted water, boil hard for ten minutes, drain and season.

Escalloped Cabbage.

2 cups boiled cabbage.
½ cup white sauce.
Bread crumbs.

Put creamed cabbage in a baking dish, cover with crumbs and bake.

Creamed Cabbage Au Gratin.

1 cup cooked cabbage
½ cup white sauce.
2 tablespoons cheese.

Put cheese in white sauce, cover with crumbs and bake.

Cream of Cabbage Soup.

4 cups chopped cabbage.
2 tablespoons onion.
1 teaspoon celery salt, or
1 cup chopped celery tops.

Cook until cabbage is transparent. Press through a colander and add one pint thin white sauce.

Thin White Sauce.

[illegible] cups milk.
1 tablespoons butter.
2 tablespoons flour.
½ teaspoon salt.

Escalloped Cabbage, Cheese and Rice.

2 cups boiled cabbage.
2 cups boiled rice.
2 cups white sauce.
½ cup finely chopped cheese.
1½ cups buttered bread crumbs.

Cover bottom of well greased baking dish with one half of the crumbs. Arrange layers of cabbage, rice and white sauce. Repeat and cover with remaining crumbs. Bake until heated throughout and crumbs are brown.

GENERAL RULES FOR SELECTION OF BEEF

Choose Cuts According to Cooking Method Desired.

Buy Only Tender Meat for Broiling or Roasting—Tough Pieces Are Useful for Stews, Soups, Etc.—Two Recipes.

(Prepared by the United States Department of Agriculture.)

Two general rules may be laid down for the selection of beef, says the United States Department of Agriculture. First: Buy only the tender cuts when meat is to be prepared by such methods as broiling or roasting. Second: Buy the less tender cuts in all cases for stews, boiled or braised meat, pot roasts, Hamburg steak, meat loaves, and soups. It should be remembered that tender cuts of meat are best not overcooked, also that plenty of time must be allowed for the cooking of the less tender cuts. One exception to this last may be made in the case of ground meat. Finely ground beef may be formed into cakes or into a large roll and these broiled or roasted and served rare just as in the case of tender meat.

The tough tail of a porterhouse steak, so often discarded, may be removed and trimmed, put through the grinder, made into cakes, and these broiled and served along with the tender part of the steak. The tender cuts of beef are the rib roasts, club, porterhouse, and sirloin steaks. The rump and the flank steak also are tender if cut from a prime carcass. All these cuts are best prepared by browning the surface with high heat, then reducing the heat to avoid overcooking the outside. Allow 8 to 20 minutes for a steak, and 15 to 30 minutes for each pound of roast, depending on the thickness of the steak, the size and shape of the roast and whether the meat is preferred rare, medium, or well done.

Grinding Beef for Making Cakes.

Soup.

In case a large quantity of soup is needed, it is well to buy freshly trimmed bones, such as the hind shank or hock, the lower fore shank, or any other fresh bone trimmings, but for the average small family it is more satisfactory as well as economical to select cuts having considerable meat along with the bone. The neck, fore shank, shoulder clod, tail, and the lower cuts of the hind shank are all good. If these are well seasoned, put to cook in hot water and allowed to simmer slowly until the meat is tender, the stock will be found to be sufficiently strong for soup and the meat itself will be usable in many ways, such as stew, jellied meat, croquettes, and meat pie.

Swiss Steak.

Any lean beef cut two inches thick can be prepared as Swiss steak. Season on both sides and pound flour into it until the surface is well coated. Brown well in hot suet. Add hot water to about half cover the meat. Cook very slowly in a covered skillet until the meat is tender enough to be cut with a fork. This will require from two to three hours, according to the toughness of the meat. It may be necessary to add a little water during the cooking, but there should be no liquid in the pan when the steak is finished.

Homemade Furniture Polish.

Many requests have recently come to the office of home economics of the United States Department of Agriculture for a recipe for a good homemade furniture polish. The following formula, which is an old, well-tried recipe, gives good results:

1 pint linseed oil or vegetable drying oil.
1 pint turpentine.
1 cup vinegar.

Shake well together in the bottle each time before using.

Jacking Up Car in Mud.

When it becomes necessary to jack up a car on soft ground, where there is no support for the tool, take out the floor-board or toe-board and use it for the jack to rest upon.

Delicious Filling.

A delicious filling is made with chopped figs and walnuts, boiling water and sugar, thickened with flour and flavored with lemon juice.

Relief Is Found From Stomach Trouble

Hope for the millions of unfortunate men and women who are victims of stomach trouble is sounded by William Hoylen, of 16 Spring St., Bristol, Conn. Mr. Hoylen was a victim of stomach trouble in its worst form, but was completely restored to health by taking Tanlac. He says:

"For fifteen years I had attacks of stomach trouble, and had been in bed for three weeks when I got Tanlac, but three bottles built me up fifteen pounds, and made a well man of me. I am now eating steak and onions, and feel just fine in every way."

Undigested food ferments in the stomach and soon the entire system is filled with poisons. Tanlac was designed to restore the stomach to a healthy condition and build up the whole body. Millions everywhere have acclaimed its wonderful power. Get a bottle today.

Tanlac is sold by all good druggists. —Advertisement.

Helped Him Off.

They found him lying on the sidewalk, both eyes were black and blue and one almost closed, his nose was bleeding, several teeth were missing and his map was decorated with cuts and bruises. He looked like the wreck of the Hesperus.

"What happened?" asked the cop who was applying first aid.

"I just told a big boob where to get off," he whispered, "and he said it wasn't his station, but it was mine."—Cincinnati Enquirer.

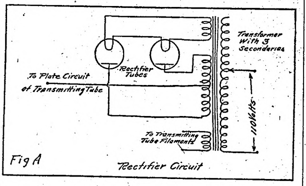
RADIO

THREE SOURCES OF PLATE POTENTIAL

Use of Step-Up Transformer and Rectifying Tubes Recommended for Amateurs.

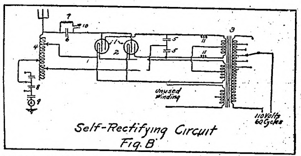
The greatest drawback in the use of vacuum tubes for radio transmitters is a suitable source of direct current potential for the plate circuits. In general there are three sources, batteries, a motor-generator set, and rectified alternating current. The alternating house lighting current can be stepped up to the required potential by means of a transformer and then rectified by an electrolytic rectifier, by the use of vacuum tubes manufactured for this purpose.

The use of batteries as a source of plate current potential is limited to very low power sets that are used infrequently, and then only for short intervals. Sufficient capacity in the form of "B" batteries would mean not only a relatively high first cost but also an extremely high maintenance cost. A motor-generator set, while high in first cost, will leave an extremely low maintenance cost and deliver a potential that only varies slightly, due to the commutator ripple. In sections where direct current is used for house lighting, a motor generator set is the only practical and satisfactory source of plate potential. Taking first cost, maintenance cost, convenience and space required into consideration, the best way to obtain the required current potential for the operation of vacuum tube transmitters, is by the use of a step-up transformer and rectifying tubes.



Transformer With 3 Secondaries
Rectifier Tubes
To Plate Circuit of Transmitting Tube
110 Volts
To Transmitting Tube Filaments

Fig A Rectifier Circuit



Self-Rectifying Circuit Fig. B

A line of vacuum tube rectifiers is on the market under the name "kenotrons." These tubes have been designed to have the proper operating characteristics to rectify alternating curent for the line of transmitting tubes put on the market by the same company.

If radiotron transmitting tubes are used it is only necessary to build or purchase a transformer with a filament heating winding and a plate current winding and by the use of kenotrons for rectifiers. The entire power to operate the transmitting set can be taken from the alternating current house lighting circuit.

It is possible to use an electrolytic rectifier in order to rectify the plate potential after the 110 volt house lighting circuit has been stepped up by means of a transformer. Electrolytic rectifiers are probably the cheapest source of plate potential, but they are sloppy and demand a lot of care and attention.

To operate the standard five-watt transmitting tube, known as radiotron type UV 202, a plate voltage of 350 is required and the plate current per tube is 45-100 of an ampere. The filament requires 2.35 amperes at 7.5 volts. Rectifying tubes known as kentron type UV 216 are made to be used in conjunction with the five-watt transmitting tubes. The rectifier tubes are so designed that one rectifier will rectify sufficient current at the correct potential to operate one transmitting tube.

Figure "A" shows how a single transformer can be used to furnish all of the necessary plate and filament current for a tube transmitter.

For those who do not wish to be bothered with the trouble and expense of rectifiers, there is a circuit known as the self-rectifying circuit that can be used for radio telegraphy. In using a self-rectifying circuit at least two tubes must be employed. If more power is desired tubes must be added in pairs. The tubes employed are divided into two groups operating on each half of the cycle.

Figure "B" is a diagram of a self-rectifying continuous wave radio telegraph transmitter using five-watt radiotron type UV 202 tubes. The amateur can purchase the parts to make this set as follows:

1. Two five-watt transmitting tubes UV, 202, $16.
2. Two-tube sockets UR, 542, $2.
3. Power transformer UP 1368, $25.
4. By-pass condensers UC 1014, $4.
5. Grid condensers UC 1014, $2.
6. Grid Leak UP 1719, $1.10.
7. Antenna series condenser UC 1015, $5.40.
8. Antenna ammeter UM 530, $6.
9. Transmitting key UQ 809, $3.

100 radio frequency.

The only parts the builder will have to make himself are the two radio frequency choke coils. The choke coils consist of 90 turns of No. 30 B & S cotton or silk-covered wire wound on a cardboard tube 2¼ inches in diameter, the length of the winding on such coil being about two inches.

ALERT RADIO DEALER LEARNS

Not Only Stocks His Shelves With Goods, but Takes Lessons in the Art.

Besides stocking his shelves, the progressive merchant in radio is also employing some of the summer in replenishing his mental supplies of radio information. The taking of courses in the art, either by mail, or through the very convenient form of carefully prepared lessons in a magazine, or from a competent instructor, is highly desirable, says Radio Merchandising. The business part of radio is going more and more into the hands of men who have basic knowledge of electricity and telephony. This, then, is the season for stock-taking, not only of the contents of the show cases, but brain pans.

Many alert merchants are employing themselves with diligence along these lines, because they realize more and more that from now on the trade will go to the dealers who can provide service vitalized by actual knowledge. When the vendor is thoroughly grounded in the art he need have no fear of summer doldrums nor of static of any kind, commercial or mental. The calling of radio merchandising is a foe to inertia in every form.

SHORT FLASHES

The Pacific coast states claim more than 25,000 owners of receiving sets. Some estimate the number at 50,000.

Dr. C. F. Jenkins, a Washington inventor, who holds the Cresson gold medal for originality in the field of invention, is at work upon the transmission of moving pictures by radio.

What the country will soon need is a radio census taker. "Some of our lads," says a Far Western enthusiast, "are picking up messages from Japan." This should make any Easterner tune up.

Doctor Marconi says present-day radio sets will be junk in ten years. So will be a typewriter, an automobile and many other kinds of apparatus. The main thing is to look out for the sets that are junk when you buy them.

Union college, at Schenectady, N. Y., broadcast its commencement exercises, including the music of the graduation ball and baccalaureate sermon. The comments of the graduating class after the baccalaureate sermon, however, were omitted.

Radio enthusiasts of Cleveland, O., must now pay a license fee of 50 cents, both for sending and receiving. The city council recently passed an ordinance requiring licensing and inspection of all radio stations, professional as well as amateur, in that city.

Stories are coming in from many directions of dogs which have become confirmed radio enthusiasts. We should think the ideal dog would be a setter who carries his tail high for one pole of an antenna. We wonder how the cat's whiskers in the set affects the canine fan.

DYED HER BABY'S COAT, A SKIRT AND CURTAINS WITH "DIAMOND DYES"

Each package of "Diamond Dyes" contains directions so simple any woman can dye or tint her old, worn, faded things new. Even if she has never dyed before, she can put a new, rich color into shabby skirts, dresses, waists, coats, stockings, sweaters, coverings, draperies, hangings, everything. Buy Diamond Dyes—no other kind—then perfect home dyeing is guaranteed. Just tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade or run.—Advertisement.

COULD DO WITHOUT UNIFORM

Youthful Fijian Proved Anew That Necessity Is the Fertile Mother of Invention.

A traveler from Fiji in the old days reports that at times in the past when the game was first introduced there the Fijians used to get waves of cricket madness, and in some outlying villages—where it was not so readily quelled by law—a match would be kept up for weeks, on end. Incidentally, they wore their pads strapped on their naked, bootless legs with a very ludicrous effect. But evidently the Fijians have no sense of the ludicrous, for our traveler further reports: "Another distinguishing mark that rather amused me once up-country was when my house boy, Esau, came in one day with his hair cut away from one side of his head, looking like a somewhat weird 'parting,' for the remainder stood up as usual like a bass broom with bristles five inches long. I asked him what on earth he had been doing and he replied: "Sir, I am now a member of the Lomaloma "A" team, and we have agreed to cut our hair like this, as the store cannot get 11 sashes all the same color.'"—London Tit-Bits.

Waited Long for Fortune.

He might have been rich 15 years ago, but a Belgian who purchased a bond in 1903 hadn't applied for the list of numbers drawn in state lotteries in 1907. A poor man from the country happening to be in Antwerp for the first time for many years, entered the offices of the Caisse Communale to see if the bond which he had taken out in the loan of 1903 had won a prize in the yearly lottery. After waiting impatiently while the cashier searched the records he was informed that his number had been drawn in 1907, and that he was entitled to a bonus of 200,000 francs ($40,000 at normal exchange rates).

When Commander Maury Died.

M. W. Maury (the great marine authority) died in 1873, one of the most loved and honored men in the state of Virginia.

It is recorded that, near the end, he asked his son: "Am I dragging my anchors?"

And when the latter replied in the affirmative, the father gave a brave sailor's answer:

"All's well," he said.—Julian Street, in "American Adventures."

Self-Preservation.

"I'm sorry to see you are deaf!" bawled the sympathetic gentleman in a hotel lobby.

"I'm not deaf," replied the old gentleman who had an ear trumpet in his hand.

"Then why do you carry that thing around?"

"There's a convention of uplifters going on here. Whenever one of the glad-eyed delegates corners me and starts to talking about the 'cause' I hoist this horn and he 'backs off.'"—Birmingham Age-Herald.

Soon Tired.

"First a man proceeds to lay off a garden." "And then?" "He proceeds to lay off."

Some married people avoid quarreling by refusing to make up.

NERVOUS AND HALF-SICK WOMEN

These Letters Recommending Lydia E. Pinkham's Vegetable Compound Will Interest You

For Your Own Good Please Read Them

Youngstown, Ohio.—"Last fall I began to feel mean and my back hurt me and I could hardly do my little bit of housework. I was played out when I would just sweep one room and would have to rest. I would have to put a cushion behind me when I would sit down and at night I could not sleep unless I had something under my back. I had awful cramps every month and was just nearly all in. Finally my husband said to me one day, 'Why don't you try Lydia E. Pinkham's medicine?' and I said, 'I am willing to take anything if I could get well again.' So I took one bottle and a second one and felt better and the neighbors asked me what I was doing and said, 'Surely it must be doing you good all right.' I have just finished my eighth bottle and I cannot express to you how I feel, the way I would like to. If you can use this letter you are welcome to it and if any woman does not believe what I have written to be true, she can write to me and I will describe my condition to her as I have to you."—Mrs. ELMER HEASLEY, 141 S. Jackson St., Youngstown, Ohio.

"I was very nervous and run-down," writes Mrs. L. E. Wiese of 706 Louisa St., New Orleans, La. "I would often sit down and cry, and was always blue and had no ambition. I was this way for over a year and had allowed myself to get into quite a serious condition. One day I saw your advertisement in the daily paper and began to take Lydia E. Pinkham's Vegetable Compound at once. I have improved ever since taking the third bottle and find it is the best medicine I have ever taken."

Benefited by First Bottle

"I was completely run down and not able to do my housework. I just dragged myself around and did not have energy to get up when once I sat down. I read advertisements of Lydia E. Pinkham's Vegetable Compound in our paper 'The Indiana Daily Times,' and learned all about it. I received results from the very first bottle and now I am doing all my own work, even washing and ironing, and I never felt better in my life. I tell all my friends it is due to you."—Mrs. ELIZABETH REINBOLD, 403 N. Pine St., Indianapolis, Indiana.

You should pay heed to the experiences of these women. They know how they felt before taking the Vegetable Compound, and afterwards, too. Their words are true.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Co., Lynn, Massachusetts.

AT LEAST GUILTY OF LYING

Truly Clergyman Had Refrained From Blasphemy, but He Had Sinned in Another Direction.

A clergyman who years ago settled in Massachusetts once reproved a workman for swearing while he was plowing a new field.

"Swear!" said the man. "I guess you'd swear!"

Whereupon the preacher took the plow and hurried after it, indignantly denying the charge. Then, as the field became more impassable, he began panting:

"I never saw the like! I never saw the like!" When he had gone once round the field he stopped, breathless, and added:

"There, you see I didn't find it necessary to swear."

"No," said the other, "but you've told more'n 50 lies. You said you never did see the like, and you saw it all the time I was plowin'."

Wouldn't Be Wasted.

During a snowstorm early in spring Jack with his shaggy-haired dog, Turk, came upon our porch to shovel off the snow.

Hearing the noise I opened the door to find Turk sitting up begging for something, so I asked Jack what he wanted.

"He wants bread and butter."

I said. "Do you think he would eat it if I got it for him?"

"Well, if he don't I will," was the answer.—Exchange.

Not to Be Cheated.

Grandfather and Betty were paying a visit to the strawberry patch. He picked some small, luscious berries and fed them to the little girl. For himself he found much larger ones. Betty watched him for a few moments, and then said, gravely: "Grandfather, I can eat the large ones, too."

Opportunity is rare, and a wise man will never let it go by him.

NOTHING WORSE IN PROSPECT

Traveler Satisfied He Had Got Over the Most Uncomfortable Part of His Journey.

W. S. Inglis, the well-known coal operator, told a railroad story at a railroad men's banquet in Scranton.

"There used to be a little line," he said, "a branch line about 12 miles long, that was notorious for its bumps, general discomfort and dirt.

"A train on this line pulled into town one morning, late half an hour, as usual, and a man said as he rose and brushed himself off:

"'Well, thank goodness, the worst part of my journey is over.'

"'Goin' far?' said another man.

"'Hong Kong, China,' said the first chap."

Landor the Explorer.

Henry Savage Landor has a splendid record as an explorer. He was the first known white man to reach both sources of the Brahmaputra river of India and established their exact positions in Thibet. His exploration tours in the Himalayas also yielded a vast store of information. He later spent a whole year cruising among and studying the Philippine islands.

With a single partner, Mr. Landor traveled 3,800 miles on a pack saddle through Corea. Later he turned his attention to Africa spending several years there and then again changing his scene of action to South America where he traveled almost continuously until 1914.

Another Darned Cynic.

"Why is Johnson looking so down in the mouth?"

"The poor fellow was disappointed in love."

"Of course it never does come up to one's expectations.'

A talkative man is seldom overestimated—a silent man often is.

Life Partners

THE union of Nature, Science and the Farmer is a partnership for life.

In the golden sheaves of living wheat, and in the waving, shimmering fields of barley—Nature stores the vital elements of human power and energy which Science converts into Grape-Nuts—the famous body-building food.

Grape-Nuts with milk or cream is a complete food, which contains all the nutrition (including the mineral elements) required for making rich, red blood, and for building sturdy body tissue, sound bone structure and strong, healthy nerve cells.

The 20-hour baking process makes Grape-Nuts easy to digest and develops that delicious, sweet flavor and crispness that has made this food a favorite the world over.

"There's a Reason"
for Grape-Nuts

Little Girls

"There was a little girl and she had a little curl, right in the middle of her forhead," etc.

Well, she didn't remain a little girl for very long.

She soon passed the "little curl" stage and became a woman—and that means a voter these days—and maybe was elected to Congress. Times have changed for the women folks. They are now supposed to be the equal of the men—possibly they have always been superior for all we know—but we do know that every little girl should be taught something about modern banking by having an account of her own. The experience is sure to be helpful in after life.

State Board of Health

REGUL[illegible] ATTENDANCE NECESSARY, S[illegible] SUPERINTENDENT ERICKSON

Crowded Condition of High School Discussed for Benefit of Tax Payers and Patrons.

The Banner has received the following letter from Superintendent Erickson of the Goodridge schools, a letter which should be carefully read by every citizen of Goodridge:

"We regret very much that several of the boys and girls from outside districts who wished to enroll in the High School department could not be accommodated on account of too crowded conditions. All those living within the district who wish to attend high school must be provided for first. Then the former pupils from outside of the district, the new pupils who made early applications and whose parents reside within the community of Goodridge have been given preference. At present there are 50 enrolled in the high school department. This makes the conditions very crowded and no more applications can be considered for this year. It is a sad state of affairs, we admit, that the doors of our public school have to be closed to any boy or girl wishing an education. We hope, however, that the time is not far distant when Goodridge will be able to accommodate all the boys and girls wishing to attend high school here. This would be a boost for Goodridge and its community, which would well be worth while.

"It is very important that every pupil enrolled both in the high school department and grades attend regularly. Experience has proven that among the normal children the child who attends irregularly is the one who is retarded in his work and fails to be promoted. The non-promoted pupil has a tendency to disorganize the whole school system, not only in high school but also the grades. Programs have to be altered, subject matter has to be varied, methods of teaching and motivation have to be changed in order to meet the needs of the non-promoted pupil. This materially decreases the efficiency of the school system. The parents should see to it that their children attend school regularly and encourage them in their work. Only by doing so can the teachers and the parents expect good results on the part of the pupils.

—E. J. Erickson, Supt."

ROAD TAX AND GAS FIGURES COMPARED

Highway Bulletin Furnishes General Totals to Guide Advocates of Motor Tax Law Revision.

Widespread discussion in Minnesota of a "gasoline tax" brought pertinent figures this week in the bulletin issued by the state highway department.

Various proposals to use gasoline consumption as the yard stick for measuring the motor vehicle taxes, the bulletin suggests, must recognize facts:

Minnesota will continue a leader for good roads only when larger highway funds are provided, now that other states are supplying vast sums thru bond issues and appropriations.

Out of 137,750,000 gallons of gasoline consumed in Minnesota during the last year according to the state oil inspection report, probably less than 125,000,000 gallons were used in motor vehicles.

A 1-cent a gallon tax on gasoline therefore would have produced about $1,250,000, or one-fifth of the amount of revenue derived from the present motor vehicle license schedules.

While a 5-cent tax would approximate the revenue return on motor vehicles now, a 7-cent tax would be necessary to yield the expected annual total of $10,000,000 of trunk highway funds, now that federal aid is reduced.

But with a reasonable license tax furnishing regular funds, an additional tax of 2 cents a gallon on gasoline and used for permanent betterments would mean $2,500,000 extra improvements every year, paid for in part by tourists from other states and taking but $7.50 from the average car owner in return for greater savings he would make on repairs, tiers and gasoline.

"Tests show that a car making 15 miles on a gallon of gasoline on unimproved roads will cover from 18 to 20 miles a gallon on good roads," the bulletin continues. "Minnesota has registered nearly 350,000 motor vehicles. Average annual travel is estimated at 5,000 miles, making a grand total of 1,750,000,000 car miles a year in this state. A saving of only a cent a mile on car repairs, tires and gasoline thus would aggregate $17,500,000 or more than twice the current revenues now turned into the trunk highway fund. It would mean a saving of $50 a year to the average car owner. Another way, a saving of 4 cents a gallon on gasoline consumption would total more than $5,500,00 a year in Minnesota. Any conclusion leads to the question of whether Minnesota car owners care to simply divert money from car and tire manufacturers and oil refiners to road betterments."

The bulletin states that the highway department is collecting data for the legislature but has not adopted any recommendations on the subject.

AMENDMENT NO. 1 BUT INITIAL STEP

After Its Adoption Legislature Must Work Out Details of Plan.

Adoption of Amendment No. 1—Rural Credits—is but an initial step in the establishment of a state rural credits system for Minnesota, says J. F. Reed, chairman of a special committee of far mleaders that is sponsoring the amendment, which comes up for consideration at the Nov. 7 elections.

"The amendemnt itself," says Mr. Reed, "paves the way for legislative action later, as it will life the constitutional limitation that now prevents the establishment of a farm loan system such as farmers have needed for years. If the amendment fails to receive the solid support of the rural districts, the legislature will remain powerless to take any steps whatsoever, for without that support adoption seems improbable."

While farm leaders obviously can not at this time state positively the intimate details the legislature may authorize after the amendment is adopted, they are agreed that the principle of amortization in the payment of loans must be recognized. That is, loans must be made for 30 to 35 years, with regular annual or semi-annual installments, each installment to cover interest charges and a small payment on principal so as to retire the loan at the end of the period. It is also agreed that tax payers shall not bear the cost of the system, necessary overhead being met by making the interest on loans enough higher than that paid on bonds to cover the expense.

"FIGHTIN' MAD" FULL OF DARING FEATS

William Desmond Thrills as Athletic Horseman in Romantic Picture.

For those who love daring feats of adventure and romance filled with swift action, "Fightin' Mad," a Metro release for William Desmond Productions, will be at the Lyceum Thursday and Friday, and will adequately satisfy all requirements.

This screen adaptation of an original story of H. H. Van Loan, author of "The Virgin of Stamboul" and a great many other screen successes, is a rapidly moving romance. In the typical whirlwind style of a man of the big outdoors he makes the acquaintance of a young lady on the overland limited. Then he signalizes his advent into the Border Patrol by thrashing his way into the friendship of three buddies and enlisting them in a desperate scheme to rescue the girl of the train, who has been kidnapped by bandits.

As a hard-riding, two-fisted adventurous lover, William Desmond played the part to perfection, while, Virginia Brown Faire was altogether delightful as the young girl from the city who is suddenly thrown into the whirl of events on the border of civilization. Rosemary Theby, who won fame in the leading feminine role in "A Connecticut Yankee," made a typical brigands' sweetheart, while William Lawrence left nothing to be desired as the brigand chief.

"Fightin' Mad" was directed by Joseph J. Franz and photographed by Harry A. Gersted.

COMPETITION NEEDED IN FARM LOAN FIELD

Amendment No. 1 Will Help Stabilize Farm Mortgage Interest Rates, Says J. F. Reed.

Competition, which always makes for efficiency and stabilization, is sorely needed in the farm loan field, according to J. F. Reed, president of the Minnesota Farm Bureau federation and chairman of a special committee of farm leaders that is sponsoring the campaign to obtain passage of Amendment No. 1 (Rural Credits) at the Nov. 7 elections.

"In sections where few farm loan companies are operating," Mr. Reed says, "interest rates invariably are high and the system of frequent renewals, cash premiums and bonuses flourishes. The first effect of the Federal Farm Loan system was to lower interest rates all over the country. But that agency thus far has been able to take over only 10 per cent of the farm mortgage business in Minnesota and farmers generally feel that additional machinery, which will be authorized when Amendment No. 1 is adopted, is necessary."

Farmers are organizing to obtain a solid rural vote in favor of the new amendment. "Blank ballots count against the amendment. Vote "Yes," is their slogan.

We repeat, by way of emphasis, that the clock is the only thing that can successfully do business on "tick."

Job was a patient man, but he never called on the telephone and found the "line busy" six consecutive times.

RAISING OF BETTER POULTRY DISCUSSED BY STANCHFIELD

State Poultry Expert Says Better Breeding Produces More Profits in Chicken Raising Industry.

One of the interesting addresses at the Community Club meeting at the School Auditorium last Friday evening was that of W. E. Stanchfield, poultry expert connected with the Northwest Farmstead. The main part of his address was devoted to the problem of properly feeding and housing poultry. Also he cited the advantages to be obtained by careful culling of the flock at regular intervals, laying special stress upon better breeding as the surest road to success in the poultry industry.

Mr. Stanchfield gave several poultry demonstrations in the county and distributed blue prints of poultry houses especially designed for this climate.

On Friday Mr. Stanchfield gave a demonstration of proper culling and housing at the yard of Palmer Tvedt in this village, also giving a similar demonstration at the farm of Stuart McLeod.

The Community Club meeting was well attended considering the season, and the speakers held the undivided attention of the people present.

POTATO PRODUCERS URGED TO DO MORE GRADING, STORING

Potato growers of the state are having serious difficulty in selling potatoes at a reasonable price this year. If there ever was a time when a quality product should be emphasized and when we needed to pay more attention to the marketing of a crop it is this year with this crop.

While the drouth has undoubtedly affected the yield, and while it may be necessary to make a considerable adjustment in the estimated production of potatoes, all authorities agree that there is a large crop; also that transportation difficulties add to the seriousness of the problem and that unless the very best grading practice is established in potato centers there will be a very low market, if any at all, for a part of the crop. With this end in view, the extension division is anxious to place all the emphasis it can upon more and better grading, more storage and more knowledge of shipping and selling potatoes.

While the price received for even the best potatoes may not be as profitable as we would desire, the returns for ungraded, blemished, disease infected stock are certain to be inadequate at such a time as this. Such stock should not be put on the market this year.—Director F. W. Peck, of the agricultural extension service, University of Minnesota.

GRADE YOUR POTATOES, SAYS "POTATO" SMITH IN TALK HERE

Farmers Suffer Huge Annual Losses by Failing to Observe Shipping Regulations, Says Expert.

That farmers of Minnesota suffer large losses every year through their failure to observe proper grading and shipping regulations, was the assertion of "Potato" Smith, who made a rousing talk at the Community Club meeting held last Friday evening at the High School Auditorium.

"This is particularly true," said the speaker, "in those sections which have more recently entered the potato raising industry and where little is known of the advantages to be gained from proper grading and handling of potatoes."

The speaker pointed out how only one car out of the first 200 carload shipments of Minnesota potatoes to reach the Chicago markets graded No. 1, the result being that the shippers paid freight on an average dockage of 4,000 pounds, besides taking a lowered price due to a reduction in the grade of the entire shipment. Mr. Smith estimated that Minnesota farmers lost at least $100,000 last year through faulty shipping and grading.

Mr. Smith is a practical farmer who has spent a lifetime in the study of potato raising and his address was chock full of valuable suggestions to local shippers. During his stay in Bennington county he gave a number of demonstrations of potato grading, showing how to eliminate scabby and otherwise imperfect potatoes in order that shipments may come up to grade when they reach the terminal markets.

BUREAU SCORES TARIFF VICTORY

Placing Potash on Free List Saves Millions of Dalls For Farmers.

The weight of the Farm Bureau's legislative office at Washington was again demonstrated when the tariff bill was finally passed with potash in the free list. As reported by the House and Senate conferees, the bill carried a tariff of $30 a ton on imported potash, an important fertilizer. This provision would have cost farmers using that product millions of dollars annually.

Hardly had the conference report become public, than was the full force of the Farm Bureau's national organization put in motion to prevent this obvious injustice. Telegrams to state organizations affiliated with the American Farm Bureau federation resulted in such a storm of protest from all parts of the country that Congress quickly placed potash on the free list.

The tariff, as finally enacted, is a compromise measure, and no one industry got exactly what it wanted. Agriculture was well represented by the Farm Bureau leaders and makers of the law probably had a better understanding of the needs of farmers than did any previous tariff body. The potash incident is but a high-light in the weeks of effort that Farm Bureau men at Washington devoted to the bill.

THE DAIRY SHOW.

Much interest is being taken by Valley farmers and business men in the National Dairy Show to be held at the State Fair grounds Oct. 7-14. At a recent meeting of the Red River Valley Livestock Association a committee was appointed to arrange for a special train or cars in order that the Valley delegation may go together and advertise the interest taken in dairying in this section of the state. The county agents of each county will receive the names from each county where there is a county agent. In Marshall county C. L. Spaulding of Warren, and in Polk county O. M. Kiser of Crookston will be in charge. The special train or cars on the Great Northern will leave Crookston 10:30 Monday night, Oct. 9. The Red River Valley Livestock Association will furnish badges to all from this section provided a special delegation is secured.

The National Dairy Show is beyond description the most wonderful exhibition of dairy cattle and allied industries that the world has ever seen. The fact that it is being held at our front door means there is an opportunity to see it that will not come again for years. All who go will receive inspiration from it that will be remembered for years. A fare and a third has been given for this event.

CHAPTER XI—Continued.

—17—

"Tell him yourself," Gramont laughed, good-humoredly. "Gumberts is coming out day after tomorrow, is he? That'll be Friday. Hm! I think that I'd better bring Fell out here the same day, if I can make it. I probably won't see Gumberts until then—I'm not working in with him and he doesn't know me yet—but I'll try and get out here on Friday with Fell. Now, I'll have to beat it in a hurry. Any message to send?"

"Not me," was the answer.

Gramont scarcely knew how he departed, until he found himself scrambling back through the underbrush of the Ledanois place.

He rushed into the house, found the fire had died down beyond all danger, and swiftly removed the few things they had taken from the car. Carrying these, he stumbled back to where he had hidden the automobile. He scarcely dared to think, scarcely dared to congratulate himself on the luck that had befallen him, until he found himself in his own car once more, and with open throttle sweeping out through the twilight toward Paradis and Houma beyond. A whirlwind of mad exultation was seething within him—exultation as sudden and tremendous as the past weeks had been uneventful and dragging.

Gramont, in common with many others, had heard much indefinite rumor of an underground lottery game that was being worked among the negroes of the state and the Chinese villages along the gulf coast. And now he knew definitely.

Lotteries have never died out in Louisiana since the brave old days of the government-ordained gambles, laws and ordinances to the contrary. No laws can make the yellow man and the black man forego the get-rich-quick heritage of their fathers. On the Pacific coast lotteries obtain and will obtain wherever there is a Chinatown. In Louisiana the days of the grand lottery have never been forgotten. The last two years of high wages had made every negro wealthy, comparatively speaking. The lottery mongers would naturally find them a ripe harvest for the picking. And who would gravitate to this harvest field if not the great Gumberts, the uncaught Memphis Izzy, the promoter who had never been "mugged!"

Here, at one stroke, stumbling on the thing by sheer blind accident, Gramont had located the nucleus of the whole business!

Gradually his brain cooled to the realization of what work lay before him. He was through Paradis, almost without seeing the town, and switched on his lights as he took the highway to Houma. Sober reflection seized him. Not only was this crowd of crooks working a lottery, but they were also managing a stupendous thievery of automobiles, in which cars were looted by wholesale! And the man at the head of it all, the man above Memphis Izzy and his crooks, was Jachin Fell of New Orleans.

Did Lucie Ledanois dream such a thing? No. Gramont dismissed the question at once. Fell was not an unusual type of man. There were many Jachin Fells throughout the country, he reflected. Men who applied their brains to crooked work, who kept themselves above any actual share in the work, and who profited hugely by tribute money from every crook in every crime.

To the communities in which they lived such men were patterns of all that wealthy gentlemen should be. Seldom, except perhaps in gossip of the underworld, was their connection with crime ever suspected. And—this thought was sobering to Gramont—never did they come within danger of retribution at the hands of the law. Their ramifications extended too far into politics; and the governors of some Southern states have unlimited powers of pardon.

"This is a big day!" reflected Gramont, dismissing the sinister suggestion of this last thought. "A big day! What it will lead to, I don't know. Not the least of it is the financial end of it—the oil seepage! That little iridescent trickle of oil on the water means that money worries are over, both for me and for Lucie. I'm sorry that I am mixed up with Fell; I've enough money of my own to drill at least one good well, and one is all we'll need to bring in oil on that place. Well, we'll see what turns up! My first job is to make sure Hammond is safe, and to relieve his mind. I'll have to leave him in jail, I suppose—"

Why did Fell want to "get something" on Hammond? To this there was no answer

He drove to Houma to find the town abuzz with excitement, for the news of the sheriff's murder had stirred the place wildly. Proceeding straight to the courthouse, Gramont encountered Ben Chacherre as he was leaving the car.

"Hello, there!" he exclaimed. "Lost my road. Where's Hammond?"

Chacherre jerked his head toward the courthouse.

"In yonder. Say, are you going back to the city tonight?"

"Yes." Gramont regarded him. "Why?"

"Take me back, will you? I've missed the last up train, and if you're goin' back anyhow I won't have to hire a car. I can drive for you, and we'll make it in a couple of hours, before midnight sure."

"Hop in," said Gramont, nodding toward the car. "I'll be back as soon as I've had a word with Hammond. No danger of his getting lynched, I hope?"

"Not a chance," said the other, conclusively. "Six deputies up there now, and quite a bunch of ex-soldiers comin' to stand guard. You goin' to fight the case?"

"No," said Gramont. "Can't fight a sure thing, can you? I'm sorry for him, though."

Chacherre shrugged his shoulders and got into the car.

Gramont was much relieved to find that there was no danger of lynching, which had been his one fear. It was with much persuasion that he got past the guard and into the courthouse, where he was received by a number of deputies in charge of the situation.

After conferring with them at some length, he was grudgingly taken to the cell occupied by Hammond. The latter received him with a wide grin, and gave no signs of the grueling ordeal through which he had passed.

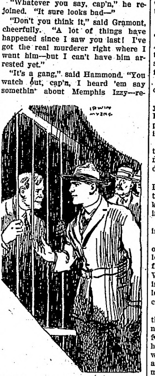
"Listen, old man," said Gramont, earnestly. "Will you play out the game hard to the end? I'll have to leave you here for two days. At the end of that time you'll be free."

The listening deputies sniffed, but Hammond merely grinned again and put a hand through the bars.

"Whatever you say, cap'n," he rejoined. "It sure looks bad—"

"Don't you think it," said Gramont, cheerfully. "A lot of things have happened since I saw you last! I've got the real murderer right where I want him—but I can't have him arrested yet."

"It's a gang," said Hammond. "You watch out, cap'n, I heard 'em say somethin' about Memphis Izzy—remember the guy I told you about one day? Well, this is no piker's game! We're up against somethin' solid—"



"Will You Play Out the Game Hard to the End?"

"I know it," and Gramont nodded. He turned to the deputies. "Gentleman, you have my address if you wish to communicate with me. I shall be back here day after tomorrow—at least, before midnight of that day. I warn you, that if anything happens to this man in the meantime, you shall be held personally responsible. He is innocent."

"Looks like we'd better hold you, too," said one of the men. "You seem to know a lot!"

Gramont looked at him a moment.

"I know enough to tell you where to head in if you try any funny work here," he said, evenly. "Gentlemen, thank you for permitting the interview! I'll see you later."

The coroner's jury had already adjudged Hammond guilty of the murder. Returning to the car, Gramont had Ben Chacherre drive to a restaurant, where they got a bite to eat. Twenty minutes later they were on their way to New Orleans—and Gramont learned for the first time of Joseph Maillard's murder by the Midnight Masquer, and of the arrest of Bob Maillard for the crime.

CHAPTER XII

The Ultimatum.

Upon the following morning Gramont called both Jachin Fell and Lucie Ledanois over the telephone. He acquainted them briefly with the result of his oil investigation, and arranged a meeting for ten o'clock, at Fell's office.

It was slightly before ten when Gramont called with the car for Lucie. Under the spell of her smiling eagerness, the harshness vanished from his face; it returned again a moment later, for he saw that she, too, was changed. There was above them both a cloud. That of Gramont was secret and brooding. As for Lucie, she was in mourning. The murder of Joseph Maillard, the arrest and undoubted guilt of Bob Maillard, dwarfed all else in her mind. Even the news of the oil seepage, and the fact that she was probably now on the road to wealth, appeared to make little impression upon her.

"Thank heaven," she said, earnestly, as they drove toward Canal street, "that so far as you are concerned, Henry, the Midnight Masquer affair was all cleared up before this tragedy took place! It was fearfully imprudent of you—"

"Yes," answered Gramont, soberly, reading her thought. "I can realize my own folly now. If this affair were to be laid at my door, some kind of a case might be made up against me, and it would seem plausible. But, fortunately, I was out of it in time. Were we merely characters in a standardized detective story, I suppose I'd be arrested and deluged with suspense and clues and so forth."

"Your escape was too narrow to joke over, Henry," she reproved him, gravely.

"I'm not joking, my dear Lucie. I learned nothing about the tragedy until late last night. From what I can find in the papers, it seems agreed that Bob was not the real Masquer, but had assumed that guise for a joke. A tragic joke! Since he was undoubtedly drunk at the time, his story can't be relied upon as very convincing. And yet, it's frightfully hard to believe that, even by accident, a son should have shot down his own father—"

"Don't!" Lucie winced a little. "In spite of all the evidence against him, in spite of the way he was found with that aviation uniform, it's still awful to believe. I can't realize that it has actually happened."

"According to the papers, poor Mrs. Maillard has gone to pieces. No wonder."

"Yes. I was there with her all day yesterday, and shall go again today. They say Bob is terribly broken up. He sent for his mother, and she refused to see him. I don't know how it is all going to end! Do you think his story might be true—that somebody else might have acted as the Masquer that night?"

Gramont shook his head.

"It's possible," he said, reluctantly, "yet it hardly seems very probable. And now, Lucie, I'm very sorry indeed to say it—but you must prepare yourself against another shock in the near future."

"What do you mean? About the oil—"

"No. It's too long a story to tell you now; here we are at the Maison Blanche. Just remember my words, please. It's something that I can't go into now."

"Very well, Henry! Do you think that it's possible your chauffeur, Hammond, could have learned about the drinking party, and could have—"

Gramont started. "Hammond? No. I'll answer for him beyond any question, Lucie. By the way, does Fell know anything about Hammond having been the first Masquer?"

"Not from me," said the girl, watching him.

"Very well. Hammond got into a bit of trouble at Houma, and I had to leave him there. It was none of his fault, and he'll get out of it all right. Well, come along up to our oil meeting! Forget your troubles, and don't let my croakings about a new shock cause you any worry just yet."

He was thinking of Jachin Fell, and the girl's closeness to Fell. Had he not known that Fell was responsible for Hammond's being in jail, he might have felt differently. As it was, he was now forewarned and forearmed, although he could not see what animus Fell could possibly have against Hammond.

It was lucky, he reflected grimly, that he had never breathed to a soul except Lucie the fact that Hammond had been the first Masquer! Had Fell known this fact, his desire to lay Hammond by the heels might have been easily fulfilled—and Hammond would probably have found himself charged with Maillard's murder.

They found Jachin Fell dictating to a stenographer. He greeted them warmly, ushering them at once into his private office.

Gramont found it difficult to convince himself that his experiences of the previous afternoon had been real. It was almost impossible to believe that this shy, apologetic little man in gray was in reality the "man higher up!" Yet he knew it to be the case—knew it beyond any escape.

"By the way," and Fell turned to Gramont, "if you'll dictate a brief statement concerning that oil seepage, I'd be obliged! Merely give the facts. I may have need of such a statement from you."

Gramont nodded and joined the stenographer in the outer office, where he dictated a brief statement. It did not occur to him that there might be danger in this; at the moment, he was rather off his guard. He was thinking so much about his future assault on Fell that he quite ignored the possibility of being placed on the defensive.

Within five minutes he had returned to Lucie and Jachin Fell, who were discussing the condition of Mrs. Maillard. Gramont signed the statement and handed it to Fell, who laid it with other papers at his elbow.

"I suppose we may proceed to business?" began Fell. "I have drawn up articles of partnership; we can apply for incorporation later if we so desire. Lucie, both Henry Gramont and I are putting twenty-five thousand dollars into this company, while you are putting in your land, which I am valuing at an equal amount. The stock, therefore, will be divided equally among us. That is understood?"

"Yes. It's very good of you, Uncle Jachin," said the girl, quietly. "I'll leave everything to your judgment."

The little gray man smiled.

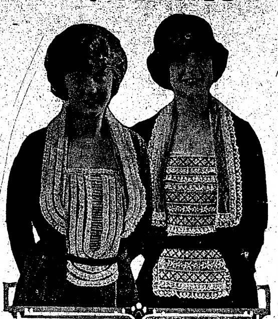
"Judgment is a poor horse to ride. Here's everything in black and white. I suggest that you both glance over the articles, sign up, and we will then hold our first meeting."

Gramont and Lucie read over the partnership agreement, and found it perfectly correct.

(TO BE CONTINUED.)

A good husband is one who lets his wife get her fall clothes before he lays in the winter supply of coal.

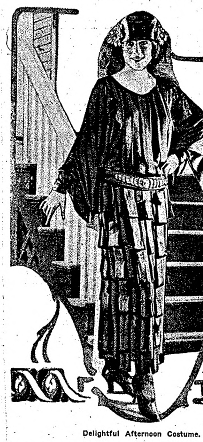
Pretty Things that are made at Home



IT IS getting to the place where every ambitious young woman aspires to an assortment of sweaters, and often she knits them for herself. This ability to make them puts the expensive, handmade garment within the reach of even a very limited dress allowance, besides making the exercise of individual taste possible, in colors and other things. The sweater gets smarter all the time—the element of style grows more and more important in it.

Vestees and collars, to be worn with sweaters or coats, are among the dainty accessories that women make for themselves, elaborating them with handwork. They add just the right note to the sweater and skirt costume and make a separate waist unnecessary. Two collar and vestee sets, as pictured, worn with sweaters and skirts contribute so much of attractiveness that they are real necessities—the good points of the sweater are emphasized by them.

A straight band of net is the foundation of both the collars, but in the set at the left it is rounded at the ends. Three frills of fluted val lace form its decoration. A panel of tucked net down the center of the vestee is bordered by frills of val lace and a very full frill edges the top.



Delightful Afternoon Costume.

Straight lines and square corners make the set at the right a simple matter to handle. Net, lace and embroidered swiss insertion are set together in strips for the vestee, the net strips covered with frills of val edging. There is a plain fold of net at the top and the collar is plain net, edged with frills of val.

That early rumor, that the silhouette would expand and the waistline move upward this fall, is less than a whisper now, for the displays do not bear it out. All the lovely frocks for afternoon and evening show that women are still devoted to long lines and slimness and that they insist on wearing soft fabrics that fall into graceful draperies. What they are looking for is apparel that glorifies the human form divine by clothing it with supple draperies that fall and float and betray its grace and beauty. Their mood will have to change before the fashions will. Long and trailing sashes and panels—sleeves that are merely floating drapery, veils and long earrings are the mode because they suit the mood of their wearers.

There is every reason to be satisfied with things as they are in the world of fashion, for women have every opportunity to be beautifully as well as fashionably dressed this season. The styles are lovely and are also refined—a consummation devoutly to be wished. After so much "jazzing" in the near past it is refreshing to study the new things. Among them appears the delightful afternoon costume, shown herewith—made of heavy brown crepe. It is a simple affair with bodice bloused at the low waistline and wide-draped sleeves ending in points and confined at the wrist. The popular trimming of loose straps has been ingeniously managed on it, falling free from neck to girdle and caught up in tiers about the skirt. The skirt is ankle length but the straps in the lowest tier fall to the instep.

The girdle of self-material is embroidered with graduated, overlapping disks, made of little knots, set close together, in colors. The small hat is a Napoleon shape of hatters' plush with rosettes of metallic leaves at the sides. It is trimmed with a long, fine lace veil which falls over it to the tip of the nose at the front and to the shoulder-blades at the back.

Tweeds for Autumn.

Dark tweeds are promised great popularity for fall. Imported plaids and checks, too, are being made into very snappy suits and coats.

Rheumatism and Dyspepsia Are Soon Ended

Victims of stomach trouble and rheumatism often find that when their stomach is set in order, the rheumatism disappears. Thousands of people everywhere have testified that Tanlac has freed them of both troubles simultaneously. Mr. Robert Trotter, 148 State St., St. Paul, Minn., says:

"About a year ago I began to go down hill. Sour stomach and rheumatism in my arms and shoulders kept me in misery all the time. Since taking Tanlac all my aches and pains have gone, and my stomach is in fine shape. I'm glad to endorse such a fine medicine."

Badly digested food fills the whole system with poisons. Rheumatism and many other complaints not generally recognized as having their origin in the stomach quickly respond to the right treatment. Get a bottle today at any good druggist.—Advertisement.

Shy on Railroads.

Though of approximately the same area, Australia has only 26,000 miles of railways to the United States' 250,000.

MOTHERS AND DAUGHTERS

Read This Letter from Mrs. W. S. Hughes

Greenville, Del.—"I was under the impression that my eldest daughter had some internal trouble as ever since the first time her sickness appeared she had to go to bed and even had to quit school once for a week. I always take Lydia E. Pinkham's Vegetable Compound myself so I gave it to her and she has received great benefit from it. You can use this letter for a testimonial if you wish, as I cannot say too much about what your medicine has done for me and for my daughter."—Mrs. WM. S. HUGHES, Greenville, Delaware.

Mothers and oftentimes grandmothers have taken and have learned the value of Lydia E. Pinkham's Vegetable Compound. So they recommend the medicine to others.

The best test of any medicine is what it has done for others. For nearly fifty years we have published letters from mothers, daughters, and women, young and old, recommending the Vegetable Compound. They know what it did for them and are glad to tell others. In your own neighborhood are women who know of its great value.

Mothers—daughters, why not try it?

When business gets dull in a little town it is glad to possess a "historical shrine."

We know some parents who are as unreasonable as their children.

The Modern Interest.

"Did you ever read that poem entitled, 'The Man With the Hoe'?"

"Sure you got it straight?" inquired Farmer Corntossel. "That title sounds to me more like politics than poetry."

FREEDOM FROM LAXATIVES

Discovery by Scientists Has Replaced Them.

Pills and salts give temporary relief from constipation only at the expense of permanent injury, says an eminent medical authority.

Science has found a newer, better way—a means as simple as Nature itself.

In perfect health a natural lubricant keeps the food waste soft and moving. But when constipation exists this natural lubricant is not sufficient. Medical authorities have found that the gentle lubricating action of Nujol most closely resembles that of Nature's own lubricant. As Nujol is not a laxative it cannot gripe. It is in no sense a medicine. And like pure water it is harmless and pleasant.

Nujol is prescribed by physicians; used in leading hospitals. Get a bottle from your druggist today.—Advertisement.

COOK GOOD MEAL WITH SLOW FIRE

Fireless Cooker Eliminates Necessity of Hot Stove.

ADAPTABLE TO TOUGH MEATS

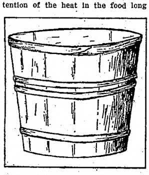
Principle of Device Is Retention of Heat Long Enough to Complete Cooking of Food—Plan of Construction Outlined.

(Prepared by the United States Department of Agriculture.)

Now that summer is at hand the housewife turns her thought to meals which require as little heat as possible to prepare, or to those devices by which a good meal can be cooked without staying constantly in a hot kitchen while doing it. A fireless cooker is one of the means by which this latter may be accomplished. Meats and fowl may be prepared in it, and particularly it is adaptable to the tougher cuts of meat and to beans and cereals, because of the long, slow cooking which it affords.

Principle of Device.

The principle of home-made and commercial fireless cookers is the retention of the heat in the food long enough for it to be sufficiently cooked. This is accomplished by first heating the food thoroughly over the stove in the cooking utensil and then placing the latter in a fireless cooker which is so insulated that the heat will be retained for sufficient time to complete the cooking. The cooking is materially aided by the use of a hot stone placed under, and sometimes also another one on top of the cooking utensil.



Wooden Pail Good for Fireless Cooker.

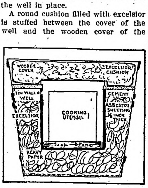
A home-made fireless cooker may be made out of a wooden box or pail of sufficient size. A wooden candy pail 16 inches in diameter, standing 15 inches high, has been made into a fireless cooker by the United States Department of Agriculture. The accompanying diagram shows the outside appearance of the wooden pail, and also a cross section.

The outside of the pail is enameled white, as this gives it a finished appearance, makes it smooth to handle, and easy to clean. The inside of the pail is lined with six thicknesses of heavy brown paper and then with several inches of excelsior. A tin can, with a well-fitting lid, such as can be purchased to keep sugar or flour in, forms the center well. This must be large enough to hold a cooking utensil of practical size.

Asbestos Is Essential.

Directly around and under the center well, and between it and the excelsior is placed asbestos sheeting at least ⅛ inch thick. This is the most essential because it not only aids materially in retaining the heat within the well but also it is a means of protection from fire. Without the asbestos there is great danger of the excelsior taking fire from the hot soapstone. The excelsior and asbestos extend nearly up to the lid of the well and are then covered with a layer of cement which holds the material and the well in place.

A round cushion filled with excelsior is stuffed between the cover of the well and the wooden cover of the cooker, and then it is ready for use. Soapstones of various sizes may be purchased at hardware stores. Flat stones, such as are picked up in some sections of the country, may be used.



Cross Section of Home-Made Fireless Cooker.

Farmers' Bulletin 771, "Home-made Fireless Cookers and Their Use," may be had without cost upon application to the Department of Agriculture, Washington, D. C.

Inexpensive Variety of Foods.

It is worth remembering, the United States Department of Agriculture reminds the housekeeper, that bread and milk, rusks and milk, and crackers and milk all have much the same food value as breakfast foods and milk, and often furnish a convenient and inexpensive variety.

MISTAKES TO AVOID WITH POTATO SALAD

Overcooking or Too Much Stirring Is Harmful.

Evenly Cut Small Dice Are More Attractive Than Large Chunks—Introduce Onion Flavor by Squeezing Juice Out.

(Prepared by the United States Department of Agriculture.)

In making potato salad it is well to avoid overcooking the potatoes, also to avoid too much stirring, or the salad will be mushy and unappetizing. Small, evenly cut dice are more attractive than large chunks of potato, advises the United States Department of Agriculture. Cold boiled potatoes can be used when on hand, or the potatoes may be cut up raw and freshly cooked until just done. Onion flavor may be introduced by squeezing the juice over the cooked hot potatoes. This is more acceptable to many persons than bits of chopped onions occurring in the salad. The potato may be mixed with French mayonnaise, or boiled dressing, while still hot. Care should be taken to avoid using too much vinegar in the salad. A tablespoonful of chopped parsley or diced cucumber is a pleasing addition, while chopped celery or radish, diced hard-boiled egg, canned sardines, capers, sour pickles may all be used with good results.

A well-flavored potato salad may be made by cooking a tablespoonful of finely chopped onion in bacon fat until tender, then adding a tablespoonful of chopped celery and two cupfuls of sliced raw potatoes. All should be covered with water in a skillet and cooked down till the potatoes are done. Use French salad dressing and mix in about two chopped hard-boiled eggs. Sardines may be added if liked. Serve hot or cold.

HIGHER FUEL VALUE OF FATS

Butter and Cream Are Most Important in Diet of Growing Children—Nuts Are Good.

Fats and fat foods, such as butter, lard, suet, table and cooking fats, oil, bacon, salt pork, pork sausages, chocolate, cream, and all nuts, except the chestnut, have a higher fuel value as a class than any other group of foods. Fats add flavor and richness to the diet, but since they are such concentrated fuel foods, are often used in excess of the amount needed. Milk fat is a particularly rich source of vitamine A. Butter and cream are therefore far more important than most other fats in the diet of growing children. Some of these fat foods, for example, chocolate and nuts, contain generous proportions of protein and mineral substances.

Roast Pork With Pudding.

A dish corresponding to the Yorkshire pudding, which is frequently served with roast beef, can be made out of corn meal to serve with roast pork, says the United States Department of Agriculture.

¼ cup corn meal.
1 cup milk.
½ teaspoon salt.
2 eggs.

Place the milk, corn meal and salt in the top of a double boiler and cook them about ten minutes, or until the meal has expanded to form a thorough mixture. After the mixture has cooled, add the eggs well beaten. Grease gem tins thoroughly, allowing to each about one teaspoonful of fat from the roast pork. Bake in a moderate oven, basting occasionally with the drippings of the pork.

Household Questions

Start the hot-weather season with a good garbage can.

• • •

The ends of worn tablecloths make very nice tray cloths.

• • •

Dull files are sharpened when laid in dilute sulphuric acid.

Children Cry For Fletcher's CASTORIA

Are You Prepared?

A doctor in the house all the time would be a good idea. Yet you can't afford to keep a doctor in the family to keep baby well or prevent sickness. But you can do almost the same thing by having at hand a bottle of Fletcher's Castoria, because it is a wonderful remedy for indigestion, colic, feverishness, fretfulness and all the other disorders that result from common ailments that babies have.

Fletcher's Castoria is perfectly safe to use. It is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. Children cry for Fletcher's Castoria, and mothers recommend it because they have found it a comfort to children and a mother's friend.

If you love your baby, you know how sweet it is to be able to help baby when trouble comes. You cannot always call upon a doctor. But doctors have nothing but good to say of Fletcher's Castoria, because they know that it can only do good—that it can't do any harm—and they wouldn't want you to use for baby a remedy that you would use for yourself.

MOTHERS SHOULD READ THE BOOKLET THAT IS AROUND EVERY BOTTLE OF FLETCHER'S CASTORIA

GENUINE **CASTORIA** ALWAYS

EDITORIAL

CARNIVALS TABOO.

Just as the old-time brewery-owned saloon hastened the downfall of the liquor traffic, just so have certain carnival owners killed the outdoor amusement game by making their rides, shows and legitimate attractions a cloak for bringing into decent country communities gangs of gamblers, prostitutes and thieves. A little of hurly-burly would be tolerated, but some of these wise show men have gone a step too far in the belief that no fair or big outdoor affair can be conducted without their noise and tinsel. Now public sentiment has turned against them, and our prediction is that the carnival business is a thing of the past unless it is placed on an entirely different basis—and that very soon.

The Grand Rapids Independent in a recent editorial has well expressed what is the matter, as follows:

"John Barleycorn was allowed to have his own way for a long time, and with the rope that was given him he effectually hung himself.

"Other 'institutions' which were given enough rope hung themselves.

"Now the carnivals are almost through using the rope that was given them, and as far as Grand Rapids is concerned, they have hung themselves.

"The spectacle presented by attaches of the carnival at the county fair this year was disgusting—little short of nauseating.

"And here let us say that as far as this fair association was concerned, no more blame can be attached to them than belongs to former fair associations, for they only followed a custom of selling 'concessions' to carnival sets the same as has been done in the past. It probably is only that the carnival people were more 'raw' with their work this year than before.

"One thing which raised the ire of more people than ever this year was the work of the young women who threw themselves on the men and 'sold' them 'fair booster' ribbons—virtually extorted from 25 cents to a dollar from every man and put the money in their own pockets when the people figured that they were paying something to help the fair association along—worked under the pretext. As a matter of fact, it was getting money under false pretenses, and there is no doubt but that the perpetrators of this graft would be liable to imprisonment if anyone wished to follow the matter up.

"Another graft which pulled in many quarters from innocent and trusting folks was the sale of 'prize boxes' containing a few cents worth of candy and a catch penny, prize. These boxes sold for 25 cents, and the bait was a few better prizes of questionable worth which were contained in a few boxes which the operator of the graft probably had 'spotted' and which he opened in front of the crowd, after the opening of which the innocents almost fell over one another in their efforts to give their 25 cent pieces for their five cent boxes of candy.

"The out-of-town venders of candy, ice cream and other goodies gouged the public for twice what their wares were worth. Even one out-of-town 'hot dog' stand charged 15 cents for sandwiches which sell anywhere else for 10 cents.

"Then, to cap the climax, the usual female contingent of the carnival was present, and if they failed to leave their trail of unspeakable disease behind them, then the looser male population of the village has been learning something of late.

"In the opinion of this paper the whole outfit should have been arrested and thrown in jail for vagrancy, and then told to move on.

"It is gratifying that the fair association has determined to give the carnivals and the attaches of carnivals who come to seek concessions another year a wide berth, and that such people will be politely asked to move on."

BOOTLEGGING REPTILES.

The bootlegger finds the public dance—especially those taking place in a pavilion or barn—a profitable place for him to ply his nefarious trade. He stocks up and lurks near the merry makers and entices the young men to purchase his wares. He is a criminal, of course, and should be promptly arrested, but it is not so easy to identify him, and order him away or call an officer to arrest him. He is a nuisance that has got to be reckoned with. He is casting a stigma upon the pavilion and country dance and it behooves those who give these dances to co-operate with the authorities in their efforts to check his infamous work. And, above all, it behooves parents and guardians of boys and girls to keep them away from all dances of this kind. The risk is too great for any thinking person to permit a youngster to take it.—Redwood Falls Gazette.

AND SITTING PRETTY, TOO.

A fellow who not so long ago was knocking the Minnesota road plan is saying nothing and having a fine ride. —Willmar Republican-Gazette.

LICENSE DODGING EXPENSIVE.

It doesnt' pay to fool with the state in the matter of neglecting or omitting licenses for cars.

So comments an exchange telling of a man with two cars, neither of which had been graced with proper license tags for two years. The offender was taken into court and his penalties and costs totalled some $150—about $41 on his small car and the balance on the larger one.

Why not pay your share when the auto tax already is being returned and more in savings on car repairs, tires and gasoline? The bigger the funds, the better the roads.

SPEED AND PERSONAL LIBERTY.

The average speed artist has very little liking for the motorcycle policeman on the state highway. The speeder usually imagines he is the only driver on the road to be considered and when he is arrested loudly howls that his personal liberty is being interfered with. A few sentences of ten days in jail would give the speeder plenty of time to think the matter over and he might come to a decision that liberty is a fine thing although he must travel at a reasonable rate of speed while enjoying it.—Little Falls Transcript.

Down in McLeod county where everything is made secondary to the cow game, times are exceedingly good. It seems that prosperity and contentment invariably follow the dairy cow.

Mrs. Bess Wilson of the Redwood Gazette very properly censures town people who drive through country districts and raid farms of their tame and wild fruit and other products. "Everything that grows on a farmer's land belongs to that farmer," says the Gazette, "and to take even wild fruit without his permission is as much a misdemeanor as to take his corn, potatoes or chickens."

RANDOM THOUGHTS

Every village that has a cop has a "star" performer.

Worry brings prosperity to the undertaker.

The fat man is out of luck. A handkerchief and shoe laces are about all he can buy ready-made to fit him.

It is well to remember that there are no elevators running to the peak of success.

The doctors are smiling again. The football season's on.

And don't forget that it takes a lot of strength to say "No!" at the right time.

Even if the country's dry, you will find springs in the beds and a well in the dictionary.

Cold cash always seems to have a lot of warm friends.

Those who seek happiness are on a long, long trail—unless they look within.

What has become of the old-fashioned kid who used to whistle "Sweet Marie?"

A little printer's ink about your store will bring buyers by the score!

Even the aviator has no right to look down on other folks.

Among the great outstanding bits of fiction is the orator's: "I shall be brief."

About the only difference between the coal operators and the bandit is that the latter usually has a gun.

All men are honest—except the umpire who "robs" the home team.

Even the fellow who is as "steady as a watch" may feel run down.

Some men fail because they haven't any more originality than a poll parrot.

Someone rises to remark that short skirts are now on their last legs.

Joshua made the sun stand still—and a lot of imitators are making moonshine stills.

Nature provides for everything. As eggs increase in price, the theatrical companies increase in number.

The fellows in the pen believe that life is nothing but a cell.

FOR SALE.

IF IF IF

If you want to EARN—LEARN. The man or woman with little knowledge is the one with little pay. They have too many competitors. We specialize in training men and women of executive timber, who have the habit of climbing higher and higher as long as they live. If you want to prepare for a position worth while, write the Union Commercial College, Grand Forks, N. D., for free catalog and full particulars.

A NEW DAY CALLS

Here's another morning with the blue skies all unfurled,
And waking winds upon the wing to romp the golden world;
Far ways are gleaming with the sheen of fairy gold,
The sun is dripping happiness for eager hearts to hold;
Let's go wandering in pathways of delight
For morning runs so soon into the covers of the night.
Here's another morning with the music on its lips,
Calling on the hearts of men for laughing comradeships,
With all the beauty of the world, and all the glad surprise
Of new and luring wonders heaped for living, loving eyes;
Let's be off to harvest all the rapture of the sod
Along the little ways of life, warm with the smile of God.

Ain't it funny to see a man who has just bought mining stock laugh at a kid for chasing butterflies?

To bring to old age the vital enthusiasms of youth, mellowed and glorified and substantiated by the experience of years, and subdued but not chastened or defeated by [illegible] and the patience and the [illegible] of calmer days, is to know [illegible] life, a vigor that is not volatile, and a serenity that is not dull.

The first day you have trouble you can strangle it. Let it hang around the house a month and it will be your boss.

A woman don't much mind having to raise a dozen children if only her husband dont' hang around too much.

Love!

I.

By Rev. H. Lutz

Text: 1. John 4,19: "We Love Him, because He first Loved us"

St. John, the Apostle, who wrote these words, is called the Apostle of Love. His Gospel is called the Gospel of love, and so his letters might be called letters of love. They are filled with the praise of God's love toward us and with exhortations that we should love God and our neighbor.

The words of our text speak of our love toward our God. They show us the reason why we should love Him, namely because He first loved us. Yes, God loved us first. He loved us long before we were born, long before we knew Him, or thought of loving Him. He loved us when we hated Him. And He loved us so sincerely that "He gave His only begotten Son that whosoever believeth in Him should not perish, but have everlasting life." John 3,16. "The Lord hath appeared of old unto me, saying: "Yea, I have loved thee with an everlasting love, therefore with loving kindness have I drawn thee." Jer. 31,3.

And what moved God so to love us? Was it because we were such good creatures? Was there anything in us which caused Him to love us? Indeed not. God "saw that the wickedness of man was great on the earth and that every imagination of the thoughts of his heart was only evil continually." Gen. 6,5. Therefore He must lament: "The imagination of man's heart is evil from his youth." Gen. 8,21, and: "There is not a just man upon earth that doeth good and sinneth not." Eccl. 7,20. And yet God loved us and gave His Son to die for us! And His Son willingly gave His life for us!

Let us imagine that a wicked subject rebelled against his ruler and king and did all he could to offend and harm him. Finally he fell into the hands of the king's men and was sentenced to die for his wicked deeds. But the king would save him from death by giving his own and only son, a prince, to die for him in his stead, and he did this out of love toward the rebel! And the prince would be willing to give his life for the criminal, because he loved him! Would not that be real love. But such love among men is unthinkable. And yet just such love it is that God showed unto man. God, the Lord, gave His only Son, and His Son His life for rebellious, wicked man in order that man might not be damned, but have eternal life.

And in what manner did God give His Son, and His Son His life for us? Look to the cross on Mt. Calvary. See Him hanging there between heaven and earth, supported by a few nails which are driven thru His hands and feet. See His lifeblood trickle from His wounds and slowly color the wood of the cross a crimson red. Hear Him mocked and reviled by wicked people, people whom He had done nothing but good, and for whom He was suffering. Imagine yourself in His position, and then remember that all this was done because God loved you and wants you to be saved!

Is not this sufficient reason why we all should love God. Surely, if we fully realize what God did because He loved us, we will love Him with our whole heart and mind and soul. We will be glad to put our all into His service. We will read and hear His word gladly and frequently; we will have communion with Him in prayer daily and hourly. We will take sorrow as well as joy from His hands cheerfully. We will try always to live according to His will. Everything we do will be done out of love toward Him, who first loved us. In all we will seek His glory and honor. We will speak of His love often and with pleasure. As a bride loves her bridegroom, as a child loves its mother, as a patriot loves his country, so and still more, will we love God. One reason why we do not love God as we should, is because we do not always remember His love toward us. What a terrible sin, not to love God who has loved us and done so much for us! What a consolation that His Son has died to atone for this sin also!

Therefore sing:

Just I am, Thy love unknown, has
broken every barrier down,
Now to be Thine, yea Thine alone, O
Lamb of God, I come, I come.
—Amen.

Lutheran Church, Missopri Synod.

H. Lutz, pastor. Sunday, Oct. 1: English Communion services at Erie at 10 a. m. and at Neptune at 3 p. m. Preaching services at Big Grove at 8 p. m.

Sunday School and Bible Class.

The Sunday school and Bible class in Goodridge meet at the Lutheran church every Sunday at 10 a. m. The classes have been rearranged. The Sunday school superintendent, Mr. Ronken, has charge of the Bible class. Mrs. Aaaker has those who study for confirmation, Miss Gyda Gilbertson 7th and 8th grades; Thelma Gilbertson the 5th and 6th; Mrs. C. Gunderson the 3rd and 4th grades; Mr. Alvin Halvorson2nd grade, and Miss Vivian Thorson the 1st grade. The parents are earnestly requested to see that their children are enrolled and attend regularly. All children over five years are welcome to the Sunday school.

Norwegian Lutheran Church.

V. O. Aaker, pastor. Sunday, Oct. 1: English services with chatechising of the confirmants and special singing at the Goodridge church at 11 a. m. Norwegian services at Lethania at 2:30 p. m. The young people's society of Erie meets Sunday afternoon at the church. The young people's society of Torgerson meets at the Torgerson church. These societies have drawn large crowds and no doubt there will be a large attendance next Sunday. The Erie ladies' aid meets with Mrs. Andrew Hanson on Wednesday, Oct. 4. Everybody welcome.

Another sad thing about strikes—when the trains aren't running the porters have to live on their wages.

Chef Tells Secret For New Bran Gems

Rene Anjard

THERE are ways of making bran gems. Rene Anjard, chef of the Waldorf-Astoria, New York, has a recipe all of his own, which occupies a prominent place in the hotel's diet lists.

The Waldorf-Astoria, by the way, has a whole series of menus on scientific diet lists, and these bran gems can be found in almost every one of them. This is the way Monsieur Anjard makes his bran gems:

One and one-half cups of bran, one teaspoonful of baking soda, one tablespoonful of butter, three-fourths cup of sour cream or buttermilk, one-fourth cup of sugar.

Mix together and bake in a hot oven for twenty minutes. This makes six gems.

FARM BUREAU MEN SEEK WOOD MARKET

Federation's Survey Shows Vast Supply Available to Meet Coal Shortage.

The Minnesota Farm Bureau Federation, co-operating with counties affiliated, is making an effort to find a favorable market for vast quantities of fuel wood in the northeast section of the state. A recent survey, taken by F. L. French, secretary, shows marketable quantities in Beltrami, Crow Wing, Mahnomen and Carlton counties.

Farmers will sell wood at the following prices: $4.50 to $5.75 for dry tamarack; $5.00 for birch and elm; $6.00 for oak. All prices are on cord basis, loading at shipping point and in carload lots.

"Conditions in the fuel and railroad industries have brought about a situtíon that easily may cause hardship and privation in the state, unless a speedy remedy is found," says President J. F. Reed. "Many sections of the state have a large surplus of fuel wood that can easily be prepared for fuel. The St. Paul office of the Minnesota Federation offers the use of its facilities for marketing the product. We would be glad to serve farm communities or dealers in sections where wood is not available locally."

Several county agents from the Northern part of the state are conducting negotiations with fuel dealers in the Twin Cities and expect to market several carloads.

The Federation's survey shows that northern farmers are prepared to supply fence posts at reasonable prices.

EXHIBIT WILL SHOW DAIRY DEVELOPMENT

Creameries Association to Have Big Display at Exposition in St. Paul October 7 to 14.

Development of the dairy industry in the Northwest, from the scrub cow and the old-time dasher churn, to the high-producing purebreds and modern co-operative creameries, will be part of the Minnesota Co-operative Creameries Association's exhibit at the National Dairy Show, St. Paul, Oct. 7 to 14.

The association has appropriated $1,500 to cover the cost of the exhibit. Of this amount, $500 will be distributed as special awards to Minnesota co-operative creamery buttermakers, whose products displayed at the show score more than 95. It is felt that this "added money" will do much toward enabling Minnesota to win the grand prize.

The exhibit, as a whole, will stress the importance of the co-operative creamery in Minnesota's dairy industry and will show to farmers the things they should do to make their loca l creameries outstanding successes.

The show also will be used to show the merits of co-operative creamery-made butter to visitors from the larger cities of the state. The Twin Cities and Duluth is a marketing field that as yet has not been entered extensively by farmer-owned companies.

FINAL PLANS TAKING SHAPE FOR 1922 DAIRY EXPOSITION

Thirty-two tons of brand new scenery and properties are being set up for the $32,000 "Healthland" show, stanchions are being installed in the $600,000 cattle barn for 1,000 purebred and 350 to 500 grade cattle (many of which will be sold at auction), advance installments of the million dollar machinery exhibit are arriving and changes are being made in the agricultural building for the National Poultry Exposition. These are final preparations for the National Dairy Exposition, Minnesota State Fair grounds, Oct. 7 to 14.

All traces of Floricultural exhibits in the Floricultural building have been removed and instead a new land is being laid out there. It is "Healthland" with its baby garage, a child health bank made of gold coins, a movie house, a restaurant built of the best foods and a library filled with story books on health. Out of twenty interesting features of this unexplored country, it is possible to mention but a few, the whole forming one of the big features of the dairy exposition, and is termed "the land of a thousand thoughts, and a playground for 100,000 children."

Cliff Goldsmith, New York interpreter of health education, who is known nationally among children as "Professor Happy" and Miss Louise Fitzgerald, director of the National Dairy Council, are personally supervising the "Healthland" display.

Staging for the machinery exhibit, where visitors will see how modern science makes dairy products better, was set up the first of the week.

The low admission price of 50 cents announced by Col. W. E. Skinner, general manager of the dairy show, will be a blanket charge admitting people to all the exhibits on the ground, as well as to the afternoon and evening entertainment in the Hippodrome. Childrens' tickets will be 25 cents. There are no extras.

Headed by E. C. Hoppe, physical director of the St. Paul Athletic Club, the Dairy Exposition Athletic Committee has scheduled the largest indoor track and field event of the season for the first night of the dairy show. High school, college and amateur athletics will be admitted to competition and record made will be officially recognized by the Amateur Athletic Union, of which the National Dairy Association is a member in good standing. On Monday, Tuesday, Wednesday and Thursday evenings of exposition week, athletic entertainment is billed, and on Friday and Saturday nights a gala horse show will be held.

One and one-third fare for the round trip applies for the Exposition and tickets will be sold on that basis by local ticket agents throughout the Northwest.

One day during exposition week, Wednesday, Oct. 11, Mrs. Hen will have her inning. Restaurants on the grounds will serve nothing but poultry products that day. A great poultry pageant will be held with 60 girls from the University of Minnesota participating. Championship club teams will compete for national honors at the poultry exposition.

Where Extra Service is Demanded
Firestone Cords Predominate

WHEREVER the exactions and tests of tires are most severe—there you will find Firestone Cords in universal use.

The hard jobs seek Firestone. And so well has Firestone responded under difficult conditions—so consistently has mileage mounted to totals impossible to obtain from ordinary tires that today Most Miles per Dollar is the buying slogan of thinking motorists everywhere.

The blending and tempering of rubber, gum-dipped cord construction, air-bag cure—all these mileage methods have been developed by men whose life work is the production of constantly increasing tire values for the public.

Users in this vicinity verify Firestone reputation, and report almost daily some new Firestone record of extra distance travelled.

Don't be satisfied to buy tires—buy values—the longest mileage at the lowest price consistent with such reliable performance.

Make Most Miles per Dollar your principle of tire economy — choose your next tire on that basis.

NEAR EAST WAR ENDED IS REPORT

British Capitol Optimistic Over Outlook for Peaceful Settlement of Question.

ARMIES STILL ON MOVE

Prolonged Negotiations Expected Because of "Trading Propensities" of Ottoman Diplomats—Lord Curzon Smiles.

Constantinople—Maj. Gen. Frederick B. Maurice, who for a long period during the war was chief director of military operations at the war office in London and now is the military expert of a London newspaper, has said:

"The war is over. Kemal will accept the allied proposals with reservations. He is just as anxious for peace as the allies, but one must not take him too lightly.

"Kemal has an army of 180,000 that may be regarded as fighting troops. It would take a good deal to defeat the Kemalists, but I am so confident of peace that I am leaving for England in a few days."

London—Smiles, which wreathed Lord Curzon's face as he departed from the prime minister's offical residence in Downing street, after making a detailed report to the cabinet of his Paris mission, typified the general easing up of the tenseness in the Near East situation as viewed from the British capital.

Expect Prolonged Parley.

Everywhere in official circles here are expressions of relief that the war crises of last week have been replaced by old school diplomacy with such an old hand as Curzon directing British policy, and although there is no word that the allied note has yet been delivered to Mustapha Kemal Pasha, the nationalist leader, it is intimated that his refusal to come to terms is extremely unlikely.

The view is held in authoritative allied circles that immediate acceptance would be against Turkish "trading propensities." It is said said that the Turk in bargaining diplomatically or otherwise always wants a first offer made to him. Then he holds the other to it and angles for further concessions. The allies have made Kemal Pasha a definite offer of Constantinople, Thrace to the Maritza river and membership in the League of Nations, but it is believed that Kemal will probably reply with a demand for all of eastern Thrace and complete retirement of the Britsh from the neutral zones before the Turks enter into a peace conference.

It is taken for granted, however, both in Paris and London that no reply will be forthcoming from the nationalist leader until he sees M. Franklin Bouilon, the French envoy, who is expected to reach Smyrna this week.

Armies Still Moving.

That all danger is not past is evident from dispatches reporting a new Kemalist incursion in the Chanak zone, necessitating a further warning from the British commander there.

WHISKY HELD NEAR BORDER

Booze Shipped from Kentucky to Drug Firm in Vancouver Held by Agents.

Portal, N. D.—Six carloads of bonded whisky, each car containing 1,000 cases, in custody of the Soo line agent here, has been seized by federal prohibton officers. The liquor is estimated to be worth more than a quarter milion dollars. They are awaiting orders from the prohibition department at Washington, D. C., as to disposition of the liquor. One of the officers said there were three alternatives:

One, destruction of the liquor.

Two, return of the shipment to the Hill & Hill distilleries at Owensboro, Ky., the shippers.

Three, release of the liquor for undelayed shipment to its orignal destination, the National Bell Drug company at Vancouver, B. C.

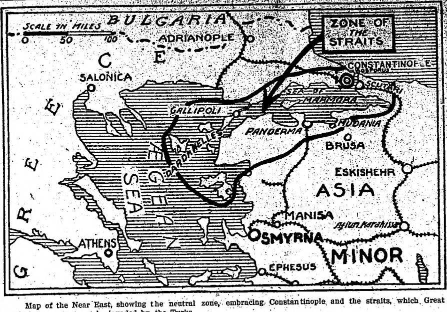
Reinforcements for the two federal agents here have arrived. The men stationed here are F. C. Upton of Minot and R. R. Cruden of Fargo.

There is talk here that the shipments offer a regular "bonanza" for high jackers as the guard at the railroad yards would be entirely inadequate to deal with a band of booze runners who have an "ear to the ground" when liquor is being shipped.

Three carloads of the liquor arrived here early this week. The other three cars have been held for about a week. No formal action regarding the shipment has been taken by customs officials here, it was reported.

Lake Sailors Quit Jobs.

Buffalo, N. Y.—Nearly a score of sailors on ships saling from Buffalo have quit, according to William Stark, business agent of the sailors' union of the Great Lakes. The men walked out, he said, in anticpation of a strike call which fixed October 1 as the date for a general walkout of sailors. Shipping men said that no boats had been crippled seriously. Mr. Stark predicted in the strike on Sunday. This will tie up the big fleet of the Lake Carriers' association.



Map of the Near East, showing the neutral zone, embracing Constantinople and the straits, which Great Britain says must not be invaded by the Turks.

NEWS REVIEW OF CURRENT EVENTS

Mustapha Kemal Pasha Holds the Key to the Situation in the Near East.

ALLIES PLAN A CONFERENCE

Will Not Permit Russia to Be Represented—British Public Protest Against War—Bonus Bill Killed by President's Veto—Tariff Measure Now Law.

By EDWARD W. PICKARD

WHETHER or not there shall be another great war in the Near East depends on Mustapha Kemal Pasha. The masterful leader of the Turkish nationalists, having expelled the Greeks from Asia Minor, demands that Constantinople be restored to Turkey, that he be allowed to send troops across the straits to recover eastern Thrace from Greece, and a conference to arrange for guarantees for the neutrality of the Dardanelles and the Bosphorus be held with every country bordering on the Black sea, especially Russia, represented.

To this England has formally replied that Constantinople will not be given up and that she will fight, alone if necessary, to keep the Turk from invading the neutralized zone that includes that city and the straits.

Kemal's forces in Anatolia are at the very edge of the zone, massed at Ismid and Chanak, and already encounters between his patrols and British outposts are reported. England is hurrying reinforcements for her land forces, and the entire British Atlantic fleet has been ordered to the Dardanelles. The dominions have been asked to be ready to send troops, and New Zealand and Australia have promised to do so if they are needed.

It appears that in this conflict, if it comes, Great Britain must stand practically alone against the Turks so far as military operations are concerned. France and Italy have declared they will have no part in it, and the former has withdrawn to the European side her troops in the neutral zone. Greece is quite demoralized and cannot be counted on to help much. The little entente, which is determined that neither Turkey nor Bulgaria shall get eastern Thrace, would be greatly hampered in war by mutual jealousies and threats of revolt in various regions.

Kemal's demand concerning representation in the peace conference met with a brusque reply when Marquis Curzon, British foreign minister, and Count Sforza, Italian ambassador to France, met Premier Poincare to arrange for the parley. They announce that France, Great Britain, Italy, Japan, Greece, Turkey, Jugo-Slavia and Rumania would participate in the conference to be held in Venice or Rome, and Kemal's demand that Russia be included was no less insistent than that of the soviet government, but General Daniloff, chief of the Russian general staff, denied the current report that Russia would give Kemal armed assistance, saying the big soviet army in the Caucasus was there to defend the frontiers and the Baku oil fields. "Russia has no intention of sending troops to Asia Minor," General Daniloff said, "nor is there any truth in the rumor of Russian reinforcements on the Esthonian, Latvian or Polish frontiers. Russia does not want fighting on any front, and, besides, any military man knows it would be foolish to begin anything in September with winter imminent."

LLOYD GEORGE'S policy, stern and uncompromising, though supported so far by most of his cabinet, may have to be modified. There is increasing protest by the press and people of England against Great Britain's undertaking any new war, and the opposition of the trades unions and in the great manufacturing centers is especially violent. There is a widespread feeling that the Turks really are entitled to repossess Constantinople so long as they leave the straits free and unfortified. The dominions, though patriotic always, are rather cool toward fresh military operations; as has been said, little or no help can be expected from other allied nations, and Japan, according to a foreign office official in Tokyo, will stand absolutely aloof.

The British government believes its forces could successfully defend Constantinople and the straits without help, and perhaps they could. But it may be the Turkish offensive will not be confined to that region. There are reports which are more than rumors that the Nationalists are moving on Irak, part of the British mandate in Mesopotamia, which is ruled nominally by Emir Feisal. Uprisings in that region are said to be becoming general, and the word came from an Anatolian news agency that the British garrisons had been worsted in several encounters with tribesmen and that Mosul was about to be evacuated. It is not unlikely that these reports are exaggerated, but the danger there is real, and is but a part of the threat of a holy war against Christendom. The trend toward this is especially strong in India, where immense throngs of Moslems gathered to rejoice over the victory of Kemal Pasha. In Calcutta speakers bitterly denounced the British policy in the Near East and asserted that seven million Moslems in India are being angered to the point of rising en masse to fight against the British for their legitimate aspirations. The central Khalifat committee of India sent a cablegram to London saying:

"By their support of the Greek military adventure the British government has broken faith with India and the Moslem world. If England goes to war with Turkey now she will never be able to regain her prestige in India."

THROUGHOUT the struggle in Asia Minor the representatives of America, lead by Rear Admiral Bristol, commissioner at Constantinople, and George Horton, consul general at Smyrna, have been chiefly concerned in the rescue of their nationals and the relief of the refugees. In this task they have been notably successful, and Mr. Horton bears witness to the bravery and unselfish devotion of the members of the American colony in Smyrna. Even the American women teachers in the Y. W. C. A. girls' school refused to leave their posts until driven away by the flames.

NO BONUS for the American soldiers and sailors of the World war—at least, none unless congress at the session beginning in December passes a satisfactory bill. The measure which went through the house last March and through the senate on August 31 was vetoed last Tuesday by President Harding. Next day the house overrode the veto by a vote of 258 to 54, but a few hours later the senate upheld the action of the President, the proponents of the bill being able to muster only 44 votes, four short of the required two-thirds majority. Twenty-eight senators voted against the measure this time, seven of them being Democrats. One of these was Senator Williams of Mississippi, and he could not resist the opportunity to exercise his caustic wit. "I'm just a plain damn fool Mississippi Democrat" said he, "but I'm going to support a Republican President in this veto because he is right. The only wonder is that a Republican President could get so right."

President Harding in his veto message said that, while he was "in accord with the avowed purpose of the bill to give expression of a nation's gratitude to those who served in its defense in the World war," he was constrained to return it without his approval for two reasons:

First, because it failed to provide the revenue to defray its expense.

Second, because, he said, "it establishes the very dangerous precedent of creating a treasury covenant to pay which puts a burden variously estimated between $4,000,000,000 and $5,000,000,000, upon the American people, not to discharge an obligation, which the government always must pay, but to bestow a bonus which the soldiers themselves, while serving in the World war, did not expect."

Of such a way of rewarding patriotic service he said further: "A peace bestowal on the ex-service men, as though the supreme offering could be paid for with cash, is a perversion of public funds, a reversal of the policy which exalted patriotic service in the past, and suggests that future defense is to be inspired by compensation rather than consciousness of duty to flag and country."

Whether he was right or wrong in his course, the President certainly was courageous, for the pressure brought to bear on him in favor of the bonus bill was tremendous, and the fall elections are not far away. But congress had refused to devise and enact a measure which he could approve as sincere and based on correct financial principles, so that the law makers rather than the chief executive should bear the onus of adverse criticism. The American Legion and other advocates of compensation for the ex-service men will continue the agitation for a bonus.

IN THE presence of Representative Fordney and Senator McCumber, the President on Thursday signed the tariff bill which bears their names, and it became effective at midnight. Vast quantities of imported merchandise were withdrawn from government warehouses just before the new rates went into effect, and vessels hurried into port to discharge their cargoes. Chairman Marvin of the tariff commission informed the President that his forces would have to be tripled in size because of the duties devolving on the commission through the operation of the so-called flexible and scientific provisions of the new law.

Mr. Harding also signed the Capper-Tincher act providing for regulation of trading in futures on grain exchanges.

HAVING accomplished what the Republican leaders called great achievements in legislation and economy and what their Democratic rivals described as nothing, or worse than nothing, congress wound up its long session on Friday and adjourned. The spokesmen for the majority especially stressed the fact that the national expenditure is being reduced at the rate of $1,000,000,000 a year. They added that in three years the public debt has been reduced as much as it was reduced in fifty years following the Civil war. Senator Harrison, Democrat, said the record of congress was "a terrible thing to take back to the people."

CONGRESSMAN OSCAR KELLER of Minnesota sustained a severe jolt last week. He was the author of the resolution for the impeachment of Attorney General Daugherty, based on his obtaining the famous injunction against the striking railway shopmen, and also on his alleged failure to enforce the anti-trust laws. Mr. Keller had prepared his case and had induced Samuel Untermyer to present it before the house judiciary committee. Then that committee calmly and coldbloodedly postponed the hearing until next December. Mr. Keller and Mr. Untermyer were furious, and Sam Gompers denounced the committee's action as brazen effrontery. The executive council of the American Federation of Labor has set aside October 1 as "Impeachment day" for demonstrations against Mr. Daugherty and Judge Wilkerson, who granted the injunction.

AFTER 22 days of furious labor, the rescue crews at Jackson, Cal., reached the level of the gold mine in which 47 miners had been entombed by a fire, only to find that every one of them was dead. It was evident that they had succumbed to poisonous gases within a few hours.

THE League of Nations in session at Geneva devoted a lot of time to discussing naval disarmament without getting anywhere. The league assembly unanimously voted Hungary a member and it was believed Germany would be admitted soon. General approval was given to the manner in which the mandates for the former German colonies have been exercised, including the phosphate monopoly on the island of Naru, which was questioned by the United States. The Bolivian delegate informed the assembly that "grave difficulties" menaced the relations between Bolivia and Chile unless the mediation of a friendly power or the arbitration of the league can be obtained.

RADIO

GREAT DISCOVERY OF EDWIN H. ARMSTRONG

Arrangement by Which Local Plate Current Is Fed Back to Grid Circuit.

An ordinary three-electrode vacuum tube used as a detector in a circuit where the input is connected to the grid and the output taken from the plate circuit will give amplification of from 5 to 15. Adding to this amplifying action the stability of adjustment of the tube gave the tube preference over the crystal detector.

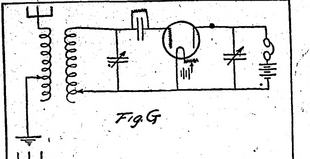


Fig. G

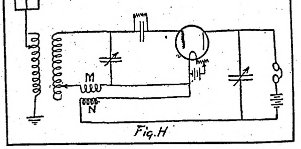

Fig. H

However, it was not until Edwin H. Armstrong made his great discovery of a circuit arrangement which fed back a portion of the large local plate current into the circuit through which the incoming signals arrived, thereby greatly amplifying the strength of the signal, that the vacuum tube reached its now recognized position of superiority as a detector of radio signals.

The circuit arrangement by which energy from the plate circuit of a three-electrode vacuum tube is fed back to the grid circuit is known by a different name, though, on account of the different names used and the different circuit arrangements used to accomplish the same results, amateurs are very apt to become confused. Some of the names given to the circuits which feed energy from the plate circuit to the grid circuit are "Feed Back," "Regenerative," "Tickler," "Tuned Plate" and "Ultra-Audion."

In Fig. F is shown a three-electrode vacuum tube with an alternator furnishing an alternating difference of potential to the grid circuit at T-T. The plate circuit of the tube is connected to a circuit containing an inductance L and a capacity C which together form a tuned circuit between the points X and Y. By adjusting the value of the variable condenser C, the natural period of the circuit between X and Y can be made to have the same frequency electrically as the alternating current supplied to the grid at T-T by the alternator. When this condition is reached the tuned circuit between the points X and Y becomes an infinite inductance in the external plate circuit. The potential variations between X and Y are now a maximum and are exact amplified reproductions of the potential variations applied to the grid circuit by the alternator.

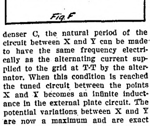

Fig. F

Going back to the simple type of standard loose coupler hookup for a vacuum tube, we will have a circuit arrangement as shown in Fig. G. Suppose that the principle of the circuit of Fig. F be applied to the circuit arrangement of Fig. G. The result will be Fig. H. In Fig. H the inductance M has been placed in the secondary circuit and the inductance N has been placed in the plate circuit.

When the coils M and N are widely separated Fig. H is essentially the same as Fig. G. An incoming radio signal impresses a small difference of potential on the grid of the tube in Fig. H which in turn liberates a large amount of energy in the plate circuit. As the coil N is brought nearer the coil M some of this plate circuit energy is transferred to the grid circuit. This reinforcement, electrically, of the incoming signal by energy transferred from the plate circuit to the grid circuit by the coupling between the two coils M and N, causes an increase in the energy liberated in the plate circuit. Coupling the two coils M and N closer and closer will cause greater and greater amplification of the incoming signal until a point is reached where the energy fed back from the plate circuit is just equal to the losses in the secondary circuit.

An increase in the coupling between the two coils M and N will cause the tube to oscillate. By changing the tuning of the secondary circuit, the frequency of the tube oscillations will be slightly different from the frequency of the incoming oscillations due to the received signals, and the beat note will be heard in the phones. The pitch of the beat note will be the arithmetic difference between the frequency of the incoming oscillations and the oscillations furnished by the oscillating detector tube.

The human ear is most sensitive to a note corresponding to 1,000 vibrations per second or electrically to a note produced by 500 cycles. Suppose the received signal was on a 200-meter wave length of 1,500,000 cycles. By adjusting the circuits so that the tube would oscillate at a frequency of 1,500,000 or 1,499,500, the best note would be 500 cycle pitch or a 1,000 vibration note.

This beat method of reception is used to receive undamped or continuous wave signals and is called the "heterodyne" method. When the same tube is used to perform the functions of a detector and an oscillator, the method is termed the "antodyne" method.

PERFORMANCE TEST METHODS

Rules Are Drawn Up by Bureau of Standards for Investigation of New Apparatus.

Owing to the very large demand which has arisen for simple radio receiving sets, many retail dealers in other lines of work have taken up the handling of such equipment. It is very difficult for such dealers to decide whether sets offered by the manufacturers are of good or poor quality, says Radio Merchandising. The whole art is so new and some of the questions involved are so technical that the problem presents considerable difficulties.

As a consequence, the Department of Commerce, and particularly the bureau of standards, has received a great many requests for tests of such apparatus. As it is impossible for the bureau to conduct all the work of this nature which it would be called upon to perform, it has drawn up rules covering performance test methods which are to be carried out by the Electrical Testing Laboratories of New York in co-operation with the National Retail Dry Goods association, the latter representing the retailers of radio receiving sets. As the work develops, suggestions regarding improvements of methods of testing will be subject to the approval of the bureau of standards.

The tests outlined include: Investigation as to the material and workmanship, the mechanical and electrical design, simplicity of adjustment, ruggedness, sensitivity, sharpness of tuning, wave length range and faithfulness of reproduction in radio telephone reception.

TIPS TO THE RADIOIST

Dr. Marconi cites as one of the future benefits of radio the ability of a man to talk with his wife without others being able to listen in. Some of us who live in apartments and have to listen to the nightly dialogues of the Jarr family will hope that they will arrange to use radio at no late date.

No better example of the versatility of radio can be cited than its use for transmitting Chinese music.

The city fathers of Newark, N. J., are framing a law to tax all possessors of radio aerials $1 a year.

It is reported from Washington that President Harding has a powerful radio set installed in the White House.

The barbers have evidently talked themselves out and are now resorting to radio so that their customers may feel at home. The wave with the shave.

Timely Comments on Agricultural Topics for Our Readers

FIVE ESSENTIAL FEATURES IN THE IDEAL POULTRY HOUSE

Cleanliness, abundance of sunlight, fresh air, freedom from drafts, and dryness, are the five essential poultry housing conditions for winter egg production in North Dakota. A temperature of 20 degrees below zero will not interfere in the least with a healthy hen with these five conditions, according to O. A. Barton, poultryman at the Agricultural college.

"Temperature is a minor factor. Housing, feeding, and culling, are three main considerations to success n poultry raising in North Dakota d especially must housing be em- sized here," said Mr. Barton.

"A poultry house need not be fancy elaborate, but durability and cost upkeep should not be overlooked in effort to build economically."

In order to insure cleanliness, dryness, and freedom from drafts, careful consideration must be given the construction of the floor and foundation. Lay a concrete foundation wall 8 inches thick at the bottom, extending 12 inches below the ground line. It is also well to taper the wall from the ground line up, so that the top of the wall corresponds in thickness to the width of the sill (usually 4 or 6 inches). It is well to anchor the sill to the foundation by setting bolts 10 inches long and one-half inch in diameter in the concrete at intervals of 8 feet around the wall. These should etxend above the top of the wall far enough to permit bolting the sill down securely, and the sill should be flush with the outside well so that the siding can extend down a few inches over the wall. This foundation will make the house secure from rats and other animals of prey.

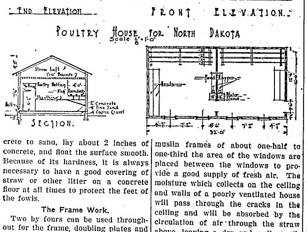
The Floor.

We have an option of four floor plans. Ordinary dirt, tamped clay, board, or concrete, and each has some advantages and some disadvantages. Ordinary dirt floors cost nothing to construct, but it is next to impossible to keep them in a sanitary condition both from the standpoint of disease and regular floor litter. It is also damp and cold.

Tamped clay costs more to construct than ordinary dirt, is more easily kept clean, but difficult to manage in case of disease. If properly constructed tamped clay will be dry and not too cold.

The board floor is dry, easily kept clean, and can be freed from disease infection quite readily. It will cost somewhat more than the tamped clay, but there is always some danger of rats getting under the floor.

The concrete floor is perhaps the most expensive at the first outlay, and of course is hard and cold, but it is the most durable, most easily kept clean from both ordinary accumulations and diseases as well. With a concrete floor poultry is safe from rats, mice, and all animals of prey. If concrete or tamped clay is used there should be from 3 to 4 inches of cinders on coarse gravel filled in on top of the ground line, then about 3 inches of fine gravel or sand tamped in hard, then, if clay is used, dampen and tamp down hard about 2 inches of clay. If concrete is used, a proportion of 1 to 5 or 2 to 9 parts of concrete to sand, lay about 2 inches of concrete, and float the surface smooth. Because of its hardness, it is always necessary to have a good covering of straw or other litter on a concrete floor at all times to protect the feet of the fowls.



POULTRY HOUSE FOR NORTH DAKOTA
Scale 1/8"=1'0"

The Frame Work.

Two by fours can be used throughout for the frame, doubling plates and sills.

The Walls.

Common sheeting can be used for walls, then cover with good quality building or tarred paper, and side up with 6-inch drop siding. This insures tight wall. A cheaper grade of lum- er may be used in place of the drop ding if desired, with a good grade of or three-ply rubber roofing cov- he whole wall space.

five essential factors necessary n efficient poultry house are: cleanliness; (2) abundance of sun- ht; (3) fresh air; (4) freedom from afts; and (5) dryness.

The suggestions already given will re a house with a dry floor, free drafts, as well as a floor easily clean. Sunlight, being a most nt disinfectant as well as a pro- against mites and lice, is es- l. Windows should be so spaced e south frontage as to permit the rays to penetrate to every part he floor space at some time during day. Long windows placed verti- y will give better floor light than se placed higher up or in a hori- ntal position. Allow from 1-12 th to -16 th as much area for glass as there is floor space. Too much glass area makes the house too warm during the day and too cold at night.

Dampness is dangerous and is one of the most effective causes of disease; hence the house must be dry not only on the floor but on the walls as well. Damp walls are good evidence of poor vehtilation and insufficient fresh air. A most effective method of securing a thoroughly dry house so far as the walls are concerned, is by means of what is known as the straw loft. The ceiling of the house, instead of being tight, is boarded with 6-inch boards left 1 inch apart, and the loft is filled with loose straw 1½ to 2 feet deep, with an opening the sixe of a 6 light, 8 by 10 inch sash in each gable of the house. These openings are covered with good grade of muslin only, except in extreme weather. Then muslin frames of about one-half to one-third the area of the windows are placed between the windows to provide a good supply of fresh air. The moisture which collects on the ceiling and walls of a poorly ventilated house will pass through the cracks in the ceiling and will be absorbed by the circulation of air through the straw above, leaving a dry and well ventilated house.

Interior Arrangement.

The health and sanitation of the fowls as well as the convenience in caring for them is materially affected by the interior arrangement. The floor is the workshop of the hen, and the entire surface should be clear and well covered with clean, dry straw in which the hens can be kept busy scratching for feed. This can be done by placing a tight, removable, board platform (dropping board) 30 inches above the floor. The platform should be from 45 to 48 inches wide, and should extend as far along the length of the house as is necessary to accommodate the flock. This width will permit three parallel perches or roosts on the same level. Such an arrangement reduces crowding, which should at all times be avoided. Allow about 6 inches roost room for Leghorns and other small breeds and 8 or 9 inches for large fowls. Place roosts 12 inches apart, center to center, and use 2 by 4 lumber on edge or 2 by 2 with a rounded upper edge.

Such a dropping board not only gives the full floor space for action but insures against vermin and disease, for most of our worst and most prevalent poultry diseases are transmitted through the digestive tract. Hence, by keeping the droppings off the floor there is much less danger of spreading any disease which may be present, than where droppings fall to the floor, there to be a part of the floor litter. The dropping board is more easily cleaned than the floor, and the house will be much more wholesome, and free from offensive odors. The fowls will be more easily kept clean and free from lice and mites and with clean hens the nests can be more easily kept clean, which means cleaner, more morketable eggs. It has been shown by federal investigation that clean eggs, naturally clean or unwashed, will stand transportation better, will preserve better, and will hatch better than dirty eggs.

POULTRY

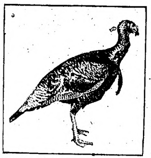
TURKEY FATTENED ON RANGE

Flesh Gains in Flavor and Tenderness in Way It Cannot If Fowl is Confined.

It is just as important to have turkeys in good plump condition before marketing as it is chickens. However, a good many farmers regard this as a hard job simply because there is considerable misunderstanding as to the correct way to go about the matter.

Turkeys, if taken aright, are easily fattened; in fact, easier than most other fowls. But if turkeys have had free range all summer, you cannot fatten them with any satisfaction in an enclosure. The change will cause them to fret and refuse to eat and thus they will lose instead of gain in weight. On the other hand, if they range too much while being fattened, they will "run off" the beneficial effects of your extra feeding. The right plan is therefore a compromise between these two extremes. Teach the turkeys to come up every evening at least, and then stuff them with all they will possibly eat. You will soon find them ranging at short distances only and coming up even between feeding times, where they should always be able to find some sort of attractive food.

Don't try to fatten the turkeys on corn alone. A close diet of new corn often results in bowel troubles for the turkeys just as it does for hogs, and a sick turkey is usually a dead turkey. Mix the fattening ration; variety is desirable for several reasons. Equal parts of wheat, oats and corn, make a good ration. Give also an occasional mash feed of equal parts of cornmeal and wheat middlings which makes a very rich feed, especially if a quantity of ground beefscrap or green cut bone is added.



Turkeys Fret and Refuse to Eat If In an Enclosure.

As the turkey takes on fat, the flesh turns to a rich golden color. If allowed reasonably free range while the fattening process is going on, the flesh gains in flavor and tenderness in a way it cannot if the bird were fattened in close quarters.

PROPER FEEDING BIG FACTOR

No Matter How Good the Breeding May Be, Good Care Must Be Given for Best Results.

Breeding plays an important part in successful poultry operation, but the factor of good feeding and the proper management of the flock plays a far more important part than many poultry keepers have been led to believe. Breeding, no matter how good, can accomplish but little in producing results unless backed by proper feeding and care. The best of breeding will give but poor results if the proper care and feed are not complied with.

POULTRY TERMS

A poult is a turkey in its first year.

By a trio is meant a male and two females.

What is known as a yearling hen is one having laid 12 months.

A breeding pen is usually made up of from six to fourteen females and a male.

A setting of eggs is usually counted at 12, although many poultrymen give 15 eggs.

When a chicken weighs between two and three pounds it is called a spring chicken.

A pullet is a female less than a year old, and when over that age it is a hen.

A stewing chicken weighs about three pounds and a rooster four or more pounds.

A capon is a male bird deprived of its generative organs for the purpose of improving the weight and delicacy of its carcass.

CONFERENCE WORKS OUT PLANS ON THE MARKETING OF LAMBS

(Prepared by the United States Department of Agriculture.)

Plans for the more orderly marketing of native lambs at Jersey City and New York city, and the elimination of violent fluctuations in prices of live and dressed lambs at these markets, are to be worked out by a committee representing live stock commission men, slaughterers, retailers, railroads, stock yard companies at Jersey City and New York, eastern lamb producers and the United States Department of Agriculture.

This committee was appointed as a result of the conference called recently by the United States Department of Agriculture, at Jersey City. At this conference members of the trade representing the various interests engaged in the handling, marketing, slaughtering and retailing of lambs at Jersey City and New York met representatives of sheep and lamb producers and the department. Practically all the factors responsible for the wide fluctuation in lamb prices at Jersey City during certain periods were brought out by full discussion.

The conference developed the fact that the lamb problem at Jersey City is a production and marketing problem combined, and that its solution lies largely in the hands of the producers and slaughterers of native lambs, although live stock commission men and retail meat dealers can assist in remedying the situation.

Occupies Key Position.

Jersey City occupies a key position in the channel of distribution between the lamb producers and the largest center of consumption, inasmuch as it is the final public concentration point for live lambs destined for New York city, the greatest consuming center for dressed lamb in the United States and a market that requires a high-grade product.

It was shown that ordinarily Jersey City has a reputation of being the highest lamb market in the country, but that during June, July and August it suffers violent price fluctuations because of the big increase in receipts of native lambs from Virginia, West Virginia, Ohio, Kentucky, Pennsylvania, Michigan and New York, without any material decrease in the supply of live and dressed lambs received there and at New York city from Western points. The situation is complicated by the marked irregularity in the volume of the daily receipts during those months and by the inferior quality of the offerings, most of which arrive unsorted and ungraded.

It was brought out that the poor quality of these lambs is due largely to the failure of producers to use better breeding stock and proper feeding methods and to dock and castrate their lambs at the proper time. The fact that native lambs in so many instances become infected in the summer months with diseases of parasitic origin, particularly stomach worms, makes it very important that they be marketed before the milk fat disappears.

These lambs usually are dropped at a period which requires that they be marketed during the months of June, July and August, hence they are a perishable produce from a marketing standpoint. When they reach Jersey City in larger numbers than the demand can absorb, and come in competition with the high-grade live and dressed Western lambs, prices break sharply and affect the lamb market generally at all points. Declines in the dressed market often are more drastic than those in the live market.

Better Breeding Stock Urged.

It was agreed at the conference that producers of native lambs should use better breeding stock; supply ample feed both to the ewes and lambs for maximum gains in order to market the lambs before they become infested with parasites, and practice docking and castration.

It was agreed, also, that producers in the different areas should reach an understanding which will lead to the lengthening of the breeding and marketing period, and that they should co-operate in their marketing in such a way as will insure grading and sorting in the country and more orderly movement of lambs to market. In this connection it was suggested that the practice which appears to be generally followed in certain states of contracting lambs to country buyers for delivery during stated periods is largely responsible for the irregularity in the daily receipts at Jersey City. If shippers would consign some of their lambs, particularly the lower grades, to other markets, where there is a better outlet, it would do much towards remedying the undesirable conditions at Jersey City and New York. Feeding stations established in the East as reservoirs from which to feed the market as supplies are needed also were mentioned as a means for remedying conditions.

Producers and commission men recommend that local and Western slaughterers co-operate by endeavoring to reduce the volume of their direct shipments and their shipments of Western dressed lambs to Jersey City and New York from Middle Western markets at periods when gluts are known to occur, in order to insure a supply no greater than the demand. It was also suggested that live stock commission men advise their patrons as to when gluts usually occur and when there are good reasons to believe one will occur, explaining fully what happens when undesirable and unfinished lambs are sent to the Jersey City market.

It was recommended that retailers feature lamb in their advertising and selling efforts during the period of excessive receipts and give consumers advantage of recessions in wholesale prices. Any steps taken along this line would encourage consumption and tend to check price fluctuations.

Personnel of Committee.

Although the movement of native lambs to market will soon be completed for the current year, the conference was unanimous in its desire to work out plans immediately which will insure more orderly marketing and less price fluctuation. The following committee was appointed to work to this end with representatives of the United States Department of Agriculture:

H. K. Nickell, United Dressed Beef company, New York; L. S. Joseph, vice president New York Butchers' Dressed Meat company, New York; George Kramer, United Master Butchers of America, New York; H. D. Wimer, Pennsylvania Railroad company, Philadelphia; George A. Shannon, vice president New York and New Jersey Live Stock association, Jersey City; J. H. Meek, chief, bureau of markets, Richmond, Va., and R. C. Bonham, president and general manager Jersey

Alfalfa for Lowest Feed Costs.

The man who has alfalfa on his place has one of the cheapest sources of protein available. Sometimes the value of alfalfa for protein is lost sight of, because high protein feeds have so often been cheaper to feed even than low protein materials. However, with silage and alfalfa one of the most economical rations possible is had by the fortunate feeder who has both of these excellent feeds. The combination is excellent for the roughage supply for all kinds of live stock, and especially for dairy cattle. The amount of expensive concentrates necessary is markedly reduced without a reduction in the production.

Pick Out Poor Layers.

If you know how, you can look over the flock and pick out the poor layers. Somebody in your neighborhood knows how to cull, and can tell you how.

FORECASTS INCREASE IN PROFITS

Growers in West Receive Predictions Through Agents.

Seed Is Largely Grown From Second Crop and If Season Is Late Frost and Harvest Periods Come Close Together.

(Prepared by the United States Department of Agriculture.)

Forecasts of weather conditions for alfalfa harvest are widely distributed in the West, particularly in Oklahoma, where 2,000 or more growers receive the forecasts through the local agents of the extension service of the United States Department of Agriculture. In Utah a rather limited but important frost-warning service for alfalfa-seed growers is in operation.

Seed is largely grown from the second crop, and if the season is late the harvest and fall frost periods come close together. As the seed crop increases in value at the rate of about $5 a day for each acre of seed when nearing maturity, the growers let the seed stand as long as possible. When temperatures low enough to cause damage are predicted by the weather bureau it is not unusual for the seed growers to run their cutting machines most of the night.

In one section of Utah during a recent harvest season fully 500 acres of seed were cut after receipt of the warnings, at an average saving of $20 to $30 an acre. Two of these growers reported that they saved at least $2,000 as a result of the weather information furnished by Uncle Sam concerning frost conditions.

Protection for Sheep.

Sheep do not require expensive buildings, as do some other animals. Freedom from moisture and winds is about all the protection they need.

A very satisfactory way of eliminating lice from poultry is to treat each fowl separately with sodium fluorid.

THE DAIRY

IMPORTANT POINTS IN COWS

Missouri Expert Tells Just What to Look for in Buying High Producing Cattle.

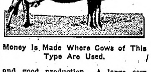
"The man does not live who can pick the good cows from the poor ones without ever making a mistake," says W. W. Swett, of the Missouri College of Agriculture. "Even the best judges sometimes make a mistake. But there are certain points about the dairy cow that are almost always associated with high production."

The udder should be deep, wide and long with good attachments. It should be evenly developed, level on the floor and equipped with teats of good and uniform size, symmetrically placed. It should also be soft and pliable, indicating that it consists of secreting cells rather than flesh.

A good set of milk veins indicates that the udder is well supplied with blood. Long, crooked milk veins entering large wells or openings through the body wall are usually associated with high production.

A cow cannot be a maximum and continuous producer unless she has a strong constitution. Vitality and strength of constitution are indicated by broad, open nostril, and a chest which is deep and broad.

Feed capacity is essential. In order to produce heavily a cow must consume large quantities of feed and water. A barrel which is long, broad and deep indicates a large capacity and good production. A large cow nearly always has the advantage in production, provided she is not deficient in other points.



Money Is Made Where Cows of This Type Are Used.

Alertness in temperament is an asset, and a sluggish cow is seldom a high producer. Dairy temperament includes those characteristics which indicate that the cow's feed is used for the production of milk rather than for body fat. Angularity, prominent points, lack of heaviness and flesh and the presence of the triple wedges are good indications.

Quality refers to the handling or pliability of the hide, the refinement of bone, and the character of the animal, which cannot be described but which have to be seen to be appreciated.

HERDS TESTED DURING JUNE

Of a Total of 250,886 Examined 8,810 Reacted, Disclosing 3½ Per Cent Tuberculous Cattle.

Cattle officially tested during June, 1922, for tuberculosis numbered 250,886, according to a summary issued by the bureau of animal industry, United States Department of Agriculture. This figure exceeds the normal amount of tuberculin testing by several thousand. Of all the cattle tested, 8,810 reacted, thus disclosing about 3½ per cent of tuberculous cattle.

The removal of such animals from herds otherwise healthy is gradually bringing about better health among farm live stock, safer milk supplies, and many economic benefits. The popularity of tuberculosis eradication is evidenced by the length of the list of herds waiting to be tested. At the end of June there were applications on file for the testing of 35,239 herds, containing more than half a million cattle.

SKIM CREAM MORE CLOSELY

Keeps Better During Hot Weather and Makes Better Butter—Keep Skim Milk on Farm.

If it's to keep best during the warm weather and to make the highest quality butter, cream needs to be skimmed closely. Better butter is made from heavier cream as the fine, sandlike grains that are precipitated in churning are more stable than the butter resulting from thin cream. Also it will pay to ship the heavier cream, as there is no use to pay shipping charges on skim milk. It will make better feed on the farm.

Tester Is Big Aid.

Nothing compares to a good cow tester in helping get the herd in the way of bringing profits.

Timely Comments on Agricultural Topics for Our Readers

FIVE ESSENTIAL FEATURES IN THE IDEAL POULTRY HOUSE

Cleanliness, abundance of sunlight, fresh air, freedom from drafts, and dryness, are the five essential poultry housing conditions for winter egg production in North Dakota. A temperature of 20 degrees below zero will not interfere in the least with a healthy hen with these five conditions, according to O. A. Barton, poultryman at the Agricultural college.

"Temperature is a minor factor. Housing, feeding, and culling, are three main considerations to success 'n poultry raising in North Dakota d especially must housing be em- sized here," said Mr. Barton.

"A poultry house need not be fancy elaborate, but durability and cost upkeep should not be overlooked in effort to build economically."

In order to insure cleanliness, dryness, and freedom from drafts, careful consideration must be given the construction of the floor and foundation. Lay a concrete foundation wall 8 inches thick at the bottom, extending 12 inches below the ground line. It is also well to taper the wall from the ground line up, so that the top of the wall corresponds in thickness to the width of the sill (usually 4 or 6 inches). It is well to anchor the sill to the foundation by setting bolts 10 inches long and one-half inch in diameter in the concrete at intervals of 8 feet around the wall. These should etxend above the top of the wall far enough to permit bolting the sill down securely, and the sill should be flush with the outside well so that the siding can extend down a few inches over the wall. This foundation will make the house secure from rats and other animals of prey.

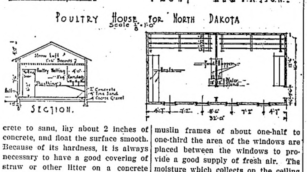
The Floor.

We have an option of four floor plans. Ordinary dirt, tamped clay, board, or concrete, and each has some advantages and some disadvantages. Ordinary dirt floors cost nothing to construct, but it is next to impossible to keep them in a sanitary condition both from the standpoint of disease and regular floor litter. It is also damp and cold.

Tamped clay costs more to construct than ordinary dirt, is more easily kept clean, but difficult to manage in case of disease. If properly constructed tamped clay will be dry and not too cold.

The board floor is dry, easily kept clean, and can be freed from disease infection quite readily. It will cost somewhat more than the tamped clay, but there is always some danger of rats getting under the floor.

The concrete floor is perhaps the most expensive at the first outlay, and of course is hard and cold, but it is the most durable, most easily kept clean from both ordinary accumulations and diseases as well. With a concrete floor poultry is safe from rats, mice, and all animals of prey. If concrete or tamped clay is used there should be from 3 to 4 inches of cinders on coarse gravel filled in on top of the ground line, then about 3 inches of fine gravel or sand tamped in hard, then, if clay is used, dampen and tamp down hard about 2 inches of clay. If concrete is used, a proportion of 1 to 5 or 2 to 9 parts of concrete to sand, lay about 2 inches of concrete, and float the surface smooth. Because of its hardness, it is always necessary to have a good covering of straw or other litter on a concrete floor at all times to protect the feet of the fowls.



Poultry House for North Dakota

The Frame Work.

Two by fours can be used throughout for the frame, doubling plates and sills.

The Walls.

Common sheeting can be used for walls, then cover with good quality building or tarred paper, and side up with 6-inch drop siding. This insures a tight wall. A cheaper grade of lum-er may be used in place of the drop ding if desired, with a good grade of or three-ply rubber roofing cov- the whole wall space.

: five essential factors necessary n efficient poultry house are: cleanliness; (2) abundance of sun- ht; (3) fresh air; (4) freedom from afts; and (5) dryness.

The suggestions already given will re a house with a dry floor, free drafts, as well as a floor easily clean. Sunlight, being a most nt disinfectant as well as a pro- against mites and lice, is es- l. Windows should be so spaced e south frontage as to permit the rays to penetrate to every part the floor space at some time during day. Long windows placed verti- y will give better floor light than ose placed higher up or in a hori- ntal position. Allow from 1-12 th to -16 th as much area for glass as there is floor space. Too much glass area makes the house too warm during the day and too cold at night.

Dampness is dangerous and is one of the most effective causes of disease; hence the house must be dry not only on the floor but on the walls as well. Damp walls are good evidence of poor ventilation and insufficient fresh air. A most effective method of securing a thoroughly dry house so far as the walls are concerned, is by means of what is known as the straw loft. The ceiling of the house, instead of being tight, is boarded with 6-inch boards left 1 inch apart, and the loft is filled with loose straw 1½ to 2 feet deep, with an opening the sixe of a 6 light, 8 by 10 inch sash in each gable of the house. These openings are covered with good grade of muslin only, except in extreme weather. Then muslin frames of about one-half to one-third the area of the windows are placed between the windows to provide a good supply of fresh air. The moisture which collects on the ceiling and walls of a poorly ventilated house will pass through the cracks in the ceiling and will be absorbed by the circulation of air through the straw above, leaving a dry and well ventilated house.

Interior Arrangement.

The health and sanitation of the fowls as well as the convenience in caring for them is materially affected by the interior arrangement. The floor is the workshop of the hen, and the entire surface should be clear and well covered with clean, dry straw in which the hens can be kept busy scratching for feed. This can be done by placing a tight, removable, board platform (dropping board) 30 inches above the floor. The platform should be from 45 to 48 inches wide, and should extend as far along the length of the house as is necessary to accommodate the flock. This width will permit three parallel perches or roosts on the same level. Such an arrangement reduces crowding, which should at all times be avoided. Allow about 6 inches roost room for Leghorns and other small breeds and 8 or 9 inches for large fowls. Place roosts 12 inches apart, center to center, and use 2 by 4 lumber on edge or 2 by 2 with a rounded upper edge.

Such a dropping board not only gives the full floor space for action but insures against vermin and disease, for most of our worst and most prevalent poultry diseases are transmitted through the digestive tract. Hence, by keeping the droppings off the floor there is much less danger of spreading any disease which may be present, than where droppings fall to the floor, there to be a part of the floor litter. The dropping board is more easily cleaned than the floor, and the house will be much more wholesome, and free from offensive odors. The fowls will be more easily kept clean and free from lice and mites and with clean hens the nests can be more easily kept clean, which means cleaner, more morketable eggs. It has been shown by federal investigation that clean eggs, naturally clean or unwashed, will stand transportation better, will preserve better, and will hatch better than dirty eggs.

POULTRY

TURKEY FATTENED ON RANGE

Flesh Gains in Flavor and Tenderness in Way It Cannot if Fowl is Confined.

It is just as important to have turkeys in good plump condition before marketing as it is chickens. However, a good many farmers regard this as a hard job simply because there is considerable misunderstanding as to the correct way to go about the matter.

Turkeys, if taken aright, are easily fattened; in fact, easier than most other fowls. But if turkeys have had free range all summer, you cannot fatten them with any satisfaction in an enclosure. The change will cause them to fret and refuse to eat and thus they will lose instead of gain in weight. On the other hand, if they range too much while being fattened, they will "run off" the beneficial effects of your extra feeding. The right plan is therefore a compromise between these two extremes. Teach the turkeys to come up every evening at least, and then stuff them with all they will possibly eat. You will soon find them ranging at short distances only and coming up even between feeding times, where they should always be able to find some sort of attractive food.

Don't try to fatten the turkeys on corn alone. A close diet of new corn often results in bowel troubles for the turkeys just as it does for hogs, and a sick turkey is usually a dead turkey. Mix the fattening ration; variety is desirable for several reasons. Equal parts of wheat, oats and corn, make a good ration. Give also an occasional mash feed of equal parts of cornmeal and wheat middlings which makes a very rich feed, especially if a quantity of ground beefscrap or green cut bone is added.

Turkeys Fret and Refuse to Eat if in an Enclosure.

As the turkey takes on fat, the flesh turns to a rich golden color. If allowed reasonably free range while the fattening process is going on, the flesh gains in flavor and tenderness in a way it cannot if the bird were fattened in close quarters.

PROPER FEEDING BIG FACTOR

No Matter How Good the Breeding May Be, Good Care Must Be Given for Best Results.

Breeding plays an important part in successful poultry operation, but the factor of good feeding and the proper management of the flock plays a far more important part than many poultry keepers have been led to believe. Breeding, no matter how good, can accomplish but little in producing results unless backed by proper feeding and care. The best of breeding will give but poor results if the proper care and feed are not complied with.

POULTRY TERMS

A poult is a turkey in its first year.

By a trio is meant a male and two females.

What is known as a yearling hen is one having laid 12 months.

A breeding pen is usually made up of from six to fourteen females and a male.

A setting of eggs is usually counted at 12, although many poultrymen give 15 eggs.

When a chicken weighs between two and three pounds it is called a spring chicken.

A pullet is a female less than a year old, and when over that age it is a hen.

A stewing chicken weighs about three pounds and a rooster four or more pounds.

A capon is a male bird deprived of its generative organs for the purpose of improving the weight and delicacy of its carcass.

CONFERENCE WORKS OUT PLANS ON THE MARKETING OF LAMBS

(Prepared by the United States Department of Agriculture.)

Plans for the more orderly marketing of native lambs at Jersey City and New York city, and the elimination of violent fluctuations in prices of live and dressed lambs at these markets, are to be worked out by a committee representing live stock commission men, slaughterers, retailers, railroads, stock yard companies at Jersey City and New York, eastern lamb producers and the United States Department of Agriculture.

This committee was appointed as a result of the conference called recently by the United States Department of Agriculture, at Jersey City. At this conference members of the trade representing the various interests engaged in the handling, marketing, slaughtering and retailing of lambs at Jersey City and New York met representatives of sheep and lamb producers and the department. Practically all the factors responsible for the wide fluctuation in lamb prices at Jersey City during certain periods were brought out by full discussion.

The conference developed the fact that the lamb problem at Jersey City is a production and marketing problem combined, and that its solution lies largely in the hands of the producers and slaughterers of native lambs, although live stock commission men and retail meat dealers can assist in remedying the situation.

Occupies Key Position.

Jersey City occupies a key position in the channel of distribution between the lamb producers and the largest center of consumption, inasmuch as it is the final public concentration point for live lambs destined for New York city, the greatest consuming center for dressed lamb in the United States and a market that requires a high-grade product.

It was shown that ordinarily Jersey City has a reputation of being the highest lamb market in the country, but that during June, July and August it suffers violent price fluctuations because of the big increase in receipts of native lambs from Virginia, West Virginia, Ohio, Kentucky, Pennsylvania, Michigan and New York, without any material decrease in the supply of live and dressed lambs received there and at New York city from Western points. The situation is complicated by the marked irregularity in the volume of the daily receipts during those months and by the inferior quality of the offerings, most of which arrive unsorted and ungraded.

It was brought out that the poor quality of these lambs is due largely to the failure of producers to use better breeding stock and proper feeding methods and to dock and castrate their lambs at the proper time. The fact that native lambs in so many instances become infected in the summer months with diseases of parasitic origin, particularly stomach worms, makes it very important that they be marketed before the milk fat disappears.

These lambs usually are dropped at a period which requires that they be marketed during the months of June, July and August, hence they are a perishable produce from a marketing standpoint. When they reach Jersey City in larger numbers than the demand can absorb, and come in competition with the high-grade live and dressed Western lambs, prices break sharply and affect the lamb market generally at all points. Declines in the dressed market often are more drastic than those in the live market.

Better Breeding Stock Urged.

It was agreed at the conference that producers of native lambs should use better breeding stock; supply ample feed both to the ewes and lambs for maximum gains in order to market the lambs before they become infested with parasites, and practice docking and castration.

It was agreed, also, that producers in the different areas should reach an understanding which will lead to the lengthening of the breeding and marketing period, and that they should co-operate in their marketing in such a way as will insure grading and sorting in the country and more orderly movement of lambs to market. In this connection it was suggested that the practice which appears to be generally followed in certain states of contracting lambs to country buyers for delivery during stated periods is largely responsible for the irregularity in the daily receipts at Jersey City. If shippers would consign some of their lambs, particularly the lower grades, to other markets, where there is a better outlet, it would do much towards remedying the undesirable conditions at Jersey City and New York. Feeding stations established in the East as reservoirs from which to feed the market as supplies are needed also were mentioned as a means for remedying conditions.

Producers and commission men recommend that local and Western slaughterers co-operate by endeavoring to reduce the volume of their direct shipments and their shipments of Western dressed lambs to Jersey City and New York from Middle Western markets at periods when gluts are known to occur, in order to insure a supply no greater than the demand. It was also suggested that live stock commission men advise their patrons as to when gluts usually occur and when there are good reasons to believe one will occur, explaining fully what happens when undesirable and unfinished lambs are sent to the Jersey City market.

It was recommended that retailers feature lamb in their advertising and selling efforts during the period of excessive receipts and give consumers advantage of recessions in wholesale prices. Any steps taken along this line would encourage consumption and tend to check price fluctuations.

Personnel of Committee.

Although the movement of native lambs to market will soon be completed for the current year, the conference was unanimous in its desire to work out plans immediately which will insure more orderly marketing and less price fluctuation. The following committee was appointed to work to this end with representatives of the United States Department of Agriculture:

H. K. Nickell, United Dressed Beef company, New York; L. S. Joseph, vice president New York Butchers' Dressed Meat company, New York; George Kramer, United Master Butchers of America, New York; H. D. Wimer, Pennsylvania Railroad company, Philadelphia; George A. Shannon, vice president New York and New Jersey Live Stock association, Jersey City; J. H. Meek, chief, bureau of markets, Richmond, Va., and R. C. Bonham, president and general manager Jersey

Alfalfa for Lowest Feed Costs.

The man who has alfalfa on his place has one of the cheapest sources of protein available. Sometimes the value of alfalfa for protein is lost sight of, because high protein feeds have so often been cheaper to feed even than low protein materials. However, with silage and alfalfa one of the most economical rations possible is had by the fortunate feeder who has both of these excellent feeds. The combination is excellent for the roughage supply for all kinds of live stock, and especially for dairy cattle. The amount of expensive concentrates necessary is markedly reduced without a reduction in the production.

Pick Out Poor Layers.

If you know how, you can look over the flock and pick out the poor layers. Somebody in your neighborhood knows how to cull, and can tell you how.

FORECASTS INCREASE IN PROFITS

Growers in West Receive Predictions Through Agents.

Seed Is Largely Grown From Second Crop and if Season Is Late Frost and Harvest Periods Come Close Together.

(Prepared by the United States Department of Agriculture.)

Forecasts of weather conditions for alfalfa harvest are widely distributed in the West, particularly in Oklahoma, where 2,000 or more growers receive the forecasts through the local agents of the extension service of the United States Department of Agriculture. In Utah a rather limited but important frost-warning service for alfalfa-seed growers is in operation.

Seed is largely grown from the second crop, and if the season is late the harvest and fall frost periods come close together. As the seed crop increases in value at the rate of about $5 a day for each acre of seed when nearing maturity, the growers let the seed stand as long as possible. When temperatures low enough to cause damage are predicted by the weather bureau it is not unusual for the seed growers to run their cutting machines most of the night.

In one section of Utah during a recent harvest season fully 500 acres of seed were cut after receipt of the warnings, at an average saving of $20 to $30 an acre. Two of these growers reported that they saved at least $2,000 as a result of the weather information furnished by Uncle Sam concerning frost conditions.

Protection for Sheep.

Sheep do not require expensive buildings, as do some other animals. Freedom from moisture and winds is about all the protection they need.

A very satisfactory way of eliminating lice from poultry is to treat each fowl separately with sodium fluorid.

THE DAIRY

IMPORTANT POINTS IN COWS

Missouri Expert Tells Just What to Look for in Buying High Producing Cattle.

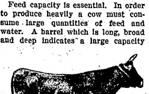
"The man does not live who can pick the good cows from the poor ones without ever making a mistake," says W. W. Swett, of the Missouri College of Agriculture. "Even the best judges sometimes make a mistake. But there are certain points about the dairy cow that are almost always associated with high production."

The udder should be deep, wide and long with good attachments. It should be evenly developed, level on the floor and equipped with teats of good and uniform size, symmetrically placed. It should also be soft and pliable, indicating that it consists of secreting cells rather than flesh.

A good set of milk veins indicates that the udder is well supplied with blood. Long, crooked milk veins entering large wells or openings through the body wall are usually associated with high production.

A cow cannot be a maximum and continuous producer unless she has a strong constitution. Vitality and strength of constitution are indicated by broad, open nostril, and a chest which is deep and broad.

Feed capacity is essential. In order to produce heavily a cow must consume large quantities of feed and water. A barrel which is long, broad and deep indicates a large capacity and good production. A large cow nearly always has the advantage in production, provided she is not deficient in other points.



Money Is Made Where Cows of This Type Are Used.

Alertness in temperament is an asset, and a sluggish cow is seldom a high producer. Dairy temperament includes those characteristics which indicate that the cow's feed is used for the production of milk rather than for body fat. Angularity, prominent points, lack of heaviness and flesh, and the presence of the triple wedges are good indications.

Quality refers to the handling or pliability of the hide, the refinement of bone, and the character of the animal, which cannot be described but which have to be seen to be appreciated.

HERDS TESTED DURING JUNE

Of a Total of 250,886 Examined 8,810 Reacted, Disclosing 3½ Per Cent Tuberculous Cattle.

Cattle officially tested during June, 1922, for tuberculosis numbered 250,886, according to a summary issued by the bureau of animal industry, United States Department of Agriculture. This figure exceeds the normal amount of tuberculin testing by several thousand. Of all the cattle tested, 8,810 reacted, thus disclosing about 8½ per cent of tuberculous cattle.

The removal of such animals from herds otherwise healthy is gradually bringing about better health among farm live stock, safer milk supplies, and many economic benefits. The popularity of tuberculosis eradication is evidenced by the length of the list of herds waiting to be tested. At the end of June there were applications on file for the testing of 35,230 herds, containing more than half a million cattle.

SKIM CREAM MORE CLOSELY

Keeps Better During Hot Weather and Makes Better Butter—Keep Skim Milk on Farm.

If it's to keep best during the warm weather and to make the highest quality butter, cream needs to be skimmed closely. Better butter is made from heavier cream as the fine, sandlike grains that are precipitated in churning are more solid than the butter resulting from thin cream. Also it will pay to ship the heavier cream, as there is no use to pay shipping charges on skim milk. It will make better feed on the farm.

Tester Is Big Aid.

Nothing compares to a good cow-tester in helping get the herd in the way of bringing profits.

INTENTIONAL DUPLICATE EXPOSURE

Local News

Mrs. Will Vaughan of Highlanding shopped in Goodridge Monday.

Jay Payne attended to business affairs in Thief River Falls Monday.

Mr. and Mrs. S. Gangeness were shoppers in Goodridge Tuesday.

Stuart McLeod autoed to Thief River Falls Wednesday evening.

Mr. and Mrs. V. C. McLeod and Miss Evelyn Kirkconnell autoed to Thief River Falls Wednesday to shop.

Miss Esther Bendickson left for Thief River Falls Tuesday morning to attend to business matters.

Ben Gustafson of Grygla returned from St. Paul Tuesday morning. He had marketed some cattle there.

Mr. and Mrs. H. A. Halverson and daughter, Florence, visited at the Carl Erickson home Sunday.

H. W. Protzeller of Thief River Falls attended the poultry meeting held here Friday afternoon.

Mrs. R. Kirkconnell and children of Spooner arrived Wednesday evening and are visitors at the A. McLeod home.

Mr. and Mrs. Albert Halverson, accompanied by Mrs. O. S. Kirklie, motored to Thief River Falls Thursday evening to visit with friends and relatives.

HANG ON.

Don't get excited and throw up the game
Just because some happy prospect went lame.
Stick to the ship, and still hope just the same—
For there's always another day coming.
Dont' let your courage fall down before your fears,
Dont' let your happiness scatter in tears,
Pay no attention to scoffings and jeers
For there's always another day coming.
One little hour with a cloud in the sky
One little day with its hope high and dry,
These things dont' count in the sweet by-and-by—
For there's always another day coming.

Born, to Mr. and Mrs. Carl Wahlin, a baby girl, Saturday, Sept. 23.

Miss Clara Ferdinandson shopped in Thief River Falls Saturday.

Miss Clara Bucholtz returned to her home at Grygla Saturday.

Miss Bertina Tollefson, who is attending school at Thief River Falls, visited at her home here Saturday and Sunday.

Mr. and Mrs. A. McLeod and son, Stuart, and Miss Evelyn Kirkconnell autoed to Crookston Sunday to visit with friends.

Irene Burhart of Carmel visited at the Jay Payne home Monday evening enroute to Grand Forks, where she is employed.

Mr. and Mrs. Nick Bundhund, accompanied by Mrs. G. Gunderson, motored to Thief River Falls Thursday to attend to business matters and to visit with Harold Gunderson, who is at the sanitarium.

Veterans Plan Trip to Show.

That the importance of the National Dairy Exposition, in pointing the way to better farming with regular revenue periods, has been learned by veterans of the world war colonizing at Veteransville, Minn., is evidenced in a letter received by Col. W. E. Skinner, general manager of the dairy show, from E. A. Larson, former agricultural agent of Kanabec county. Mr. Larson advises that a large delegation of veterans is coming from Veteransville to gain information of value to them in their farming.

The world won't go broke if you fail to make good; but it may wear a scar somewhere because you didnt' come through when needed.

How good God is to fill the world with you—
Remembering you I find the skies all blue
And the air full of music and white wings,
And life all glad with clean and holy things;
You, with your shining radiant Womanhood
Make it so easy to believe in good
That everythings seems sweet and fair and true—
How good God is to fill the world with You!

All-Wool Suits!

All brand new goods, fresh from the Mills—the same fine all-wool quality other tailors ask $40 and $50 for. The Scotch Woolen Mills offer you the very same fabrics at one single price, $25, for any two-piece or $29.50 for any full suit or overcoat. Everything made to order. This is the most phenomenal tailoring offer in all America. No other tailor, we don't care who he is, can produce such fine clothes for such low price.

Overcoats—Any Style—Any Fabric
All $29.50

Lost: Crank for Oakland car. Finder please return to H. Christianson, Goodridge, Minn.

Everette Seavey left for Park River, N. D., Thursday evening, where he will be employed.

Mr. and Mrs. Theo. Tandberg visited with relatives and friends at Thief River Falls Sunday.

Rudolph and Eddie Kusmack and Anton Overby autoed to Grand Forks Sunday to seek employment.

Mr. and Mrs. Fore of Thief River Falls visited with Miss Magda Nelson Sunday afternoon.

Miss Florence McCoy arrived from Fairdale, N. D., Tuesday morning enroute to her home at Schilling.

Misses Grette Gulrud and Mabelle Tweeton autoed to Thief River Falls Tuesday afternoon to have dental work done.

Mr. and Mrs. John Sundquist and children and Miss Cora McEnelly visited at the W. Hall home in Thief River Falls Sunday.

Mr. and Mrs. Carl Christianson motored to Middle River Sunday and were house guests at the John Nystul home Sunday afternoon and evening.

ROSEWOOD

Poultry Demonstration.

The poultry demonstration and meeting were held last Tuesday instead of on Friday as previously announced, owing to the speaker, Mr. Stanfield, being unable to remain that long in this section of the state. Mr. Stanfield was accompanied by County Agent J. J. McCann and Mr. Neset of Thief River Falls and the gentlemen were well posted on their subject. The meetings were not as well attended as might have been wished for, evidently owing to the busy season. The afternoon demonstration was held at the farm of Mr. and Mrs. Fred Dols and the chief feature was the showing of proper means of culling layers and separating the profitable hens from those intended for the market. Mr. Stanfield also spoke on other subjects, including turkey raising, and distributed free booklets on the culling of poultry, feeding and housing and the raising of turkeys. The evening meeting was held at Rosebank and was a very interesting lecture on poultry raising in general. The gentlemen left the same evening for Thief River Falls.

Breaks Arm at School.

Little Stanley Ranum had the misfortune last Friday of falling from an improvised swing on the school play ground and breaking his arm just above the elbow. The full extent of the injury was not ascertained until in the evening, when the little fellow was taken to Thief River Falls for an examination. By that time the arm had swollen so the bone could not be set and it will be necessary to wait for some time before anything can be done to straighten the arm.

Rev. and Mrs. Fred Brodin of Thief River Falls spent Tuesday as guests of Mr. and Mrs. Carl Bloom and in the evening conducted a young people's meeting at the Swedish church in town. Rev. Brodin has recently been appointed traveling lecturer of the Red River Valley Young People's Covenant, succeeding Rev. Emil Seagren, who is taking up theological studies at Chicago and may not return to the valley.

Mrs. O. H. Ryan and daughter Lorraine of Thief River Falls spent a few days this week as guests at the home of the former's parents, Mr. and Mrs. A. T. Thoreson.

Mr. and Mrs. James Thompson had as Sunday guests the following from Gully: Mr. and Mrs. L. H. Aos and family, Editor and Mrs. J. B. Sprague and family, and Mrs. Ena Thompson.

Math Barzen and W. B. Fuller were out from Thief River Falls last week to look after their elevator interests here.

Mrs. Severin Brandon, accompanied by a few friends, motored over from Thief River Falls last Saturday and visited with Miss Gladys Swenson. They were accompanied home by Miss Swenson, who remained over Sunday.

John Remmem expects to leave on Sunday for Warren with his team to put in some time threshing at the C. Franks farm.

Wooden Leg Saved Him.

Martin Gilbert probably never thought the time would come that he would be thankful because he had an artificial limb. But that happened to him last Sunday. The Gilbert and the Holthe families were spending the afternoon on the banks of North Branch, in Bothun's pasture, a favorite picnic place. Mr. Gilbert went down the river to try his luck with the black bass, and while passing through some brush, a rattlesnake struck at him. The reptile fastened its fangs in his ankle but it must have become thoroughly disappointed over the futility of its attack because it happened to be Mr. Gilbert's wooden leg. It coiled to strike a second time, but by this time Gilbert was aware of its presence and was on the defensive. However, on account of the thickness of the brush he failed to dispatch the poisonous snake.—Levang's Weekly.

Funeral of A. B. Remmem

Well Known Resident for Twenty-five Years Succumbs to Nervous Breakdown.

(From The Tribune, T. R. Falls)

Anton B. Remmem, well known resident of the city, died at his home, 123 Third street west, on Monday morning, September 25, his demise being due to a severe nervous breakdown. Deceased showed signs of failing health last spring, when he was sent away for observation and treatment, returning to this city about six weeks ago with his health still very much impaired.

Mr. Remmem was a resident of the city for many years, to be exact he came to Thief River Falls 25 years ago, and up to the time of his death conducted a livery business on Third street.

Deceased is survived by his wife and five daughters, namely, Bertha, Mildred, Gladys, Goldie and Ruth; also a brother, John, who resides at Rosewood.

The funeral was held this afternoon from the Zion Lutheran church in this city, Rev. Geo. Larson officiating at the obsequies.

T. R. FALLS NEWS

(From The Tribune, T. R. Falls)

Mr. and Mrs. George Wilson motored Sunday to Mentor, Minn.

Mr. and Mrs. Alfred Maltcar motored here Sunday from Black River to be the guests of friends in the city.

Jim Hruby of Mavie motored here Monday to spend the day attending to business matters.

Mrs. Eli Peterson and Miss Selma Peterson of Hazel spent Monday in the city shopping.

Paul Scanlan left Saturday evening for the cities, where he expects to be employed.

Attorney and Mrs. J. M. Bishop and Miss Effie Hamry motored Sunday to Mentor, Minn.

A. O. Anderson and Oliver Gullingsrud spent Saturday on a hunting expedition to Conley lake.

E. Olson, who had been a guest for a week of his sons, who reside near this city, returned home Saturday.

Mr. and Mrs. H. L. Larson and Mrs. Laura Swanson spent Friday at Red Lake Falls.

W. Moose of St. Paul attended to land interests in this vicinity Thursday and Friday.

Miss Belle Hermanson returned on Saturday to Minneapolis, where she is employed, having spent a week with her mother, Mrs. H. Hermanson.

Mr. and Mrs. Hans Wolden have returned to Portland, N. D., after spending a few days with Mr. Wolden's parents in this city.

Dr. H. W. Froehlich and son, William, returned Sunday morning from Minneapolis, where they had spent a few days.

G. F. Hoyez arrived Friday from Grand Forks, N. D., and was a guest of friends in the city enroute to his home at Warroad.

Mrs. Alfred Peterson arrived Saturday afternoon from Middle River to be a guest of her sister, Mrs. Carl Anderson, and family.

Edward Fiterman of the Northern Trading Company attended to business affairs at Warren on Wednesday.

Miss Lena Lunde left Wednesday for her home at Seattle, Wash., having spent the past few weeks at the home of her sister, Mrs. Anna Mellum.

O. C. Gran, who has spent the past two weeks at the home of his daughter, Mrs. Ed. Peterson, at Minot, N. D., has returned to this city.

Mrs. T. B. Kjorsvik arrived Thursday from Drayton, N. D., to spend an indefinite time with her sister, Mrs. C. A. Anderson.

Mrs. Carl Solberg of Bisbee, N. D., arrived Monday evening to be the guest of her cousin, Dr. T. M. Kolberg.

Miss Sylvia Piesron motored over Monday from her home at St. Hilaire to spend the day with friends and also with her sister, Miss Albirdie, who is a sophomore in the local high school.

Miss Elsie Sundahl, Miss Lillian Knight and Paul Scanlan motored on Thursday to Grand Forks, N. D., and visited with Milton Lund, who is employed at that place.

Mrs. C. A. Anderson and son, Alfie, and her sister, Mrs. T. B. Kjorsvik, of Drayton, N. D., motored Sunday to Warren, where they spent the day with Miss Vera Matelski.

Miss Eunice Lind, graduate nurse of the general hospital, who has been visiting with her brothers near this city, arrived Monday to be a guest at the Lloyd Crown home.

Must Have a Mail Box.

An order instructing postmasters throughout the country to stop the delivery of mail at every dwelling house not having a slot or box for mail at the front door was issued this week by Assistant Postmaster General Barrett. A notice of four months is given citizens to provide the slot or receptacle. After that time has expired the delivery of mail will be stopped at homes of delinquent patrons. The order was issued to speed up carrier deliveries.

AFTER.

How often, longing for the sun,
Our hearts have sorrowed at the rain;
Forgetting that when storms are done
The buds will bloom again,
The world is new, the skies are blue,
And over all the rainbow's hue.
How often, hungering for delight,
Our portion has been pain instead;
And on the loneliness of night
We deem all glory fled;
But life will sing again, and ring
With God's sure word of conquering.

FOREST FIRES RAGING IN NORTHERN SECTIONS OF STATE; SALOL BURNING

Thousands of Acres of Timber in State Consumed by Devastating Flames and Fire Fighters Are Rushed From Warroad, Roseau.

Northern Minnesota is experiencing one of the most devastating forest fires in the history of the state and unless soaking rains interfere, it is believe the fires will make further progress.

Peat bogs and dry underbrush in the country lying in northeastern Marshall county has been on fire for the past week, it is said, and many of the roads in that section have been rendered impassable owing to the grades caving in under the weight of automobiles and other vehicles.

Big game has been driven from the timber countries in the Rapid River sections and farmers report seeing herds of them in the open country to the east of Middle River and near Grygla. The smell of smoke and the burning forests has compelled deer and moose to seek relief in the open. A farmer living about 15 miles east of Middle River has informed The Banner that several deer have been making their home on his farm ever since the fires became threatening.

Salol, a town situated about half way between Roseau and Warroad, is reported to be on fire. The town has several stores, a bank, lumber yard, sawmill and several other smaller business institutions, including a $10,000 school building, which has recently been completed, and these are believed to be doomed. Automobiles have been sent to the scene from Roseau and Warroad carrying fire fighters and provisions and the cars will be used to carry the refugees from the little village in the event a total destructions of the town seems inevitable. Meagre reports received by The Banner indicate that the fires are burning within a mile or two of the town and much of the timber in the vicinity is tall pine, through which the fire is sweeping at a rapid pace. Because of the intense heat, the men fighting the flames are scarcely able to get within a quarter of a mile of the scene.

A dense cover of smoke has enveloped Goodridge and eastern Pennington county for the past everal days, or since the timber fires near Duluth and on the iron range became serious a week ago. Inquiries made as to whether there were fires along the west shore of Red Lake reveal that this section is so far untouched, there being a considerable area between the Rapid River section and the west side of the lake that is entirely free of timber. How the large timber tracts along the east shore is faring is difficult to ascertain, there being no reports eminating from there us to the time of going to press.

The Banner has information that thousands of partridges have been driven from the north woods and are scattered throughout the wooded sections lying between Goodridge and Grygla and even as far west as Thief River Falls. The smaller thickets and farmers' groves are harboring numbers of them, it is said. The season for the shooting of partridges opens a week from Sunday, October 15th, and until then the law specifically protects them.

Since the report of the Salol fire had been received, it is learned that they have been greatly exaggerated and that the information of the town being in flames is erroneous. It is known that the cattle yard there burned Wednesday.

Moen Is Making Rapid Progress on New Road

Contractor Moen, in charge of operations of the 10-mile stretch of road lying between the Narrows and the Ridge of the Red Lake road is making rapid progress on his contract, according to reports reaching Goodridge from that section. A large part of the clearing for the road has been completed and also some of the grading.

A crew of men is engaged in the clearing work and it is expected that it will be completed some time during the coming winter. It is claimed by Mr. Moen that the work of clearing can be done to better advantage during the winter months, after the freeze, than at present, this being due to the fact that long stretches of the road leads through swampy and low land.

The fellow they say "has a good carriage" may be just a little buggy.

If you let your debt run you'll have to be fast to catch up.

MRS. OLESON AT THIEF RIVER FALLS OCTOBER 11

Mrs. Peter Oleson, Democratic candidate for United States senator, will speak at the Auditorium at Thief River Falls Wednesday evening, October 11. Go over and hear her.

Hunters Shoot Good Bags Near Neptune Duck Ponds

Hunters who visit the Neptune section this fall are attended with a generous amount of success, many returning from there with a full day's limit. The Neptune swamps lie from three to seven miles north of the river and ducks are continually flying between Red River and the lakes.

A number of smaller bodies of water in the section are also said to contain numbers of the feathered tribe. Hunters generally, however, are waiting for the late fall shooting at the "outlet" of Red Lake, a time when the big northern flights come down the 40-mile stretch over the lake, which leads them directly to the outlet.

There they come over in swarms and men who have hunted there claim that no such duck hunting grounds exist in the entire United States.

EXHIBITS POTATO GRADER.

A. B. Mandt, manager of the Goodridge Farmers Elevator and Milling Company is exhibiting at the elevator a new potato grader, which is said to be quite the latest thing in this line of machinery. He has secured the Goodridge agency for the new device and invites those interested to visit the elevator and inspect it.

Bernt Tanem Purchases High-Grade Piano for Hall

Bernt Tanem, enterprising Goodridge business man, this week purchased from the Thief River Music Company at Thief River Falls one of that company's high-grade pianos. Mr. Tanem will place the instrument in the hall, where it will be placed at the disposal of dance orchestras, musical entertainments, etc., that are expected to be held there during the fall and winter months. The Monarch Comedy Company, which is booked to appear at the hall all next week, have a full compemlent of musical entertainers and no doubt will please many an audience during its stay in Goodridge. Seats are now on sale.

October Slips Us a Hot Day, Warmest on Record

Tuesday was said by weather observers as the hottest day ever recorded in the history of U. S. weather statistics for October. A rather hot wind was prevalent throughout the day and even during the evening it showed but slight cooling effect. Many were of the belief that the forest fires raging in northeastern Minnesota were to blame for the warm day, but this is discredited by the weather man at Moorhead. He claims the day was destined to be hot—and it certainly was.

Bookkeepers are in active demand as judges at beauty shows. Probably because they are used to figures.

Those who live on Easy Street generally arrived by the alley of Hard Knocks.

MOONSHINERS RAIDED IN THIEF RIVER FALLS

Six Alleged Offenders Arrested, One, a Woman, Is Ordered Out of Town.

Sheriff W. J. LaBree, arrested six alleged moonshiners at Thief River Falls on Tuesday of this week, one of them being a woman who has on previous occasions given the authorities trouble.

Ole Linstad, who has also been in the toils of the law before, was caught with three stills in the town of Sanders. The sheriff also took possession of 20 gallons of moonshine and a large quantity of mash. Linstad was bound over under $600 bail bond.

O. W. Carlson, Bennie Vigen, soft drink proprietors, and Alfred Rasmussen, proprietor of the Jefferson Cafe, were bound over to await the action of the district court. This disposition was also made of the case of Adolph Amundson, formerly employed by Carlson as a bartender.

The evidence in each case was furnished by a private detective employed by County Attorney Theo. Quale.

FOR SALE.

NORTH DAKOTA NIGHT COP IS KILLED DURING STORE ROBBERY

Murderers Escape in High-Powered Automobile After Cooly Shooting Carl Peterson, Who Interferes With Their Plans.

Carl Peterson, night policeman at Westhope, N. D., was shot down in cold blood last Monday night when, in intercepting the work of a gang of holdup men and burglars who were robbing a hardware store there, he received a bullet in his left leg from which he bled to death two hours later, before medical attention could reach him. Peterson leaves a widow and six children.

The bandits drove into town under the cover of darkness and proceeded to the hardware store in the little town, where they helped themselves to rifles, ammunition, etc., as well as a number of other articles. Officer Peterson spied them and went to summon several of his townsfolk to aid him in an attempt to surround the men and possibly capture them.

After rousing the citizens of the village, Peterson returned to the business, where he was closely watching the activities of the burglars and to map out a mode of attack. He was discovered by one of the robbers, who fired at him with a high-powered rifle and Peterson dropped in his tracts The bandits picked up their loot and hurried into their automobile and sped away.

They were next heard from at Maxbass, nearby, where they broke into an oil station and helped themselves to enough gasoline and oil to carry them a considerable distance. The men then traveled along one of the main highways leading toward Minot, and it is believed they are in hiding there.

A posse which was hurriedly organized, trailed their car for a distance of 50 miles when the car tracks were lost and since then no clues have been uncovered.

Several bank robberies in the province of Manitoba and along the border are laid to the same gang of robbers, as it is known that the car in which the men traveled had been seen across the border a day or two previous to the Westhope robbery. North Dakota officials, however, are inclined to doubt that there is any connection and are working on the theory that they are the same gang that has been at work in Minnesota and other North Dakota towns during the past two weeks. They do not link up the Mentor bank robbery with the Westhope raid and murder.

Three nearly new Cadillac automobiles which were recently stolen in the twin cities and disposed of in North Dakota at ridiculously low prices have been discovered by twin city detectives through secret numbers stamped on the cars, and all of them have been returned to their owners. One of these sold to a merchant at Sherwood was said to have been purchased for $300. Another was sold to a man living in Minot, while the third was disposed of to a man living just north of that city. All of the cars have been turned over.

You Can Get Back Your Grip on Health

Persons suffering from stomach trouble and who are under weight find an ever-ready friend in Tanlac. This celebrated medicine has ended indigestion and increased the weight for thousands of people everywhere. Mrs. O. D. Flaherty, 1905 Grace St., Lynchburg, Va., says:

"My son's health was fully restored by Tanlac and he actually gained twenty pounds in weight. After every meal he suffered terribly from severe pains, palpitation and shortness of breath, and had awful headaches. He was terribly nervous, too. He is working now every day and is in as good health as he ever was."

Under nourishment is the cause of most cases of under weight. Tanlac enables the stomach to extract the healthy nutriment from the food, builds up the whole body and increases the weight to normal. Millions of people have testified to its great benefits. Get a bottle today at any good druggist.—Advertisement.

Up to the Doctor.

Mrs. Potts' husband had been quite ill, but finally there came a change. When the doctor called and had a look at his patient he announced:

"He is a convalescent."

Whereupon Mrs. Potts regarded the physician suspiciously; and her suspicion increased when he made no further comment but prepared to go.

"Well, you'se a doctor, ain't yo," she demanded. "Ain't yo' got no med'cine fo' dis heah convalescence?"—Exchange.

DYED HER DRAPERIES, SKIRT AND A SWEATER WITH "DIAMOND DYES"

Each package of "Diamond Dyes" contains directions so simple that any woman can dye or tint faded, shabby skirts, dresses, waists, coats, sweaters, stockings, hangings, draperies, everything like new. Buy "Diamond Dyes"—no other kind—then perfect home dyeing is guaranteed, even if you have never dyed before. Tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade, or run. So easy to use.—Advertisement.

One Ray of Joy.

"And what kind of a filling do you want. my little man?" asked a kindly dentist of a small boy who had been suffering a dozen martyrdoms in the chair.

It was the first cheerful word the boy had heard for an hour.

"Gimme chocolate," he replied, brightening visibly.—American Legion Weekly.

Is Backache Crippling You?

Is that dull, nagging backache making it hard for you to get around? Are you lame, sore and tortured with sharp, rheumatic pains? It's time, then, you gave some attention to your kidneys! A persistent backache is often Nature's first signal of kidney weakness. You may have headaches, dizziness and annoying bladder irregularities, too. Kidney troubles, if treated early, are usually easily corrected. Begin now with *Doan's Kidney Pills. Doan's* have helped thousands and should help you. *Ask your neighbor!*

A Minnesota Case

"Every Picture Tells a Story"

Albert Ericksen, painter, 408 2nd Ave., N., Chrisholm, Minn., says: "My back gave me trouble and my kidneys were not in good condition. When I bent over it was impossible for me to straighten again. Mornings my back was stiff and lame. Sometimes when I turned suddenly I got sharp catches in my back. My kidneys were irregular in action. I used one box of Doan's Kidney Pills, which corrected the trouble."

A TRUE RAT STORY

Auburntown, Tenn., 6-22-22.

Stearns Electric Paste Co.

Dear Sirs: Mr. Robert T. Donnell of Auburntown, Tenn., came in our store the other day and wanted something to kill rats, so I sold him a box Stearns Rat Paste. And he put some paste on six biscuits that night and the next morning he found fifty-four big rats. And the second night he put out four more biscuits with paste on them, and the second morning he found seventeen more rats, making a total of seventy-one rats in two nights, and there were lots more that he did not find.

This is some big rat tale, but, nevertheless, it is so. Just thought would write to let you know that your rat paste is good.

Respectfully, KENNEDY BROTHERS.

CHAPTER XII—Continued.

—18—

"Very well, then, the meeting is called to order!" Jachin Fell smiled as he rapped on the desk before him. "Election of officers—no, wait! The first thing on hand is to give our company a name. Suggestions?"

"I was thinking of that last night," said Lucie, smiling a little. "Why not call it the 'American Prince Oil company'?" And her eyes darted to Gramont merrily.

"Excellent!" exclaimed Jachin Fell. "My vote falls with yours, my dear—I'll fill in the blanks with that name. Now to the election of officers."

"I nominate Jachin Fell for president," said Gramont, quickly.

"Seconded!" exclaimed the girl, gayly, a little color in her pale cheeks.

"Any other nominations? If not, so approved and ordered," rattled Fell, laughingly. "For the office of treasurer—"

"Miss Lucie Ledanois!" said Gramont. "Move nominations be closed."

"Seconded and carried by a two-thirds vote of stockholders," chirped Fell in his toneless voice. "So approved and ordered. For secretary—"

"Our third stockholder," put in Lucie. "He'll have to be an officer, of course!"

"Seconded and carried. So approved and ordered." Mr. Fell rapped on the table. "We will now have the report of our expert geologist in further detail than yet given."

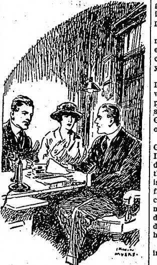
Gramont told of finding the oil; he was not carried away by the gay mock-solemnity of Jachin Fell, and he remained grave. He went on to relate how he had secured the lease option upon the adjoining land, and suggested that other such options be secured at once upon other property in the neighborhood. He handed the option to Fell, who laid it with the other documents.

"And now I have a proposal of my own to make," said Jachin Fell. He appeared sobered, as though influenced by Gramont's manner. "Although we've actually found oil on the place, there is no means of telling how much we'll find when we drill, or what quality it will be. Is that not correct, Mr. Gramont?"

"Entirely so," assented Gramont. "The chances are, of course, that we'll find oil in both quality and quantity. On the other hand, the seepage may be all there is. Oil is a gamble from start to finish. Personally, however, I would gamble heavily on this prospect."

"Naturally," said Mr. Fell. "However, I have been talking over the oil business with a number of men actively engaged in it in the Houma field. I think that I may safely say that I can dispose of the mineral rights to our company's land, together with this lease option secured yesterday on the adjoining land, for a sum approximating one hundred and fifty thousand dollars; reserving to our company a sixteenth interest in any oil located on the property. Personally, I believe this can be done, and I am willing to undertake the negotiations if so empowered by a vote of our stockholders. Lucie, you do not mind if we smoke, I know? Let me offer you a cigar, Mr. Gramont."

Gramont took one offered him, and lighted it amid a startled silence.



IRWIN MYERS.

"I Nominate Jachin Fell for President," Said Gramont Quickly.

Fell's proposal came to him as a distinct shock, and already he was viewing it in the light of prompt suspicion.

"Why," exclaimed Lucie, wild-eyed, "that would be fifty thousand dollars to each of us, and not a cent expended!"

"In case it went through on that basis," added Jachin Fell, his eyes on Gramont, "I would vote that the entire sum go to Miss Ledanois. Her land alone is involved. If she then wishes to invest with us in a new company to exploit other fields, well and good. One moment, my dear! Do not protest this suggestion. The sixteenth interest reserved to our company would provide both Mr. Gramont and me with a substantial reward for our slight activity in the matter. Don't forget that interest, for it might amount to a large figure."

"Right," assented Gramont. "I would second your vote, Mr. Fell; I think the idea very just and proper that Miss Ledanois should receive the entire amount."

Lucie seemed a trifle bewildered.

"But—but, Henry!" she exclaimed. "What do you think of selling the lease to these other men?"

Gramont eyed the smoke from his cigar reflectively, quite conscious that Mr. Fell was regarding him very steadily.

"I can't answer for you, Lucie," he said at last. "I would not presume to advise."

Mr. Fell looked slightly relieved. Lucie, however, persisted.

"What would you do, then, if you were in my place?"

Gramont shrugged his shoulders.

"In that case," he said, slowly, "I would gamble. We know oil is in that ground; we know that it has been found in large quantities at Houma or near there. To my mind there is no doubt whatever that under your land lies a part of the same oil field—and a rich one. To sell fifteen-sixteenths of that oil for a hundred and fifty thousand is to give it away. I would sooner take my chances on striking a twenty-thousand barrel gusher and having the whole of it to myself. However, by all means disregard my words; that is not my affair."

Lucie glanced at Jachin Fell.

"You think it is the best thing to do; Henry does not," mused the girl. "I know that you're both thinking of me—of getting that money for me. Just the same, Uncle Jachin, I—I won't be prudent! I'll gamble! Besides," she added with smiling naivete, "I'm not a bit willing to give up having a real oil company the very minute it is formed! So we'll outvote you, Uncle Jachin."

Despite their tension, the two men smiled at her final words.

"That motion of mine has not yet been made," said Fell. Her rejection of his proposal had no effect upon his shyly smooth manner. "Will you excuse us one moment, Lucie? If I may speak with you in the outer office, Mr. Gramont, I would like to show you some confidential matters which might influence your decision in this regard."

Lucie nodded and leaned back in her chair.

Gramont accompanied Fell to the outer office, where Fell sent the stenographer to keep Lucie company. When the door had closed and they were alone, Fell took a chair and motioned Gramont to another. A cold brusquerie was evident in his manner.

"Gramont," he said, briskly, "I am going to make that motion, and I want you to vote with me against Lucie. Unfortunately, I have only a third of the voting power. I might argue Lucie into agreement, but she is a difficult person to argue with. So I mean that you shall vote with me—and I'm going to put my cards on the table before you."

"Ah!" Gramont regarded him coolly. "Your cards will have to be powerful persuaders!"

"They are," returned Jachin Fell. "I have been carefully leading up to this point—the point of selling. I have practically arranged the whole affair. I propose to sell the mineral rights in that land, largely on the strength of the signed statement you gave me a few moments ago. That statement is going to be given wide publicity, and it will be substantiated by other reports on the oil seepage."

"You interest me strangely." Gramont leaned back in his chair. The eyes of the two men met and held in cold challenge, cold hostility. "What's your motive, Fell?"

"I'll tell you: it's the interest of Lucie Ledanois." In the gaze of Fell was a strange earnestness. In those pale gray eyes was now a light of fierce sincerity which startled and warned Gramont. Fell continued with a trace of excitement in his tone.

"I've known that girl all her life, Gramont, and I love her as a father. I loved her mother before her—in a different way. I can tell you that at this moment Lucie is poor. Her house is mortgaged. she does not know, in fact, just how poor she really is. Of course, she will accept no money from me in gift. But for her to get a hundred and fifty thousand in a business deal will solve all her problems, set her on her feet for life!"

"I see," said Gramont with harsh impulse. "What do you get out of it?"

He regretted the words instantly. Fell half rose from his chair as though to answer them with a blow. Gramont, aware of his mistake, hastened to retract it.

"Forgive me, Fell," he said, quickly. "That was an unjust insinuation, and I know it. Yet, I can't find myself in agreement with you. I'm firmly set in the belief that a fortune in oil will be made off that land of Lucie's. I simply can't agree to sell out for a comparative pittance, and I'll fight to persuade her against doing it! As I look at it, the thing would not be just to her. I'm thinking, as you are, only of her interest."

A light of sardonic mockery glittered in the pale eyes of Jachin Fell.

"You are basing your firm conviction," he queried, "very largely upon your discovery of the free oil?"

"To a large extent, yes."

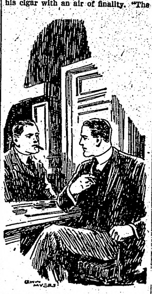
"I thought you would," and Fell laughed harshly.

"What do you mean?"

"I mean," said the other, fiercely earnest, "that for a month I've worked to sell that land! I had young Maillard hooked and landed—it would have been poetic justice to make him hand over a small fortune to Lucie! But that deal is off, since he's in jail. And do you know why young Maillard wanted to buy the land? For the same reason you don't want to sell. I sent him out there and he saw that oil seepage, as I meant that he should! He thought he would skin Lucie out of her land, not dreaming that I had prepared a nice little trap to swallow him. And now you come along—"

"Man, what are you driving at?" exclaimed Gramont. He was startled by what he read in the other man's face.

"Merely that I planted that oil seepage myself—or had it done by men I could trust," said Jachin Fell, calmly. He sat back in his chair and took up his cigar with an air of finality. "The confession is shameless. I love Lucie more than my own ethical purity. Besides, I intend to wrong no one in the matter."



IRWIN MYERS.

"I See," Said Gramont With Harsh Impulse. "What Do You Get Out of It?"

Gramont sat stunned beyond words. The oil seepage—a plant.

There was no reason to doubt what Fell said. Gramont believed the little man sincere in his love for Lucie.

"No matter what the outcome, your reputation will not be affected," said Fell, quietly. "The company which will buy this land of Lucie's is controlled by me. You understand? Even if no oil is ever found there. I shall see to it that you will not be injured because of that signed statement."

Gramont nodded in dull comprehension. He realized that Fell had devised this whole business scheme with infernal ingenuity; had devised it in order to take a hundred and fifty thousand dollars out of his own pocket and put it into that of Lucie. It was a present which the girl would never accept as a gift, but which, if it came in the way of business, would make her financially independent. Nobody would be defrauded. There was no chicanery about it. The thing was straight enough.

"That's not quite all of my plan," pursued Fell, as though reading Gramont's unuttered thoughts. "The minute this news becomes public, the minute your statement is published, there will be a tremendous boom in that whole section. I shall take charge of Lucie's money, and within three weeks I should double it, treble it, for her. Before the boom bursts she will be out of it all, and wealthy. Now, my dear Gramont, I do not presume that you will still refuse to vote with me? I have been quite frank, you see."

Gramont stirred in his chair.

"Yes!" he said, low-voiced. "Yes, by heavens, I do refuse!"

With an effort he checked hotly impulsive words that were on his tongue. One word now might ruin him. He dared not say that he did not want to see Fell's money pass into the hands of Lucie—money gained by fraud and theft and crime! He dared not give his reasons for refusing. He meant now to crush Fell utterly—but one wrong word would give the man full warning. He must say nothing.

"It's not straight work, Fell. Regardless of your motives, I refuse to join you."

Jachin Fell sighed slightly, and laid down his cigar with precision.

"Gramont," his voice came with the softly purring menace of a tiger's throat-tone, "I shall now adjourn this company meeting for two days, until Saturday morning, in order to give you a little time to reconsider. Today is Thursday. By Saturday—"

"I need no time," said Gramont.

"But you will need it. I suppose you know that Bob Maillard has been arrested for parricide? You are aware of the evidence against him—all circumstantial?"

(TO BE CONTINUED.)

Plant's Remarkable Growth.

A recent note in science records what is believed to be the temperate zone record for a single season's growth of a shoot of the tree type of woody plant. This quite phenomenal shoot grew from the stump of a beheaded Paulownia and reached a height of 21 feet 6 inches, a circumference of 10 inches at the base, and had 24 leaves, one of which, measured in late July, was found to be 38 inches long in the largest dimension.

A UNION OF INTEREST TO WOMEN

Healthy Housewife---Happy Home

Lydia E. Pinkham's Vegetable Compound Has Helped Form Many

For the ailing, half-sick housewife such a union is impossible. Often times even the slightest form of housework cannot be accomplished. Yet the work must be done.

Many women struggle along for years suffering from some form of female trouble that make their lives miserable and their homes far from happy.

Lydia E. Pinkham's Vegetable Compound has helped thousands of just such women regain their health and strength. Just give your thought to the following letters and remember that the women who wrote these letters knew how they felt before taking the Vegetable Compound and again afterwards. It helped them—let it help you.

Had Nervous Spells

Horatio, Ark.—"I had nervous spells and awful bad feelings. My right side and my back hurt me all the time and I had been going down in health for six or seven years. For three years I had not been able to do my work without help. I weighed only 95 pounds when my husband's mother persuaded me to take Lydia E. Pinkham's Vegetable Compound. Now I heartily recommend it to all suffering women, as I have gained weight and health. I can do all my work, anything I want to do."—Mrs. JIM REARICK, Horatio, Arkansas.

Reading, Pa.—"I was a nervous wreck and could hardly do my housework. I always had to have help or I would never have got it done. Through the advice of friends I have been taking Lydia E. Pinkham's Vegetable Compound for my nerves and Lydia E. Pinkham's Blood Medicine for my blood and I am feeling fine and doing my work all alone. I can recommend these medicines to any one, for they certainly helped me. I suffered for five years and Lydia E. Pinkham's medicines pulled me through."—Mrs. WALTER U. STOYER, 1218 Mulberry St., Reading, Pa.

Recommends the Vegetable Compound

New Orleans, La.—"I have found relief from my troubles by taking Lydia E. Pinkham's Vegetable Compound and I praise it wherever I go. I could not do my work as it should be done for I would sometimes have to lie down because of the pains I had. A friend induced me to take your Vegetable Compound and I have got great results from it. I keep house and am able to do all my own work. I recommend your Vegetable Compound to my friends who have troubles similar to mine."—Mrs. T. FOECKLER, 1915 N. Derbigny St., New Orleans, La.

SICK HEADACHE

Take a good dose of **Carter's Little Liver Pills** then take 2 or 3 for a few nights after. They restore the organs to their proper functions and **Headache** and the causes of it pass away.

Aspirin

Say "Bayer" and Insist!

BAYER

Genuine

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds	Headache
Toothache	Lumbago
Earache	Rheumatism
Neuralgia	Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Advertisement.

Ten Largest States.

The ten largest states in respect to area are: Texas, California, Montana, New Mexico, Arizona, Nevada, Colorado, Wyoming, Oregon, Utah.

Why does money usually get rattled when it converses?

For Visitors Only.

The primary teacher asked the class for a definition of the word "blessing." None of the pupils seemed to know. Finally Johnny's hand went up.

"What is it, Johnny?" said the teacher.

"Papa says the blessing every time we have company."

FIFTY YEARS AGO

A young man who practiced medicine in Pennsylvania became famous and was called in consultation in many towns and cities because of his success in the treatment of disease. This was Dr. Pierce, who finally made up his mind to place some of his medicines before the public, and moving to Buffalo, N. Y., put up what he called his "Favorite Prescription," and placed it with the druggists in every state.

Dr. Pierce's Favorite Prescription has long been recognized as a tonic for diseases peculiar to womankind. After suffering pain, feeling nervous, dizzy, weak and dragged-down by weaknesses of her sex—a woman is quickly restored to health by its use. Thousands of women testify that Dr. Pierce's Favorite Perscription has entirely eradicated their distressing ailments.

More recently that wonderful discovery of Dr. Pierce's, called An-uric (for kidneys and backache), has been successfully used by many thousands who write Dr. Pierce of the benefits received—that their backache, rheumatism, and other symptoms of uric acid deposits in joints or muscles have been completely conquered by its use.

Send 10c to Dr. Pierce, Buffalo, N.Y., for trial pkg. of any of his remedies, or write for free medical advice.

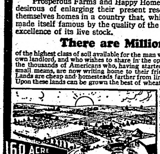
WESTERN CANADA

for **Wheat Growing, Cattle Raising** and a **Happy Home of Your Own**

Prosperous Farms and Happy Homes await those who are desirous of enlarging their present resources and securing for themselves homes in a country that, while yet in its infancy, has made itself famous by the quality of the grain it produces and by the excellence of its live stock.

There are Millions of Acres

of the highest class of soil available for the man whose object in life is to become his own landlord, and who wishes to share in the opportunity which has given wealth to the thousands of Americans who, having started on Western Canada farms with but small means, are now writing home to their friends, telling of what they have done. Lands are cheap and homesteads farther from lines of railway are **free to settlers.** Upon these lands can be grown the best of wheat, oats, barley, flax, grass, hay, fodder corn and sunflowers.



160 ACRE FARMS IN WESTERN CANADA FREE

Cattle winter in most places without shelter; dairying is highly successful. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities.

AGREEMENT SEEN FOR NEAR EAST

Allies and Turks to Hold Conference at Mudania to Discuss Problem.

TURK TO YIELD, BELIEF

British Report Kemal's Terms Unacceptable Though Discussable—Turks Yield More Ground in Straits.

London—The Turks have evacuated Kara-Bigha and retired from the neutral zone at this point, says a dispatch to the Times from Constantinople. On the other hand, the dispatch says, Turkish infantry have appeared within the neutral zone at Bergaz, 18 miles northeast of Chanak and at Kusu-Keui, 12 miles south.

Constantinople—The Kemalist proposals which will be laid formally before the Mudania conference are "discussable, but no acceptable."

This was the decision of the extraordinary council, which met at the British embassy. It included the allied high commissioners, ambassadors, generals and admirals.

M. Franklin-Bouillon, the French envoy, through whose efforts with Kemal Pasha, the conference was made possible, expressed his belief to the Associated Press correspondent that an agreement would be reached at Mudania.

"Kemal will make an even greater effort for peace than he has made for war," he said.

Two Important Questions.

Two of the most important questions to be discussed at the conference will be demarcation of a new neutral zone on the Asiatic shores of the Dardanelles and at Ismid, and the evacuation of Thrace.

The Allies hold that Kemal's demands as outlined by M. Franklin-Bouillon are of such a nature that the Angora assembly would thereafter be in a position to reject the Allied note.

Kemal Pasha insists on settlement of all military questions before reply-four of the ministers at Smyrna accepted the allied note in principle, but the attitude of the Angora assembly is not known.

No Reference to Zone.

The Allies feel that Kemal's demands could have been made with better grace if the Allied note had been fully indorsed by his government. Kemal's armistice terms make no reference to a neutral zone or neutrality of the straits, but the opinion of the Allied council was that the most important question to be discussed would be the establishment of a provision neutral line at Chanak, as suggested by General Harington's latest note to the Turkish nationalist leader.

OFFICERS USE SIEZED BOOZE

Charge Made That "Evidence" Was Used by Agents and Friends.

Washington—Charges that "certain representatives of the department of justice" converted to their own use large stocks of liquor seized in the enforcement of prohibition laws, were made in a special report filed by the District of Columbia grand jury.

The report asserted that the liquor was removed from the warehouse used by the department for storage purposes and was used by the officials involved for their private consumption, for distribution to personal friends, and as gifts to favored institutions.

There was no charge that any of the liquor was disposed of for financial gain.

Illegal withdrawals covered in the report were declared to have occurred between July 20 and September 11, 1920. The jury did not name the individuals who were involved, but declared that their conduct "cannot be too severely condemned."

At ne department of justice, officials indicated that no action was in prospect since the offenses complained of were by "former attaches of a former administration" of the department.

William J. Burns, chief of the department's bureau of investigation, confirmed the statement that large stocks of liquor held in the custody of the department had "disappeared" between the dates mentioned in the grand jury report.

The first intimation of such a situation, Mr. Burns said, came to him when counsel for a defendant in a liquor case which had lapsed under the statute of limitations, filed claim for return of the several cases of whisky involved.

Soft Coal Rate Cut.

Grand Forks, N. D.—Notice of reduced freight rates on soft coal shipments from all points of entry from Canada to North Dakota has been received from the Great Northern by the traffic department of the Commercial club. The new rates effective now are the result of negotiations between the state industrial commission and the railroad, the commission having assurance from Canadian mines that they would be able to furnish North Dakota with 500 to 1,500 tons weekly.

YOU MAY NOT BELIEVE THIS

But, if True, This Young Lady Is Very Evidently Not in the Class of Modern "Flappers."

A country correspondent of an Indiana weekly newspaper, who disclaimed being either a pessimist or reformer, recently wrote as follows: "The other day a man and his daughter from near Danville, Ky., passed through our town on their way to a nearby village. They expected to be met at the train by a relative, but he was late, so they had to wait for him for four or five hours. The daughter was a young woman of seventeen, but still wore her hair in curls. We were especially impressed by the natural girlishness and sweet modesty of the young woman. She was refined, too, both in manners and dress. Her father apologized for her bashfulness. There's nothing else to say about this little incident except that it is a rare and beautiful thing to hear a father apologize for the modesty of a daughter of seventeen summers."—Indianapolis News.

Stop the Pain.

HAD REAL CAUSE FOR GRIEF

Small Boy's Distress Had a Whole Lot More Than Mere Sympathy as a Basis.

A lad in Washington got a job that didn't at all please him—shoveling the snow from the sidewalk in front of his house. There was a good bit of ground to cover. After about two hours' toil he began to cry.

"What's the matter, son?" asked a sympathetic neighbor, as he came upon the scene.

"A tramp came along and stole the shovel from the boy next door," explained the lad between sobs.

"Well, son," continued the neighbor, "it's a fine thing to be sympathetic, but you mustn't worry so over other people's affairs."

"It ain't that," added the boy, "I am crying because he didn't steal my shovel, too."—Milwaukee Sentinel.

Spoiled Diamonds.

Among the crown jewels of the Hapsburgs were two large diamonds of ruby tint which were always regarded as especially valuable and whenever the royal jewels were placed on exhibition these stones were under special guard. It was necessary some time ago to dispose of the jewels, and as they were being prepared for exhibition, prior to being offered for sale, they were put through a wash which unfortunately removed the color of the precious stones and left them perfectly white. Instead of demanding a fabulous price as ruby diamonds, they were sold simply as white stones.—Chicago Journal.

His Natural Inquiry.

"Land of Goshen, Runt!" ejaculated Mrs. Johnson of Rumpus Ridge. "You're a sight on earth! Go clean yourself up right now. Take plenty of soft soap, and wash your face and hands and arms and neck and ears."

"Heck, Maw! What's coming off?" cried the child in amazement. "Is it my birthday?"—Kansas City Star.

Always in Style.

They were going through the furniture factory, and Mrs. Smith was amazed at the great proportion of chairs.

"Well, ma'am," responded the ingenious attendant, "you see, it's the dull season, and most of our furniture is out of style, but settin' never really goes out of fashion."

Paradoxical but True.

"The human anatomy is a wonderful bit of mechanism," observed an apprentice. "Yes," agreed the foreman, "I patted Charles on the back and made his head swell."

PRAYER CAME FROM HEART

Under the Circumstances, There Can Be Little Doubt Sambo Was Sincere in His Supplication.

Representative Christopherson of South Dakota tells a good story about a darky who was short of meat at home and selected his pastor's smokehouse as a likely place to get a nice ham. As he was leaving with a big one under his arm the pastor suddenly appeared before him and said:

"Why, Sambo, what are you doing in my smokehouse at this time of night?"

To which the trembling darky replied: "Ah suh, Ah just come in to pray, suh."

Whereupon the pastor said: "If that is the purpose of this visit here, then you just get down and pray."

Thereupon the darky sank on his knees, raised his eyes and hands to heaven and offered up this prayer: "Oh, Lord, I pray that you now promptly dismiss us so that we may depart in peace."—Exchange.

Misused Figure of Speech.

A young writer, not much given to revision, recently sent out a story wherein the following occurred:

"He called his son a spendthrift, and did not fail, as he had done before, to cast his recently purchased motorcar, a 160-horsepower touring machine, in his teeth."—Exchange.

Surprised.

"Heavens!" said the visiting golfer, "I never played such a rotten game!" "Oh! Then you have played before?" asked the brave caddy.—Judge.

No man lives a useless life. He may serve as an example for others to avoid.

Descendants of Mary's Lamb.

Col. Thomas Powell of Columbus, Ohio, veteran of the Civil war and brother of the famous Gen. Eugene Powell, is the proud owner of "Lawnmower," the only living descendant of Mary's little lamb. The original Mary was Mary Sawyer of Sterling, Mass., who was eight years old at the time celebrated by the poem in 1814. The immortal verses, by the way, were written by John Roulston.—From the Argonaut.

Threat Considered a Favor.

Jodkins was always a dissatisfied member of the staff. His complaint this time he considered a big one and he told his work mates that he would threaten to leave.

"What did the boss say about your threat to leave?" he was asked on being seen coming from the chief's room.

"He didn't take it as a threat," replied Jodkins, "he thought I was doing the firm a favor."—London Tit-Bits.

Early Start.

A doctor lately married a girl whom he had ushered into the world twenty years ago. Real love at first sight.—London Opinion.

Announcing the New

SUPERIOR Models

Again Chevrolet Motor Company has emphasized its admitted leadership as producer of the World's Lowest Priced Quality Automobiles.

The new SUPERIOR models—one of which is here illustrated—represent the most sensational values in modern, economical transportation ever established.

Quality has been still further improved by more artistic design and added equipment.

Economy has been still further increased by engineering refinements and greatly broadened production and distribution facilities.

Service is ensured by more than 10,000 dealers and service stations operating on a flat rate basis.

Prices remain the same in spite of added equipment and more expensive construction, which have greatly increased value.

Some Distinctive Features

Streamline body design with high hood; vacuum feed and rear gasoline tank on all models; drum type head lamps with legal lenses. Curtains open with doors of open models. All closed models have Fisher bodies with plate glass Ternstedt regulated windows, straight side cord tires, sun visor, windshield wiper and dash light. Sedanette is equipped with auto trunk on rear.

Prices f. o. b. Flint, Mich.

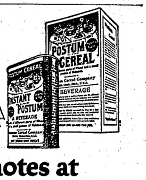
I do hereby promise to pay in sleepless nights
Mr. Coffee Drinker



Why sign notes at the dining table?

If your mealtime cup of coffee leads you into midnight wakefulness and mid-afternoon drowsiness (as so often happens) why not stop giving the promise to pay?

It is so easy to keep out of debt by turning to Postum.

Postum is a satisfying, mealtime drink, rich in flavor and aroma—and with no regretful settlements, afterward.

Why not try Postum instead of coffee today, and pave the way to better health and happiness?

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

Postum FOR HEALTH *"There's a Reason"*

EDITORIAL

NEWSPAPERS OF SERVICE.

A newspaper never swerves from the path of duty when it stands unalterably for law enforcement. It cannot go wrong on that score any more than a merchant or banker in applying simple honesty in his dealings with his customers.

A newspaper which ceases to be of service to the community—of which it may be said to be indirectly the common property of the community in which it is published—it becomes an organ either of privilege on a small scale or the mouthpiece of a certain class or an individual.

When it assumes the latter role it is better off dead than alive, and Heaven knows we have plenty of them with us. Their rantings are stinking up the atmosphere every day, pollotting pure air with grime and turning the righteous into sinners.

In the first class may be placed The Tribune of Thief River Falls. Just now it is engaged with turning the white light of publicity on the black industry of the moonshiners, and in this great service it deserves the plaudits of an entire community. Six alleged moonshiners charged with the palming off of poison to unwary drinkers have been driven into the courtroom, where they will be compelled to answer to the judge for their actions.

The Banner likes to commend a newspaper like The Tribune. It would like to be just like it, swinging along the same road of service that has prompted that excellent newspaper in pointing out to city officials that poison without the familiar skull and crossbones is being sold without the label.

The Tribune has done its duty and the community is the better off. It has shown Thief River Falls officials that the poisonous reptile has been in hiding somewhere. It can do nothing more.

It is now squarely up to the authorities whether they will or will not go further and extract the fangs, poison sac and all. The moonshiner has all the acquirements of the rattlesnake minus the warning signal. Buying his product and you sense the sting. Drink it and you will surely die.

Moonshine strikes in the dark. It knifes you in the back. The term "moonshiner" derives his term from his product and his actions are the same—he follows the same method of attack. He strikes in the dark. He knifes you in the back.

Long live newspapers like The Tribune, which sees its duty and then proceeds to carry it out. It cannot be on the wrong track because it stands for law enforcement.

WILL IT COME TO LIFE?

It is pretty hard to imagine that anything lifeless can be brought back to the stage of living and breathing. The same thing pertains to the possibility of reviving a dead issue such as, for example, the bonus bill.

The Banner hates like sin to parade a corpse before the eyes of its readers, yet we cannot reconcile ourselves to the belief that the bonus bill is a corpse. Not yet, anyhow.

It hasn't been dead long enough for that.

There is, in the humble opinion of this newspaper, the probability that a pulmotor may revive "Bonus Bill," and to that end we are going to do still more pumping for the poor devil that has recently passed away although he had every reason in the world why he should live to see his ambitions at least partially fulfilled.

The soldier should have received adjusted compensation and nothing under God's green earth can convince us differently. The country practically promised to him some form of remuneration for his sacrifice and the citizens stood along the streets and waved their assent, assuring him that things would be equalized at a later date.

No greater sacrifice lies within the power of man to do than to show that he is willing to lay down his life for his fellowman, democracy, or whatever it might be. The majority of the people of the United States wanted to show their gratitude by compensating him with a few dollars in order to set the returning fighter squarely on the ground and on his feet.

But the Government said "No!"

Rather, one man of the Government said "No!"

President Harding signed his name on the veto line and America's fighters, America's sons, America's heroes, who a few months previous had defended the Stars and Stripes with their blood and bravery, were pushed aside with a curt and brutal "No!"

How much within the power of one man to do!

If all political candidates made the pre-election pledges to their constituencies as is characteristic of Andy Gump in his race for Congress, we'd take them more seriously. Andy is assuredly an outspoken cuss. We hope the people see fit to send him to Congress, but even at that we'd bet he couldn't out-talk some of the human talking machines already there.

That was a good joke the governor of Georgia pulled on that old lady down there when he appointed her to fill the unexpired term of Senator Tom Watson, who died a week ago, and then turned smack around and filed for the same office himself. That sure is throwing the bone to himself, we'll say.

According to newspaper reports from Thief River Falls, the authorities over there are making the roads mighty dirty for the moonshiner, "the concoctor of unlabeled poison." Now let's hope that they make a clean sweep of the whole affair and not let them slip through their hands.

Love. II.

Text: 1. John, 4,11: "Beloved if God so loved us, we ought also to love one another."

Last time we saw, that we should love God because He first loved us. In our text for today we are told that we should love our neighbor for the same reason, namely, because God so loved us. The verse before our text reads: "Herein is love, not that we loved God, but that God loved us, and sent us His son to be the propitiation for our sins." When a person is loved by those who are placed above him, he will be all the more willing and ready to love his equals. Now, God, who is our Father and Maker, loves us; ought we not therefore love one another? The apostle says so: "Beloved, if God so loved us, we ought also to love one another."

This is said in the first place of Christians. They know that God loves them, they have experienced and enjoyed and constantly experience and enjoy the fruits of this love: Forgiveness of sins, peace with God, and the hope of eternal life. Therefore, they ought also to love their fellow Christians. It is, indeed, a sad spectacle, when members of one and the same Christian congregation hate one another, and live in constant strife and enmity! They are willing to accept the love of God toward them, but they are not willing to extend this love toward their fellow men. Such a case reminds us of that wicked servant: His master had forgiven him his debt, because he was unable to pay, but he put his fellow-servant into prison [illegible] him his [illegible]

But the commandment to love one another does not end with the boundaries of the Christian church. Our love should embrace all men. "Thou shalt love thy neighbor as thyself," said the Savior.

"Who is my neighbor?" asked the self-righteous Pharisee. And the Lord told the story of the Good Samaritan (Luke 10,25-37), showing that our neighbor is everyone who is in need of our love. At another time the Lord said: "Love your enemies." So we should love not only the members of our family, our church, our country, not only our good friends, our neighbors, our acquaintances, not only those who have been kind to us, those from whom we can expect kindness, those who are rich and honored but also the poor and lowly, those who cannot reward us for our love, those who hate us; yea, all men.

And if a person does not love his fellow-men as he should, his love toward God is not what it should be either. "If any man say, I love God, and hateth his brother, he is a liar; for he that loveth not his brother, whom he has seen, how can he love God, whom he hath not seen?"

We do not love our brother if we speak evil of him, if we try to cheat him in business, if we are unwilling to help him as much as we can when he is in trouble, if we laugh about or ridicule his weaknesses and shortcomings, if we rejoice over his misfortune, if we encourage him to do what is wrong, if we take no interest whatsoever in his welfare, if we are unwilling to forgive him when he has sinned against us, in short if we do anything at all to hate him, or fail to do what we should to help him.

On the other hand, if we love our neighbor as ourselves, we will do unto him as we would have him to do unto us. If we know something evil about him that must be told, we will tell him first. We will be fair in all our dealings with him, we will share his burdens, and joys and sorrows, we will warn him against what is wrong, we will be ready to forgive, will be kind, humble, patient, long suffering, gentle, and good to him.

If we all loved one another as we should, there would be no war, no murders, no robberies, no profiteering, no enmity, no law suits, not near as much poverty and misery and suffering. The Savior says of the last days before the end of the world: "And because iniquity shall abound, the love of many shall wax cold." (Math. 24,12. Truly these words are being fulfilled this very day!

But you might ask: "Is there anybody in the world who can and does love God and his neighbor as he should?" I ask: "Do you realize that you are guilty of breaking the commandment of love, and are you sorry that you have sinned against God? If so, remember that God sent his son to die for your sins. Believe that and you have forgiveness. And then in the future try to thank God for His great love for you by leading a life of love toward God and your neighbor. Remember that on Judgment Day the Lord will say unto you: "Whatsoever ye have done unto one of the least of these, My Brethren, ye have done it unto me." Amen.

REAL DIRT FARMER WOULD GO TO HOUSE

Marius Waldal Calls at The Banner Office and Tells of His Life.

The Banner this week made the acquaintance of Marius Waldal, young man of Red Lake county, who is making the race for the House of Representatives this fall, seeking the place made vacant by the death of A. J. Hemstad, which occurred this spring.

On another page of The Banner appears the political announcement of Mr. Waldal who, gathering from his utterances, favors all progressive legislation of benefit to the farmer, perhaps because he is one himself and is inclined to be a little selfish.

Together with another brother, Mr. Waldal conducts a farm near Plummer and on the evening he called he bore the marks of his day's labor in the potato field on the farm. He says he will harvest in the neighborhood of 1,500 bushels of good grade spuds, but whether or not he would find a market after the completion of his harvest, he was unable to say.

Mr. Waldal is a native of Minnesota, being born on a farm near Erskine. In 1895 he moved with his parents to the farm which he now conducts. He studied one year at the Thief River Falls high school, after which he attended the Minnesota Agricultural College. He is the president of the Cloverdale Farmers Club [illegible] Co-Operative [illegible] Community Shipping [illegible] is now the [illegible] Co-Operative Creamery [illegible] and takes an active part in the affairs of the community, as indicated above.

Although still a young man, Mr. Waldal has for some time been a keen student of all legislative enactment concerning the welfare of the agriculturist and probably because he harbors certain desires along this line, he now seeks to break into the political arena.

Nature provides for everything. As eggs increase in price, the theatrical companies increase in number.

Latin is a dead language. And how about "Fill 'em up again!" and "Come on boys, let's have another!"

[illegible]

[illegible] in the autumn [illegible]
[illegible] the whole world turned its
heart to prayer,
And every highway is an altar pure
With an eternal fire,
The wild and whirring wing
Of the swift passion of exuberant
spring,
Now folds in soft white ecstacies of
peace,
And all its longings cease.
Where once the leaping wind
Planted its vague unrest upon the
mind,
Stinging life with its scars,
Now be but know the quiet of the
stars.
The dreams no longer roam,
And the sure soul comes from adventuring home,
Finding beside life's never-ding fire
Its full serene desire.

A pugilist is no astronomer, yet he often sees stars.

Banner Editor Returns, Sees a Lot of Interesting and Instructive Ventures

S. V. Arneson, editor of The Banner, returned Monday evening from a 10-day tour of Minnesota, North and South Dakota, which time he enjoyed immensely. Although he was gone for 10 days, we have noticed upon our return that The Banner was issued on Thursday evening just the same as though we were at the helm all the time, largely due to the co-operation and generous spirit of The Tribune editor of Thief River Falls and his capable force of printer men. No more able set of workers in their class was ever assembled anywhere and we herewith express our thanks and bow before their innate capabilities.

While in South Dakota we had the opportunity of witnessing a complete revolution of farming and agriculture as it effects that state. Although South Dakota is essentially a stock-raising and agricultural state, it is surprising to note the steady and sure shift that is being made there to diversified farming ideas. While farming is conducted on a vastly larger scale than is practiced in eastern Pennington county (2,000 to 5,000 acre farms being quite common), the promoters are coming to realize the folly of their venture and are coming over to the raising of feed and forages, hog-raising, cow-milking and the many other industries closely identified with diversified farming.

One man, who conducts a ranch of 1,200 acres, told The Banner man that never again under similar conditions prevailing this season, will he be a straight grain-raising farmer. Although his crop was good, he said he was destined to lose money because of the low prices paid for small grain this year. In order to gain an idea of the size and quality of his crop, it might be said that he had 73 stacks of wheat and 43 stacks of flax, all of which had been harvested with a header and all of very good quality. The farm had been conducted on the most economical scale possible, still he stood to lose considerable. Employing practically no outside help in planting and harvesting, possessing his own threshing machine, grain elevator, etc., present prices will not warrant him planting the same acreage next year, and he will hook up with the dairy cow, the hog, chickens and the other allied industries.

Several other instances in South Dakota of a similar character, of which the writer has definite knowledge, feel the same way about farming along former standards. Present low prices prevent it, they say.

The same thing may be said of many North Dakota localities. Sections of the Flickertail state which formerly had but a speaking acquaintance with the dairy industry, are now going into it whole-heartedly and without reserve. Some of these sections scarcely knew what a creamery meant to them, yet today they don't hesitate to spend thousands of dollars in their establishment. Practically all the native-born farmers have dairy cattle, the only exceptions being a scattering of German-Russian farmers, who are slow in coming over to the new policy. The latter may be said to be dyed-in-the-wool grain raisers and do not take kindly to the proposition of milking cows and feeding hogs, their idea being that in so doing one automatically ceases to become a farmer any longer.

Roads throughout the central and southern part of North Dakota may be said to be fair—that's all—much better roads being encountered after crossing into South Dakota, where the Sunshine trail and the Yellowstone trail compare favorably with some of Minnesota's better roads, although they are somewhat rougher in spots, due largely to an absence of gravel and the customary windy weather out there blowing loose sand off the highway, rendering it rough in many instances. Good time, however, was made on the trip between Ellendale, N. D., and Aberdeen, S. D., and on west along the Yellowstone trail.

Parts of North Dakota had fairly good roads, but in other sections they were in bad repair. From Jamestown to Fargo, however, the National Park highway adds considerable to the comfort of the weary automobile traveler.

It wouldn't require the judgment of an expert to know when Minnesota is reached, judging from the quality of the roads in the three states. The King of Trails, far from being the best in this state, shows improvement over the best in North Dakota. In dry weather the "K. T." isn't bad at all, but heavy rains raises havoc with it due to the fact that only portions of it is covered with a coat of gravel.

Staples Railway Guard Killed by Unknown Gang

Paul Montgomery, railway guard in the employ of the Northern Pacific railway at Staples, was shot to death Tuesday night by an unknown gang of men who fired at him without a warning. A freight train was pulling into the yards when suddenly a man leaped from the pilot (cow catcher) of the engine and fired five shots point blank at the guard, who fell mortally wounded. Montgomery lived two hours after the shooting and was able to give the police authorities a fairly accurate description of the murderers.

A posse of 75 men, with the chief of police at the head, has been organized and is on the trail of the gang, who are expected to be surrounded and captured. The posse is scouring the woods tributary to Staples, being of the belief that the men are seeking cover there.

Montgomery had come to Staples but two weeks ago and immediately entered the employ of the Northern Pacific there.

COMMUNITY CLUB TO HOLD ANOTHER MEETING SOON

Stuart McLeod, president of the Community Club, has assured The [illegible] of [illegible] M. [illegible] son, to arrange a program for the next meeting. Watch for the date in the next issue of The Banner.

STOCK SALE HELD AT THIEF RIVER FALLS

Grade and Pure-Bred Sale of Holsteins Goes Over in Big Way.

The sale of grade and pure-bred cattle held at Thief River Falls Wednesday under the auspices of the Pennington County Holstein Breeders' Association went over in a big way, according to Goodridge residents who attended the disposal and consignment sale.

More than 60 animals were on the block and disposed of to various dairymen and farmers of Pennington county. Although the cattle were of a very high grade, it cannot be said that they brought fancy prices. Two pure-bred bulls of the Holstein breed are said to have brought $75 and $85, respectively. One Holstein cow of [illegible] stockmen of the county who realize the advantage of securing the correct foundation stock for their dairy herds. The Holstein is considered as especially adaptable to this region and for that reason this particular breed at the present time is holding high favor.

Up to the time of going to press, The Banner is unable to secure a list of the buyers and the cattle each purchased, but it is hoped that this newspaper will be able to furnish this information to its readers by next week, at which time it will be published in detail.

This is the first annual sale of the Pennington County Breeders' Association and it is planned to make the event a seasonal one for the county now that dairymen recognize the relative value of grade and pure-bred cattle over that of the "scrub" variety.

Two Spooner Children [illegible]

Two little children of Mr. and Mrs. [illegible] Lien of Spooner were burned to death last Saturday, when the house was destroyed according to information received here. Mrs. Lien was badly burned about the face and arms while trying to rescue the little ones from the flames and she is now in the hospital at Warroad. Details of the sad affair are very meager. The mother had stepped over to a neighbor's to get some ingredients for a cake and when she returned the whole inside of the house was ablaze. Just how it started is not known, but the supposition is that an explosion of the stove took place, judging by the quick spreading of the flames.—Roseau Times.

University livestock men agree that plenty of fresh water and shade are important factors in the successful production of pork. Hogs will drink often if water is available. Water helps digestion and promotes fat production. A mineral mixture of charcoal, hard wood ashes, air slaked lime or ground limestone and salt in front of the hogs will keep them in better tone.

Eastern Pennington County in Midst of Potato Harvest

Eastern Pennington county is harvesting one of the largest potato crops in its history and, although a small part of the acreage is not producing the high quality of spuds which is usually the case, other fields are coming fully up to expectations.

A rather poor market is afforded, however, and producers are awaiting developments.

The weather the past two weeks has been ideal for potato harvesting and this has been taken advantage of by farmers who have almost completed the work.

Potato prices are still low, but it is said by dealers thought to be well informed on the potato market that prices will shortly take on a firmer tone. This is particularly true with potatoes of good quality, the graded variety and sorted spuds.

NEWS REVIEW OF CURRENT EVENTS

Allies Ready to Permit Turkey to Regain Her Former Territory in Europe.

KING CONSTANTINE OUSTED

Greek Army Compels Him to Abdicate and Declares for War to Keep Thrace—Federal Fuel Distributor Spens Gets Busy—Death of Senator Watson.

By EDWARD W. PICKARD

> OWING to the military and diplomatic skill of Mustapha Kemal Pasha and his colleagues in the Turkish Nationalist government, and to the strong determination of the people of the allied nations not to embark in another war, it is practically certain that Turkey will regain the territory in Europe which she lost in the World war and probably a considerable part of Mesopotamia, now under British mandate. Do you and your friends think the Turks are entitled to this restoration and are really no worse than most of their neighbors? Or do you believe it is worth another great war to keep them out of Europe?

CONCILIATION and concession were the order of the day in the Near East. The allies, in formally inviting the Turks to a peace conference, assured them that they "will take advantage of this opportunity to declare that they look with favor upon the desire of Turkey to recover Thrace up to the Maritza river, and Adrianople." It was even intimated that Russia would be admitted to the conference, and M. Franklin-Bouillon, who last year negotiated an agreement between the Nationalists and the French, was sent to Smyrna with a mandate to deal with Kemal. The stipulation of the allies was that the Dardanelles, the Sea of Marmora and the Bosporus must remain free and open to all nations. The British also insisted that the neutral zone, which embraces the straits and Constantinople, must not be invaded by the Nationalists during the peace negotiations.

Early in the week Kemal gave a long interview to a correspondent of the Chicago Tribune, in which he said that he had no desire to provoke hostilities with Great Britain, but that he insisted on complete independence of the Turkish empire and complete freedom of the straits to all nations. He said Turkey had no wish to fortify the Dardanelles, but that she must control the Sea of Marmora and the Bosporus to secure the safety of her capital—Constantinople. On Wednesday the Kemalists announced they would respect the neutrality of the straits pending an armistice conference with the British generals. They then formulated their reply to the allied peace proposals. Not given to the public at this writing, this answer is understood to provide, among other things, that the Nationalists shall occupy all strategic positions prior to the opening of the conference; that all British forces en route be recalled and the British shall not fortify the neutral zone; that the Nationalists shall occupy Thrace before the conference, at which Russia, Ukrainia and all countries bordering on the Black sea shall be represented; that if these conditions are accepted, the Nationalists agree to an armistice conference at Mudania, which is to be followed in three days by the opening of the peace conference in Smyrna.

Meanwhile Kemal, who has freely expressed his distrust of the British and especially of Lloyd George, sent various units into the Asiatic part of the neutral zone and occupied strategic positions from which he virtually controlled the Dardanelles. The British commanders made several demands for the withdrawal of the Turks, but Kemal responded that he knew of no neutral zone. To the French he explained that he had occupied these places because the British had disregarded the neutrality of the straits by permitting the Greeks to have free passage through them.

REVOLT by the Greek army against the government, which was expected, came on schedule time. The troops that had returned from the scene of disaster in Anatolia and were concentrated in the archipelago islands rebelled and, using battleships and destroyers as transports, sailed to the mainland and moved on Athens under the leadership of regular officers of the army and navy. Military airplanes dropped in Athens proclamations demanding the abdication of King Constantine, the formation of a ministry friendly to the allies and the sending of reinforcements to Thrace. On Wednesday the cabinet resigned and Constantine formally abdicated the throne in favor of Crown Prince George, who was sworn in. For the present a revolutionary committee is in charge of the government. The object of the coup d'etat as announced in Athens was to oust Constantine in order to unite the country in firm opposition to the Paris conference's peace terms to Mustapha Kemal Pasha and to wage an immediate and aggressive war to retain Thrace. Army and navy leaders fully support the Thracian war, and they say they can take Constantinople.

THOUGH it had been reported that Bulgaria was ready to seize the part of Thrace which she claims, Dimitri Stancioff, Bulgarian minister to England, denies this. "Bulgaria is firmly resolved to avoid participation in any military action," said he, "not only because the country is practically disarmed, but also because the new Bulgaria is an agricultural country and does not wish to risk a repetition of her previous misfortunes."

SOVIET Russia formally declared herself the champion of Islam last week. She sent a note to the entente, the Balkan nations and Egypt demanding the restoration of Turkey in Europe and warning the world that she would not recognize "any decision concerning the Turkish straits taken without her participation or arrived at against her interests."

ACCORDING to an agreement about completed between the United States and Japan, the international technical control of the Chinese Eastern railway by the Stevens commission will soon be terminated. It is provided that the commission shall cease to function upon completion of the evacuation of Japanese troops from Siberia. The Chinese government is to be made responsible for the continued operation and protection of the railway, and if it fails in this, there will be a resumption of international control. The other allied powers are in accord with this plan. That is the news that comes from Washington. From Peking come reports that put another face on the matter. The president of China has suspended the Russian Boxer indemnity of about $5,000,000 annually and the soviet government, in its reply of protest, intimates that it will seize the Chinese Eastern railway. John F. Stevens, the head of the commission, according to a correspondent, is convinced the line is lost to China.

GREAT BRITAIN has offered to pay $50,000,000 of interest due the United States, and the World war debt funding commission has been considering the proposition. At the rate of 5 per cent, the interest due in the next two installments, October 15 and November 15, amounts to $95,000,000, but the funding law authorizes a rate of 4½ per cent, so it is suggested that the $50,000,000 be paid October 15 and adjustments be worked out with Sir Robert Horne, who is coming over soon. Congressman Burton of Ohio, who is a member of the funding commission, is in London, and at a luncheon attended by prominent financiers he said plainly that the United States expected Great Britain to pay in full. He pointed out that the loans made by America were not given out of an overflowing treasury, but were raised, sometimes with difficulty, by loans from the American people, who had no reason to expect that they would not be repaid. He also drew attention to the American suspicion that if the loans were forgiven the money thus released might be used in new wars.

CONRAD E. SPENS, railway official of Chicago, who was appointed federal fuel distributor under the act passed by congress, started in by warning the various states that his powers do not extend to coal mined and sold within a given state and their officials must look after that end of the proposition. He then asked eight leading railway executives to serve as an advisory committee in the fuel transportation emergency and named 13 prominent business men as members of an advisory committee for industry, to keep in touch with the distribution of fuel supplies for industries in their respective districts. Large industrial consumers are asked to confine their purchases of coal under present conditions as closely to current needs as safety permits; to suspend accumulation of advance stocks of coal until the present emergency pressure on production is relieved; to unload coal cars immediately and return them to service and to promptly furnish material required for new railroad equipment or repairs.

THE grand jury in Marion, Ill., which investigated the Herrin coal mine massacre, indicted 76 men for participation in the outrage, 44 of them for murder. All of the latter group have been put under arrest, and of the total 20 are still at large. Eight of those accused of murder are held without bail. The others were released on bonds, which were furnished by the leading citizens of Marion. The defense of the men, as already outlined by their lawyers, will be, in brief, that this is a "private persecution by a political boss and a labor-hating organization," the allusion being to Attorney General Brundage and the Illinois Chamber of Commerce.

FEDERAL JUDGE WILKERSON in Chicago formally entered the temporary injunction obtained by Attorney General Daugherty against the railway shopmen, having sustained it on all points. The proceedings were perfunctory and the attorneys for the union did not concern themselves with the form of the order. They said they hoped to be permitted to take the case direct to the Supreme court of the United States on appeal.

SOME twenty thousand veterans of the Civil war assembled in Des Moines, Ia., for the fifty-sixth national encampment of the Grand Army of the Republic. On Wednesday three-fourths of these grizzled warriors, escorted by two regiments of the regular army, marched in the yearly parade—an event that grows more and more pathetic as the years pass. They were reviewed by their commander-in-chief, Lewis S. Pilcher, and by Hanford MacNider, national commander of the American Legion. One tragedy marked the occasion. M. J. Mackenhausen of White Bear Lake, Minn., dropped dead after two hours of marching. Judge J. W. Willett of Tama, Ia., was elected commander-in-chief for the coming year.

THOMAS E. WATSON, United States senator from Georgia, one of the most fiery political figures of the time, died suddenly of asthma Tuesday in Washington. For 40 years he was active in state and national politics, and he was the Populist nominee for vice president in 1896 and for President in 1904. The Populists elected him to the house of representatives in 1891, and in 1920 he was elected senator. He was opposed to Woodrow Wilson and his policies and was especially against the League of Nations.

ACCORDING to the Freeman's Journal of Dublin, Eamon de Valera has abdicated as leader of the Irish republicans and Liam Lynch has succeeded him. The newspaper says this destroys hope of a rational peace as Lynch is driving his followers to fight to the bitter end. The republicans are keeping up their guerrilla warfare, but the Free Staters are slowly cleaning them up, especially now in County Kerry.

News of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Duluth—More than 6,000 new names will be included in the new city directory of Duluth to be published in November.

Chisholm—The next annual conference of northern Minnesota Methodists will be conducted at the Hennepin Avenue Methodist church of Minneapolis.

Minneapolis—Minnesota's right to levy a tax on automobiles even though they are in storage and out of use has the judicial "O. K." of the Hennepin county district court.

Virginia—Immediate steps to issue $50,000 worth of bonds of the $200,000 authorized for light, water and heat extensions will be taken by the city council.

Hutchinson — Dedication exercises of the Hutchinson Community Hospital took place Tuesday, Sept. 26, when the entire community declared a holiday.

Windom—A district convention of the firemen of southwestern Minnesota will be conducted at Windom on Oct. 11.

Chatfield—Of 21 entries to the First State bank's third annual five acre corn contest, five received prizes aggregating $70.

Minneapolis—Mrs. I. G. Scott, wife of Alderman Scott and Miss Josephine Beaverson, were badly cut and bruised in an auto accident here.

Wheaton—Miss Laura Fuhrman, who filed as a candidate on the farmer-labor ticket for county superintendent of schools, has withdrawn.

Duluth—A request has been made that $76,300 be levied in the 1922-23 school tax levy for the Duluth teachers retirement fund.

Duluth—Duluth's $500,000 school bond issue, bearing 4¾ per cent interest, was sold to the Harris Trust and Savings bank of Chicago.

Minneapolis—Coal dealers throughout Minnesota are to receive within the next 10 days blanks which will be used for the requisitioning of supplies of coal from the docks at Duluth and Superior.

Minneapolis—Increases in appropriations for three institutions were asked of the Hennepin county tax commission. The Minneapolis Home School for Girls asks an appropriation of $37,000 as compared with $14,270 in 1922.

Duluth—Damages of $10,000 for alleged wrongful death of his wife, Ida M. Johnson, is sought by Charles Johnson in an action against Edward D. Gumphrey now on trial before a jury in district court here.

Iron Mountain, Mich.—A recount of the votes cast in Schoolcraft county, for treasurer showed that Mrs. Agnes Husband was nominated by a majority of two votes over Edward Multhaupt and by three votes over Miss Laura Williams.

Mankato—Mrs. J. R. Brandrup of Mankato has been appointed chairman of the legislative department of the Minnesota Federation of Women's clubs by Mrs. J. E. Rounds, president.

Winona—Dave Conradt, 45 years old, of Mabel, is being held in the Fillmore county jail at Preston tonight in connection with the poisoning of a herd of cattle owned by Arch Gordon.

Moorhead—If low potato prices continue it seems probable, a large part of Clay county crop will be left in the ground, O. M. Olson, county agent, said. A carload of the best grade—U. S. No. 1—sacked and graded, brought 37½ cents.

Rush City—Implement dealers north of the Twin Cities to the Canadian line and east of St. Cloud were represented at the district convention of the dealers which was held here as the first of a series of annual meetings.

Red Lake Falls—The farmers' produce exchange has opened warehouse here and will handle potatoes raised in this community. It has the necessary machinery for grading at a small cost. It will buy potatoes at market, will find an outside buyer.

Albert Lea—Fortunate is the baby born in Minnesota! According to tables, Minnesota ranks third in states of the longest lived people. The expectation of life at birth is for white males 58.54 years and for white females 60.58 years.

Hibbing—Total mine shipments from the state-owned properties have shown a decrease with the end of the shipping season in sight. Total output amounted to 130,012 tons, 2,710 cars.

Duluth—Guilford G. Hartley, Duluth business man, who died last January left an estate valued at $2,987,734.86, according to an inventory of the estate filed in probate court by Edward J. Maney, and F. L. Salter, appraisers.

Northfield, Minn.—Carleton college shows a present enrollment of 940 students, the largest in the history of the college. Pending completion of the men's new dormitory 150 students are quartered in lodges and private homes.

Duluth—That an increase in the 1922 tax levy for 1923 in the county is inevitable is the opinion today of St. Louis county officials. The increase will be due to an increase in interest on outstanding bonds, principally road bonds.

Duluth—Contracts for two graveling jobs and installation of drain tiles on six state and federal projects entailing an expenditure of $68,281, were awarded by the St. Louis board of county commissioners.

Duluth—Duluth is the only city in the United States where the paving program for the year will be completed.

Litchfield—This city and Meeker county will attend the National Dairy show at the State Fair grounds in a body Oct. 12. All business will close.

St. Cloud—Lawrence C. Hodgson, former mayor of St. Paul, and J. F. Reed, president of the Minnesota Farm bureau federation, made addresses during the meeting here of the German Catholic societies.

Luverne—Fire originating in a small stack of straw on the county fair grounds here destroyed the horse and poultry buildings, entailing a loss of about $2,500. The flames were kept from spreading by a bucket brigade.

Crookston—At a well attended meeting of the Red River Valley Livestock Association, it was decided to complete the payments of the livestock pavilion buildings at Crookston owned by the association members. The eleven northwestern Minnesota counties have been divided into 100 districts, each district being asked to sell $250 of shares in the building. All the counties are going ahead enthusiastically to complete the payments and save the winter shows for the Valley.

St. Louis Park—Injunction proceedings to prevent the Minneapolis public welfare board from erecting a tubercular hospital on the site of the city's abandoned quarantine station near St. Louis park, has been started by the St. Louis park village council.

Northfield, Minn.—Dr. George O. Berg, registrar of St. Olaf college, announces that registration has now reached a total of 885 students, which includes 174 seniors, 157 juniors, 223 sophomores, 287 freshmen and 44 music students.

Bemidji, Minn.—Bishop G. G. Bennett of Duluth, has been chosen by the Ralph D. Gracie post of this city to deliver the Armistice day oration on Nov. 11. The celebration promises to surpass all others attempted here.

St. Paul—An identification bureau, nation wide in extent, is being organized throughout the country. Undertakers are at the head of the movement and police departments, officials of hospitals, asylums and other institutions will assist.

Duluth—Because of the condition of the state highway department fund, the department will allow refundments on roads only up to the cost of one course concrete. This will prevent the construction bithulitic asphalt or macadam covering on the concrete base by the county.

Crookston—Increased interest in education in rural communities is evidenced by the large preliminary enrollment at the Northwest School of Agriculture here. The fall term will open Oct. 9 with the largest enrollment in the school's history.

St. Paul—Minnesota members of the National Association of Twenty-fifth Engineers celebrated the arrival of their regimental colors at a banquet at the St. Paul Athletic club. The flags, presented to the state at that time, were first claimed by New York state but later awarded Minnesota upon the formation of the national association.

St. Paul—The dates of the annual conference of agricultural extension workers of the University of Minnesota have been advanced from Nov. 20 and 21 to Nov. 13 and 14. The meeting will be held at University Farm. The change in dates was made to avoid a conflict with the annual meeting of the Association of Land Grant Colleges which is to be held at Washington, D. C., Nov. 21 to 23.

Rush City—One of the biggest delegations which ever represented Chisago county will attend the National Dairy show next month, it was decided at a meeting here, at which every township in the county was represented. The meeting decided to send a representation of 2,000 to the show and 500 automobiles were pledged to carry the crowd and the three bands from Rush City, North Branch and Chisago Lake that will accompany it.

St. Paul—Propagating muskrats for the purpose of starting a fur farm in Minnesota is the latest proposition put up to Oscar H. Smith, Minnesota Commissioner of Immigration, in a letter received from Mack Lee, Long Pine, Nebraska. "We receive all sorts of inquiries in our department," says Commissioner Smith, "and we aim to locate an intending purchaser on the sort of land he desires. We will do all we can to assist the Nebraska fur farmer in securing a suitable place for his rat-raising enterprise."

Reassuring.

Six-year-old Dora returned unusually early from school the other day. She rang the door bell. There was no answer. She rang again, a little longer. Still there was no response. A third time she pressed the button, long and hard. Nobody came to the door, and she pressed her nose against the window pane and in a shrill voice, which caught the ears of every neighbor, called: "It's all right, mamma. I'm not the instalment man."—London Weekly Telegraph.

Why She Is a "Pippin."

How and why the word "pippin" ever broke into the slang language, is not known definitely, but the word is an Anglicised form of the medieval French word pepin, which means seed or seedling. When an apple lover of the Dark Ages produced a new variety he called it such-and-such a pepin. It is said that there is no apple stock that is more than 400 years old, though the statement would be hard to prove. A Yorkshire pippin must be very old, and a pearmain may have descended from the days of the Romans

One Good Merchant in Every Town
can establish a profitable and permanent shoe business on limited capital through the
W. L. DOUGLAS NEW SALES METHOD
Retailers Reserve System
Men's, Women's & Boys' Shoes
This new plan of distribution has been arranged for your benefit, and through it
Profits Are Guaranteed
W. L. Douglas shoes are the world's best-known trade-marked shoes. High quality, honest workmanship coupled with low prices and latest styles make easy sales and quick turn-over of your small investment. Prepaid express and freight, 10 cents per pair allowance west of the Mississippi, and bonded 24 hour shipping service help increase profits and make large investments unnecessary. Write now for catalog and full information. If there is no Douglas dealer in your town you may be awarded
EXCLUSIVE RIGHTS
to handle this great nationally advertised product. Any dealer who sells shoes can increase his profits by adding W. L. Douglas shoes to his line.
REMEMBER that $6,000,000 has been spent in advertising W. L. Douglas shoes. No other shoes can equal W. L. Douglas in quick sales, because people call for them. The results of this advertising and 46 years of honest shoemaking means sales and profits for you.
Write today. The first application will have first consideration.
W. L. DOUGLAS SHOE CO., 10 Spark Street, Brockton, Mass.
Ask your Dealer for W. L. Douglas shoes.

Appeal to Intellect.

"Why did you introduce vaudeville in your campaigning tour?"

"My constituents," replied Senator Sorghum, "know more about the economic situation than I do. They are intelligent people, and I approach them as such. The brain needs rest. I am going to earn their gratitude by giving them a chance to take their minds off politics."

Timely Comments on Agricultural Topics for Our Readers

WHEAT PRICES ERATIC

Word of British Ultimatum To Turks Unsettles Futures.

U. S. Bureau of Markets, Washington, D. C., for week ended Sept. 29, 1922.

GRAIN—Grain prices unsettled during the week and closed lower. Foreign war news was the dominating market factor. Chicago December wheat down 4 cents, Chicago December corn down 1 cent: Wheat prices erratic on the 29th following development of political conditions abroad. Export demand only fair. Cash market strong. Corn higher early but prices declined later on liquidation and weakness in wheat. Closing prices in Cihcago cash market: No. 2 red winter wheat $1.11; No. 2 hard winter wheat $1.09; No. 2 mixed corn 64c; No. 2 yellow corn 64c; No. 3 white oats 40c. Average farm prices No. 2 mixed corn in central Iowa about 52c. Closing future prices: Chicago December wheat $1.04; Chicago December corn 58½c; Minneapolis December wheat $1.04⅜; Kansas City December wheat 97⅜c; Winnipeg December wheat 94⅝c.

DAIRY PRODUCTS—Butter markets firm during the week. Receipts lighter following seasonal decrease in production. Storage butter moving in fairly large quantities in a wholesale way. Prices of fresh butter are now the highest they have been this year. Closing prices, 92 score butter: New York 44c; Chicago 42c; cheese markets firm during the week. Demand has continued good in spite of advances early in the week averaging to $2c. Held cheese beginning to move. Prices at Wisconsin primary cheese markets Sept. 28: Twins 23c; Daisies 23c; Double Daisies 22¾c; Longhorns 23½c; Square prints 24½c.

LIVESTOCK AND MEATS—Chicago hog prices for the week advanced 15c to 30c per 100 lbs. The price trend of cattle was generally downward. Beef cattle ranged from 15c lower to 25c up; butcher cows and heifers generally 25c lower and veal calves 50c net lower. Feeder steers were steady to 10c higher. Sheep and lamb values showed mixed movements; fat lambs were 15 to 50c lower; fat sheep 10 to 25c lower while yearlings were steady to 25c higher and feeding lambs 30 to 75c higher for the week. On Sept. 29, the Chicago hog market opened steady to 10c higher, closed unevenly weak and about 10c lower than early or about steady with Thursday's average. Cattle market generally steady on all classes; best native lambs steady to a shade lower in between grades dull and fully 25c lower; sheep about steady. Sept. 29th Chicago prices: Hogs, top $10.65, bulk of sales $8 to $10.60; medium and good beef steers $7.50-$11.10; butcher cows and heifers $3.75 to $9.25; feeder steers $5.75-$8.25; veal calves $10-$12.75; fat lambs $13-$14.60; feeding lambs $13.25-$14.65; yearlings $9.25-$12.50; fat ewes $3.50-7. Stocker and feeder shipments from 12 important markets during the week ending Sept. 22nd were: Cattle and calves 143,265; hogs 8,354; sheep 107,275. There was little change in eastern wholesale fresh meat prices compared with a week ago. Beef and veal practically steady, lamb weak to $1 lower; mutton $1 lower at some markets and $1 higher at others while fresh pork loins advanced generally about $1 higher per 100 lbs. On Sept. 29th beef was firm to 50c higher; veal steady, lamb weak to $1 lower; mutton steady at some markets and $1 higher at others and pork loins firm at some markets and $1 higher elsewhere. Sept. 29th prices good grade meats: Beef $17-$18; veal $18-$20; lamb $24-$28; mutton $12-$18; light pork loins $28-$31; heavy loins $16-$23.

Minneapolis Closing Cash Prices.

Spring wheat—No. 1 dark northern, 08@1.15; No. 1 northern, 1.06@1.13; o. 1 dark hard, 1.09@1.13; No. 1 hard 02@1.07. No. 1 am. dur. 90c@94c; o. 1 durum, 83c@87c. Corn No. 2 ellow, 58c@59c. Oats No. 2 white, 34@36c. Barley, choice to fancy, 57c@9c. Rye No. 2, 67c. Flaxseed No. 1 23@2.24.

South St. Paul Live Stock.

So. St. Paul—Steers, $2.75@7.25; veal calves, $3.00@11.25; cows and heifers, $3.50@6.00; hogs, $7.50@9.50; sheep and lambs, $6.00@13.50.

EGGS—Country receipts, rots out, per case, $9.30; No. 1-candled, good extras, free from rots, small dirties and checks out, per dozen, 34c; small dirty and held stock, rots and leakers out, dozen 19c; checks, rots and leakers out, 16c; quotations on eggs include cases.

Ate Poisoned Mushrooms.

Detroit, Mich.—Father, mother and three children, are in the Municipal hospital near death from the effects of eating poisonous mushrooms, which were served by the mother, when the the supply of food and funds gave out and the family starving.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

STRETCHY TYPE OF HOG BEST FOR MARKETING PURPOSES

No Longer Any Demand for the Short, Compact Type as Vegetable Oils Replace Animal Fat.

The fat or lard type of hog with great compactness of form and shortness of limb has recently passed out of popular favor among American hog raisers, feeders, and packers who are looking for the more "stretchy" kind of hog approaching the bacon type, according to E. J. Thompson, professor of animal husbandry at the North Dakota Agricultural College.

"One reason for this change is that vegetable oils are coming to take the place of animal fat to a great extent and the excessively fat hog is not in such demand as it has been in the past. People do not like too much fat in their meat and the choice bacon and hams so much in demand at present cannot be obtained from the old lard type hog," said Mr. Thompson.

Another reason for the change is the fact that in the competition of pork production the hog that can "rustle" and get a portion of his feed direct from the field is most profitable for his owner. Farmers have found that the very compact hog is too clumsy to compete with the more lengthy hog in foraging. The "stretchy" hog can get around better and has more room for digestive and vital organs.

Fecundity is also lacking in the very compact type. This type lacks room to carry a good litter and is lacking in quantity and quality of milk to nurse the young. They have not the ability to move about without danger of crushing the young pigs.

In England and Canada the bacon hog has always been practically the only kind raised. The compact type was developed in America to suit the conditions of the corn belt and is known in other countries as the American type.

Modern methods of agriculture demand the elimination of much costly labor, so the hog of today and tomorrow must do much foraging in corn, alfalfa and sweet clover pastures, and must be built with substantial bone, long legs, great length of body, good depth of body, and strongly muscled.

"Farmers in most principal hog raising localities have made the change in type of hogs but it is a noticeable fact that most North Dakota farmers still select hogs for the old compact lard type because they are unaware of the change in type demanded by the packers and the advantages to themselves of raising the new type," said Mr. Thompson.

MORE MILK AND MONEY FROM COW-TESTING ASSOCIATIONS

That cows on which production records are kept in cow-testing associations give more milk and turn in a bigger profit than untested cows, was recently shown by the United States department of agriculture in publishing the figures of 120 sets of records for 96 cow-testing associations.

The average annual milk production of 21,234 cow-testing association cows was 6,077 pounds, and the average butterfat production 248 pounds. These figures are about 50 per cent above the estimated averages of all the dairy cows in the United States.

Cows having high production averaged high in income above feed cost regardless of breed, age, weight, date of freshening, and geographical location.

The cows having an average milk production of 3,250 pounds gave an average income of $42.25 over cost of feed, while the cows having an average milk production of 13,250 pounds turned in an average income of $218.19 over cost of feed. The average production per cow in the latter group was about four times as great, but the average income over cost of feed was nearly seven times as great as in the other group.

"Cow-testing association records take much of the guesswork out of dairying," says M. H. Keeney, dairy specialist at the state college of agriculture. "Conformation indicates performance; but the Babcock tests, the milk scales and the feed scales prove it. Knowing the true feed and production records, the good dairyman can practice selective breeding, eliminate all low producers that will not respond to better feed and care, and feed the remainder according to their known production.

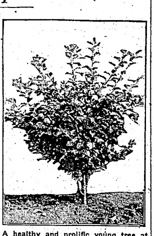
"The elimination of low producers is important, but it is not the only work of the cow-testing association. The well-managed cow-testing association saves many cows because it furnishes their actual records of production. It discourages the use of the scoop-shovel method of feeding grain. Through the weighing and testing of milk it lets the farmer know which are the high testers and persistent milkers. Careful weighing and testing of the milk has caused many an intelligent dairyman to say: 'The cow I thought was the poorest turned out to be one of the best in the herd'."

North Dakota Apple Trees Thrive

"One Anoka apple tree which was two years old this spring produced 26 good apples and another the same age produced 23," said A. F. Yeager, horticulturist at the A. C., in discussing some promising varieties of apples for North Dakota.

The Anoka, an apple of South Dakota origin, has given better results than any other of the large varieties of apples. It is unusual, Mr. Yeager says, for an apple tree to bear apples at two years of age.

Experiments now in progress at the college experiment station are centered on developing hardy varieties of fruits suited to North Dakota. Selections from hardy varieties, crossbreeding, and similar work have already yielded encouraging results, according to Mr. Yeager. Plums, raspberries, apples, and other fruits are being used in the work. Horticulturists predict that varieties splendidly suited to North Dakota conditions will be developed in this state.



A healthy and prolific young tree at the A. C.

AGRIGRAPHS

Uncle Ab says: I never met a man who didn't improve on acquaintance. The worst wasn't so bad as I first thought he was; even the best proved better still the more I knew him.

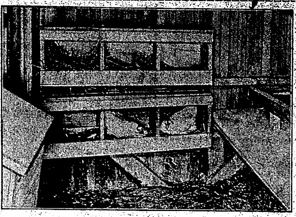
All the news of the community laid down at your door every week for half the price of a good cigar—that's just a part of the service your Home Town Paper gives you.

Some folks take a few minutes to go over the tractor with a wrench and an oil can every day; others don't touch it until something breaks and then hold up their work to wait for new parts.

Uncle Ab says he's getting tired of talk about going to town to get its "advantages" when the talkers should be working to bring those advantages to the country.

To test the milk of every cow,
Some folks think quite a chore,
But boys in club work do it well
And wish they had before.

FEEDING IS MOST IMPORTANT IN GETTING PROFITS FROM POULTRY



rofits Are Greater When Houses Are Kept in Sanitary Condition.

(Prepared by the United States Department of Agriculture.)

Next to good breeding and health, good feeding is most important in getting profitable yields from the poultry flock. A few simple suggestions on feeds and practices, such as those in the following paragraphs from the United States Department of Agriculture, will help build up the egg yield.

Principal Grains Used.

The principal grains fed to poultry are corn, wheat, oats and barley. Corn and wheat are the most popular. Corn is the best and most economical single feed, but is very fattening and should always be used with some other grain. Wheat is the safest to feed alone. The usual practice of successful poultrymen is to feed a part of the daily grain ration ground: This is on the theory that it is easier to digest. Soft feed, while it is a little more economical, must not be overworked. Too much soft feed may cause digestive troubles.

Ways of Feeding.

Methods of feeding differ, but a good rule to try to follow is to have empty crops in the morning and never have them quite full until it is time for the chickens to go to roost. For the first feed, grain scattered in the litter in the morning is best, the sooner after the birds leave the roost the better. This induces them to exercise. Feed about one-third of the scratch mixture in the morning and the other two-thirds in the afternoon. A light morning feed keeps the hens hungry and exercising all day. Have the litter from three to six inches deep and dry. It may be of straw, hay, leaves or any other material of this sort.

Indicates Health of Fowl.

The condition of the droppings is a good indication of the hen's health. They should be of enough firmness to hold their shape, but not solid. The normal color is dark, shading off into grayish white. Droppings that are soft or pasty and of a yellowish or brownish color indicate too much fat or a lack of meat. If the droppings are watery and dark with red splashes of mucus in them, too much meat is being fed. A greenish, water diarrhea usually is evidence of insanitary conditions, either in the surroundings, the feed or the water.

A ration must necessarily be based on local conditions and prices, but any of those quoted below will be found satisfactory.

Ration No. 1.

Mash.	Scratch Mixture.
100 lbs. corn meal.	50 lbs. cracked corn.
40 lbs. meat scrap.	50 lbs. wheat.
6 lbs. wheat bran.	50 lbs. oats.
6 lbs. wheat middlings.	

Ration No. 2.

100 lbs corn meal.	100 lbs. cracked corn.
35 lbs. meat scrap.	50 lbs. oats.

Ration No. 3.

100 lbs. corn or barley meal.	100 lbs. cracked corn.
50 lbs. wheat bran.	50 lbs. oats.
50 lbs. wheat middlings.	50 lbs. wheat or barley.
50 lbs. meat or fish scrap.	

Ration No. 4.

100 lbs. corn meal.	100 lbs. cracked corn.
50 lbs. middlings.	50 lbs. wheat.
50 lbs. bran.	50 lbs. oats.
20 lbs. cottonseed or gluten meal.	50 lbs. barley.
20 lbs. meat scrap.	

Ration No. 5.

50 lbs. corn meal.	100 lbs. cracked corn.
50 lbs. bran.	50 lbs. wheat.
35 lbs. meat scrap.	50 lbs. oats.
50 lbs. middlings.	50 lbs. barley.
50 lbs. ground oats.	

Ration No. 6.

100 lbs. corn meal.	100 lbs. cracked corn.
25 lbs. bran.	50 lbs. wheat.
35 lbs. middlings.	50 lbs. oats.
20 lbs. meat scrap.	

HOW MANY SEEDS IN POUND?

United States Department of Agriculture Makes Count of Number in Various Kinds of Grasses.

Counts to determine the relation between the number of grass seeds to the pound and the number of pounds required per acre to assure a good stand of grass, have been made by the United States Department of Agriculture. In general the fine-seeded grasses require fewer pounds of seed to the acre than do the coarse-seeded varieties.

The work of the department shows that timothy on the average has 1,200,000 seeds in a pound. Kentucky blue grass has 2,400,000 and Redtop, 4,000,000, while Sudan grass has only 50,000. Orchard grass has 500,000; Canada blue grass, 2,700,000; tall meadow grass, 150,000; meadow fescue, 240,000; foxtail millet, 200,000; sheep's fescue, 680,000; red fescue, 500,000 seeds; Italian rye grass, 280,000; perennial rye grass, 280,000; and Bermuda grass, 1,800,000.

Timothy usually is seeded at the rate of 15 pounds to the acre; Kentucky blue glass, 14 to 18 pounds; Redtop, 10 pounds; and Bermuda grass, 5 pounds. Orchard grass is usually sown at the rate of 25 pounds to the acre; Canada blue grass, 15 pounds; and tall meadow oat grass, 40 pounds. Meadow fescue requires 25 pounds to the acre; foxtail millet, 12 to 25 pounds; sheep's fescue, 28 pounds; and red fescue, 30 pounds. Italian rye grass is sown at the rate of 30 to 40 pounds per acre; perennial rye grass, 30 pounds; and Sudan grass, 12 to 2L pounds per acre.

There are some 6,000 distinct species of cultivated and wild grasses in the world but only about 20 of these are of importance in the United States.

Thing to Be Despised.

A dull hoe is a thing to be despised. Ten minutes with a good file will do wonders for it.

DECREASE IN GRAIN CROPS

Reports Indicate Smaller Yields of the Principal Crops in England and Wales.

The production of wheat in England and Wales for 1922 is estimated by the British ministry of agriculture to be 63,040,000 bushels from an area of 1,969,000 acres, according to a recent cablegram from the London representative of the United States Department of Agriculture. This estimate is 6,736,000 bushels less than the estimated production last year.

The area sown to barley was reported as 1,362,000 acres and the yield as 40,720,000 bushels, compared with 42,472,000 bushels last year. The oats area was given as 2,161,000 acres and oats production as 74,320,000 bushels, compared with 80,264,000 bushels last year.

Big Advantage of Alfalfa.

Even under the most favorable conditions, common clover cannot compete with alfalfa as a hay crop. As a rule, the former will not produce much more than one-half the quantity of the latter. Besides, ton for ton, clover is not so high in feeding value as alfalfa.

Early Fattening Best.

A rule obtains in poultry raising, as with all forms of live stock intended for meat, that the younger you can sell a chicken at a fair price the more profitable it will be.

Potato Tops Help.

It is a mistaken idea that the land will be injured by plowing down potato tops. They furnish a limited amount of vegetable matter and are worth plowing down.

Half the Flock.

Every thoughtful farmer who is keeping sheep recognizes that a good ram is really more than half the flock especially where they are used upon grade ewes.

Aid in Egg Production.

Clover is a wonderful aid to egg production for hens.

DAIRY POINTS

FEED DAIRY COWS PROPERLY

Animal Requires Food in Accordance With Amount of Milk She is Able to Produce.

Too many cows are underfed. A cow weighing 1,000 pounds needs each day, for the maintenance of her body, an amount of food equivalent to that supplied in 8 pounds of clover hay and 20 pounds of good corn silage. She must have this food regardless of whether she produces any milk. Food used for milk production must be in addition to that required to keep the cow's body. A 1,000-pound cow producing 20 pounds of 4 per cent milk a day, if properly fed, devotes about half of her feed to maintenance and half to milk production. Obviously when a dairyman has gone to the expense of supplying that half of the food required for maintaining the cow's body, it is poor economy to withhold any of the other half, all of which goes to produce milk. A cow then requires feed in accordance to the amount of milk she is able to produce. The heavy producer needs the most feed.

A Good Dairy Cow Must Have Some Grain.

Farm-grown roughages (silage, hay, etc.) furnish the cheapest food nutrients. However, a good dairy cow cannot eat enough roughage to supply her needs for milk production. She must have some grain. Therefore, to feed with the most economy the following rules must be observed, says the University of Missouri College of Agriculture.

1. Feed all the roughage a cow will eat. She will eat more if fed three times a day instead of twice.
2. Feed grain in proportion to the pounds of milk produced.

To a Jersey or Guernsey cow feed one pound of grain for each three to three and one-half pounds of milk produced.

To a Holstein, Ayrshire, or Shorthorn feed one pound of grain for each four to four and one-half pounds of milk produced.

PREVENT SCOURS IN CALVES

One of the Most Common Causes of Ailment is Dirty Pails and Feeding in Wooden Troughs.

Calves may get scours from several causes, but one of the common sources is dirty pails and the practice followed of feeding in wooden troughs. A good rule is to keep the calf buckets as clean as the milk pails. The farmer who uses a swill pail for feeding calves or who hangs the pail on a post between feedings without washing it will be looking for a cure for calf scours. With warm weather and the fly season at hand extra precaution must be taken in caring for the pails. They should be washed thoroughly after each feed and sterilized either with steam or hot water and then inverted in a clean place until used again.

GIVE CALF SOME ATTENTION

Stunted Heifer Will Never Develop Into Profitable Cow—Provide Shade and Water.

The calf is often very much neglected from the time it is six until it is twelve months of age. A heifer stunted by the lack of suitable food will never develop into as good a cow as one kept growing from birth to maturity. During summer while the young animals are on pasture not much attention is needed, as pasture grass furnishes the best and cheapest feed available. Shade and an abundance of fresh water are two essentials which the careful herdsman always provides.

HOME-MIXED MEAL FOR CALF

Good Results Obtained in Raising Young Animals at New Jersey Experiment Station.

A very good home-mixed calf meal is made up of equal parts by weight of old-process linseed meal, hominy feed, red dog flour or wheat middlings, and high-grade dried blood. In raising calves in the dairy herd at the New Jersey agricultural experiment station, both the home-mixed and commercial calf meals have been used with equally good results.

John Gangeness left for Thief River Falls Tuesday morning, where he will be employed.

Miss Esther Bendickson left for Stevens Friday morning, where she will teach school.

Miss Anna Rosette arrived from St. Hilaire Monday evening and is employed at the Stephenson Cafe.

Salve Tharaldson returned from St. Paul Monday, where he marketed a carload of cattle.

D. Fish and son, Glen, of Thorhult, were business visitors here Wednesday.

J. A. McEnelly returned from St. Paul Tuesday morning, where he marketed some cattle shipped from here Saturday.

J. P. Jensen accompanied Reuben Sandberg of Grygla to Crookston on Monday, where they attended to business matters.

Morgan Christianson, who is employed at the bank at Strathcona, visited with his parents, Mr. and Mrs. H. Christianson, Sunday afternoon.

Miss Evelyn Kirkconnell, who has been visiting with her mother, Mrs. A. McLeod, left for Minneapolis Sunday evening, where she is employed.

Mr. and Mrs. Carl Christianson, accompanied by Misses Adeline Davids Magda Nelson and Pearl Bergeson, autoed to Thief River Falls Sunday afternoon.

Mrs. Hans Svaare and two sons of Pelican Rapids arrived Tuesday morning to visit for an indefinite period with their daughter and sister, Mrs. K. Roysland.

Mr. and Mrs. R. H. McDonald, Mr. and Mrs. V. C. McLeod, Miss Evelyn Kirkconnell, Mr. and Mrs. A. McLeod and son, Stuart, visited at the C. Tomie place near Thief River Falls Sunday.

Arthur Seavey and Sam Seavey of Blooming Prairie, Minn., and Alfred Josephson of Wylie, Minn., and Mrs. G. Larson and son, Winton, arrived Friday to visit at the George Josephson and M. O. Seavey home.

LADIES' AID THURSDAY.

The Ladies' Aid society of the Norwegian Lutheran church will meet at the church Thursday afternoon, Oct. 12. Mrs. Theodore Gilbertson and Mrs. Gunder Erickson will entertain. All are invited.

SIMLEY LIKES US!

Sept. 30, 1922.

Mr. S. V. Arneson,
Goodridge, Minn.

Dear Mr. Arneson:

I want to compliment you on the excellence of The Banner. The community of Goodridge is certainly to be congratulated upon having so live and good a paper. The Banner will compare favorably with any weekly of the local type published in any community, many, many times the size of Goodrigde. It seems to me the businessmen and the people in general should rally to its support, which by the way, also seems to be the case. It is worth a great deal to a community to have this live kind of local press.

With best wishes, I am, very respectfully yours,

I. T. SIMLEY.

IF IF IF

If you want to EARN—LEARN. The man or woman with little knowledge is the one with little pay. They have too many competitors. We specialize in training men and women of executive timber, who have the habit of climbing higher and higher as long as they live. If you want to prepare for a position worth while, write the Union Commercial College, Grand Forks, N. D., for free catalog and full particulars.

Court Ruling Halts Highway Operations

Prompt Appeal Follows Decision of District Court Substituting Its Opinion For Commissioner's.

Right-of-way proceedings involving condemnations in advance of state highway improvements are suspended by order of Charles M. Babcock, highway commissioner, this week pending a supreme court decision on a question of vital importance to Minnesota's good roads program.

The lower court ruling upheld the contention of three property owners objecting to a state route in a new locaton for trunk highway No. 7 near Byron, between Rochester and Kasson. The highway department planned to build on the best engineering lines a cut-off to eliminate two very dangerous crossings, an unnecessary turn and extra distance and also to continue serving the town of Byron, which unanimously endorsed the plan. The ruling adverse to the state threatened so much delay and confusion to the road program that Attorney General C. L. Hilton at once appealed to the supreme court. The case already is attracting wide attention throughout the state.

In an editorial on the importance of giving the highway department reasonable powers, the Minneapolis Journal continued:

"It is to be hoped that the Supreme Court will see its way clear to taking the hobbles off the highway department, and giving it the chance to go ahead speedily with its great work for the benefit of the whole public. If this proves legally impossible, recourse to the Legislature must be had. Condemnation proceedings ought to be made quick and effective, so long as fair prices are paid for land taken for public purposes. The state highway commissioner ought to have at least as much power over state roads [illegible] roads.

Highway officials said that there is a wide difference in the attitudes of owners of property affected by road plans, a few demanding fancy prices but the majority seeing the benefits of a state road and making only reasonable allowances, and some donating right-of-way to speed betterments.

STEEN[illegible]SON SAYS FARMERS ILLS DU[illegible]O LACK OF ORGAIZATION IN [illegible]EECH BEFORE LARGE AUDIENCE

[illegible]igressman Pledges Himself to Work for Relief of Agriculture — Delegation Presents Rural Delivery Changes Desired.

In a vigorous speech at the Goodridge Hall Tuesday afternoon, Congressman Halvor Steenerson laid the blame for the present plight of the farmers to lack of organization and general unfavorable conditions arising out of the World War.

He also reviewed the work of Congress and defended its action upon many imprtant measures which he claims have been misrepresented and misunderstood.

He opened his address here with a general statement of conditions surrounding the railroad properties of the nation as a result of the government operation during the period of the war, leading up to the passage of the famous Esch-Cummins Act, which terminated the contract made in 1917 by President Wilson.

He stated that the government was losing $75,000,000 a month and the Act was passed in order to stop this leakage, the guarantee to the railroads being extended for six months after the termination of the war at a rate determined upon their earnings previous to the confiscation by the government. The earnings were not based, as has often been asserted, upon the watered stocks and bonds of the railroads.

Steenerson asserted high wages had played havoc with the farmers, who, through lack of organization on their own part, had failed to get into the game for fair profits as had other industry and labor, which was better organized.

He also reviewed the work of Congress with reference to the Cappee-Tincher bill, which goes into effect in November and which prevents grain speculation except by those who have the actual grain.

The congressman went into details concerning his own efforts to correct evils of standard grades maintained by the Government, claiming that the old Minnesota grades, under the terms of which wheat may be sold upon its milling value, will soon be re-established.

The hall was well filled with attentive listeners and Mr. Steenerson's address made a deep impression by its earnestness and clear cut statement of important matters in which the farmers are interested.

A delegation of farmers waited on the congressman and urged immediate action upon the proposed change in the Torgerson mail route which will give better service to those who reside in the vicinity of this village.

Faculty Attended Institute Held at Thief River Falls

The local school was closed over Thursday and Friday of last week while the members of the faculty attended the teachers' convention at Thief River Falls. The following attended from here: Misses Madga Nelson, Minnie Lindbloom, Pearl Bergeson, Adeline Davids and Mr. and Mrs. E. J. Erickson.

Every village that has a cop has a "star" performer.

BANNER SECURES NEW LOCAL EDITOR

Joe Christianson in Charge of Newswriting and All Business Affairs.

The Banner begs to introduce Mr. "Joe" Christianson, new associate editor of this family journal.

Mr. Christianson will take charge of business affairs and the newswriting in Goodridge and The Banner feels that it has connected with a real "live wire" in securing his services. He has always demonstrated a keen interest in writing for a newspaper, so when he landed he chose a good one.

Mr. Christianson is a graduate of the local high school and has always appeared at the forefront in all athletic activities of the institution. At the present time he is associated with his brother in business here and will continue in that capacity until such time as the business affairs of The Banner warrant the uninterrupted attention of a man for eight, ten or fourteen hours a day—which we hope is not a far distant time.

If you have any business with The Banner, see "Joe." If you have news of interest, tell him about it, 'cause he'll find out anyhow. If you want to pay your subscription—and we know you do—call on him, as he is authorized to make receipts and even handle the money.

In fact, if there is anything under the sun that requires the combined services of yourself and a full-fledged editor, see "Joe," Goodridge's newest addition to the ranks of the journalistic fraternity.

Dance at Goodridge Hall Attended by Good Number

The dance given at the Goodridge Hall Saturday night was attended by a record-breaking number of dancers. Music was furnished by the local orchestra which has recently been organized. The organization is composed of the following personnel: Miss Gretta Gulrud, piano; P. O. Tvedt, trombone; Martin Moen, cornet; Roy Brown, clarinet, and Joe Christianson, cornet.

Anton Hegge, Old-Time Resident, Passes Sunday

Sunday afternoon occurred the death of Anton Hegge of Germantown old-time resident of this section. Mr. Hegge had been ailing for some time. Deceased is well known in Goodridge, having been employed here a number of years back. The funeral services were held last Tuesday.

CONCERT COMPANY CLOSES ENGAGEMENT

"Most Popular Young Lady" Contest Proves Interesting Feature.

The Monarch Comedy and Concert Company finished a successful week of entertainment at the Goodridge Opera House Saturday night.

The company was composed of five active participants of exceptional talents for their particular faculties and presented black face comedy, novelty and musical acts, songs and dances in a style which brought vigorous applause from the audience.

The black face comedy of Saturday night, which was a strenuous adverse argument on the "Woman Suffocats" was especially appreciated.

As a stimulator, a "Most Popular Young Lady" contest was put on; this caused much excitement and comment throughout the week so that at the end of the week people were keyed to the highest pitch with hopes and enthusiasm for their favorite contestant.

On Saturday night patent medicines were sold; with these were given votes to be cast for the contestants. A sudden onrush to secure the medicine and votes was the result and for a while the little house was in a stampede. When the dust cleared and all buying and casting of votes was over, it was found that Miss Geida Gilbertson was the winner, with a lead of 700 votes.

As a reward she received an 18-piece ivory manicure set.

Confirmation Exercises at Lutheran Free Church

Confirmation exercises were held at the Lutheran Free Church Sunday, October 8th. Three young people were confirmed, namely, Luella Urdahl, Gertrude Anderson and Freddie Stephenson. Rev. George Larson of Thief River Falls officiated and delivered a very beautiful sermon.

Two beautiful songs were sung by the local choir and both were high appreciated by the people who filled the church to capacity.

DON'T FAIL TO ATTEND ROAD MEETING AT GRYGLA OCT. 28

As a reminder of the big road meeting to be held at Grygla Saturday evening, October 28th, The Banner prints the information again. Good roads are the urgent need of every community. Rates from Grygla via Thief River Falls and Holt or via Goodridge will also be discussed. Make it a sure point to be there!

BUNDHUND-IVERSON NUPTIALS ARE HELD

Well-Known Local Couple Joined in Marriage on Wednesday.

Wednesday, October 18 at 10 o'clock A. M. at Thief River Falls occurred the marriage of Miss Christina Bundhund to Henry Iverson.

Miss Bundhund is the daughter of Nick Bundhund, cashier of the Farmers State Bank, and is a graduate of the Goodridge High school.

Henry Iverson is a son of Mrs. Ellen Iverson, living north of town and until recently has been employed in Minneapolis.

They were attended by Ellard Iverson, a brother of the groom, and Miss Violette Josephson. The newlyweds returned to Goodridge the same evening and will make their home here for the present.

Rev. George Larson of Thief River Falls officiated at the ceremony.

Neptune Resident Loses Car Control; Goes in Ditch

Mr. Halvorson of Neptune had the misfortune to drive his Chevrolet car into the small ditch in front of the Henry Tollefson residence Thursday evening. It appears that when Mr. Halvorson attempted to turn his car into the yard he lost control of it and as a result the left wheel run off the culvert and then dashed into the ditch. Fortunately for Mr. Halvorson he was but slightly shaken up. A very small amount of damage was sustained to the car.

Mr. and Mrs. M. G. Thoreson and family, Mr. and Mrs. Gilbert Gunderson and daughter, Edith, and grandson, Wallace Johnson, and Mr. and Mrs. H. Christianson, were entertained Sunday at the R. L. Mork farm home.

"BUY POTATOES" DRIVE IS STARTED

State Interests Unit in Effort to Absorb Part of Surplus Stock.

A state-wide movement to create an active and immediate demand for Minnesota spuds promises to materially help growers who find themselves with a large surplus on hand and a market so low that it hardly pays for digging and hauling.

Efforts to strengthen buying demand was started in Crow Wing county, where, in co-operation with E. G. Roth, county agent, people of Brainerd and vicinity are being urged to "buy ten bushels of potatoes." The idea behind the Brainerd effort is to absorb the local surplus and at the same time give growers a cash market.

"If every family in the state with average facilities for storage can be induced to put in their winter's supply now, growers would be materially helped," says J. F. Reed, president of the Minnesota Farm Bureau Federation. "Residents of the larger cities especially, should purchase tehir winter's supply at once and they should demand Minnesota potatoes. n the smaller towns, local markets will be strengthened, just as is being done in Brainerd."

The Banner is strong for a proposition of this kind and would like to see such a movement take root in this county. t could easily be done and would no doubt have a strong tendency to relieve a glutted market.

Ole Graver, Farmer, Is Back From "Old Norge"

Ole Graver, a former former of this vicinity, who has spent the past two years in the old country, has returned to spend an indefinite time here. Mr. Graver reports that the hard times has Norway in a much tighter grip than any times felt in this country.

We Need the Money!

The Banner is making arrangements this week to collect a considerable number of overdue subscription accounts and in this latest effort, we ask your assistance. If you owe for The Banner, pay it now and thereby enable us to straighten out our list and place it on a paying basis. A newspaper cannot long exist with a so-called "dead-head" list and unless we clear them up soon, we are going to clean them off the slate entirely. The small amount of $1.50 to you may not seem such a large amount but when it is considered that we have numbers of these small accounts, it is plainly seen that they mean a lot to us. By your co-operation we will still be able to retain you on the list. Come in any pay it today! We need the money!

CHAPTER XIV

—20—

Chacherre's Bundle.

It was seven in the morning when Henry Gramont drove his car into Houma.

In the wire which he had sent over Chacherre's signature he had commanded Dick Hearne to meet Gramont at about this time at a restaurant near the court house. Putting his car at the curb, Gramont went into the restaurant and ordered a hasty breakfast. He had brought with him copies of the morning papers, and was perusing the accounts of Bob Maillard's pitifully weak story regarding his father's murder, when a stranger stopped beside him.

"Gramont?" said the other. "Thought it was you. Hearne's my name—I had orders to meet you. What's up?"

The other man dropped into the chair opposite Gramont, who put away his papers. Hearne was a sleek individual of pasty complexion who evidently served the gang in no better light than as a go-between and runner of errands. That he suspected nothing was plain from his casual manner, although he had never seen Gramont previously.

"Business," said Gramont, leaning back to let the waitress serve his breakfast. When she had departed, he attacked it hungrily. "You got Chacherre's wire about the stuff in his car?" Was it burned?"

"No. He countermanded it just as I was hirin' a car to go over to Paradis," said Hearne. "What's stirrin', anyhow?"

"Plenty. Memphis Izzy's coming down today. When'll he get in?"

"He'll go direct to the other place, won't come here. Oh, I reckon he'll get there along about nine this morning. Why?"

"We'll have to go over there to meet him," said Gramont. "I stopped in here to pick you up. Hammond is still safe in jail?"

"Sure." Hearne laughed evilly. "I don't guess he'll get out in a hurry, neither!"

"Chacherre was pinched last night for the murder," said Gramont, watching the other.

"The h—ll!" Hearne looked astonished, then relaxed and laughed again. "Some fly cop will sure lose his buttons, then! They ain't got nothin' on him."

"I heard they had plenty."

"Don't worry." Hearne waved a hand grandiloquently. "The boss is solid with the bunch up to Baton Rouge, and they'll take care of everybody. So old Ben got pinched, huh? That's one joke, man!"

Gramont's worst suspicions were confirmed by the attitude of Hearne, who plainly considered that the entire gang had nothing to fear from the law. Chacherre's boasts were backed up solidly. It was obvious to Gramont that the ramifications of the gang extended very high up, indeed.

"Better cut out the talk," he said, curtly, "until we get out of here."

Hearne nodded and rolled a cigarette.

When his hasty meal was finished, Gramont paid at the counter and led the way outside. He motioned toward the car, and Hearne obediently climbed in, being evidently of so little account in the gang that he was accustomed to taking orders from everyone.

Gramont headed out of town and took the Paradis road. Before he had driven a mile, however, he halted the car, climbed out, and lifted one side of the hood.

"Give me those rags from the bottom of the car, Hearne," he said, briefly.

The other obeyed. As Gramont made no move to come and get them, Hearne got out of the car; then Gramont rose from the engine unexpectedly, and Hearne looked into a pistol.

"Hold out your hands behind you and turn around!" snapped Gramont. "No talk!"

Hearne uttered an oath, but as the pistol jerked at him he obeyed the command. Gramont took the strip of cloth, which he had previously prepared, and bound the man's wrists.

"These are better than handcuffs," he commented. "Too many slick individuals can get rid of bracelets—but you'll have one man's job to get rid of these! Oh! a gun in your pocket, eh? Thanks."

"What t'ell you doin'?" exclaimed the bewildered Hearne.

"Placing you under arrest," said Gramont, cheerfully.

"Here, where's your warrant? You ain't no dick—"

Gramont cut short his protests with a long cloth, which effectually bound his lower jaw in place and precluded any further idea of talk.

He then tied Dick Hearne securely, hand and foot, and then lashed him to one of the top supports of the car. When he had finished, Hearne was reasonably safe. He then climbed under the wheel again and proceeded on his way. Hearne's lashings were inconspicuous to any one whom the car passed.

It was a little after eight in the morning when Gramont drove into Paradis. He noticed that two large automobiles were standing in front of the post office, and that about them were a group of men who eyed him and his car with some interest. Paying no attention to these, he drove on through the town without a halt.

Sweeping out along the north road, he encountered no one. When at length he reached the Ledanois farm he drove in toward the deserted house and parked the car among some trees where it could not be seen from the road.

Leaving the car, Gramont took his way toward the bank of the bayou and followed this in the direction of the adjoining property.

He went on to an opening in the bushes which, over the low rail fence, gave him a clear view of the Gumberts property. There he paused, quickly drew back, and gained a point whence he could see without danger of his presence being discovered. He settled into immobility and watched.

That Memphis Izzy himself had not yet arrived, he was fairly certain. Near the barn were drawn up two flivvers, and sitting in chairs on the cottage veranda were three men who must have come in these cars. Gramont had come provided with binoculars, and got these out. He was not long in discovering that all three men on the veranda were strangers to him. They, no doubt, were men in the lottery game, waiting for Gumberts to arrive. Gramont turned his attention to the other buildings.

Both the barn and shop were open, and the buzzing thrum of machinery bore witness that the mechanics were hard at work upon the stolen cars. Gramont thought of Ben Chacherre, still tied and lashed to the chair in his room, and wondered what was to be found under the rear seat of Ben's car. He could see the car from where he lay.

Almost on his thought, a high-powered and noiseless car came sweeping down the road and he knew at once that Memphis Izzy had arrived. He knew it intuitively, even before he obtained a good glimpse of the broad, heavy figure and the dominating features. Memphis Izzy was far from handsome, but he possessed character.

"Where's the Goog?" As he left the car, which he had driven himself, Gumberts lifted his voice in a bull-like roar that carried clearly to Gramont. "Where's Charlie the Goog?"

The mechanics appeared hurriedly. One of them, no other than Gramont's friend of the adenoidal aspect, who seemed to own the mellifluous title of Charlie the Goog, hastened to the side of Gumberts, and the latter gave him evident directions regarding some repair to the car. Then, turning, Memphis Izzy strode to the cottage. He nodded greetings to the four men who awaited him, took a bunch of keys from his pocket and opened the cottage door. All five vanished within.

Gramont rose. A moment previously, fever had thrilled him; the excitement of the manhunt had held him trembling. Now he was cool again, his fingers touching the pistol in his pocket, his eyes steady. He glanced at his watch and nodded.

"It's time!" he murmured. "Let's hope there'll be no slipup! All ready, Memphis Izzy. So am I. Let's go!"

Unhurried and openly, he advanced, making his leisurely way toward the barn and shop. Charlie the Goog, who was bent over the car of Gumberts, was first to discern his approach, and straightened up. Gramont waved his hand in greeting. Charlie the Goog turned his head and called his brethren, who came into sight, staring at Gramont.

The latter realized that if he passed them the game was won. If they stopped him, he bade fair to lose everything.

"Hello, boys!" he called, cheerily, as he drew near. "I came out on an errand for the boss—got a message for Gumberts. Where is he? In the house?"

The others nodded, plainly mistrusting him, yet puzzled by his careless manner and his reference to Fell.

"Sure," answered Charlie the Goog. "Go right in—he's in the big front room."

"Thanks."

Gramont continued his way, conscious that they were staring after him. If there was anything phony about him, they evidently considered that Memphis Izzy would take care of the matter very ably.

The steps of the cottage porch creaked protestingly as Gramont ascended them. Perhaps Memphis Izzy recognized an unaccustomed footstep; perhaps that conversation outside had penetrated to him. Gramont entered the front door into the hall, and as he did so, Gumberts opened the door on his right and stood gazing at him—rather, glaring.

"Who're you?" he demanded, roughly.

"Came out with a message from Mr. Fell," responded Gramont at once. "Brought some orders, I should say—" The sixth sense of Memphis Izzy, which had carried him uncaught into a grizzled age, must have flashed a warning to his crook's brain. In the man's eyes Gramont read a surge of suspicion and knew that his bluff could be worked no longer.

"Here's his note," he said, and reached into his pocket.

Gumberts' hand flashed down, but halted as Gramont's pistol covered him.

"Back into that room, and do it quickly," said Gramont, stepping forward. "Quick!"

Memphis Izzy obeyed. Gramont stood in the doorway, his eyes sweeping the room [illegible]. Startled, all four of them had risen and were staring at him. In his other hand he produced an automatic which he had taken from Dick Hearne.

"The first word from any of you gentlemen," he declared, "will draw a shot. I'm doing all the talking here. Savvy?"

They stood staring, paralyzed by this apparition. They had been sitting about the table, which was heaped with papers and with packages of money. A large safe in the wall stood open. Beside the table was a small mail sack, partially emptied of its contents; torn envelopes littered the floor.

That this was the headquarters of at least a section of the lottery gang Gramont saw without need of explanation.

"You're under arrest," said Gramont, quietly. "The game's up, Gumberts. Hands up, all of you! Dick Hearne has peached on the whole gang, and from the boss down you're all in for a term in stir. You with the derby! Take Gumberts' gun, and those of your companions, then your own; throw 'em on the floor in the corner, and if you make the wrong kind of a move, heaven help you! Step lively, there!"

Each man there had a revolver or pistol, and one by one the weapons clattered into the corner. Gumberts stood motionless, licking his thick lips, unuttered curses in his glaring eyes. And in that instant Gramont heard the porch steps creak and caught a low, startled cry.

"Hey, boss! They's a gang comin' on the run—"

It was Charlie the Goog, bursting in upon them in wild haste. Gramont stepped into the room and turned slightly, covering with one of his weapons the intruder, who stood aghast in the doorway as he comprehended the scene.

No words passed. Staring at the five men, then at Gramont, the adenoidal mechanic gulped once—and like a flash acted. He ducked low and fired from his pocket. Gramont fired at the same instant, and the heavy bullet, catching Charlie the Goog squarely in the chest, hurled his body half across the room.

With the shots Memphis Izzy flung himself forward in a headlong rush. That desperate shot of the little mechanic had broken Gramont's right arm above the wrist; before he could fire a second time, with the weapon in his left hand, Gumberts had wrested the pistol aside and was struggling with him. The other four came into the melee full weight.

Gramont went down under a crashing blow. Over him leaped Memphis Izzy and rushed into the doorway—then stopped with astounding abruptness and lifted his arms. After him the other four followed suit. Two men, panting a little, stood outside the door and covered them with shotguns.

"Tie 'em, boys," said Gramont, rising dizzily to his feet. "No, I'm not hurt—my arm's broken, I think, but let that wait. Got the ones outside?"

A stamping of feet filled the hall, and other men appeared there.

"Got two of 'em, Gramont!" responded the leader. "The third slipped in here—ah, there he is!"

Poor Charlie the Goog lay dead on the floor—a touch of heroic tragedy in his last desperate action; the one great action of his life, possibly. He had realized that it meant doom, yet he had done what he could.

"I think that's all," said Gramont. "We've sure made a killing, boys—and it's a good thing you jumped in to the minute! A second later and they'd have done for me. Take care of that evidence, will you? Get that mail sack and the letters particularly; if they've been working their lottery outside the state, it'll be a federal matter."

Gumberts, who was being tied up with his friends, uttered a hoarse cry.

"Who are you guys? You can't do this without authority—"

"Don't be silly, Memphis Izzy," said Gramont, smiling a little, then twitching to the pain of his arm. "These friends of mine are members with me of the American Legion, and they've come along at my request to put you crooks where you belong. As for authority, you can ask and go hang.

"Here, boys, I've got to get out to that barn. Come along, some of you!"

He led the way out to the barn and, the others trooping in behind him, entered. He pointed out the car which had brought Chacherre here previously, and ordered the extra seat in the back opened up.

"I think there's a bundle inside," he said. "What's in it, I don't know—"

"Here we are, cap."

A bundle was produced, and opened. In it was found the aviator's costume which Gramont had worn as the Midnight Masquer, and which Chacherre had stolen with the loot. Wrapped among the leather garments was an automatic pistol.

Gramont stood aghast before this discovery, as realization of what it meant broke full upon him.

"Good, lord!" he exclaimed, amazedly. "Boys—why, it must have been Ben Chacherre who killed Maillard! See if that pistol has been used—"

The Midnight Masquer had fired two bullets into Maillard. Two cartridges were gone from this automatic.

(TO BE CONTINUED.)

In the Hands of Friends.

"When you leave yourself in the hands of your friends are you sure you can trust them?"

"No," replied Senator Sorghum. "Some of them are liable at any moment to go out behind my back and dig up all kinds of needful campaign funds in a manner that I should highly disapprove of if I knew about it."

His Scattered Acquaintance.

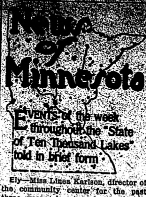
He—Scraping up an acquaintance.



News of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Ely—Miss Linea Karlson, director of the community center for the past three years, has resigned, effective Nov. 1.

Hibbing—Chisholm and Hibbing celebrated the anniversary of the landing of Columbus with banquets, pageants, and parades.

St. Paul—All present officers and directors of the National Dairy union were re-elected at the annual meeting of the organization held in St. Paul.

Minneapolis—For the first time, the United States department of agriculture has separated its estimates of production of durum wheat and spring wheat.

Duluth—The Miller Trunk highway, the longest single stretch of concrete roadway built in Minnesota under the Babcock plan, was formally opened under the huge Arch of Welcome at Eveleth.

Hamline—Dig your potatoes, was the message broadcast to Minnesota farmers by Hugh J. Hughes, director of markets, state department of agriculture. If the crop is not dug, he said, state growers will face a total loss.

Duluth—James H. Harper was elected president of the Duluth Chamber of Commerce.

Dawson—The contract for the erection of the new plant of the Dawson Farmers' Co-operative Creamery company has been let to T. E. Johnson & Co. of Minneapolis on their bid of $12,000.

St. Paul—Dr. Paul C. Fowler of St. Paul was elected president of the Ninth District Association of Minnesota Chiropractors at the annual meeting.

Minneapolis—Navigation on the upper Mississippi river will close Oct. 20, Major B. C. Dunn, superintendent of lighthouse service, Rock Island, Ill., announced.

Willmar—Ragnar Thyden and the Misses Nora Thyden, Gertrude Thyden and Mildred Benedict have started from here on a hike for Los Angeles.

New Ulm—The Minnesota river is as low as it has been in 25 years. The water level in the surface wells is also considerable lower than it has been. Many wells fail to furnish the usual quota of water, while some are already dry.

Minneapolis—The United States Grain Growers' Sales Company of Minneapolis, it was learned, has obtained a seat in the Minneapolis Chamber of Commerce and has opened an office in the Corn Exchange building.

St. Paul—The three airplanes of the 109th Aero Observation squadron which have been patrolling the fire district in northern Minnesota returned to St. Paul, a distance of 200 miles, in 95 minutes.

Rochester—Members of the city council assert they meant business when they passed an order directing the Chicago Great Western railroad to put its crossings in this city in safe condition or remove its tracks from the streets.

Thief River Falls—The annual meeting of the Northwestern Minnesota Educational association opened here with the largest attendance in its history, more than 500 being at the opening sessions.

St. Paul—One million feet of lumber was destroyed at an estimated loss of $300,000 in a fire at the yards of the Twin City Hardwood Lumber company, 515-535 North Cleveland avenue, St. Paul.

Minneapolis—Confronted with a request "to provide" $35,000 to insure garbage collection for the remainder of the year, the board of estimate and taxation has insisted on detailed information, including the department's payroll.

Duluth—Arrangements for the 1923 state convention of the Minnesota chapters of the National Association of Stationary Engineers were discussed at a meeting of the Duluth chapter No. 3. The convention will be held in Duluth.

Granite Falls—The official call has been received here for the annual convention of the Minnesota Yellowstone Trail association at Appleton, Oct. 31. This meeting will be the seventh of a series of 14 in different states through which the trail passes.

St. Paul—Special class pupils of the St. Paul Public Schols will present a vaudeville program at the Orpheum Theatre at 9:30 A. M. October 27th. Blind pupils will offer several numbers on piano and ukelele. Pupils of corrective speech will present two playlets. Miss E. L. Woods, clinical psychologist and state supervisor of special classes of Wisconsin, will speak on "Mental Hygene for Teachers."

Minneapolis—According to instructions from the Federal prohibition commissioner's office druggists will be held responsible for the validity of any liquor prescriptions they may fill, says a decision of Federal Judge Quinn.

Biwabik—The old McKinley-Elba school, between Biwabik and Gilbert, will be turned into a sanatorium for tuberculosis children, according to plans announced by the Sanatorium committee. The committee has appropriated $22,000 for the repair of the building while additional funds will be necessary to maintain the hospital.

Says It Made a New Person of Her

Thousands of people needlessly endure a half-sick, nervous, run-down condition when they might enjoy sturdy, robust health and all its manifold blessings if they only knew what to do. People in this condition find Tanlac soon ends their trouble and builds up abundance of strength, energy and vitality. Mrs. Paul Lavreau, 67 S. Fitzhugh St., Rochester, N. Y., says:

"Sometime ago my health and strength left me all at once. I lost nineteen pounds in a short time and could hardly stay up. I gained five pounds on two bottles of Tanlac and it has made me perfectly well and strong again."

Nervousness and a run-down, tired-out feeling are but symptoms of a hidden cause, which usually lies in the stomach. Tanlac enables you to digest your food properly, eliminate waste and regain your old time strength and vigor. Get a bottle today at any good druggist.—Advertisement.

HOW TWO WOMEN ESCAPED OPERATIONS

Doctor Advised Use of Lydia E. Pinkham's Vegetable Compound

Happy Results in Both Cases

St. Joseph, Missouri.—"Both of my sides swelled and hurt me so that I could not move or do any of my work. There was heavy pressure and pains through my lower organs and the doctor told me to try Lydia E. Pinkham's Vegetable Compound for these troubles. He said I had this one chance, and if the Vegetable Compound did not help me nothing but an operation would. After taking several bottles I felt it was helping me and now I am able to do my own work. If my testimonial will help others I shall be glad for them to read it and hope your Vegetable Compound will do them as much good as it did me."—Mrs. WM. LOCKMAN, 513 N. 4th St., St. Joseph, Mo.

White Plains, N. Y.—"I had such a pain that I could hardly walk and the doctor said that I needed an operation. I was sick for a year before I started taking your medicine and I could not work. I saw your advertisement in a little book and that is how I came to take Lydia E. Pinkham's medicines. I have been taking the Vegetable Compound and Lydia E. Pinkham's Blood Medicine, also Lydia E. Pinkham's Liver Pills and used Lydia E. Pinkham's Sanative Wash and the capsules and prescription recommended. I am doing all my work and have gained twenty pounds. I am taking the medicines still, but I feel fine. You have my permission to use this letter for the good of others."—Mrs. MARY MARK, 87 Hamilton Ave., White Plains, N. Y.

Some female troubles may through neglect reach a stage when an operation is necessary. But most of the commoner ailments are not the surgical ones; they are not caused by serious displacements, tumors, or growths, although the symptoms may appear the same.

When disturbing ailments first appear, take Lydia E. Pinkham's Vegetable Compound to relieve the present distress and prevent more serious troubles. Many letters have been received from women who have been restored to health by Lydia E. Pinkham's Vegetable Compound after operations have been advised by attending physicians.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Co., Lynn, Massachusetts. This book contains valuable information.

WESTERN CANADA for Big Wheat Crops

Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon. Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

A Reminder.

A man was almost frantic with toothache. The only other person in the room was his pompous, pedantic, matter-of-fact aunt.

Presently the man burst out:

"Oh, I wish to goodness people were born without teeth."

His aunt glanced up from her paper.

"A moment's consideration, my dear Alfred," she said, "will remind you that that is precisely what does happen."

And she went on reading.

Cuticura Soothes Itching Scalp.

On retiring gently rub spots of dandruff and itching with Cuticura Ointment. Next morning shampoo with Cuticura Soap and hot water. Make them your everyday toilet preparations and have a clear skin and soft, white hands.—Advertisement.

She Had Her License Safe.

A tall, willowy young woman at Seventh avenue and Thirteenth street, New York, was reciting her complaint to an officer, charging a taxi driver who had jolted her car with failure to observe traffic regulations. The driver protested that she lied.

"I'll bring a complaint against her," said the driver. "She hasn't got a license."

"Yes, I have."

"Well, where is it?" asked the driver.

"Do I have to show it to him?" she asked the policeman.

"Show it to me," he said.

Without flinching, she lifted her skirts knee high, and produced the much desired license from her stocking.

Stop the Pain.

BRITISH WON'T JOIN U. S. DRYS

Refuse to Allow Search of Foreign Ships Until Three-Mile Limit Is Entered.

WOULD CAUSE TROUBLE

England Is, However, Willing to Co-operate to Prevent Smuggling of Liquor Into America—Hughes Handed Note.

Washington—England will not agree to a treaty with the United States extending the right of search of vessels up to 12 miles off shore. However, England is willing to co-operate with the United States in preventing smuggling of liquor into this country from Canada and the Bahamas.

This is the substance of the note handed Secretary of State Hughes by Ambassador Geddes in reply to Secretary Hughes' note of June 26 on the subject.

Secretary Hughes made public his correspondence with the ambassador without comment. There was nothing to indicate that any further step to extend the right of search for American prohibition officers beyond the three-mile limit was in prospect.

Action of the cabinet in recently approving the abandonment of such search, presumably because of possible international difficulties, coupled with the British reply, appeared to indicate that operations would continue to be confined within recognized territorial waters.

The American note dealt particularly with smuggling operations from British possessions in waters adjacent to the American coast and suggested methods by which the existing extremely unfortunate condition might be remedied.

DISABLED VETS AID PLANNED

MacNider Criticizes Government Officials' Feeble Efforts to Aid.

New Orleans—The American Legion, through its national commander, Hanford MacNider, has affirmed that the welfare of disabled veterans was its chief interest.

The government's handling of the disabled, from the time of the armistice was signed, down to the present, was described as one of "tragic mistakes, politics, alibis, and blunders," in the report of the Legion's rehabilitation commission, and Colonel C. R. Forbes, director of the United States Veterans' bureau, in a counter-statement to newspaper men asserted that the bureau which he heads was "the most perfect large organization in the world," and that implied criticism of it was not justified by facts.

Charles Bertrand, president of the Inter-Allied Veterans' federation and an officer of the French Legion of Honor, bore renewed pledges of fraternity and friendship to the Legion from the nations associated with the United States in the World war, who had been in session here two days prior to the opening of the Legion convention.

The convention held no sessions during the afternoon of the first day, and veterans spent the rest of the day and much of the night in impromptu reunions on sidewalks, in hotel lobbies, and in the old French quarter of New Orleans.

In historic Jackson square, in the heart of the French quarter, an outdoor fete was held in honor of the veterans. Jackson square is the spot, where, in 1815, Andrew Jackson mustered his forces to fight the British and win the battle of New Orleans. The "buddies" who are inclined to cheer any opportune suggestion gave the bronze equestrian statue of "Old Hickory" repeated cheers.

AVIATOR BEATS OWN RECORD

Mount Clemens, Mich.—Traveling at a greater speed than any human being ever before attained, Lieutenant R. L. Maughan, a United States army pilot, set a new world's airplane speed record by covering a one-kilometer course at the rate of 248.5 miles an hour.

The record was made during official government tests of speed planes that participated in the national air races at Selfridge field, and was electrically timed by officers from McCook field.

Aeronautical engineers and army and navy officers who witnessed the flight were astounded. The demonstration, they declared, proved that there was no limit to the speed that might be attained in the air.

Principal Whips Child—Faces Court.

Birmingham, Ala.—R. A. Duvall, principal of the North Birmingham public school, will be tried before Judge Henry Martin in police court on a charge of assault and battery in connection with the alleged whipping of James Lavis, 14, a student. Complaint was made by Mrs. Benjamin H. Branch, mother of the boy, who charged that her son's back was a mass of "livid welts and bruises." The principal is quoted as saying he had written permission to punish the

TIRED OF THE "OLD STUFF"

Polyandrian Queen Welcomed Imported Novel for the Reason That It Struck New Note.

The queen of the Polyandrian isles reclined lazily upon her throne of masculine skulls. Her seven husbands had all gone a-hunting, and time lay heavily upon her hands. "Bring me a book!" she commanded, and seven virgins ran off to do her bidding.

The queen thumbed the pages of the seven native novels.

"Bah!" she ejaculated after a time. "The same old stuff. Eight men pursuing one woman. I'm tired of this eternal polygon business. Fetch me one of those racy, risque, imported novels where one man and one woman brave the world and his wives and dare to love each other despite our polyandrian conventionality. They're a little bit immoral, perhaps, but what a relief from the banality of our everyday existence."—Philadelphia Ledger.

DESIGNED FOR HIGH PLACE

Sandy's Prediction for Son's Future, However, Contained One Rather Unfortunate Proviso.

In Scotland there is told a story of one Sandy McIntosh, who started to build a small outhouse of brick. After the usual plan of bricklayers he worked from the inside, and, as he had the material close beside him, the walls were rising fast when noon arrived, and with it his son, John, who brought his father's dinner.

With honest pride in his eye, Sandy looked at John over the wall on which he was engaged, and asked:

"How de ye think I am gettin' on?"

"Fine, father; but how dae ye get oot? You've forgot the door?"

One glance around him showed Sandy that his son was right; but, looking at him kindly, he said:

"Oh, but ye've got a grand heid on ye, John! Ye'll be an architect yet, as sure's yer feyther's a builder!"—Philadelphia Ledger.

Moveable Mark.

A player and his caddy started off from the first tee. The man's drive had hooked badly into the rough. They hunted for the ball for some time and then the man turned to the boy and said: "Caddy, did you mark my ball?" "Yes," he answered, "I marked it." "What by?" asked the man. "By a bird," said the boy, "but it flew away."—Judge.

Royal Road to Success.

Whatever your occupation in life may be apply yourself to it seriously and diligently. Let it be the subject which dominates your thoughts, because your success will be measured by the interest you take in what you are doing. Intense interest will mean close application and hard work and it is only along that road that success and contentment are to be found.—Exchange.

Evidently Christians.

An American family living in China recently hired two servants from Nanking, a missionary center. Accordingly, the new servants were Christians. Another Chinese servant in the family discovered the newcomers' religion and reported the fact to his mistress. Asked how he knew the new boys were Christians, he said: "Oh, they know all about God, Jesus Christ, and Santa Claus."

Able to Watch for Enemies.

The eyes of snails and slugs are perched right on the ends of their feelers, so that they can look in every direction without moving.

Lone Surviver.

"That sailor must have had a wild night; he looks a wreck."

"Probably struck a hidden bar."

Prudence, patience, perseverance command success.

Adds a Zest—Helps Digest

TIP OFFERED TO DENTISTS

Writer Thinks Practice Might Mitigate the Horrors of Tooth-Pulling Operations.

A new idea for dentists.

If you've never had a tooth pulled don't read this suggestion, for it's beyond the comprehension of such. Far!

One certain friend of a certain dentist in this city, having read a delicious dissertation on the pulling of teeth via the novocaine method, happened upon the end of the story, in which the dentist said: "That's all. Perhaps you'd better have a little stimulant."

By way of suggestion to the local dentist his friend wrote: "By introducing this innovation there is no doubt but that you can soon take over the entire building for your practice. Of course, the technique of extraction will be lengthened. One pull by the dentist to be followed by one pull by the patient, and then, I suppose, a long pull all together."—Washington Star.

American people make their own laws—accounting for their opinion of some of them.

How to meet trouble is the real problem of life. Good fortune takes care of itself.

Danger in Osculation.

When one of the Talmadge girls was in Washington some time ago she was being shown through the senate chamber by a well-known Washingtonian. Seeing a rather handsome little page, she leaned forward and impulsively kissed him. I learned the other day that after the story had reached a certain group of young girlie girls the fortunate youngster has been eagerly sought after by those who would emulate the movie screen star's actions. The lad should remember, however, what kissing did for Captain Hobson of Spanish war fame.—Washington Star.

Ancient Greeks Took Gymnastics.

In every Greek city was established a gymnasium where crowds of young men exercised themselves naked. This institution was originally intended for those only who were in training for the Olympic games, but afterward it became part of the daily life. The Greeks went to the gymnasium with the same regularity as the Romans went to the bath.—Winwood Reade in "The Martyrdom of Man."

Eggnog is still made without the essential ingredient; but it is used to pour on the pudding.

The best metals lose their sparkle unless brightened by use.

Why Risk Your Health?

THE path of the coffee or tea drinker is beset with dangers to health and comfort. These dangers lurk in the irritant, caffeine, which is the active principle of both coffee and tea.

For those who enjoy a well-made cup of coffee or tea, but find that it makes them nervous, wakeful and irritable, there's satisfaction and freedom from discomfort in delicious Postum—the table beverage of no regrets.

POSTUM CEREAL
BEVERAGE
INSTANT POSTUM

Its fragrant aroma and rich, full-bodied flavor are delightful. Postum is made from roasted wheat and contains no caffeine, nor any other harmful ingredient whatsoever.

Order from your Grocer TODAY!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

EDITORIAL

THE BILL.

Yesterday's mail brought to us a bill—a bill rather larger than we are accustomed to receive and we looked it over with mixed emotions.

Some folks become angry when they get a bill, just why we never have been able to understand.

This bill of ours was from a local merchant. Some of the merchandise had been purchased early in the summer. It had not been paid for during three months.

We can easily recall every item on the bill. Most of them were ordered by telephone. We were not in the store, did not see the merchant at all, did not ask for long credit, did not even promise to pay for the goods at any time. We simply asked the merchant to send us the goods.

He did so. They were satisfactory. The price was right. We used them.

Now, after three months, that merchant wants his money. He has his own bills to pay and must collect outstanding accounts in order to square himself with his jobber, his wholesaler and the man he buys from.

That merchant had faith in us.

When we asked him to send us the goods, he did not hesitate. He sent them. He did not protest that we must appear at his store cash in hand to pay. He trusted us.

And now he has politely notified us that he needs his pay. He is asking us to justify his faithin us.

And he is going to have his money if there is any way of scratching it together for him.

Any man who gets angry or indignant or stuffy when an honest bill is sent him when that bill is due is a thief at heart.

A MAN'S TOUGH LUCK.

Usually when a man is down on his luck due to his own misconduct, he likes to argue the facts with himself and imagine that he is greatly abused.

In this state of mind he musters up all the meanness in him and proceeds to take it out on those about him. The recent happenings in the life of Phil Douglas is a case in point. —Douglas, a star pitcher of the New York Giants, attempted to "sell out" to another pennant contender, was detected and promptly banished from organized baseball. Failing to work up sympathy among the baseball world to have him reinstated, he resorted to abusing his wife and children to give vent to his feelings.

Recently he was lodged in jail upon complaint of his wife. It is hoped that the rock pile connected with Phil's particular jail is sufficiently large to afford solid employment for him for some time to come.

Commenting on the fact that a St. Peter man recently hung himself with a pair of overalls by tying one leg of the same around his neck and the other around the limb of a tree, the Hibbing Daily News opines that there will be a scramble among overall manufacturers to claim the distinction of being the makers of that particular kind of non-ripping pants.

Let every family in the state buy 10 bushels of potatoes now and thereby create a demand for the spuds that are here in such numbers. You're going to need them, anyhow, so why not lay in your winter's supply today. Do your potato shopping early.

GENERAL ELECTION
TUESDAY, NOV. 7, 1922
(Cut out this advertisement and take it to the polls for reference.)

The Osseo newspaper [illegible] Minneapolis. The reason is [illegible] lack of support. Many merchants are utterly indifferent regarding the support of their home newspaper until they lose it. Then they realize what they have lost.

It looks to The Banner as though the only part of the crop the middleman is really successful at raising is the price. If the farmers ever get thoroughly organized, they'll raise a tombstone over his head.

JOY!

By REV. H. LUTZ.

Text: "And your joy no man taketh from you." John 16,22.

The time was drawing near, when Jesus, the Lord, was to ffer up His life on the cross of Calvary as a sacrifice for the sins of the world. That meant that He had to leave his disciples, whom He had chosen from among the people, and who had learned to love and trust in Him. Jesus knew all the horrible things that would be done to Him by the Jews. But His disciples did not, as yet, know them. Jesus knew what a trial it would be for the faith and trust of His followers to see Him killed and laid away in the grave, and therefore He began to prepare them for it long before it happened. In the chapter from which our text is taken, the Lord tells His disciples: "But now I go my way to Him that sent me. . . . A little while and ye shall not see me, and again a little while, and ye shall see me, because I go to the Father." And according to the Evangelist Luke, He said shortly before going to Jerusalem the last time:

"Behold we go up to Jerusalem, and all things that are written by the prophets concerning the son of man shall be accomplished. For He shall be delivered unto the Gentiles, and shall be mocked, and spitefully entreated, and spitted on, and they shall scourge Him and put Him to death."

And then a few verses before our text, he says: "Verily, verily, I say unto you, that ye shall weep and lament; but the world shall rejoice; and ye shall be sorrowful" and then He adds: "But your sorrow shall be turned into joy." And the verse from which our text is taken reads: "And ye now, therefore, have sorrow; but I will see you again, and your heart shall rejoice, AND YOUR JOY NO MAN TAKETH FROM YOU."

From all this we see that there are two kinds of joy: The joy which the wicked world experienced at the death of the Savior, and the joy which took the place of sorrow when the disciples saw their risen Savior. The first is a joy which lasts but a short time and is vain and even harmful, while the latter is a heavenly joy which "no man taketh from you."

We all crave joy and happiness, and we all will seek to have joy. But we will do well to make sure that our joy is of the right kind.

The world today, even as the world at the time of the Lord, rejoices at the death of the Lord. It will have nothing to do with Jesus as the Savior. It hates Him, it despises Him, it mocks and ridicules His servants, and His gospel. It seeks its joy and happiness outside of Jesus. And its joys are like those of those wicked Jews. They last but a short time. The Savior's name is blasphemed and the world rejoices. A great festival is celebrated, the world indulges in the lusts of the flesh: Dancing, slandering, gambling, drinking, cursing, etc., and all claim to enjoy it. The world gets rich by profitearing, cheating, stealing, and puts on a joyful face. Death comes, the risen Savior appears as judge, and all joy of the unbelieving world vanishes and gives room to despair and gloom. Such is all joy that does not have its source in Jesus!

Considering all this, we might be tempted to think that a Christian must be entirely without joy in this world. Quite the contrary is true. That old Puritan idea, that a child of God must always have a sober face, that he dare never smile, is a false idea. In fact, a true child of God has all reason to be truly joyful at all times. For a true child of God at all times beholds in faith the risen Savior, who has said: "I will see you again."

That is the source of his joy. He rejoices because he knows that the Son of Man died for him and rose again on the third day. He is joyful because he can read and hear this Savior's words: It provides him joy to use all the benefits of nature, for he knows that his kind Father has given them to him. He is joyful even in sickness and trouble, knowing that these are a proof of his master's love. And above all he is joyful when death comes, for his is a joy which no man taketh from him. It will last forever.

So, then, if you wish to be real joyful here and hereafter, look to your [illegible] has not some connection with Him is vain, empty, short-lived. And if you would bring real joy to your loved ones, help them to fix the eye of faith upon Him who died and rose for them, too. Then, and then only, will you and they have that joy which "no man taketh from you."

Amen!

AMENDMENT NO. 1 REMEDY FOR TAX FREE BOND PERIL

State System Needed to Assure Farmers of Adequate Loans, Says Christianson.

INVESTORS TURNING TO TAX EXEMPT SECURITIES

Voters Told to Remember Amendment No. 1 is First on Pink Ballot—All Urged to Vote "Yes."

A state farm loan system such as adoption of Amendment No. 1 will authorize is needed if Minnesota farmers are not to be seriously handicapped because of the growing peril of tax-exempt securities, according to Theodore Christianson of Dawson, father of the law under which the amendment is submitted Nov. 7.

"The practice of issuing tax-exempt securities and their popularity among large investors," says Mr. Christianson, "is going to make it impossible, eventually, for farmers to get loans upon real estate, unless they can get them through the issuance of governmental securities. Life insurance companies, whose surpluses in the past have been largely invested in farm mortgages, now are beginning to invest in these tax free bonds, instead of in farm mortgages.

"It, therefore, is increasingly important that we set up a state system of rural credits, administered by the state, to finance farmers even in the inadequate way in which they have been financed heretofore. The increased interest rates on farm mortgages reflect this preference for taxexempt securities.

"It is true that the tax-exempt feature should be eliminated, but until that is done and there is no telling when that step will be taken—the farmer is going to be seriously handicapped, unless the state is permitted to set up machinery for which the proposed amendment paves the way. With this machine in operation farmers needing loans will be in position to cope with the tax-exempt security peril."

The Farmers' Special Committee, of which J. F. Reed, president of the Minnesota Farm Bureau Federation, is chairman, is urging voters to remember these points in voting on Amendment No. 1—Rural Credits—on election day, Nov. 7:

1. That it is the first on the pink ballot, and that the Amendment ballot is separate from the one on which appears the names of state and county candidates.
2. That a majority of voters voting must vote "Yes" if it is to be adopted.
3. That it has the indorsement of all parties and, therefore, is purely a non-political issue.
4. That blank ballots count against the proposal as effectively as do those marked "No."
5. That creation of a state rural credits system will not cost taxpayers a dollar.
6. That adoption of the amendment, in itself, does not create any particular system; it merely paves the way for the legislative action by removing present constitutional restrictions on any legislation of this nature.
7. That it will give Minnesota an opportunity to study systems now in operation and avoid objectionable features that may be found in existing plans.

The man who can get a good laugh out of his own blunders is on the way to wisdom—and to happiness.

Proposed Amendments to the Constitution of the State of Minnesota

Submitted by the Legislature at its General Session, 1921, to the People of Minnesota at the General 1922 Election Together with Statements of

Purpose and Effect of each

Prepared by

CLIFFORD L. HILTON

Attorney-General of Minnesota.

Addressed to

MIKE HOLM

Secretary of State.

ST. PAUL, MINNESOTA,
OFFICE OF ATTORNEY GENERAL,
June 30, 1922.

HONORABLE MIKE HOLM,
Secretary of State,
Capitol.

SIR:

As required by section 46, General Statutes of the state of Minnesota for the year 1913, I have the honor to furnish you, herewith, a statement of the purposes and effects of all amendments proposed to the constitution of the state of Minnesota by the legislature of 1921 and which are to be submitted to the electors of said state at the general election in 1922.

PROPOSED AMENDMENT NO. ONE

Chapter 528, Session Laws of Minnesota for the year 1921 proposes an amendment to section 10 of article 9 of the constitution of said state. Said section now reads as follows:

"The credit of the state shall never be given or loaned in aid of any individual, association or corporation. Nor shall there be any further issue of bonds denominated 'Minnesota state railroad bonds,' under what purports to be an amendment to section ten of article nine, of the constitution, adopted April 15, 1858, which is hereby expunged from the constitution, saving, excepting and reserving to the state, nevertheless, all rights, remedies and forfeitures accruing under said amendment."

If amended, said section will read as follows:

"The credit of the state shall never be given or loaned in aid of any individual, association or corporation, except as hereinafter provided. Nor shall there be any further issue of bonds denominated 'Minnesota State Railroad Bonds' under what purports to be an amendment to section 10 of article 9 of the constitution, adopted April 15, 1858, which is hereto expunged from the constitution, saving, excepting and reserving to the state, nevertheless, all rights, remedies and forfeitures accruing under said amendment. Provided, however, that for the purpose of developing the agricultural resources of the state, the state may establish and maintain a system of rural credits and thereby loan money and extend credit to the people of the state upon real estate security in such manner and upon such terms and conditions as may be prescribed by law, and to issue and negotiate bonds to provide money to be so loaned. The limit of indebtedness contained in section 5 of this article shall not apply to the provisions of this section, and the purposes for which the credit of the state or the aforesaid municipal subdivisions thereof may be given or loaned as herein provided are declared to be public purposes."

The PURPOSE of said amendment is to develop the agricultural resources of the state by authorizing the lending of money and credit of the state to the people upon real estate security.

The EFFECT of said amendment, if adopted, will be to authorize the enactment of laws by the legislature for the establishment and maintenance of a system of rural credits. The legislature will be empowered to provide money by the issuance and negotiation of bonds of the state to be loaned upon real estate security to the people of the state, and will be enabled to prescribe the terms and conditions upon which such money may be lent and such credit extended. There will be no limit of indebtedness in this respect, and the state will be enabled to issue and negotiate as many bonds for this purpose as it deems advisable.

PROPOSED AMENDMENT NO. TWO

Chapter 529, Session Laws of Minnesota for the year 1921, proposes an amendment to the constitution of the state of Minnesota by adding a new section to article 9, to be known as section 1A, to read as follows:

"Every person, co-partnership, company, joint stock company, corporation, or association, however or for whatever purpose organized, engaged in the business of mining or producing iron ore or other ores in this state, shall pay to the state of Minnesota an occupation tax on the valuation of all ores mined or produced, which tax shall be in addition to all other taxes provided by law, said tax to be due and payable from such person, co-partnership, company, joint stock company, corporation or association however or for whatever purpose organized, on May first of the calendar year next following the mining or producing thereof. The valuation of ore for the purpose of determining the amount of tax to be paid shall be ascertained in the manner and method provided by law. Funds derived from the tax herein provided for shall be apportioned; fifty per cent to the state general revenue fund, forty per cent to the permanent school fund and ten per cent to the permanent university fund. The legislature shall by law make the necessary provisions for carrying out the provisions of this section."

The PURPOSE of said amendment is to direct the legislature of the state of Minnesota to impose and to keep in effect an occupation tax upon those engaged in the business of mining or producing iron ore or other ores in this state, in addition to other taxes imposed by law, at a rate, based upon the valuation of the ore produced, to be determined by the legislature and to provide for the proportionate distribution of such taxes to the general revenue fund, the permanent school fund, and the permanent university fund.

The EFFECT of the amendment, if adopted, will be to direct the legislature to impose and keep in effect such a tax upon those engaged in said business; and to require that the proceeds of such taxes shall be distributed in the manner following, to-wit: fifty per cent to the state general revenue fund, forty per cent to the permanent school fund, and ten per cent to the permanent university fund.

Yours respectfully,
CLIFFORD L. HILTON,
Attorney General.

Students of the Union Commercial College, Grand Forks, N. D., [illegible] What is the great value of a business education. It puts you into touch with the big positions. To secure this training takes but a short time and the cost is very moderate. In fact, the tuition is lower than it has been for years. Many earn back in one month the entire tuition cost. Send for catalog and find out how easily you can prepare for a good position—Adv.

Ole Prestebak of Thorhult autoed down Friday morning to get Mrs. Prestebak and daughter, who have been visiting at the C. N. Urdahl home the past week.

There will be Ladies' Aid Society meeting in the old schoolhouse Wednesday afternoon, October 25. Mrs. H. Christianson will entertain. All are invited.

Mis Emma Graff left for Grygla Saturday afternoon after attending the teachers' convention at Thief River Falls. Miss Graff is the principal of the Grygla school.

North Star College Day at Warren on October 24

Public Invited to Participate in Meeting to Advance Interests of School.

Tuesday, October 24, has been designated as North Star College Day, when the well konwn Warren educational institution will offer an all afternoon and evening program of particular attractiveness for the purpose of awakening renewed and more sympathetic co-operation among the people of this section who are already friends of the school. Speeches will be made by Judge Magney of Duluth, and conference officials, including Rev. Oscar Gustafson of Elbow Lake. In addition there will be a fine musical program both afternoon and evening.

The North Star College had an enrollment of 125 last year. This year the school is in position to accommodate an increased number of students, improvements having been completed last summer which included dormitory space for thirty girls. Rev. Albin A. Larson of this city, who is a director of the school, informs The Tribune that plans are under way for a Junior College course and that students who enter the North Star may effect a considerable saving all along the line.

Rev. Larson is very deeply interested in the success of the school and he desires to issue a cordial invitation to the public to attend the College Day next Tuesday.

[illegible] AT GOODRIDGE NEXT SUNDAY

The Union Harvest Festival at Goodridge next Sunday, October 22, will begin at [illegible] o'clock sharp, with Norwegian services at the church.

Rev. V. O. Aaker will preach and two choirs will furnish music. There will be a chicken and meat ball dinner with all the regular trimmings served in school gymnasium. After dinner a fine program will be rendered in the school auditorium.

Rev. T. E. Sweger, pastor of Trinity Lutheran church at Thief River Falls will speak and Miss Lindblom and the choir will furnish music.

Altogether it is going to be one of the nicest festivals held in Goodridge for a long time and a nice feature of it is that families from the various congregations and outsiders will have a chance to get acquainted. The sum of 30 cents for adults and 15 cents for children will be charged for dinner. Don't miss it. You are welcome.

Lutheran Church, Missouri Synod.

Sunday, Oct. 22: German services at 10 A. M. Sunday school at 2 P. M. English services at 3 P. M. at Germantown. English services in the parsonage in Goodridge at 8 P. M. H. Lutz, pastor.

Statement of the Ownership, Management, Circulation, Etc., Required by the Act of Congress of August 24, 1912.

of the Goodridge Banner, published weekly at Goodridge, Minn., for October 1, 1922.

State of Minnesota, County of Pennington—ss.

Before me, a notary public in and for the state and county aforesaid, personally appeared S. V. Arneson, who, having been duly sworn according to law, deposes and says that he is the owner of the Goodridge Banner and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers, are:

Publisher, S. V. Arneson, Goodridge, Minn.

Editor, S. V. Arneson, Goodridge, Minn.

[illegible] Business Manager, S. V. Arneson, Goodridge, Minn.

2. That the owners are:

S. V. Arneson.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are:

COUNTY TREASURER

Candidate for Re-election at the General Election November 7, 1922.

"One Good Term Deserves Another!"

YOUR VOTE AND SUPPORT WILL BE APPRECIATED.

To the Men and Women Voters of Pennington County:

I respectfully solicit the votes of all law abiding citizens of Pennington county for the office of sheriff. If I am elected it is my purpose to give all my time to the duties of the office, and I promise faithfully to enforce the laws impartially without fear or favor. The lack of time and means will prevent me from meeting all the voters but I take this opportunity to thank my friends for their assistance and support.

Respectfully,

OLE L. IHLE.

(Inserted by Ole L. Ihle and paid for at regular rates.)

TO MY FRIENDS!

During the many years I have been a resident of the 65th Legislative district, a good many changes have taken place, some for the better and others for the worse. During these years I have learned to realize by actual experience that only through betterment of the conditions of the agricultural interests can a lasting and sound development of the district be accomplished. If it is my good fortune to be honored with the election to the office of State Senator from this district, my aim will be to use all of my energies and everything in my power to further any legislation which will be of benefit to the man engaged in agricultural work—which also means the only practical way to benefit all the people of the district. Upon this industry depends the future welfare and prosperity of the district and all its people.

Thanking you for the good will and many favors extended me in the past, I remain,

Yours respectfully,

C. L. HANSEN

(Paid political advertisement, ordered inserted in behalf of and to be paid for at regular advertising rates by C. L. Hansen, Thief River Falls, Minn.)

The Same Old Backache!

Does every day bring the same old backache? Do you drag along with your back a dull, unceasing ache? Evening find you "all played out"? Don't be discouraged! Mudania Protocol Is Signed and Greeks Are Fleeing From Turkish Territory.

PEACE CONFERENCE ON NOV. 1

Attorney General Daugherty's "Dry Seas" Order Creates a Stir—May Help Ship Subsidy Bill—Great Britain Pays America $50,000,000 Interest.

By EDWARD W. PICKARD

> ATTORNEY General Daugherty has ruled that no intoxicating liquor may be served on any American vessel anywhere, and that no vessel whatever may bring liquor within the three-mile limit, even though it be sealed. Do you agree with the opinion that this ruling will increase the chances of passage of the ship subsidy bill; and what do you think of that measure?

TURKEY for the Turks—that in a word will be the effect of the protocol signed by the allied commanders and the Kemalists Thursday morning at the little village of Mudania, if the Near East peace conference soon to be held follows along the same lines. Something like a million and a half Greeks who have been residents of Asia Minor, Constantinople and eastern Thrace are fleeing westward, fairly panic stricken at the thought of massacre and outrage which Christian peoples have been taught to expect from the Moslem. An added incentive to their flight is afforded by the fear of Turkish reprisal for the acts of the Greek army in Anatolia and the Greek civilians in Constantinople.

Truly the plight of these refugees is most serious. Abandoning their long-time homes and sacrificing their possessions, they are struggling in disorganized masses to get out of Turkish territory, and the means of transportation are pitifully scant. Pestilence already is appearing in the crowded concentration camps, and food is scarce. Of course they are all trying to get to Greece, but what will become of them there, is a problem. The government at Athens is striving to devise means of caring for them, but the country already is crowded and has neither the food nor the money to provide for these hundreds of thousands of newcomers. In eastern Thrace the Greeks are working feverishly to save all they can of their harvest. There is a lot of wheat there and the Greek government may purchase it to help stave off a famine. The Thracian delegates in the Greek parliament have cabled to Secretary Hoover for aid from America.

Another throng that is trying to get out of Turkish territory is composed of the many thousands of Russian refugees. They believe that Kemal has secretly promised the soviet government that he will send them back to Russia, and the record of the Bolsheviki leaves them in no doubt as to what their fate would be there.

COMPLETION of the armistice protocol was accomplished at six o'clock Thursday morning and the document was signed by Generals Harington, Charpy, Mombelli and Ismet Pasha, for Great Britain, France, Italy and the Turkish Nationalists respectively. Full agreement was reached only after many anxious days during which Ismet's excessive demands were met by General Harington's calm and unafraid firmness. The Englishman told the Turk plainly that his government had said its last word, and that if its terms were not accepted the Turks must take the consequences. He reminded Ismet that England had a strong navy, a good army and an abundance of guns. "While the British people want peace" said he, "they are equally determined to have fair play and are dangerous opponents when aroused." Meantime General Charpy received instructions from Paris, where Lord Curzon had been in conference with Premier Poincare, and announced that France adhered to the terms proposed. Ismet Pasha, losing thus the support he may have counted on, had no alternative but to yield, and this he did with good grace. The Greek representatives sent a note saying they could not sign the protocol, but the Turks were assured that it would be effective in three days despite this refusal. "Let's sign," said Ismet, and the signatures were appended and the threat of war faded out. Later Greece decided to sign.

The terms of the Mudania convention are substantially as given in this column a week ago. Greece is given fifteen days to evacuate Thrace as far west as the Maritza river, handing over the civil powers to the allied authorities, who will immediately transfer them to the Turkish authorities. Turkish gendarmerie in limited numbers will control the territory for the time being, with allied troops on guard to prevent disorders, but within thirty days after Greece gets out Thrace is to be turned over wholly to the Turks. New neutral zones in the Chanak and Ismid areas, in the Constantinople peninsula and in Gallipoli are to be defined by mixed commissions and are to be respected by the Angora government.

It is understood the peace conference will open on November 1 in Scutari, or possibly in some city in Italy. It is probable that Bulgaria, Georgia and the Ukraine will be invited to send representatives, but not the Moscow government. Other nations that are likely to have delegates, in addition to Great Britain, France, Turkey and Italy, are Jugo-Slavia, Rumania, Greece, Hungary, Austria, Czechoslovakia and possibly Poland.

HAVING avoided war with Turkey without losing dignity, and retaining for the present the actual control of the Dardanelles, the British government seems once more solidly entrenched, and the talk of retiring Prime Minister Lloyd George, which broke out furiously a few days ago, is dying down. His opponents at home, indeed, now have no fit man to suggest as his successor, for Bonar Law, upon whom they had counted, has renewed his fealty to the Welshman, as has Lord Birkenhead. The Unionists are said to have decided to stick by the coalition and make it practically a permanent party when the general election comes, which probably will be about Christmas. The premier, after a week of retirement in the country, made a notable speech Saturday in Manchester, telling his opponents what he thought of them and demanding the support of the country for his policies.

BUCHAREST was en fete Saturday, when King Ferdinand and Queen Marie were formally crowned as rulers of the kingdom of Rumania which the war enlarged by the addition of Bessarabia and Transylvania. The ceremonies were gorgeous and many other nations were represented by princes and high dignitaries. In view of the fact that soviet Russia still threatens Rumania, it is worthy of note that France sent Marshal Foch and with him General Weygand, who organized Poland's successful opposition to the Bolsheviki two years ago.

ATTORNEY General Daugherty certainly stirred up the animals when he barred liquors not only from all American vessels, but even from all other ships while within the American three-mile limits. At first there was a storm of comment punctuated with excited predictions of what foreign governments would do to us in the way of retaliation and with predictions that all foreign steamship lines would divert their ships to Canadian ports, leaving New York, Boston, Philadelphia, San Francisco, Seattle and our other coast cities to go to wreck and ruin. With the subsidence of the tempest these facts appear: The British government says it has no interest in the domestic legislation of the United States, which it has a perfect right to put into operation, and if British subjects break United States law they will have to take the consequences. The French government may send a protest to Washington, but will wait to see how the decree is enforced and how it affects French interests. French labor circles are concerned because the French law provides that sailors must be given wine daily. All American vessels, notified by wireless, at once sealed their liquor supplies and are turning them over to the authorities on reaching port. Many foreign vessels sailed with their usual supplies of booze, in order to bring about test cases, and the Cunard and Anchor Steamship companies began proceedings in the United States district court in New York to restrain government officials from seizing their ships or the liquor aboard them. These companies attack the legality of the Daugherty order on the ground that it is in contravention of the general commercial treaty of 1815 and a misinterpretation of the Volstead act.

The International Mercantile Marine corporation obtained from Federal Judge Hand a temporary restraining order enjoining New York officials from molesting the liquor on the steamers Finland and St. Paul.

The American Steamship Owners' association decided to abide peacefully by the ruling provided the prohibitionists will reciprocate by giving their support to the ship subsidy bill. It cannot be denied that the attorney general's decision met with general approval throughout at least the Middle West and South, and it is believed its effect will be greatly to improve the chances of the ship subsidy measure when it comes up for passage in congress.

GREAT BRITAIN, through Ambassador Geddes, has just paid to the United States $50,000,000, which is approximately the amount of this year's interest on the British debt to America. Sir Robert Horne, who is coming to help adjust the terms of the debt, is delayed by the unsettled state of foreign and domestic policies and may not arrive before the end of the month.

It is stated in Paris that France will not be able to pay any part of her debts for four years, since all receipts for that period must be devoted to reconstruction of the devastated regions. When the interallied financial congress meets in Brussels the French government will probably submit a plan drawn up by Premier Poincare. It calls for a revision of Germany's indebtedness on a basis of actual reparations only, wiping out all charges for pensions, war allowances and the like. France's claim would thus be reduced by almost 25 per cent.

THE Irish hierarchy last week delivered a shrewd blow at the rebellious Republicans in the form of a pastoral letter strongly condemning guerrilla warfare against the Free State government and declaring "the killing of National soldiers is murder before God."

JAPAN notified Washington last week that the official documents of ratification of the Washington treaties were on the way and that her embassy had been given full power to exchange ratifications. This was most gratifying to the administration, which is beginning to get a bit annoyed by France's long delay in ratifying the pacts. Paris dispatches say action by the French parliament is not likely during the forthcoming session because of the great number of domestic issues and the Near East affairs.

PRESIDENT Harding has appointed seven nationally prominent men as members of the coal fact-finding commission created by congress. They are: John Hays Hammond, California and Washington, mining engineer. Thomas Riley Marshall, Indiana, former vice president of the United States and former governor of Indiana. Samuel Alschuler of Illinois, judge of the seventh United States Circuit court. Clark Howell, Atlanta, editor of the Atlanta Constitution. George Otis Smith, Maine, director of the United States geological survey. Dr. Edward T. Devine, Iowa, now of New York, editor, teacher and publicist. Charles P. Neill, Illinois and Washington, commissioner of labor in Roosevelt's administration.

NEW YORK Giants, champions of the National league, won the world's series in decisive fashion, defeating the New York Yankees, champions of the American league, in four games out of five, the fifth being a draw called on account of darkness.

Madam, Raisins Cost Less Now

So Get Their Benefits and Their Flavor in Scores of Attractive, Money-Saving Foods

DUE to greatly increased crops, even though production costs are still much higher than in pre-war days, raisins now cost almost as little as before the war.

Use this luscious, energizing, healthful food lavishly, therefore, in scores of "plain foods" like rice pudding, boiled rice, bread pudding, Indian pudding, and in cake, cookies, pie, and with the children's cereals, to *give them "luxury flavors" at "plain food" costs.*

Raisins are both good and good *for* you.

So take advantage of these lower prices *now.*

Sun-Maid Raisins

Seeded—Seedless—Clusters

Packed under most sanitary conditions in fresh, clean cartons. Very highest quality. Insist on Sun-Maid Brand, the kind that you know is good.

Not More Than 20c

Your retailer should sell you Sun-Maid *Seeded* Raisins in 15 oz. blue package for not more than 20c.

New 11 oz. Package

Your retailer should sell you Sun-Maid Seeded and Seedless Raisins in 11 oz. packages for not more than 15c.

Not More Than 18c

Your retailer should sell you Sun-Maid *Seedless* Raisins in 15 oz. red package for not more than 18c.

Musical Note.

A very deaf old woman walking along the street saw an Italian turning a peanut roaster. She stood looking at it awhile, shook her head, and said: "No, I shan't give you any money for such music as that. I can't hear any of the tunes, and besides it smells as if there were something burning inside."—The Congregationalist.

DYED HER BABY'S COAT, A SKIRT AND CURTAINS WITH "DIAMOND DYES"

Each package of "Diamond Dyes" contains directions so simple any woman can dye or tint her old, worn, faded things new. Even if she has never dyed before, she can put a new, rich color into shabby skirts, dresses, waists, coats, stockings, sweaters, coverings, draperies, hangings, everything. Buy Diamond Dyes—no other kind—then perfect home dyeing is guaranteed. Just tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade or run.—Advertisement.

Not Beauty Parlors.

"Smokers" for women now make their appearance on British trains. Women have been crowding the men's compartments to an uncomfortable degree—not, officials say, because they want to ride with the men, but because they insist on smoking while traveling.—Scientific American.

Handy Airman.

Air navigation will long have its difficult situations, some being typical and some exceptional. Here is one that was handled masterfully the other day in the service between Paris and London. A French pilot carrying passengers after crossing the channel in a driving storm found himself becoming disabled. He wirelessed to an emergency station on the French shore near Calais, and then successfully came down with twelve passengers. Everything was working to meet the emergency. When the plane touched the earth a corps of experts was ready. Within fifteen minutes a new propeller was put on and motor trouble corrected. Off went Pilot Comte Henri de Perignon with his passengers only twelve minutes behind the schedule.

His Deduction.

"You recollect that thick-set Widder Smathers, that licked Constable Gunshun about a year ogo?" inquired Mrs. Johnson. "Well, she married him yesterday."

"Uh-huh!" returned Gap Johnson of Rumpus Ridge. "Do you reckon she got to thinking it over and finally figured that she didn't punish him enough the first time?"—Kansas City Star.

Reputation is sometimes more valuable than character.

Which Is Larger the Sun or a Cent

The sun is the largest but you can hold the cent so close to your eye that you'll lose sight of the sun. Don't let a cheap price or a big can baking powder make you lose sight of quality.

CALUMET

The Economy BAKING POWDER

Is the quality leavener—for real economy in the kitchen, always use Calumet, one trial will convince you.

The sale of Calumet is over 150% greater than that of any other baking powder.

BEST BY TEST

Timely Comments on Agricultural Topics for Our Readers

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

SOME VALUABLE INFORMATION ON THE ERADICATION OF WEEDS

Mowing is one of the useful methods where it can be done. There are a few things which yield larger returns for labor involved than mowing the edges of grain fields along the roads. Numbers of weeds may be prevented from seeding and the appearance of the land is greatly increased. Other pieces of unused ground which have grown to weeds should be mowed if nothing better can be done. Some weeds are killed by mowing, others send up new shoots. Some flower early, others late. Consequently about four mowings are needed during the season. June 10, July 1, July 20, and August 10, might be suggested as the general dates of mowing.

Treatment of Winter Annuals and Biennials.

Seeds of winter annuals germinate in the fall, the plants become well establish and those which survive the winter are ready to make a quick growth in the spring. Mustards of ally sorts are the most common weeds of this type. "Stubbling in" a crop is especially conducive to such weeds as the ground is not worked enough to kill more than a part of the seedlings. If ground is not to be plowed, the disc and harrow should be used to kill such plants and to keep the soil in condition to cause the growth of as many of the weed seeds as possible. Biennials are relatively unimportant and can be controlled by the same methods as the annuals.

Treatment of Perennials

Most perennials reproduce freely by seed and what has been said of annuals applies to them also. But prevention of seed production prevents only the increase of some perennials. It does not kill the root, neither does it prevent the spread by underground parts.

To destroy perennials, two general means are available: (1) dig out all underground parts, (2) starve them by preventing leaf growth. A combination of the two will be used in most cases. leaves are both lungs and stomach to a plant. Without them it cannot live. A starving animal can prolong its life by use of food material in its tissues, and by small amounts of food. So, also, can a plant. Leaf growth can be prevented by smothering with tar paper, straw or heavy growth of other plants, or by repeated cultivation. Hoeing off just below the surface will destroy the roots if done frequently and persistently.

Small patches of quack grass or similar weeds may be dug out by hand. The rootstocks will be broken more or less and pieces left in the ground will continue to grow, so the spot should be revisited every few days until no more growth shows. The plants dug out by hand had best be burned as soon as possible. If left in a pile they will start growing.

In covering with tar paper, care must be taken that the underground parts do not grow out beyond the cover. The ground should be hoed off smooth, the paper lapped sufficiently, and held down securely as by boards weighted with stones. Covering with straw or manure is often a failure in that the weeds are able to grow through or beyond the cover.

Larger areas must receive careful cultivation. If only one side or end of a field is affected, this should be worked by itself to prevent dragging pieces of roots int othe other part of the field. The type of implement used in cultivating should be preferably one which tends to bring the roots to the surface with as little cutting as possible. Persistence is the most important factor however. The amount undertaken should be small enough to permit thorough work.

Quackgrass sod may be mown about June 15, the hay removed and the soil plowed shallow. The sod should be cut sharply, laid flat and well packed down. Double disc whenever growth appears, plow deeper late in August, and continue to disc until the ground freezes. The field may be kept bare or it may be planted to corn if thoroughly cultivated and hand hoed to get all the plants. The second year another cultivated crop may be used or a late heavy seeding of millet or buckwheat. This should be sufficient to clean the ground, but in caseone should watch for the plants, as they will re-establish themselves quickly if not entirely killed out.

Pasturing is a valuable help in many cases. It may be used to weaken the plants previous to attempting eradication, and to prevent seed production. Often there will be a few stalks which will still need mowing to keep them from going to seed. Sheep are the most efficient, as they will nearly destroy the plants by close grazing. A little salt is sometimes scattered on small patches to induce close grazing. Pasturing stubble fields prevents much weed seed formation.

Chemical sprays have received considerable attention as a simple way of destroying weeds, but they have been only partially successful. Broad-leaved plants which are not protected by hairy or waxy coverings are easily affected by such means. Common mustard and kinghead in grain can be killed if the spray is applied before the plants are too old. Hare's ear mustard and Indian mustard are protected by a waxy covering; marsh elder and others by hairs. The leaves of perennials such as dandelion and sow thistle can be killed, but new ones are quickly produced so that the treatment must be repeated several times. Spraying may be practicable for roadsides, fence rows or other places difficult to reach by other means. The chemical most commonly used is sulphate of iron at the rate of 1½ to 2 pounds per gallon of water.

Weed seeds in the ground are eliminated chiefly by keeping the surface soil in good condition for their growth so that the seedlings can be killed. The length of time for which seeds may live in the ground varies much according to the kind of seed, the nature of the soil, and the amount of moisture. Mustard has always attracted attention by its appearance in fields which had no mustard for several or many years. In general, mustard and seeds with thick coats may remain viable for five to eight years or even longer; grass seeds not over two or three years. Most of them retain vitality better in dry soil, and when buried deeply in compast soil. Deep plowing should be avoided when a field has borne a heavy crop of weed seeds. The surface should be worked often in order to cause the growth and destruction of such seed without burying it too deeply to grow. Seeding to grass for several years will kill much of the weed seed in the ground.

Thirty Most Troublesome Weeds Of North Dakota.

To name the thirty worst weeds is a matter of some difficulty, and if several such lists were prepared by different people, probably no two lists would contain exactly the same plants. Some weeds are especially troublesome on certain soils, in certain districts, or in certain crops. Some people are more successful than others in dealing with weeds. Consequently opinions differ as to what weeds are the worst.

Sow thistle, quackgrass and Canada thistle are placed first here on account of the difficulty of eradication due to their spreading from the roots, as well as by seed. With them are discussed several plants often confused with them. Next come field bindweed and leafy spurge—not yet common but needing watching. Then follow the annuals and last, three perennials which differ in habit from the first five.

Some of the annuals—wild oats, Russian thistle, mustards, etc.—probably cause greater losses than sow thistle or quackgrass because of their abundance over larger areas. Thus both present and possible future damage needs to be considered and different weeds are difficult to compare.

Digging for gold and digging merely to produce a ditch are vastly different. Both may require the same amount of physical effort, but the gold digger finds keen enjoyment where the other man only watches the clock and wishes the day were over.

Milking ordinary cows and milking high producing cows are in the same degree and for the same reason vastly different. The average cow of the United States is regarded by the boys on the farm as a necessary evil and few dairymen regard dairying as an interesting game. That is the primary reason why dairying on the average North Dakota farm is not liked.

Fall-bought fruit trees get you the varieties you want without danger of hold-up in deliveries. You can heel them in over winter.

DAIRY FACTS

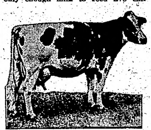
IMPROVEMENT OF DAIRY COW

Department of Agriculture Has Six High-Producing Animals on Its Farm at Beltsville.

(Prepared by the United States Department of Agriculture.)

The improvement of dairy cows means a great deal more than increased profits to the dairyman. It means cheaper food and more milk, the best bone and muscle maker for children. What this improvement means is brought out forcefully by a poster prepared by the United States Department of Agriculture and sent free to interested persons.

An ordinary cow or scrub produces only enough milk to feed five children a quart a day, while a good cow yields enough to give 20 children a quart a day. The supercow, and there are more and more of them in this class each year, gives enough milk so that a small herd of them might supply this quantity to all the small children in a small town.



A High-Producing Holstein.

On its farm at Beltsville, Md., the department has six cows, the result of its breeding work, that have produced an average of more than 22,000 pounds of milk in 365 days. This little herd of six big producers yields enough milk to provide 170 children a quart a day. One of them could supply nearly 30 children, or six times as many as the ordinary cow could take care of.

Good breeding, first, and good feeding, second, have made the difference.

MAKE COW RATION TEMPTING

Animal Will Not Do Well on Food That Is Not Palatable—Avoid Any Sudden Change.

The good dairy ration must be attractive. A cow is a self-respecting sort of animal and she likes palatable food. In fact, a cow will not do well on food that isn't palatable, and it should be remembered that the condition of the food has the most to do with its palatability. Moldy grains or roughages do not appeal to the appetite of the cow, and consequently are unsatisfactory. Thus the unsatisfactory feed, no matter if it does contain the proper elements, may cause a reduction in the milk supply due to the cow's unwillingness to eat a plenty to keep up a good flow of milk.

At the same time it must be recognized that it is not a wise idea to change a ration suddenly in order to make it better. A cow is a pretty delicate sort of a milk-producing machine and, especially if she is a large producer, sudden changes in the food are quite likely to upset her in one way or another, and the result will be a loss of milk.

KEEP FEED UTENSILS CLEAN

Average Farmer Is Liable to Grow Little Careless About Pails in Summer.

Wide-awake dairymen realize the importance of keeping calf feeding utensils scrupulously clean at all seasons of the year. The average farmer, however, may grow a little careless about the calf pail, especially during the warm summer months. These pails should be of tin or galvanized iron, never of wood, and should not be allowed to get rusty or battered. They should be thoroughly washed, rinsed and sterilized after use, and kept in a clean place. Never use calf pails for feeding hogs, or live stock other than calves.

ESSENTIALS FOR DAIRY HERD

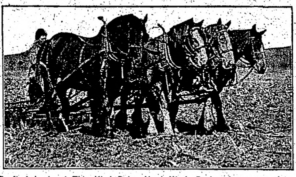
Cows and Young Animals Should Be Provided With Plenty of Pure Water and Shade.

Provide plenty of shade and cool, pure water for the cows and young animals. Spray cows at milking time to keep off flies. Look out for sour milk and cream. Bacteria and warmth cause milk to sour. The modern way to spell bacteria is d-i-r-t. Keep it out of the milk, thoroughly wash and scald all milk utensils. Keep the milk or cream cool, 50 degrees or lower if possible, and it will stay sweet for several days.

WINTER SHOULD BE RESPITE OF FARM ANIMALS FROM PARASITES

(Prepared by the United States Department of Agriculture.)

Most of the domestic animals that are kept on pastures during the summer collect a wide assortment of internal parasites that spend part of their life cycle within the animal and part of it outside. The infection, says the United States Department of Agriculture, usually takes place in warm weather, as at that time there are proper conditions of moisture and temperature for the development of the organisms. In some cases there are insects that act as intermediate hosts for certain parasites and of course during the winter such hosts are not active. Some parasites of horses and cattle are carried by biting insects that introduce them into the blood stream of the animal. Several species of parasites spend part of their life cycle in dung beetles and through these beetles are taken in with grass and get into the digestive tract of the animal. The ordinary house fly is a carrier for one of the stomach worms of the horse. Various kinds of tape worms of poultry spend a period of their existence in house flies, snails and other lower animals. All these worms require also proper conditions of warmth and moisture for their development.



Draft Animals of This Kind Doing Hard Work During Summer Season Are Entitled to Some Care During Winter.

Get Rid of Parasites.

From these facts about the habits of some of the well-known internal parasites of domestic animals it is plain that fall and early winter is the most opportune time to rid the animals of them, and give them a chance to recuperate. Such an interior cleanout also reduces the number of chances of reinfection on the pastures the following spring. Winter is a rest from reinfestation, but because animals have to resist adverse weather conditions it is doubly advisable to get rid of all parasites, to give the animals an opportunity to use their feed in maintaining body temperature and in putting on fat or producing milk.

There are probably hundreds of treatments recommended by various persons for worms, bots, and other parasites, most of which are useless or very nearly so. However, there are certain treatments that have been proved by experiment to be effective for certain parasites. It has been found that bots can be removed from horses by the use of carbon bisulphide. It is given in six-dram doses, in capsules, and a purgative is unnecessary. The horse is usually kept off feed for 24 hours before the capsule is given. This treatment will also get the big round worms that frequently infest the small intestine. To get rid of the round worms that are found in the large intestines, use oil of chenopodium (oil of American wormseed) in doses of 4 to 4½ drams, with a quart of raw linseed oil or an aloes ball.

So far veterinarians have very little to say about the treatment of internal parasites in cattle. Not a great deal of work has been done along this line, but copper sulphate has been found of some use as a treatment for stomach worms.

Control Stomach Worms.

This copper-sulphate treatment for stomach worms is very effective in the control of stomach worms in sheep. A 1 per cent solution in water is the strength usually employed. Three fluid ounces of the 1 per cent solution is sufficient for yearlings and older sheep, and 1½ ounces for lambs three months old and older. At the bureau of animal industry farm at Vienna, Va., this treatment is given once a month through the year, and the treated lambs have made better growth and grown more wool than lambs that were not treated. At the age of one hundred and twenty days, treated lambs have averaged 60 pounds each. Other worms of sheep are hard to get rid of, but carbon tetrachloride gives promise of being effective for many of them.

In the case of swine, oil of chenopodium in doses of one dram for 100-pound pigs, and other doses in proportion, will remove the large round worms from the small intestine. A dose should be accompanied with one to four ounces of castor-oil. This treatment is given with a dose syringe. Although worm treatments are given to hogs in a great many cases in capsules with a capsule gun, there is considerable danger that, owing to the peculiar anatomy of the pig's pharynx a capsule will be put in the wrong place. A great many hogs, say veterinarians in the Department of Agriculture, have been killed in this way.

Treatment for Poultry.

A treatment frequently used for round worms in poultry is made up by soaking a pound of finely chopped tobacco stems in water for two hours and then mixing the stems and the water with half the usual mash ration. This amount is for 100 birds. The feed which is mixed with the tobacco is given after fasting the birds for 24 hours, as usually they will not eat it otherwise. So far no recommendation can be made for ridding hens of other intestinal parasites.

A word of caution is necessary as to the use of remedies for parasites, which applies as well to medicinal treatment generally. Medicinal treatment for parasites and other conditions should be given only by or under the direction of properly qualified and competent persons, otherwise serious damage may be done to valuable animals and little or no benefit result from the treatment.

Watch Markets Closely.

Market fat hogs and grass-finished cattle. Watch the market closely from day to day. Send fat cows that are poor producers to market.

Give Cows Attention.

Look after cows carefully at calving time. Separate them from the herd and provide a clean, comfortable box stall. Watch for milk fever.

FREEZING POINTS OF MANY CROPS

Object of Special Studies in Bureau of Plant Industry.

Experiments Being Conducted With Various Fruits and Vegetables Liable to Freezing in Handling or on Market.

(Prepared by the United States Department of Agriculture.)

The freezing points of a large variety of vegetables and fruits, which are likely to be subjected to freezing conditions during harvesting, handling, or marketing, have been the object of special studies in the bureau of plant industry of the United States Department of Agriculture. Between 15,000 and 20,000 determinations have been made, including the freezing points of 25 varieties of apples, 22 kinds of strawberries, 18 varieties of sweet potatoes, 19 different types of sweet potatoes, 19 tomato varieties, and many varieties of cherries, grapes, peaches, plums, blackberries, raspberries, cranberries, and some cut flowers, particularly peonies, roses, and lilies. Besides this general study, the work is being continued with the principal fruits and vegetables which are liable to be in danger of freezing either in transit or on the market. In this work the methods of detecting freezing injury, the rate at which fruits and vegetables freeze in constant low temperatures are determined.

The freezing points were determined for 18 standard varieties of Irish potatoes, grown under the same cultural conditions, harvested at the same time, and stored at the same temperatures. The freezing point apparently varies with the variety and shows a tendency to vary with the family group. It has been shown that potatoes can frequently be exposed to temperatures much below their freezing points if they are not disturbed until the temperature is again above the freezing point.

POULTRY

TREATMENT FOR SCALY LEGS

Affection Is Common Among Chickens and Is Caused by an Extremely Small Mite.

Scaly leg of poultry is a common and well-known affection of chickens that sometimes causes affected birds to become worthless. It is caused by an extremely small mite that works in and under the crusts that form on the legs. Caraway or sulphur ointment will kill the pests. Scales form at the point of invasion of the insect, and under them the skin is irritated and bloody. Badly affected birds walk with difficulty, and may even lose a toe; later they become thin, lose their appetites and prove worthless.

To treat scaly leg the feet and legs of affected fowls are held in warm water for several minutes, so that the crusts are softened and can be removed. A mite killer is then applied to the dry diseased surface. The following mixtures are recommended: 1, Oil of caraway, mixed in four times as much lard or vaseline; or 2, flowers of sulphur, one dram; carbonate of potash, 20 grains; and lard or vaseline, half an ounce. Some poultrymen have used a mixture of one part of kerosene and two parts of raw linseed oil with speedy effect. The legs of the affected fowls are dipped in this mixture, care being taken that the feathers are not wet.

Bad Case of Scaly Leg.

GARBAGE FED SUCCESSFULLY

District of Columbia Poultry Farm Reports Excellent Results From Waste Material.

A poultry farm in the District of Columbia which handles about 1,000 fowls reports excellent results from the use of well-selected garbage. This material is hauled twice a day and fed to the birds about ten o'clock in the morning and again during the middle of the afternoon so that the table scraps are fed fresh only two or three hours after they are discarded from the kitchen. The feeding method of this poultryman is to scatter the garbage on the grass in such quantities that the fowls will clean up all the refuse. He rotates these feeding spots in such a way that no contamination results. The outstanding feature of the success of this poultryman is centralized in his painstaking selection of the garbage and the elimination of all objectionable material.

Profitable returns have resulted also from the feeding of garbage to fattening cockerels and old hens. A small flock of turkeys is maintained on this farm and the gobblers gobble their way to a front line position when garbage lunch time rolls around. The turkeys keenly relish the table scraps and abandon tender grasshoppers and succulent alfalfa in order to scamper to the feeding spots when the garbage wagon approaches.

RAISE CHICKENS FOR PROFIT

Besides Furnishing Supply of Eggs and Meat for Family Some Can Be Marketed.

Raise more chickens. Besides furnishing meat and eggs for the family a good flock of hens will lay eggs to sell. It costs little to get a good flock started; they live largely on waste for a good part of the year and do not require a large acreage of cleared land for their keep.

Determine Best Laying Hen.

You can help to decide which hens are kept at a loss by going through the house just after dark and feeling the crop of each bird. Those hens whose crops are packed full are in all probability the hens which are laying well. You may well be suspicious of the hen which night after night has only a partly-filled crop.

Mrs. James Wilson of Grygla visited with her daughter, Gladys, Tuesday.

Mrs. A. T. Johnson of Germantown was a visitor at the O. S. Kirklie home the past week.

Albert Arntz, Alfred Olson and Evan Grimley of Highlanding were among the number who attended the political meeting at the Goodridge Hall Tuesday.

Mrs. Marie Linder and daughter, Josie, of Pelican Rapids, Minn., is visiting at the John Dahlen home.

Henry and Charley Berg of Larimore, N. D., are visiting at the Rustad home near Erie.

Mr. and Mrs. Joe Gangness were visitors at Thief River Falls Sunday afternoon.

Mrs. Linder and daughter, Josie, of Pelican Rapids, were guests at the C. O. Stephenson home Tuesday.

Mrs. G. Gunderson visited with her son, Harold, at the Sanitorium Monday afternoon.

Martin Overby returned Monday night from Park River, N. D., where he has been employed.

Miss Maggie Johnson of Highlanding left for Thief River Falls Tuesday morning, where she has been employed.

Ben Habedank of Elbow Lake, Minn., visited with friends here Wednesday. He returned the same evening.

Everett Seavey and Adolph Johnson returned Friday night from Park River, N. D., where they have been employed this fall.

Miss Alice Tenold, a student at the Thief River Falls high school, arrived Thursday to spend the week-end with her parents.

The school children enjoyed a two days' vacation last week on account of the teachers being in attendance at the teachers' convention.

A large number of hunters were seen in town Sunday, most of whom were on their way to the sand ridge in search of partridges.

Misses Mildred Seavey, Clara Ferdinandsen, Geida Gilbertson and Stuart Ferdinandsen, Andrew Kumack, Rudolph Kusmack attended the show at Thief River Falls Sunday evening.

G. C. Gulrud, accompanied by Misses Minnie Lindbloom and Adeline Davids, autoed to Thief River Falls on Thursday. Misses Lindbloom and Davids remained to attend the teachers' convention.

"HIRED MAN" TELLS TROUBLES

Whacks Number of Things Not Entirely to His Liking—Lauds Banner.

By THE HIRED MAN.

Well, I have the boss' harvest all put away and am ready for another long, hard winter.

It's a strange fact but, nevertheless, a fact, that 80 per cent of the people living on homesteads can—if they are worth the powder to shoot them—raise enough garden truck to keep them, but they just will not do that. They must go out to harvest a few days and spend nearly all they make going and coming.

Our postal service is the worst possible. In fact, it is worse than none at all. We sent in a petition with over 30 names to have this postmaster removed, but our letters are held up and opened with as much impudence as ever. It is very hard for me to endure such crooks, as my ancestors helped make this old U. S. what it is in 1776.

It sure did me good to see how The Banner howled for the ex-service men. Our great country is certainly cutting its own throat when, after the way the boys responded to the call, now the President wants to spit in their faces. But the highbrow money thugs may have a chance to make a few more fortunes (in the trenches). It is certainly a disgrace to one of the best countries when our President, after making so many promises to the disabled ex-service men. We may not have enough money to give the boys, but we can—and do—feed the foreign countries that want it or need it, whether they are worthy or not.

Misses Mildred Seavey, Clara Ferdinandsen, Guida Gilbertson and Stuart Ferdinandsen, Rudolph Kusmack and Andrew Kusmack attended the movies at Thief River Falls Sunday evening.

IMPATIENT HORSES GO ON WILD SPREE

Punch New Entrance Into Ford Sedan With End of Wagon-Pole.

Saturday noon a team of horses belonging to Curtis Smith, a farmer living east of town, on the Reservation, was left standing near the Farmers elevator while Mr. Smith was transacting business in the elevator.

After a short time of restless waiting, the horses evidently decided they would like a change of landscape and forthwith dashed across the railroad crossing and turning down Main street past the T. & O. garage, galloped down the street at a good rate of speed and a swerving action that made pedestrians seek the doorways of business places for safety.

The team, with a large lumber wagon thundering behind, mised two automobiles parked close to the sidewalk so narrowly that it seemed an illusion to bystanders to see the Fords still there. The team continued at a breakneck celerity westward along Main street, several times narrowly averting a dash over the sidewalk. At the end of the block the team turned suddenly and dashed squarely into P. O. Tvedt's Ford Sedan, which was parked close to the sidewalk in front of the lumber yard, and at a rate of speed which looked bad for the future of the animals.

The pole of the wagon penetrated the rear of the car, making a hole in the body about two feet square and skidding the automobile a distance of six or seven feet. Also the plate glass in the sedan was demolished and many minor damages sustained. The only damage sustained by Mr. Smith was a broken pole, the team in no way being injured in their collision with the machine.

Rev. George Larson will hold services at the Lutheran Free Church on Sunday, October 29, at 2:30 P. M.

SCHOOL PATRONS

One of the problems that a teacher has to contend with is that connected with fair marking and the progress of pupils through a course of study.

Once, and often twice each year, the teacher of each class must arrange the pupils in two grades—those above and below the passing mark. It is a disagreeable task to place any of the pupils in the latter group, but at times it is necessary due to various reasons.

The report cards sent out last week indicate that the marks on the whole are rather low for the first six weeks period. One cause of these low marks may be due to lack of home work. The work of the high school cannot be done successfully during the hours of school alone. It demands as the minimum two hours of honest study every day in the home. The parents whose child is not giving from an hour and a half to two hours, or even two and a half hours, to effective high school study each day in the home, may be assured that their child is not doing efficiently the work of a high school course. Many of the pupils are liable to take the easiest course thru school and be satisfied just with a passing mark unless advised differently by the teachers, as well as by the parents. The easiest course is not always the wisest policy.

At the beginning of every school year there is a large number of high school graduates entering the Freshman class at the State University. By the end of the first quarter many of these have been "weeded out" on account of their poor grade of work. Records will show that about nine out of every 10 who were eliminated were the ones who followed the easiest course through high school.

Superintendent Webster of the Minneapolis schools, in his talk at Thief River Falls during the M. E. A., said: "If I had a son attending college and he came home in a coffin marked, 'Dead, Due to Overwork,' I would be proud."

This is a statement well worthy our attention. If more of us would take that same attitude, we could look for better results in our schools.

Another cause of low marks is that of irregular attendance. The total number of days lost by all the high school pupils for the first six weeks' period amounts to 114, or 7.9 per cent of the total number of days taught for all the pupils in the high school. In the 7th and 8th grades the attendance has been less regular. For the same period the total number of days lost by all the pupils in these two grades counts up to 171, or 20.3 per cent of the total number of days taught for all the pupils in these two grades. The reason for such a high percentage in these two grades is due to two extreme cases. These figures show that the attendance has not been what it should be and needs the attention of the parents. The child needs the best education that can be given him.

Begin by seeing to it that he goes to school regularly.

—E. J. ERICKSON.

Many Thief River Falls Visitors at Harvest Fest

John Gullingsrud, county treasurer, and family were among the number of county seat visitors who came to this village Sunday to attend the Union Harvet Festival. Mr. Gullingsrud was well pleased at the good attendance and stated that if ever he received his money's worth in his life before, he did when the ladies furnished him with a spring chicken dinner at the nominal fee of 30 cents and is only awaiting the time when he can come again.

Parcel Shower Is Given Newly Married Couple

A parcel shower was given at the Goodridge hall Tuesday evening in honor of Mrs. Henry Iverson (nee Christina Bundhund). Twenty-one of her young lady friends gathered to wish her a long and happy married life. The evening was spent in playing games and dancing, also a mock wedding was staged that caused much merriment. At midnight an excellent luncheon was served, after which the guests retired to their respective homes. Mrs. Iverson received many beautiful and useful gifts.

John Hoppe was a Thief River Falls visitor Friday.

TO THE VOTERS OF THE 65th DISTRICT.

Being under the impression that a short statement regarding the senatorial campaign by me at this time may be due the voters, I am submitting this through the columns of the local newspapers, hoping that same will be received by the voters in the same spirit as it is written.

I have tried my very best to bring Mr. Hansen's candidacy before the voters in such a manner that there would be no reason in any way to bring personalities into the campaign. I defy anybody to prove that there ever has been a word of personal criticism, except as to the opposition's record in the state senate, ever uttered by me or Mr. Hansen. We are sorry to state that this cannot be said regarding Mr. Hansen's opponents. There has been considerable mudslinging, even Mr. Hansen's friends being subjected to accusations and villifications for which there absolutely was no foundation. We are not going into details about those things as we consider it too ridiculous to even mention, but we want to go on record right here that we know every statement made by the opposition regarding the personal character and Mr. Hansen's method of conducting the campaign to be absolutely false and deliberate, outright lies.

I have known Mr. Hansen for the past 27 years. Have also been a resident of this community myself for about 40 years and I know the district and the conditions of same as well as anybody. My reason for favoring Mr. Hansen for state senator is because in my opinion he can accomplish more for the benefit of the agricultural interests of the district than any other man that could be persuaded to run for this office. The fact that he is engaged in the banking business is no crime and there is no question in my mind that a banker at the present time will work harder than anybody else to bring about conditions favorable to the farmer. Bankers in this section and in every agricultural section of the state are dependent on the prosperity of the man engaged in agriculture. Mr. Hansen has influence and if he is elected he will represent the people of the 65th District, not a certain clique or political organization. His hands are not tied and he is responsible only to the people at home. This is my opinion in this matter and we know it to be a positive fact that the same opinion is held by a large number of men and women throughout the district. Many of these people are devoting their time and going out of their way to bring Mr. Hansen's candidacy before the public, and they would not do this unless they were sincere in their opinion that he is the logical man for the office.

I am submitting this statement to the kind consideration of the voters. Although unfortunately I am no writer but I hope that I have made my stand in the matter clear.

Thanking you, I remain, Yours for the best interest of the 65th District,

PETER ENGELSTAD.

Thief River Falls, Minn.
October 23, 1922.

ALLIASON-JOHNSON MARRIAGE FRIDAY

Couple to Make Home on Groom's Farm Near Highlanding.

Andrew Johnson and Clara Alliason, both of Highlanding, were married on Friday, October 20, by Judge Tarrant of Thief River Falls.

The ceremony was performed in the presence of Mrs. Henry Alliason, the mother of the bride, and Edwin Alliason, a brother. They returned immediately after the ceremony to Mr. Johnson's farm home, where they will make their future home.

The bride is a daughter of Mr. and Mrs. Henry Alliason, old and well known settlers of the Highlanding community.

The bridegroom is a well known farmer, having resided here for some time.

Their many friends in this county join in extending congratulations and best wishes for a long and happy married life.

Successful Harvest Fest Is Held Here Sunday

The Union Harvest Festival held at Goodridge last Sunday was a big success. A crowd of more than 300 persons were present.

Many noble ideas and inspiring thoughts were uttered through the forenoon sermon delivered by Rev. G. A. Hanson and Rev. T. E. Sweger's address of the afternoon. The singing was also rendered in a splendid manner. And last, but not least, the bounteous dinner added to the people's good feeling.

NUMBERS ATTEND HARVEST FESTIVAL

"Chicken Dinner, 30 Cents" Causes Guests to Forget High Cost of Living.

The Union Harvest Festival held in Goodridge Sunday was in every way a grand success. A large crowd was in attendance despite the inclement weather and everyone reported an excellent time. The participants in the Fesival cannot be too highly eulogized for their efforts, especially he ladies who undertook the task of furnishing the food for the crowd. The net proceeds of the dinner amounted to $73.81

The Festival started at 11 o'clock when Rev. G. A. Hanson, a former pastor here, officiated, and was ably assisted by he Bethania and Erie choirs. These choirs each rendered a number during the services and their efforts were highly appreciated. Immediately after the services the people retired to the schoolhouse, where they took part in a sumptuous chicken dinner. The larke building was filled to its utter capacity, some of the people having to wait in line for more than an hour before being able to get a chair in he dining hall. Three table settings were necessary before the crowd could be fed.

After everyone had appeased their appetites, the crowd was invited to the second floor, where they enjoyed the following program:

Address of welcome, Rev. V. O. Aaker; song by the Erie choir; Scripture reading prayer, Rev. G. A. Hanson; song, Bethania choir; address by Rev. T. E. Sweger of Thief River Falls; song by the combined choirs of Bethania and Erie; word of thanks, Rev. V. O. Aaker; song by nine little girls.

P. O. Tvedt and H. W. Boyd, salesman for the Hudson Manufacturing Company, autoed to Grygla Tuesday.

LUTHER LEAGUE HAS SUCCESSFUL MEETING

Mr. and Mrs. Henry Iverson Presented With Gift by Society Membership.

The Luther League held its regular monthly meeting Wednesday evening, October 18. A large number of young and old people were in attendance and the following program was delivered:

Song, Luther League; Scripture reading, Rev. V. O. Aaker; vocal solo, Miss Minnie Lindbloom; reading, Mrs. Bennie Johnson; duet, Miss Myrtle Iverson and Mrs. Henry Iverson; reading, Mrs. E. J. Erickson; song, Eunice Thoreson, Tena Gaudland and Ruth McDonald; talk, Rev. V. O. Aaker; minutes of the previous meeting were then read by the secretary.

This was followed by a business meeting and the following new committees were elected: Program committee, Myrtle Iverson and Cora McEnelly; refreshment committee, Mrs. Gaudland and Mrs. Mandt; membership committee, Miss Nellie Wiseth and Miss Thelma Gilbertson.

The Luther League then presented to Mr. and Mrs. Henry Iverson a gift as a token of their best wishes for the future.

Immediately following the program a delicious lunch was served at a cost of 10 cents a plate.

IMMIGRANTS ARRIVE.

An immigrant car from Detroit, Minn., containing the household furnishings of Carl Rowberg and family, was brought into Goodridge Wednesday morning. The new arrivals will settle on a farm near Thorhult and the hauling of the furniture was commenced Wednesday afternoon.

Mr. and Mrs. Cy Thompson of Minneapolis have been visiting at the home of Mr. and Mrs. Theodore Tandberg the past week.

CHAPTER XV

—21—

When the Heavens Fall.

The chief of police entered the office of Jachin Fell, high in the Maison Blanche building, at eight o'clock on Friday evening. Mr. Fell glanced up at him in surprise.

"Hello, chief! What's up?"

The officer gazed at him in astonishment.

"What's up? Why, I came around to see you, of course!"

Jashin Fell smiled whimsically. "To see me? Well, chief, that's good of you; sit down and have a cigar, eh? What's the matter? You look rather taken aback."

"I am," said the other, bluntly. "Didn't you expect me?"

"No," said Jachin Fell, halting suddenly in the act of reaching for a cigar, and turning his keen gaze upon the chief. "Expect you? No!"

"It's darned queer, then! That chap Gramont called me up about ten minutes ago and said to get around here as quick as I could make it, that you wanted to see me."

"Gramont!" Jachin Fell frowned. "Where's Ben Chacherre? Haven't you found him yet?"

"Nary a sign of him, chief."

The door opened, and Henry Gramont appeared, his right hand bandaged and in a sling.

"Good evening, gentlemen!" he said, smiling.

"Here's Gramont, now!" exclaimed Fell. "Did you call the chief over here—"

"I sure did," and Gramont came forward. "I wanted to see you two gentlemen together, and so arranged it. Miss Ledanois is to be here at nine, Fell?"

The little man nodded, his eyes intent upon Gramont. He noticed the bandaged arm.

"Yes. Have you been hurt?"

"Slightly." Gramont brought up a chair across the desk from Fell, and sat down. He put his left hand in his pocket and brought forth a document which he handed to the chief of police. "Cast your eye over that, chief, and say nothing. You're here to listen for the present. Here's something to cover your case. Mr. Fell."

Gramont produced his automatic from the pocket of his coat, and laid it on the desk before him. There was a moment of startled silence. The officer, looking over the paper which Gramont had handed him, seemed to find it of sudden, intense interest.

"What means all this mystery and melodramatic action, Gramont?" demanded Jachin Fell, a slight sneer in his eyes, his voice quite toneless.

"It means," said Gramont, regarding him steadily, "that you're under arrest. I went out to the Gumberts place on Bayou Terrebonne this morning, arrested Memphis Izzy Gumberts and four other men engaged in operating a lottery, and also arrested two mechanicians who were engaged in working on stolen cars. We took in, further, a gentleman by the name of Dick Hearne; a lesser member of the gang, who is now engaged in dictating a confession. Just a moment, chief! I prefer to do the talking at present."

Gramont smiled into the steady, unfaltering eyes of Fell.

"You are next on the program," he said, evenly. "We know that you are at the head of an organized gang, which is not only operating a lottery through this and adjacent states, but also is conducting an immense business in stolen automobiles. Therefore—"

"Just one minute, please," said Jachin Fell. "Do you forget, Mr. Gramont, the affair of the Midnight Masquer? You are a very zealous citizen, I have no doubt, but—"

"I was about to add," struck in Gramont, "that your pleasant friend Ben Chacherre is charged with the murder of the sheriff of Terrebonne parish, in which I have clear evidence against him, having been present at the scene of the crime. He is also charged with the murder of Joseph Maillard—"

"My heavens!" said Fell, staring. "I never dreamed that Chacherre—"

"Perhaps you didn't." Gramont shrugged his shoulders. "Neither did anyone else. I imagine that Ben learned of this room and drinking party, and rightly decided that he could make a rich haul off a small crowd of drunken young sports. He had the costume stolen from my car, as you know; also the automatic which went with it. Two shots were missing from the automatic when we found it in Ben's possession; and you remember the Masquer fired twice at the time Maillard was killed."

Fell's keen eyes sparkled angrily.

"You're a very zealous citizen, young man," he said, softly. "I see that you've been hurt. I trust your little game did not result in casualties?"

Gramont nodded. "Charlie the Goog went west. He was desperate, I fancy; at all events he got me in the arm, and I had to shoot him. Memphis Izzy hardly justified his tremendous reputation, for he yielded like a lamb."

"So you killed the Goog, eh?" said Fell. "Very zealous, Mr. Gramont! And I suppose that the exigencies of the case justified you, a private citizen, in carrying arms and using them? Who aided you in this marvelous affair?"

"A number of friends from my post of the American Legion," said Gramont, evenly.

"Ah! This organization is going in for politics, then?"

"Not for politics, Fell; for justice. I deputized them to assist me."

"Deputized!" repeated Fell, slowly.

"Certainly." Gramont smiled. "You see, this lottery business has been going on for a year or more. Some time ago, before I came to New Orleans, the governor of this state appointed me a special officer to investigate the matter. There is my commission, which the chief has been reading. It gives me a good deal of power, Fell; quite enough power to gather in you and your bunch."

The chief of police looked very uneasily from Gramont to Jachin Fell, and back again. Fell sat erect in his chair, staring at Gramont.

"You were the original Midnight Masquer," said Fell in his toneless voice. At this direct charge, and at Gramont's assent, the chief started in surprise.

"Yes. One reason was that I suspected some one in society, some one high up in New Orleans, to be connected with the gang; but I never dreamed that you were the man, Fell. I rather suspected young Maillard. I am now glad to say that I was entirely wrong. You were the big boss, Fell, and you're going to serve time for it."

Fell glanced at the chief, who cleared his throat as if about to speak. At this moment, however, a sharp knock sounded at the door.

"Come!" called Gramont.

A man entered. It was one of Gramont's deputies, who happened also to be a reporter from one of the morning papers of the city. He carried several sheets of paper which he laid before Gramont. He glanced at Fell, who recognized him and exchanged a nod of greeting, then returned his attention to Gramont.

"Ah!" said the latter with satisfaction, as he examined the papers. "So Hearne has given up everything, has he? Does this confession implicate Mr. Fell, here?"

"Well, rather," drawled the other, cheerfully. "And see here, cap! There are two more of us in the crowd and we've arranged to split the story. We'd like to rush the stuff to our papers the minute you give the word, because—"

"I know." Gramont returned the papers that bore the confession of Hearne. "You've made copies of this, of course? All right. Shoot the stuff in to your papers right away, if you wish."

Fell raised a hand to check the other.

"One moment, please!" he said, his eyes boring into the newspaper man. "Will you also take a message from me to the editor of your newspaper—and see that it goes to the others as well?"

"If Mr. Gramont permits, yes."

"Go ahead," said Gramont, wondering what Fell would try now. He soon learned.

"Then," pursued Fell, evenly, "you will kindly inform the editors of your papers that, in case my name appears in connection with this matter, I shall immediately institute suit for libel. No matter what Mr. Gramont may say or do, I assure you fully that no publicity is going to attach to me in this matter. Neither, I may add, am I going to be arrested. That is all, sir."

Gramont smiled. "Take the message if you see fit, by all means," he said, carelessly. "You may also take my fullest assurance that within twenty minutes you will observe Mr. Fell safely in jail. That's all."

The newspaper man saluted and departed, grinning.

Gramont leaned forward, the harsh lines of his face spelling determination as he looked at Jachin Fell.

"So you won't be arrested, eh? Let's see. I know that this gang of yours has influence running up into high places, and that this influence has power. That is why I was appointed to investigate this lottery game secretly, and in my own way. That is why, also, I brought the chief of police here tonight."

He turned to the perturbed officer, and spoke coldly.

"Now, chief, you've seen my authority, you've heard my charges, and you know they will be proved up to the hilt. Are you willing to arrest Jachin Fell, or not?"

The chief cleared his throat.

"Why, Mr. Gramont," he observed, nervously, "about the rest of the gang, we'll take care of 'em, sure! But it's different with Mr. Fell, here. He's a friend of the senator—"

"Different, h—ll!" snapped Gramont, angrily. "He's a criminal, no matter who his friends may be, and I have the proof of it!"

"Well, that may be so," admitted the chief of police. "But this thing is goin' to raise a h—l of a scandal, all up and down the state! You know that as well as I do. Now, if I was you, I'd act kind of slow—"

Gramont smiled bitterly.

"Perhaps you would, chief. In fact, I don't doubt that you would. But you are not me. Now, as a duly-appointed officer acting under authority of the governor of the state, I call upon you to arrest this criminal, and I make you duly responsible for his safe-keeping. Do you dare refuse?"

The chief hesitated. He looked at Fell for help, but none came. Fell seemed to be rather amused by the situation.

Gramont leaned back in his chair. The purpling features of the chief were streaming with perspiration; the man was in a frightful dilemma, and his plight was pitiable. At this instant Jachin Fell interposed.

"Let me speak, please," he said, gently. "My dear Mr. Gramont, it has just occurred to me that there may be a compromise—"

"I'm not compromising," snapped Gramont.

[illegible] at Baton Rouge [illegible] With them also is Senator Flaxman, who has come from Washington on the same errand. Now it would be a very simple matter to end all this anxiety. Suppose that you call up the governor on long distance, from this telephone, and get his assurance that I am not to be arrested. Then you'll be convinced."

Gramont laughed with deep anger.

"You gangsters are all alike!" he said, turning to the desk telephone. "You think that because you have planted your slimy tentacles in high places you can do anything with absolute impunity. But the governor of this state is not in your clutches.

"He's a man, by heaven! I have his assurance that he'll prosecute to the limit whoever is behind this criminal gang—and he keeps his word! Don't think that if your friend the senator is with him, you will be saved. I'll call him, if only to show the chief, here, that influence is not going to count in this game."

Gramont took down the receiver, called long distance, and put in a hurried call for the executive mansion, asking for the governor in person.

"So you think that he's immune from influence, do you?" Jachin Fell smiled patronizingly and lighted a fresh cigar. The chief of police was mopping his brow.

"My dear Gramont, you exhibit a youthful confidence in human nature! Let me topple your clay-footed idol from its pedestal in a hurry. Mention to the governor that you have me under arrest, and that I have asked him to speak with Judge Forester and Senator Flaxman before confirming the arrest. I'll wager you five hundred dollars—"

The telephone rang sharply. Taunted almost beyond endurance, Gramont seized the instrument and made answer. In a moment he had the governor on the wire. His gaze went exultantly to Fell.

"Governor, this is Henry Gramont speaking," he said. I've just succeeded in my work, as I wired you this afternoon—no, hold on a minute! This is important.

"The head of the entire gang is a man here in New Orleans by the name of Jachin Fell. Yes, Fell. I find it very hard to get him arrested. Fell boasts that his influence is superior to any that I can bring to bear. He asks that you speak with Judge Forester and Senator Flaxman before confirming the arrest, and boasts that you will order me to keep my hands off.

"Speak with them, governor! If they're in the gang, too, don't you worry. You confirm this arrest, and I'll put Fell behind the bars if I have to turn all New Orleans inside out. Go ahead! I know you can't be reached by any of these crooks—I'm merely calling Fell's bluff. We have the chief of police here, and he's sweating. Eh? Sure. Take as long as you like, governor."

He smiled grimly at Jachin Fell as he waited. Two minutes passed—three—four. Then he heard the voice of the governor again.

"Yes?"

"Don't arrest him, Gramont."

"What?" Gramont gasped.

"Don't touch him, I said! Get in all the others, no matter who they are, but leave Fell alone—"

"You d—d coward!" shouted Gramont, in a heat of fury. "So this is the way you keep your promises, is it? And I thought you were above all influences—real American! You're a h—l of a governor—oh, I don't want to hear any more from you."

He jerked up the receiver.

There was a moment of dead silence in the room. The chief mopped his brow, in evident relief. Jachin Fell sat back in his chair and scrutinized Gramont with his thin-lipped smile.

Gramont sat helpless, wrung by chagrin, rage and impotency. There was nothing he could say, nothing he could do. The man behind him had failed him. The entire power of the state, which had been behind him, had failed him. There was no higher power to which he could appeal, except the power of the federal government. His head jerked up sharply.

"Fell, I've got evidence on you, and I've got the evidence to put this lottery business into federal hands. Boys! come in here!"

At his shout the door opened and two of his men entered. Gramont looked at the chief.

(TO BE CONTINUED.)

Wall-Paper Collecting.

The hobby of collecting wall paper had a distinguished pioneer in Sir Walter Scott, who in one of his letters narrates his delight in a gift which came to him when he was adorning Abbotsford. He was in a quandary as to an appropriate wall decoration for his "with-drawing room," which, with the library, was to be the most distinguished chamber in the mansion. Tapestry ran to too great a price, and as for ordinary designed wall-papers, they were lacking in distinction. But a friend who had sojourned for long in the East, and had brought home a collection of oriental objects, found among them a number of rolls of gilt Chinese paper, adorned with dragons and other reptiles of the imagination. He offered the rolls to Sir Walter, who saw that the design the very thing that suited. The paper stands today almost as fresh as when it was put up in the "Wizard's" baronial hall.

Faith That Sticks.

Many people seem to have lost faith in everybody except the fellow who promises to make them rich quick.—Toledo Blade.

RADIO

SIMPLE ANTENNA IS BEST FOR AMATEUR

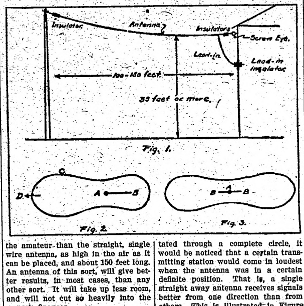
Straight, Single Wire Type, Placed High, Is Preferable for the Receiving Set.

It is estimated that in one year's time from 700,000 to 1,000,000 new radio receivers were installed in the United States and from observation it would appear that there were almost as many different styles of antennae erected as there were sets installed. This, too, despite the fact that the country was flooded with literature telling each and every citizen how to build his own set.

These cage, flat-top, multi-wire, umbrella, etc., kinds of antenna were designed primarily for their sending characteristics. Remember that, in the beginning of radio, the man who wanted to hear wireless signals had to know quite a bit about practical radio. He had to know the Continental and Morse codes, and in addition to be a fairly decent sort of mechanic. He was, in short, the radio amateur, who wanted to send as well as receive. Therefore all this early literature was for the man who wanted to send as well as receive.

Since radiophone broadcasting was first started, there has grown up another army of radio enthusiasts, greatly outnumbering the pioneer amateurs, who do not want to send at all, but who do wish to receive. Therefore much of this early literature does not apply, or more correctly, all of it does not apply, to the new generation.

In building an antenna, remember that nothing is more satisfactory for the amateur than the straight, single wire antenna, as high in the air as it can be placed, and about 150 feet long. An antenna of this sort, will give better results, in most cases, than any other sort. It will take up less room, and will not cut so heavily into the owner's finances.



The function of the antenna for a receiving set is to absorb the maximum amount of energy radiated from a transmitter. This means that it must be so built and placed as to be as efficient as possible. The factors governing the type of aerial to be erected are as follows:

Amount of space available.

The amount of money which is to be spent.

The wave-length range which is to be received.

The distance from which signals are sent.

An aerial possesses both distributed capacity and inductance, which combined give it a defined period of oscillation. These oscillations will set up a wave motion the length of which is related to the capacity and inductance by a formula which can be closely approximated by multiplying the length of the antenna in feet, plus the length of the lead-in in feet, by 1.22. This wil give the fundamental wave length of the antenna.

No matter what kind of antenna is used it must always be remembered that the lead-in should be as short and as direct as possible. In other words, don't use up any unnecessary energy received in the antenna to force a way through a long lead-in to the receiver.

If a multi-wire antenna is used, have the lead-in consist of as many wires as are in the antenna. These wires should be wrapped together at a point a few feet from the antenna and brought into the receiving set as a cable. Where this cable passes through the walls of the building, it should be insulated with porcelain tube or standard electrose lead-in insulators.

Be careful to keep the lead-in as far as possible from electric light wires, telephone wires, etc. If this is not done, an objectionable 60-cycle hum may be heard in the phones, caused by electric light induction.

The ground connection should also be as short and direct as possible. Service water pipes or gas pipes make excellent grounds, and should be used in all cases where available. All connections in the ground lead-in should be soldered, especially the connection to the actual ground pipe. If this is not done, the general resistance will so decrease the strength of the received signals as to make them almost inaudible.

If water pipes are not available for a ground, bury from eight to ten feet [illegible] ground.

All outdoor receiving or transmitting antenna should be protected by some form of lightning arrester or switch approved by the National Board of Fire Underwriters. This switch must have at least a capacity of 100 amperes, 600 volts, and must be supported at least five inches from the side of the building. The ground connection from the switch consists of No. 10 B. & S. gauge copper wire, also supported five inches from the building.

If the antenna is to be used for receiving only, any one of the numerous approved lightning arresters now on the market will be satisfactory. However, these cannot be used for a transmitting station, as the current put into the antenna by the transmitter is in effect a miniature lightning discharge and would escape to the ground through the arrester.

One of the most satisfactory antenna for short wave reception consists of a single wire, 100 to 150 feet long, supported at least 40 feet above the ground, with the lead-in taken from one end. This wire should be placed so that it is free from all obstructions, such as trees and houses. If power or high tension transmission lines are in the immediate neighborhood of the antenna, it should be placed as nearly at right angles to the power lines as possible, in order to reduce the 60-cycle induction.

No. 12 or No. 14 hard drawn copper wire, or copper clad or copper weld of the same gauge make a very satisfactory antenna. Furthermore, this wire is strong enough to support itself, and will stand up in weather of all kinds. Phosphor bronze wire or standard copper cable has a higher tensile strength than a single wire, and therefore long spans may be safely made, but the receptional qualities of these wires are not noticeably superior to the wires first mentioned.

If a single wire antenna were rotated through a complete circle, it would be noticed that a certain transmitting station would come in loudest when the antenna was in a certain definite position. That is, a single straight away antenna receives signals better from one direction than from others. This is illustrated in Figure 2, which shows the directional characteristics of this type of antenna. "A" shows the lead-in and "B" the direction in which the antenna is stretched.

If a transmitting station of constant power were moved around the receiver along the path of the curved line "C," the signals from this transmitter would come in with equal intensity at all positions. Conversely, stations from the direction "D" will be received over greater distances than those in any other direction. Keep in mind the direction of the transmitting station from which it is desired to catch signals and point the free end of the antenna away from the station.

If the lead-in is brought in from the center of the antenna, its fundamental wave length will be decreased, and its directional characteristics will be similar to that shown in Figure 3.

RADIO FLASHES

New York is to have a permanent radio fair.

A reformed burglar is broadcasting a talk on how to beat crime and criminals.

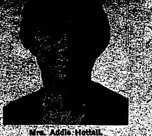
Sir Oliver Lodge hopes to cure protracted droughts in England by using radio to electrify the atmosphere.

A camper at Cayuga Lake, N. Y., with a makeshift aerial, was astonished to hear a concert broadcast at Louisville, Ky.

At a meeting of the Rotarians at Ithaca, N. Y., the proceedings were conducted by the absent president by means of radio.

If it is possible, incorporate in your detector circuit an eight or ten-volt meter for obtaining constant voltage operation of your detector tubes. The life of your tubes will be increased about three times by careful operation under this plan.

A system of wireless telephony now connects the Turks islands and the Caicos islands in the West Indies, the same installations being used also for wireless telegraph and for communication with ships. The distance covered by the radio-telephone circuit is about twelve miles.



Mrs. Addie Hottell.

Minneapolis, Minn.—"I want to make this public expression of what Dr. Pierce's medicines have done for me. Some years ago I was in a weak, run-down condition with neither strength nor ambition. A neighbor suggested that I take Dr. Pierce's Golden Medical Discovery. I secured a bottle from the drug store and this was so helpful that I had no need of a second bottle. To those whose condition needs building up I can and do recommend Dr. Pierce's Golden Medical Discovery."—Mrs. Addie Hottell, 711 Buchanan St., N. E.

Gain health and vitality by obtaining Dr. Pierce's Discovery at your drug store, in tablets or liquid.

SPOHN'S DISTEMPER COMPOUND

A safe, dependable and effective remedy for Coughs, Colds, Distemper, Influenza, Heaves and Worms among horses and mules. Absolutely harmless, and as safe for colts as it is for stallions, mares or geldings. Give "Spohn's" occasionally as a preventive. Sold at all drug stores.

Bright Idea.

An Evansville young man, whenever out of the city, instead of writing to his best girl, sends her every few days a box of candy. She is delighted with his plan and boasts of it to her girl friends, who straightway hint to their admirers to do the same.

One of the admirers went to the first-named young man on his return from one of these trips and made complaint of this habit of his. "The other girls are expecting us fellows to do it, too," he said. "We can't see why you do it. It's expensive and—"

"Yes," admitted the candy sender, "it is expensive, but it's mighty safe. Candy could never tell tales in a breach-of-promise suit."—Indianapolis News.

An insignificant little pin in a woman's belt often disturbs a man's mental poise.

Women have no business in politics until they are able to throw mud straight.

NEW PREMIER OPPOSES WARS

Choice of Bonar Law to High Post Means Abstinance From Foreign Affairs.

CONSERVATIVES RULE

Adventures of Lloyd George Government Forced Climax, and People Demanded Change in Foreign Policy.

London—The succession of Andrew Bonar Law to the premiership means that the British empire will be led back firmly by a master hand to a course of traditional conservatism in international affairs, which means abstinence from adventure abroad, determination not to mingle in the affairs of other nations and a fixed policy of maintaining the historic traditions of the British empire.

It is an old truth that wars and international complications have been studiously avoided by the conservatives. Whenever they have been out of power the nation has become entangled abroad and, in the end, it has been the conservative element on whom has fallen the task of extrication.

The adventures of the Lloyd George government brought things to a climax and forced the conservative majority in the coalition to assert its principles. The crash was inevitable.

Bonar Law represents in the fullest sense the true, unalloyed policy of Britain's ancient conservatism. He is a careful, conscentious thinking man who never acts on impudse. If anything, he errs on the side of caution.

No Speculator.

He is imbued with the spirit of the old Scotch covenanter. He has no sympathy with international speculation. His premiership will be remarkable more for steady, unswerving determination first, to get the house in order before attempting to put on decorations.

So far as his attitude toward the United States is concerned, his understanding of and sympathy for the American democracy is deep and well founded. He, perhaps more than any other statesman, understands the American people, their hopes and their aspirations, and it is regarded as a magnificent augury for an even closer understanding between the two great democracies that Bonar Law should be the first minister of the British democracy.

NORTH DAKOTA MINE FIRED

Aberdeen, S. D.—The Haynes coal mine at Haynes, N. D., one of the biggest working mines in the Northwest, is afire, the result of alleged malicious mischief on the part of a workman, who is reported to have been apprehended and to have entered a plea of insanity due to shellshock.

The mine has not ceased operation, it was reported. The fire is in a deserted cavein in the mine, and the plans are to block the entrance to the mine proper with a concrete wall. North Dakota fire apparatus is to be on the ground to fight any fire that approaches the tipple.

INDICTMENTS ASKED IN CASE

New Brunswick, N. J.—Developments in the investigation of the murder of Rev. Edward Wheeler Hall and Mrs. Eleanor Reinhardt Mills center about the sitting of the Somerset county grand jury at Somerville when it is learned indictments against at least two persons, probably a man and a woman, will be asked by County Prosecutor Beekman.

Confident that he has built up a stronger case than is generally believed, Prosecutor Beekman has questioned several of the newer figures in the mystery. He disclosed nothing of the results, nor the identity of the two persons said to be eyewitnesses of the double slaying, upon whose testimony he is believed to rely greatly in obtaining the indictments.

HOOPER, JEWELL MAKE UP

Chicago—For the first time since he issued the call for the federated shopcrafts to walk out on July 1, B. M. Jewell, president of the organization, called on the United States railway labor board, holding a lengthy conference with Chairman Ben W. Hooper. President Jewell notified Chairman Hooper that he shopcrafts within a few days would present a petition to the board for reopening of its case against the New York Central involving establishment of the piecework system in shops at Elkhart, Ind.

Missing Teacher Is Found.

Minneapolis — Lorraine Schneider, school teacher of Avon, Minn., who disappeared from a hotel here several months ago, is working in a Minnesota rural community under an assumed name and does not wish here whereabouts to become publicly known, it has been learned here. Miss Schneider was previously reported to have sought refuge in a convent. "Gossips" in her home town were responsible for her leaving home, Miss Schneider said in messages to her parents, who have kept in touch with her.

10 Cents Insures Fresh Charm to Old Shawls

PUTNAM FADELESS DYES—dyes or tints as you wish

AND THEY GET AWAY WITH IT

Truly, the Female of the Species Is More Fortunate Than the Inferior Male.

Two cases in Judge Chesebro's court.

First, the graceless male arrested for speeding after having imbibed two glasses of claret, $250 or 180 days in jail.

Second the graceful maiden who drove her limousine into a man, failed to stop and render assistance, bumped into a cab and hit a flivver. And all without a drop of claret. Ten days in jail—suspended.

The graceless male might have done a lot of damage, of course, but actually his guilt was confined to "reckless driving."

The graceful female did do a lot of damage. But, of course, she never meant to, and she couldn't help it, and she was nervous, and there were tears in her eyes instead of claret on her breath, so there you are!

Votes for women. The ladies, bless 'em!—Los Angeles Times.

Always Hopeful.

"I tell you there is no oil here."

"Well, if we don't strike oil maybe we'll strike ore."

Never laugh when a boy takes you into his confidence. It's like pulling teeth for him to do it.

COPPER ALWAYS IN DEMAND

Durability of the Metal Has Made It Almost Indispensable for Variety of Purposes.

The many uses of copper may be imagined from the size of the output. It is said that if the United States were to cease producing, either all the trolley cars or all the armies of the world would cease operating, for outside of Michigan and Montana there is not enough copper in existence to supply both.

In the building trade copper is in great demand on account of its durability. At first glance the amount of copper seems to be negligible in comparison with iron and steel. It is used for such things as roofing, flashings, cornices, gutters, drain pipes, leaders and ventilators. These are nearly all copper in the large office buildings. In the Woolworth building, in New York, which is today the world's tallest skyscraper, there is approximately a million pounds of copper used for roofings, elevators and interior decoration.

Divided Work.

"Does your wife drive the car?"

"Oh, no. I'm the driver. She's the director."—New York Sun.

There may be people who constantly live in a state of mind that to you is only a mood.

WHERE FORMALITY IS WAIVED

Introductions Not Absolutely Demanded When Gentlemen Engage in Game of Craps.

Abe Jockson (colored) was indicted for stealing money from the station agent of a railroad. As the railroads were then under the control of the government, the trial was in a United States court.

The station agent, who was white, testified that he did not know Jackson and had never seen him before the day of the theft.

Jackson's defense was ingenious. He did not deny that he got the money from the agent, but claimed that he won it.

The presiding judge seemed astounded at the defense, and asked: "Do you mean to tell me that you won this money from the agent shooting craps?"

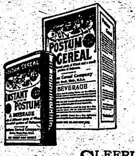
"Yes, suh."

"Why, the agent doesn't know you—never saw you before that day!"

"'Deed, jedge, you don't have to know folks tuh shoot craps wif 'em!"—Judge.

Never put off until tomorrow the creditor who will wait until next week.

You can tell a sloven by the fit of her glove.



Try the Grocer, first!

SLEEPLESS nights and daytime irritation, when caused by coffee drinking, often require a call on the grocer to avoid a later call on the doctor.

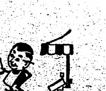
Postum, instead of coffee, has brought restful nights and brighter days for thousands of people—together with complete satisfaction to taste.

You will enjoy the full, rich flavor and aroma of Postum, and nerves will be free from any possibility of irritation from coffee's drug, caffeine. You can begin the test today with an order to your grocer.

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

Postum *for* Health

"There's a Reason"



Made by Postum Cereal Co., Inc., Battle Creek, Mich.

Thanking the Voters

of Pennington County

In expressing my sincere gratitude to the voters of the county for the fine endorsement given me in the June primaries, I respectfully ask their further assistance and support at the coming general election. It has been my constant aim to conduct the affairs of the Sheriff's Office in such manner as to do full justice to the laws of the state and those with whom I come in daily contact, and on that basis do I ask for your continued confidence.

Yours truly,

W. J. LaBREE

CANDIDATE FOR SHERIFF

(Ordered inserted and to be paid for at regular rates by W. J. LaBree).

To the Men and Women Voters of Pennington County:

I respectfully solicit the votes of all law abiding citizens of Pennington county for the office of sheriff. If I am elected it is my purpose to give all my time to the duties of the office, and I promise faithfully to enforce the laws impartially without fear or favor. The lack of time and means will prevent me from meeting all the voters but I take this opportunity to thank my friends for their assistance and support.

Respectfully,

OLE L. IHLE.

(Inserted by Ole L. Ihle and paid for at regular rates.)

Prepared and circulated for and by

HOWARD SMITH

Candidate for the Office of

County Attorney

My Platform

I believe that the business of the county requires the same rigid economy that your own and my private business requires today.

I am not a politician, have no axes to grind and would consider my duty as County Attorney to be to carry out your wishes and not my own.

I believe that the office of County Attorney is for the use of the people generally and not to be used to settle private grievances or further individual ambition.

I believe that the prosperity of this county depends entirely upon the prosperity of the farmer, and will back any possible effort to bring prosperity to the county.

EDITORIAL

GAME LAW VIOLATIONS

The Banner wishes to make a plea for the partridges and grouse inhabitating this section of the country who are just now subject to one of the fiercest barrages of hot lead and rifle fire opened up on them since the history of Nimrod.

Our little friends of the forest and prairie have just acted the role of refugees from out of the burning timber in other sections of Minnesota to become subject to the all-day assaults of hundreds of game hogs who have penetrated the woods with everything in the line of killing paraphernalia outside of poison gas.

Few of them stop with the day's limit—five birds. Most of them come out with five times that amount and then kick up the dust because one or two of the tame ones ducked under a windfall and escaped a potshot.

The law protects grouse and prairie chickens, but if all the reports we hear are true, only the wise and alert of them escape the fusillade of shot just now being directed their way.

A news report from the iron range states that a certain game warden of St. Louis county made 42 arrests for game law violations a week ago Sunday. The state collected several thousend dollars in fines and incidentally gave added protection to game. A similar officer scouting around the east country could at least do half that well most any day, but as far as The Banner knows not a single game warden has been seen in this locality this fall.

And the slaughter continues unabated even though the birds have hoisted the white flag of truce and broadcasted an "S. O. S." for immediate assistance against the tremendous odds of a small army equipped with automatic shotguns and ammunition galore.

We couldn't blame the birds much if they left us and returned to the flaming forests. It might afford them a greater degree of protection, at that.

THE STATE JUDICIAL ELECTION.

There is one vacancy on the supreme bench to be filled at the coming election, the place now occupied by Justice James H. Quinn of Fairmont. Judge Quinn was for many years judge in his home district. For six years he has been a justice of the supreme court. He was nominated at the primary by a decisive majority. It is reflecting upon no one to say that no member of the supreme court has done better work than Judge Quinn. His opponent offers no judicial experience nor hopeful promise of good service. The voters should give Judge Quinn a second term, not merely as a reward for judicial service well done, but to advance the best interests of the state.

The Grygla Eagle deplores the fact that hunters are killing off wild folw out its way and Brother Muzzy opines that their aim is not always directed against partridges, but that they have declared an open season on grouse and prairie chickens as well. Keep your Eagle eye on 'em, Muzzy, and let's save a few until the time comes when we can afford to get out and blow away seven dollars worth of ammunition at a bunch of feathers.

Down in Pennsylvania a magistrate "blacked" the eye of a man who was being tried for wife-beating just to show said wife-beater "what it felt like." Justice's eyesight seems to be improving; she is not half so blind as she was alleged to be in the past.

[illegible] ballot.

Now, if the Parole Board up and paroles Detloff in the course of the next two or three years there is likely to be a genuine old-time Minnesota riot.

Something is radically wrong when handpicked and graded apples sell at 10 cents per bushel in Nebraska and when potatoes in Northern Minnesota go at about the same price. The department of agriculture of the State University places the expense of digging and hauling at that figure, to say nothing about the seed, planting, cultivating, bugging and use of the land. The trouble is not overproduction and distribution.—Mapleton Enterprise.

Everybody is agreed on the matter thus far. Now what is the answer? There must be one if we only go after it. There must be.

Crew Completing Work of Gravelling Streets

The uncompleted work of gravelling the streets, which was started last spring, is being finished. This is one of the most practical improvements ever made in Goodridge and the villagers are to be lauded on their successful efforts, as there are few towns the size of Goodridge that can boast of such excellent streets.

[illegible] should. No true American should.

The man who believes that it is never too late to mend is usually in need of repairs.

(Prepared and ordered published by H. P. Rued, personal campaign commitee for Geo. M. Gunderson, County Superintendent of Schools, candidate for re-election. Advertising rates to be paid.)

RE-ELECT

Geo. M. Gunderson

SUPERINTENDENT OF SCHOOLS

FOR

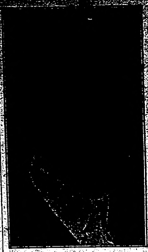
A SECOND TERM

Part of his record with reference to:

OUR SCHOOLS: Has given them his entire time and attention. Built up the standard along modern progressive lines. Tried to establish better co-operation between people of the country and city through enlisting the voluntary services of professional and other city people as speakers at county sectional parent-teacher meetings.

OUR COUNTY: (Economized why and how?) He is a taxpayer in both country and city. Served for a lower monthly salary than his teachers. Has the lowest traveling expense account of any county official traveling full time in the interest of the county. Sacrificed his chance of an offer of a better paying position to stand by the people who elected him.

Sincerely,
H. P. RUED.



Vote For

JOHN GULLINGSRUD

for

COUNTY TREASURER

Candidate for Re-election at the General Election November 7, 1922.

"One Good Term Deserves Another!"

YOUR VOTE AND SUPPORT WILL BE APPRECIATED.

BAR ENDORSES WATTS and GRINDELAND

To the Voters of the Fourteenth Judicial District:

An able and upright judiciary is a first necessity of the public welfare.

In Judges Watts and Grindeland, the Fourteenth Judicial District has been fortunate in having Judges of unquestioned integrity and ability.

The undersigned, attorneys of such district, being actuated by their knowledge of conditions, hereby respectfully recommend to the voters of the district the re-election of the Honorable William Watts (of Crookston, Minn.) and the Honorable Andrew Grindeland (of Warren, Minn.) at the coming November election.

REST!

By REV. H. LUTZ.

Text: "There remaineth therefor a rest to the people of God." Hebrews 4,9.

In order to give us a faint idea, at least, of what Heaven will be like, the Bible uses many beautiful illustrations and paints to us the glories and wonders of that life on high in glowing colors and from many different viewpoints.

It calls Heaven ETERNAL LIFE; it tells us that in Heaven we will be with God, with Christ, with the saints and angels, and see God as He is. We will have eternal glory; we will be clothed in white raiment; we will have fullness of joy, and sorrow and sighing shall flee away. We shall have a crown of righteousness, an inheritance incorruptible, and that fadeth not away; we shall be just men made perfect. Our days of mourning shall be ended, we shall not hunger nor thirst; God shall wipe away all tears from our eyes, and there shall be no more death, neither sorrow nor crying, and neither shall there be any more pain. We shall shine forth as the sun; our mouth shall be filled with laughter, and our tongue with singing. We shall live in that New Jerusalem whose streets are pure gold and whose gates are decorated with pearls and precious stones.

All of which tends to turn our thoughts and desires away from the petty pains and pleasures, virtues and vices of this life, and to direct them upward and onward to the realities of the grand life above and ahead.

But, just now, during these days of turmoil and unrest, there is probably no description of yonder life that appeals to us more than that which we find in the text quoted above. Here Heaven is called REST.

Rest! What a blessing is rest already in this life! Therefore "some seek bread; and some seek wealth and ease; and some seek fame, but all are seeking rest."—Langbridge.

Or listen to the first stanza of Gray's Elegy:

The curfew tolls the knell of parting day, the lowing herd winds slowly
o'er the lea,
The plowman homeward plods his
weary way, and leaves the world to
darkness and to me."

In exquisite language the poet here pictures the end of a day. Everything has gone, or is going to rest. The "lowing herd," tired and satisfied after a day's roaming and grazing, is slowly wending its way home, there to seek the shelter of the stables, and in it rest and refreshment. The plowman—and everyone who has been working during the day—homeward plods his weary way; he, too, is seeking rest and new strength after the toils and hardships of the day's labor. Who of us has not often experienced the sweetness and tenderness of rest?

[illegible] whether [illegible] for the night [illegible] We are traveling [illegible] a time. But after we have traveled [illegible] we soon long for nothing more than that we might soon arrive home again where we can rest from traveling. We are sick and suffering pain, and nothing is more welcome to us than that sleep come and take us into its tender embrace. Why? Because then we can rest! Our country is at present in the grip of industrial war, causing turmoil and unrest everywhere. We are hoping that we will soon get back to normalcy, so that we can enjoy rest from these troubles and trials.

In short, rest in this life is a blessing which all desire and all seek after. And that is true in spite of its imperfections. Every time we go to rest we know that we can enjoy this rest but a short time, and after it is over we must again take up the fight with the enemies of life. And oftentimes when we arise from rest we are nearly as tired and weary as we were when we went to rest. How often are we not disturbed in the midst of our rest! And yet we could not do without rest, such as it is.

Now if the rest we find in this life, imperfect and faulty as it is, is such a great gift, how much more that rest which "remaineth to the people of God" in Heaven, that rest which will endure forever, that rest which is perfect, that rest which is in God and in Heaven.

That rest remains for you, my dear friend, if you belong to the people of God, if you are a child of God. This you are if you firmly trust in Christ, crucified as your Savior. It makes no difference who you are or what your past life has been, if today you believe that Jesus died for you, to atone for your sins, and for His sake ask for forgiveness, God will surely forgive you! This means YOU. God does not exclude yourself! Accept, believe, trust this word of God: "Believe in the Lord Jesus Christ, and thou shalt be saved and thy house" (Acts 16,31. Then you shall in the end come to rest. And then, also, as long as you live in this world, live as one who has found peace in God, and who does not expect to find real and final rest until he has obtained that rest which remaineth to the people of God.

For the time being therefore:

Work, for the night is coming,
Work through the sunny noon;
Fill brightest hours with labor,
Rest comes sure and soon.
Give every flying minute
Something to keep in store.
Work, for the night is coming,
When man works no more.

—Amen.

First Meeting of Literary Society Held Friday Eve

The first regular meeting of the Goodridge High school Literary Society was held Friday, October 20. An invitation had been extended the week previous to the public and the people responded in a body. The Literary Society is a peppy organization and a credit to the Goodridge High school. They rendered an excellent program, which opened with a speech by Miss Eunice Tvedt, president of the society, explaining the purpose of the as[illegible] high school students [illegible] with an [illegible] song [illegible] by the audience; vocal solo, Myrtle Silverson; recitation, [illegible] Vaughan; song, Hazel Aarness, Francis Hindell, Esther Bonkin and Ruby Thompson; current events, Harry McDonald; reading, Clarissa Aarness; instrumental solo, Vivian Thoreson; recitation, Angeline Swobodny; vocal solo, Miss Minnie Lindbloom; recitation, Pearl Lamporter; song, "How Can I Leave Thee?" by audience.

The trouble with most fault-finders is that they see only the fault, and when this gets to be a habit, they have become blinded to all the good of life.

Waiting is twice as hard when you are not waiting for something.

Hustling for the best beats hoping for the best.

[illegible]

FOR

County Treasurer

FOR PENNINGTON COUNTY

The homesteader of 1896. Formerly Secretary of the Co-operative Store and Postmaster at Germantown, and Town Clerk and Assessor. Now President of the Village of Goodridge and Member of School Board. The home man, with a large family, who has always been and is now, a man of and for the people.

(Inserted in behalf of C. L. Hansen at regular advertising rates by Peter Engelstad, Thief River Falls, Minn.)

To the People of the 65th Legislative District

THE ELECTION is now comparatively only a few days off, and I find that it will be impossible for me to call personally on as many people as I would like to do. I am asking your kind consideration and good will in regard to my candidacy for state senator from the 65th Legislative District. I STAND SQUARELY ON A PLATFORM WHICH FAVORS ANY LEGISLATION WHICH IS OF BENEFIT TO THE AGRICULTURAL INTERESTS OF THE DISTRICT. I FAVOR PROGRESSIVE LEGISLATION; ECONOMY IN THE EXPENDITURE OF PUBLIC MONEYS, WITH A VIEW OF LESSENING THE BURDENS OF TAXATION; GOOD ROADS FROM FARM TO MARKET; A LOWER INTEREST RATE; STATE LOANS TO FARMERS AT COST; GUARANTY OF BANK DEPOSITS; ADEQUATE COMPENSATION LAWS, AND JUSTICE TO ALL THE PEOPLE OF THE DISTRICT. I AM OPPOSED TO A STATE CONSTABULARY.

Thanking you, I remain
Yours respectfully,

C. L. Hansen

MARIUS WALDAL
Candidate for the Legislature

STATEMENT OF PRINCIPLES:

To the Voters of the 65th Legislative District:

Owing to the great amount of work on the farm at this time of the year, I find it will be physically impossible for me to meet any considerable number of the voters, hence I shall have to depend on the public press to bring my message to the voters.

If elected to the Legislature it will be my purpose to oppose all measures giving privileges to the special interests of the state, including the so-called "Constabulary Law." Giving such added political machinery into the hands of any one man is to my mind dangerous and should be defeated.

If the Rural Credits Amendment is adopted, which I earnestly hope it will, I will give my assistance to the enactment of suitable laws which will give the farmers of the state the privilege of making long-time real estate loans at the lowest possible rate of interest.

It will be my aim and purpose to vote for the repeal of the present vicious pre-primary law and to uphold in every respect the old-time primary under which the voters may express their own choice of candidates.

The departments of the state government should be combined and corelated in such manner as to effect the greatest possible saving to the tax payers, and I believe further that the automobile tax is badly in need of revision and equalization.

All co-operative marketing measures of merit will have my aid and support; the time may not be ripe for state controlled terminal elevators and warehouses, but if such a law should be attempted it will have my vote and support.

I want to make it plain that I stand unequivocally for the agricultural interests of the state, believing that the men and women who labor have not been treated with entire fairness in the past.

Believing I can be of service to the people of this district, as well as to the state in general, I respectfully solicit the aid and support of all voters at the coming general election.

MARIUS WALDAL

1—Italian model for mother airship designed to carry and launch airplanes, soon to be built by United States. 2—British troops arriving in Constantinople to curb the over-ambitious Turks. 3—Gen. Alberto Salinas, second in command to the Mexican rebel leader Murguia, who has been captured and sentenced to seven years' imprisonment.

NEWS REVIEW OF CURRENT EVENTS

British Tories Quit Coalition and Lloyd George and His Cabinet Resign.

BONAR LAW TO BE PREMIER

America's Attempt to Dry Up the Seas Meets With Various Kinds of Opposition—Doings of the American Legion Convention.

By EDWARD W. PICKARD

> **PRESIDENT HARDING**, in a letter addressed to Secretary of Agriculture Wallace, to be read at a Republican meeting, said: "Agricultural production is very nearly restored, taking the world as a whole; but agricultural prices are so low that it is apparent to all of us that the farmer is not being compensated." Asserting that the administration has done all in its power to restore the balance between prices and costs of production, he said the trend is "strongly toward better conditions for the farmer."
>
> Do you and the farmers of your acquaintance agree in this with President Harding?

COALITION government in Great Britain has gone to smash. Lloyd George has resigned as prime minister and his entire cabinet is out. A. Bonar Law has been asked by the king to form a new conservative ministry. Lloyd George has promptly begun a fight to regain power as chief of a new party. The British are entering on the most exciting political contest they have had for many years. A call for a general election is expected shortly.

The downfall of the coalition ministry was brought about when the conservative—otherwise tory or unionist—members of parliament and of the cabinet, in caucus at the Carleton club, decided their party should go to the country as an independent party, and, if elected, choose a conservative premier. This action was taken against the protests of Austen Chamberlain, their leader, and in accordance with the advice of A. Bonar Law, hitherto a staunch supporter of Lloyd George. It was precipitated by an election in Wales which was won, surprisingly, by the conservative candidate.

At this writing it is not certain that Bonar Law will attempt to form a ministry, but he probably will do so, and it is taken for granted that all its members will be conservatives except Lord Grey, who will be offered the post of minister for foreign affairs. The life of this ministry undoubtedly will be short.

As is said above, Lloyd George has not quit the fight. He delivered a hot speech at Leeds Saturday and several others on his way there, and made it plain that he won't "take his punishment lying down." He has the nucleus of a new and strong party in such conservative leaders as Lord Balfour, Austen Chamberlain, Lord Birkenhead, Worthington Evans and others who have stood by him in this crisis. It will be a party of moderates and may be called the center or national party.

UNCLE SAM in the role of prohibition enforcer is not having things all his own way on the seas. Federal Judge Learned Hand in New York, after hearing arguments in the suit brought by foreign and American shipping companies to enjoin the United States government from enforcing the ruling of Attorney General Daugherty, reserved his decision and extended the temporary restraining order. The British government has rejected the proposal of Secretary Hughes for a treaty to extend the right of search of vessels up to twelve miles off shore, and has formally protested against the seizure by our dry navy of a Canadian schooner eight miles off the New Jersey coast. France, Holland, Italy, and perhaps other countries, are only awaiting the necessity of contesting the right of the United States to enforce a ruling that will mean either that their seamen will be deprived of the daily allotment of wine guaranteed them by their laws or that their vessels must refrain from entering American waters.

In addition to these embarrassments, the government is being told that the trade of our insular possessions, especially the Philippines and Porto Rico, will suffer greatly if foreign vessels carrying liquor are barred from entering their ports. Secretary of War Weeks is especially insistent on this point, and it is said to be likely the government will follow his suggestion and ask congress speedily to revise the Volstead act so that the ruling of the attorney general may be modified.

Mr. Hughes' note to Great Britain, suggesting extension of the right of search dealt especially with liquor-smuggling operations. In reply, Ambassador Geddes said his government was doing and would do all it could to prevent such smuggling, but that it has consistently opposed any extension of the limit of territorial waters and "do not feel that they can properly acquiesce, in order to meet a temporary emergency, in the abandonment of a principle to which they attach great importance."

THOUSANDS of former service men spent last week in New Orleans, taking part in the fourth annual convention of the American Legion, and they had as guests a number of much-decorated heroes from the allied nations and some distinguished American civilians. It was a lively gathering and woke up the old Crescent city. Moreover, it did and said and heard some things that are likely to have effect on governmental and congressional action. Naturally the bonus, or, as the legion members prefer to call it, the adjusted compensation, came in for much discussion. This was very one-sided, however, for the organization as a whole was decidedly in favor of the bonus, and a resolution, strongly worded, was adopted declaring that the men who fought the war were underpaid and that there should be an adjustment. Former Judge Landis, in a fiery speech, upheld this view and was wildly cheered.

Col. A. A. Sprague, chairman of the legion's rehabilitation commission, submitted a report severely criticizing the government's achievements in that line to date and excoriating individual congressmen and senators. "The story of hospital construction by the government up to date," the report declared, "judging by actual results, is a tragedy for the sick, a discredit to the government and an affront to the American Legion. There is not a redeeming feature in it—politics, promises, plans, failure to prepare anything but alibis in advance, red tape, excuses and contentions conspired to defeat the actual providing of needed beds."

President Harding's delay in the matter of naming co-operative committees on rehabilitation in various districts was the subject of comment.

Thursday the convention after an exciting debate adopted a resolution demanding the removal from office of General Sawyer, co-ordinator of the federal hospitalization board. The vote was 601 to 375.

On Wednesday the boys had their parade, and it was a big one. Some ten thousand of them were in line, and they had 25 military bands, 23 drum corps, lots of tanks and floats and flags and standards, while above them circled two squadrons of airplanes and many seaplanes.

General Pershing arrived in New Orleans on Thursday and was given a rousing welcome. It was said he was particularly pleased with the report of the military affairs committee, adopted by the convention, calling for the drafting of industry and labor in the event of war.

One of the distinguished guests of the convention was to have been Col. C. R. Forbes, director of the federal veterans' bureau. He went, with his staff, but departed almost at once, because, according to report, the supporters of one of the candidates for the position of national commander charged that he was sent there by President Harding to play politics. On the other hand, a Down-East post of the legion, composed of former marines, has dissolved because it believed the legion and another organization of veterans were being used for political purposes by their members.

SEVERAL recent victories by the Red army in eastern Siberia over the White Russians have caused a great deal of apprehension in that region. The Reds are advancing on Vladivostok with the evident intention of occupying it as soon as the Japanese evacuate the city. More serious is the threat of the Reds against the Chinese Eastern railway, toward which other columns of the soviet army are moving. Gen. Chang Tso Lin, the Manchurian military leader, is prepared to resist the Reds and, if necessary, will make an alliance with the White Russians. The Moscow government has demanded that China cease aiding the White forces by permitting them to concentrate in Chinese territory for attacks on Siberian soil.

MOSCOW also is taking a firm stand concerning the coming Near East peace conference. The soviet government says if it is not represented in that conference any results of it will be of no effect, and it especially protests against its exclusion if Rumania and Jugo-Slavia participate. Russia supports fully all the Turkish claims on frontiers and for sovereign rights on the coasts of the straits, opposes any control of the straits by the League of Nations or by mandate, and declares for absolute freedom of commerce in the straits.

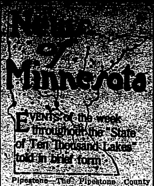
Large numbers of the refugees from Thrace, chiefly Armenians, entered Bulgaria the early part of last week, and on Thursday the Bulgarian frontier was closed to them. Half a million of the fugitives are in Macedonia, lacking shelter, food and clothing. French troops in considerable numbers are arriving in Thrace to preserve order, and in some places, notably Adrianople, a big part of their task is to prevent the Greeks from burning the city and slaughtering the Moslems before they depart.

PREMIER FACTA of Italy apparently has successfully withstood the demands of the Fascisti that he and his cabinet resign. The ministry refused to yield and Facta made an unexpected showing of strength. Benito Mussolini, leader of the Fascisti, was so impressed with this that it was said he would instruct his followers, at their great gathering in Naples this week, to refrain from causing the government any more trouble. Gabriele D'Annunzio, the soldier-poet, has signed an agreement with Mussolini establishing common action between their forces.

PORTLAND, ORE., doesn't propose to be pestered by "wobblies." Learning that thousands of members of the Industrial Workers of the World were gathering there to participate in the waterfront strike, the city council appropriated funds for a lot of extra police and the mayor ordered immediate raids. Between two and three hundred men were arrested and held on charges of vagrancy. It was said the I. W. W. plans contemplated the swarming of 25,000 members of the organization to Portland and other Pacific coast points.

WORLD'S records went by the boards in the aviation races at Mount Clemens, Mich. Lieut. R. L. Maughan of the army won the Pulitzer trophy, and later set a new speed record of 248.5 miles an hour with the same plane. This was not considered official, because no official of the Federation Aeronautique Internationale was present, but later Gen. William Mitchell, assistant chief of the army air service, took the same machine and drove it at a speed of 224.05 miles an hour before official observers.

Our luck with dirigibles continues bad. Last week the big army balloon C-2, which had made the trip from coast to coast, was destroyed at San Antonio, Tex., on its return journey. While being taken from the hangar it was struck by a high wind and its gas bag was ripped. Explosion and fire resulted. Several members of the crew were injured, but all escaped death.



[illegible] of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Pipestone—The Pipestone County Poultry association has selected Jan. 15 to 18 as the dates for the annual show which will be staged in the gymnasium of the Pipestone high school.

Duluth—Special deputy sheriffs began patrolling the Miller Trunk highway on the lookout for speeders and road hogs, Sheriff Frank L. Magie stated.

Eveleth—Eveleth's townsite was increased by 1,600 acres and its population boosted 600 when citizens in three additions and one location bordering the city limits voted to annex their districts to the city.

Duluth—Forty automobiles and a three-story brick building belonging to the H. B. Knudson Auto company were destroyed by fire. The loss is estimated at $225,000.

Austin—The Golden Bell dairy herd, at Le Roy, owned by Mrs. Sylphia Bauman, in nine months earned $1,797.60 in cash for butterfat, $804.93 profit on hogs and $460 for calves, making a total of $3,061.

Duluth—Fifteen forms of county ballots are necessary to take care of the separate commissioner and legislative districts in St. Louis county.

Minneapolis—A $2,000,000 campaign for a mammoth athletic stadium and auditorium will be started by the University of Minnesota, Monday the 30 of October.

Chisholm—During September the five mining companies operating in this district increased their pay rolls by 135 men. A total of 1,690 men are now in the mines here.

Winona—John M. Henry, a member of the executive committee and manager of the Winona American Legion baseball and basketball teams, was chosen commander of the local legion post at the annual election of officers.

Minneapolis—Leaders in the barberry eradication campaign from 13 north central states will gather at Minneapolis on Nov. 14 for the second annual meeting of the Conference for the Prevention of Grain Rust.

Minneapolis—Minneapolis milk dealers agree to give preference to union labor, but are not bound to exclude nonunion labor from their employ, according to a contract between 11 dealers and members of the Milk Wagon Dirvers and Dairy Employes union, local No. 471 is made public.

Grand Rapids—State Highway Commissioner Charles M. Babcock and John H. Mullen, his assistant, delivered addresses here on the occasion of the opening of the new Babcock paved highway between this city and Hibbing. A parade of automobiles left Hibbing and brought to Grand Rapids several hundred people from range towns.

Tower, Minn. — Pursuant to the terms of a resolution of the city council at a meeting early this month, a special election has been called for Oct. 24 for the purpose of deciding whether the city of Tower shall issue refunding bonds in the amount of $25,000.

Rochester—Dr. W. Carpentier McCarthy, head of the pathological department of the Mayo clinic, in an address before the Minnesota State Registered Nurses association in convention here, declared the present cost of efficient nursing service is beyond the reach of the vast majority of people.

Owatonna—C. N. Kellestadt, a retired farmer of this city, raised two crops of potatoes this year in his garden. He planted Early Ohio potatoes on May 10 and dug them July 21. The next day he planted Rural New Yorkers and dug his second crop Friday, October 13. Both crops were successful.

Minneapolis—The second annual meeting of the Conference for the Prevention of Grain Rust will be held here on Nov. 14, according to an announcement by Harrison Fuller, director of the organization. Representatives from thirteen north central states are expected to attend. The Minnesota members are: Governor J. A. O. Preus, J. F. Reed, president of the Minnesota Farm Bureau; N. J. Holmberg, state commissioner of agriculture; Dean E. M. Freeman of the State College of Agriculture; F. M. Crosby, Minneapolis, representing the millers; Ralp Budd, St. Paul, representing the railroads; C. C. Webber, Minneapolis, representing the implement dealers, and Frank T. Heffelfinger, Minneapolis, representing the grain dealers. The Conference will review the work done this year in eradicating the common barberry as a means of preventing black stem rust and will discuss plans for a continuance of the work next season.

Fairmont—For the first time in the history of the sugar beet industry in Martin county the crop is being harvested by Martin county people, according to H. W. Chase, representative of the Chaska Sugar Beet company, where formerly Mexican help was used.

Beaudette—Recent fires destroyed a strip of timber in the Rapid river section a half mile wide by 12 miles long, according to Fire Ranger John Morris. It is the biggest strip of standing timber that has been destroyed since the big fire of 1910 and it rep[illegible] week beginning Nov. [illegible] and ending Nov. 10.

Duluth—Organization of a St. Louis county branch of the Minnesota Historical society will be effected at a meeting to be held here Nov. 4, it has been announced.

Minneapolis—Articles of incorporation by Hotel Maryland, Inc., of Minneapolis, have been filed in the office of Mike Holm, secretary of state. The incorporation is capitalized at $50,000.

Duluth—By the last of this week virtually all emergency guards in the forest fire zone north of Duluth will have been discharged.

Hibbing—More than 150 Hibbing citizens, representing all sections of the city entered formal protests against the tax valuations and assessments in Hibbing.

Virginia—Partridge hunting within the city limits has occurred here. Hundreds of birds were driven into the city by the recent forest fires.

Jackson—The large home of the late J. T. Knox is to be converted into a modern hospital to be known as the Knox Memorial hospital.

St. Paul—National Guard members may compete in examinations for entrance to West Point Military academy between Nov. 1 and 15, Adjutant General W. F. Rihnow has announced. Requirements are one year's service in the National Guard and the necessary education.

Thief River Falls—Claiming that the present form of city government does not meet requirements, a plan is on foot to secure a new charter.

Duluth—Satisfaction of 11 judgments totaling $26,310 entered in favor of the Massey Steamship company against insurance companies throughout the United States, has been filed in district court here.

Chisholm—The Chisholm village council accepted the bid of the Kolman, Wood & Co., of Minneapolis for the purchase of $188,000 in bonds for the construction of a new municipal hall, library and reading room.

St. Paul—Two belated war medals from Great Britain arrived in St. Paul for Wendell Phillips Loomis, formerly a first lieutenant in the Royal Flying corps, now in business at Atlanta, Ga.

Albert Lea—The C. P. Edwards Manufacturing company, Albert Lea, capitalized at $150,000, has filed articles of incorporation with Secretary of State Mike Holm. R. A. Edwards is president. The company has been doing business since 1878.

Minneapolis—The first anti-Ku Klux Klan organization in the state was formed at a meeting of Twin City men to be known as the National Protective association. Headquarters will be opened here.

Zumbrota—B. C. Grover, 82 years old, one of the oldest residents of Goodhue county, is dead at his home here. Death was caused from a general breakdown. Mr. Gorver settled in the village of Zumbrota in 1868. He served in the state legislature in 1876 and 1877.

Minneapolis—Mission problems including the launching of a campaign for a missionary fund of $100,000, were the chief topics of discussion at the 41st annual meeting of the Minnesota branch of the Women's auxiliary of the Episcopal church, which opened at St. Paul's church here.

Red Wing—H. P. Hansen, former president of the Farmers & Mechanics' State bank at Cannon Falls, has been arraigned here on an indictment charging grand larceny in the first degree in connection with the alleged embezzlement of $1,500 from a farmer.

Minneapolis—Carrying 200 Mennonites from Gretna and Altona, Man., a special train is en route to Mexico, following arival in Minneapolis over the Great Western.

Pipestone—The state fire marshal's office has condemned the grand stand at the county fair grounds here and notice has been served on County Auditor Bailey.

St. Paul—Minneapolis and St. Paul will receive less than 50 per cent of the normal supply of hard coal, according to the plans of the fuel administration and information received by Ivan Bowen, state fuel administrator.

Windom—Seventy-five delegater representing 18 fire departments in this section of the state attended a meeting held here for the purpose of forming a district firemen's association to be affiliated with the state firemen's association.

Minneapolis—H. L. Duncan, new divisional prohibition chief, is not expected to arrive here from Kansas City until October 24, when Emerson E. Hunt, the present chief, will return from his vacation and take Mr. Duncan's post at Kansas City.

Mankato—Mayor W. A. Beach has started a movement to rid this city of men and women who have been loitering, without any visible means of support.

St. Paul—Prospects for extensive navigation on the upper Mississippi received a setback when it was learned that the fleet of 19 barges and five tow boats leased by Col. E. F. Goltra of St. Louis, will operate only on the Ohio river.

Duluth—The Duluth Community fund has passed the half-way mark in the drive for $300,000 for the 23 charity organizations of the city. Contributions amounting to almost $165,000 had been received.

Duluth—The city council has accepted the proposition of Mrs. Chester E. Congdon for construction of a road from Lester river to the city limits to bring trunk highway number one into the city of Duluth. The road will cost $350,000. Mrs. Congdon, the county and the city will each give $100,000 and in addition about $50,000 will be

Has Never Felt Better in All Her Life

Thousands of frail, nervous people and convalescents everywhere have testified to the remarkable power of Tanlac in bringing back their health, strength, and working efficiency. It seems to quickly invigorate the constitution and is a powerful foe of weakness. Mrs. Mary Choklat, 1415 N. Broadway, Los Angeles, Calif., says:

"Before I took Tanlac, I was so weak I had to be helped from one room to another. My nerves were shattered and my digestion so poor I was almost afraid to eat anything, but now I am in perfect health and will always be grateful to Tanlac."

There is not a single portion of the body that is not benefited by the helpful action of Tanlac. It enables the stomach to turn the food into healthy blood, bone and muscle, purifies the system and helps you back to normal weight. Get a bottle today at any good druggist.—Advertisement.

Could Do Better Wholesale.

Film Star—How much will you charge to get me my divorce?

Lawyer—If you'll agree to let me handle all your divorce suits for the next ten years, I'll make you a special price.—Life.

DOES LAUNDRY WORK AND HOUSEWORK TOO

Surprised to Find Herself Feeling So Well

Taunton, Mass.—"I used to have pains in my back and legs so badly, with other troubles that women sometimes have, that my doctor ordered me to stay in bed a week in every month. It didn't do me much good, so one day after talking with a friend who took Lydia E. Pinkham's Vegetable Compound for about the same troubles I had, I thought I would try it also. I find that I can work in the laundry all through the time and do my housework, too. Last month I was so surprised at myself to be up and around and feeling so good while before I used to feel completely lifeless. I have told some of the girls who work with me and have such troubles to try Lydia E. Pinkham's Vegetable Compound, and I tell them how it has helped me. You can use my testimonial for the good of others."—Mrs. BLANCHE SILVIA, 59 Grant St., Taunton, Mass.

It's the same story—one friend telling another of the value of Lydia E. Pinkham's Vegetable Compound.

A Weary Landowner.

"Some day your boy Josh will own the old place."

"Yes," replied Farmer Corntossel; "but I dunno whether it'll make him happy. It seems to me he'd have more time for rest and comfort if he could jes qualify as a farmhand, an' draw regular wages without no argument."

To Have a Clear Sweet Skin

Touch pimples, redness, roughness or itching, if any, with Cuticura Ointment, then bathe with Cuticura Soap and hot water. Rinse, dry gently and dust on a little Cuticura Talcum to leave a fascinating fragrance on skin. Everywhere 25c each.—Advertisement.

Big Growth in Standards.

In 1909 there were less than ten automobile standards; in 1921 there were more than 300 in actual use by automobile manufacturers.

FREEDOM FROM LAXATIVES

Discovery by Scientists Has Replaced Them.

Pills and salts give temporary relief from constipation only at the expense of permanent injury, says an eminent medical authority.

Science has found a newer, better way—a means as simple as Nature itself.

In perfect health a natural lubricant keeps the food waste soft and moving. But when constipation exists this natural lubricant is not sufficient. Medical authorities have found that the gentle lubricating action of Nujol most closely resembles that of Nature's own lubricant. As Nujol is not a laxative it cannot gripe. It is in no sense a medicine. And like pure water it is harmless and pleasant.

Nujol is prescribed by physicians; used in leading hospitals. Get a bottle from your druggist today.—Advertisement.

Operatic as Ever.

"Here's a late picture of my aunt—she's a former prima donna." "Well, isn't she still? She looks large enough."

Grasp no more than thy hand will hold.

Timely Comments on Agricultural Topics for Our Readers

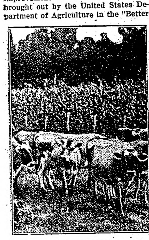
THE DAIRY

PUR, PUREBRED FEMALES GAIN

Rapid Improvement of Live Stock Brought About by "Better Sires—Better Stock" Campaign.

(Prepared by the United States Department of Agriculture.)

When farmers adopt purebred sires to head their herds and flocks it is not long before the percentage of purebred females increases noticeably. This encouraging tendency toward more rapid improvement of live stock has been brought out by the United States Department of Agriculture in the "Better Sires—Better Stock" campaign. Of a total of more than 300,000 female animals listed by farmers who have agreed to keep nothing but purebred sires, more than 35 per cent are of pure breeding. On these farms scrubs have practically disappeared. For the larger animals the reports show that only 2.4 per cent of the females are scrubs and, of course, the males are of pure blood as that is the basis on which the farms are listed.



Use of Purebred Females Is on Rapid Increase.

The poultry flocks owned by these farmers are particularly well bred, only 1-3 per cent of the female birds being listed as scrubs. More than 68 per cent of a total of 610,000 birds are entered on the list as standard-bred. Among the herds of swine there are very few scrub sows—only 1.1 per cent. Nearly two-thirds of them are purebred.

This federal-state effort to improve the live stock and poultry of the country has now brought in a membership campaign that represents nearly a million head of animals and poultry. Farmers who have become members have sent in interesting accounts of their experiences in improving their animals and their bank accounts. Other farmers who are taking part in the work are invited by the department to send in their individual experiences as well as those of community organizations engaged in the improvement of live stock. Definite facts and figures should be included whenever possible.

Big Disease Factors

Dirty cows, stables and utensils are the prime factors in distribution of pathogenic or disease producing organisms through milk. There are few dairy herds in which there is not a case or two of garget each year. In every case investigated during an Illinois survey the milk from cows having garget contained germs which cause stomach and intestinal diseases and general sickness.

Garget or mammitis is almost invariably induced by infections of the urinary tract and uterus. When a cow lies down in dirty stables and barnyards her udder rests on the ground and the germs become lodged in the teat openings where they multiply rapidly.

RIGHT FEEDING FOR CALVES

Number of Times a Day Varies With Different Dairymen—Temperature Is Important.

The number of times a day to feed the calf varies with the different dairymen. For the first three or four weeks some men feed the calves three times a day. This is an excellent practice, but many do not give proper attention to the temperature of the milk, particularly at noon. This milk is often given cold and it would be far better to feed only twice a day and have the milk at proper temperature than to feed three times a day and have noon milk cold.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

N. D. WEED CLASSIFICATION SHOWS MANY NEW WEEDS

By O. A. STEVENS.

North Dakota Agricultural College.

"What is a weed" is an old question to which various answers have been given. Judging from the specimens received for identification, almost anything is likely to be suspected of being a bad weed. Several of those of the past year were plants which scarcely any writer would think of placing upon a weed list. On the other hand very common ones frequently are received with the comment that they have not been seen before in that locality.

There seems to be a frequent tendency of over-estimating the danger of certain weeds on account of some conspicuous feature instead of examining them carefully for essential characters. The goat's beard has attracted much attention during the past two years. Its flowers and especially its fruiting heads are conspicuous. Buffalo bur is another case. Both of these plants have been in the state for at least thirty years and their increase is probably much over estimated. On the other hand there is an all too general tendency to neglect the important weeds. Much too often they are rgarded with indifference, or one individual sees no use of fighting them unless his neighbor does.

Out of some 275 received for indentification at the Agricultural College in the year ending July 1, about one-third are included in the list of thirty in Bulletin 162; one-sixth belong to the seven others included on account of the frequency with which they are confused with some of the others. Thus one-half of all of them are illustrated in the bulletin.

Four-fifths of the remainder were included in the list of one hundred and eighty. The remaining twenty-three specimens belonged to twenty-one different species, mostly native plants which had not been regarded as of sufficiently importance to include in a list of weeds.

Eleven different species were sent with the question as to whether they were sow thistle. All except two had yellow flowers but few were of much importance. During the past summer dozens of specimens of annual sow thistle and prickly lettuce were received with the question whether they were perennial sow thistle. During the same period only three or four plants of the perennial were received. Such a condition does not necessarily indicate the abundance of the two kinds. Probably the perennial sow thistle was rare or absent from the localities from which the other plants were received. When once seen it would be recognized and sending specimens would be unnecessary.

Most people seem to regard the barberry bush as one of the weeds, although it is not such in the most common sense of the word. During the year, seven different kinds of plants were suspected of being it. Most of them had at least one point of resemblance. Some bore rust, which was, however, of an entirely different kind and had no connection with ordinary wheat rust.

"How many kinds of weeds are there in the state" is a common question and one which is difficult to answer exactly. While there are about 1,000 flowering plants in North Dakota, about 200 of these are considered as weeds. In a list published several years ago, one hundred and eighty were enumerated. A recent revision of this list which has not been published omits several of these and adds others, bringing the number to two hundred and twenty-four. To this might be added two more found for the first time at Fargo the present season.

Frequent attempts to reduce this list to the most common or important sorts gives about seventy-five specie. In Bulletin 162 recently issued for the North Dakota Agricultural College the list was further reduced to about thirty. This process of selecting out the most important ones is difficult. The list as prepared by the author was submitted to others for suggestions with the result that three of four were dropped out and some others inserted. In many cases it is difficult to say that one particular weed is worse than another because they cannot be compared readily. Weeds differ in their habits, in their behavior and in different seasons.

Sow thistle is regarded as the most serious problem at the present time. When once established it occupies the ground completely, is difficult to eradicate and has possibilities of spreading which are unequalled by any other of our weeds. Quack grass is a similar plant, but its seeds are not readily wind blown. If it is entirely similar to sow thistle with respect to spreading by roots, we should have to rate it below sow thistle, although it now occupies more ground in the state and thus at present is causing more trouble.

Canada thistle is much like sow thistle as to both seeds and roots, but is much more prickly. Here is yet another point to consider. Field bindweed is rather new to the state but its behavior where now established and its history in other regions indicate that it might become one of our most troublesome weeds.

Some annuals such as wild oats and mustards are regarded by many people as our worst seeds. Probably they cause the greatest loss at the present time because of their wide distribution, but they cannot continue to increase to the extent that some of the perennials can.

Our principal weeds have been introduced from Europe and Asia. Some of the native plants are decidedly weedy, but as a rule they are not so persistent. Some are pasture weeds, not eaten by stock and increasing as the grass is weakened or killed by pasturing. Many are plants of no apparent value, but just how many of them should be included in a list of weeds is difficult to say. Several introduced plants have been found only a few times and may never become common enough to justify keeping them on the list.

WNU—N D Agri—9-20-22 . . . . Two

BARBERRY ERADICATION SUCCESSFUL.

With the federal government's 1922 campaign for the eradication of the common barberry bush in North Dakota now nearing its completion, George C. Mayoue, state leader of the United States department of agriculture forces announces that 2,000 bushes have been removed this season. The farm to farm survey of 14 counties in the central part of the state was finished during the major offensive from July to October.

The national government is fighting the common barberry as a means of combatting black steam rust which damaged North Dakota's grain crops to the extent of $70,000,000 in the three year period, 1919-21. Since the campaign started in this state approximately 20,000 bushes have ben eradicated in a search that extended over every city, town and farm in the eastern half of the state.

Every bush that has been found by the government scouts has been accounted for as destroyed, Mr. Mayoue reported.

WAR WAGED ON PRAIRIE DOGS.

"'The passing of the prairie dog,' is a phrase which, in a very few months, will apply to several of our counties west of the Missouri river," says R. Scott Zimmerman, biologist in charge of the rodent extermination work now being conducted in North Dakota by the United States bureau of biological survey in cooperation with the extention division of the North Dakota Agricultural College.

During August a survey was made of the number of infested acres in Mercer, Dunn, Oliver, Morton, Grant, and Sioux counties. The general impression has been that a great number of infested acres lay in this section of the state, but upon careful inspection it was definitely learned that the persistent efforts of the farmers in cooperation with the county agents have been making a very vivid impression on the prairie dog population.

Mercer, Grant and Hettinger counties will have written the passing of the prairie dog in the annals of their history in another season. A few scattered towns in Grant and Mercer counties will be thoroughly treated and rechecked this fall. Hettinger county has already made a fine showing in the extermination work.

To have a small fire extinguisher in the barn and another in the house is better than to wish you had.

DWINDLING FORESTS ARE FORCING MUCH DECREASED USE OF LUMBER

(Prepared by the United States Department of Agriculture.)

If the food consumed by each man, woman, and child were reduced by one-third, the pinch of hunger would soon be felt and the cry of famine undoubtedly raised.

Yet substitute the word "wood" for "food" and you have exactly what has happened in the use of lumber. The per capita consumption has dropped from 500 board feet in 1900 to 316 board feet in 1920, says the forest service, United States Department of Agriculture.

This decreasing use of a fundamental commodity, according to forest experts, is not a result of decreasing needs but a result of forest exhaustion. It is not being accomplished without economic hardship or without curtailment of industrial expansion. It is not a temporary condition that will automatically adjust itself, for even at this reduced rate of consumption we are still cutting our forests more than four times as fast as they grow. The situation proclaims, according to the forest service, that if we are to remain a nation of timber users, we must become a nation of timber growers.

Reached Highest Point in 1906.

In 1906, when American lumber production reached its highest point, the average per capita consumption of lumber in the United States was approximately 500 board feet. Since that time the per capita consumption has rapidly and consistently decreased until in 1920 the average citizen used approximately 316 board feet. This is a reduction of 37 per cent in 13 years, or nearly 3 per cent a year. Should this decrease continue at its present rate, by 1940 the downward sweep of consumption would approach zero. This, of course, will not happen. The average consumption will ultimately reach a fairly stable level, which will depend mainly upon the extent to which our devastated forests are made again productive.

The consumption of lumber is not evenly distributed. Previous studies indicated that the states of the Pacific Northwest, now the last great stronghold of big lumbering operations, had a much higher per capita consumption than those of other regions, but the present figures are the first to give information for all states upon the same basis. Naturally the greatest per capita consumption occurs where wood is plentiful and the population is relatively small. In Washington and Oregon the consumption appears to be between 900 and 1,000 board feet annually per person.

Next come California, Montana, Idaho, and Wyoming, where the rate of consumption is from 500 to 800 feet per person annually. In these states timber is relatively plentiful as compared with the density of the population, and a very considerable expansion has been taking place in the development of farms and other natural resources.

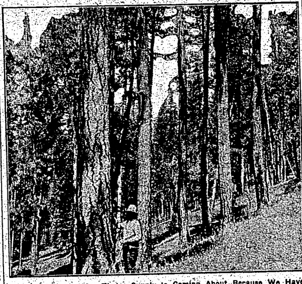
The group next lower in per capita consumption includes the Lake states, and sweeps southwesterly across the prairie states through Colorado, New Mexico, and Arizona. In this group the annual consumption is between 300 and 500 feet, board measure.

Use Less Than 300 Feet.

Practically all the remaining states fall into a class in which the annual consumption is 200 to 300 feet. This group extends in a broad belt from Texas along the southern and eastern Atlantic coast to Cape Cod, Mass. It also includes North Dakota, Iowa, Utah, and Nevada.

The lowest consumption of all is in Rhode Island, the District of Columbia, South Carolina, and Georgia, in which the average consumption is rated between 100 and 200 feet per year. In the District of Columbia there is an extreme situation in density of population. No lumber is produced, there is little farming or manufacturing, and the entire population consists of urban dwellers in the city of Washington who live mainly in houses of brick and stone and require relatively little lumber. All the lumber used in the District of Columbia is imported from other states, just as it is in some of the non-timbered prairie states.

In general, the older and more densely settled states show the lowest average consumption. The states characterized by heavy agricultural operations come next, and the greatest use per individual is indicated in those states where there is still considerable timber and where the extension of home building is proceeding at a rapid rate, using the abundant material provided by the forests. The states are going through an evolutionary process, building first of lumber and later of more costly materials as the forests recede before fire and axe.



The Exhaustion of Our Timber Supply Is Coming About Because We Have Failed to Use Our Timber-Growing Land.

Attention to Garden.

The garden should be cleaned of all trash, manured and plowed if possible this fall. All rubbish from it should be burned.

MATERIAL FOR ROAD MAKING

First Shipment of Surplus Army Equipment Used in Germany Arrives at Brooklyn.

The first shipment of surplus war material used by the American army of occupation in Germany and now to be distributed among the states for use in road construction arrived at Brooklyn, N. Y., July 1. The equipment consisting of 30 trucks, 7 tractors, 4 concrete mixers, and 8 road rollers, will be distributed by the bureau of public roads of the United States Department of Agriculture in the same way as was several million dollars' worth of material from France and the arsenals and camps in this country. Additional material for road making to be shipped from Germany will consist of several hundred trucks, a number of tractors, and about 2,000,000 pounds of spare parts for trucks.

Best Cream to Whip.

Rich cream, from 24 to 48 hours old, is the best cream to whip.

PUREBRED MAKES BEST GAIN

Puts on Weight Faster on Same Feed Than Either Grade or Scrub—Brings Higher Price.

The grade hog is more profitable for the farmer than the scrub or razorback and the purebred is more profitable than the grade. The purebred gains weight faster on the same feed than either the grade or the scrub and finishes so much better for market that it invariably commands a much better price.

Parsnips of High Quality.

Parsnips of the highest quality are those which have been frozen. They can be left in the ground until all other crops are harvested. Then they should be dug out and stored in an out-door pit or placed in sand in the cellar.

The rule for figuring the value of skim milk is to count one-half the price of a bushel of corn as the value of 100 pounds of milk.

POULTRY

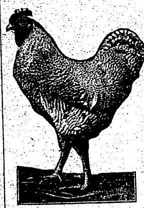
STANDARD-BRED FOWLS BEST

Egg Production Is Greatly Increased by Using Improved Cockerels on Mongrel Hens.

Standard-bred hens lay more eggs than mongrels. The ability to lay a good many eggs is an inherited quality. Many standard-bred poultry breeders have long realized the importance of high egg production and have selected their stock for improvement. One thousand standard-bred pullets at the Connecticut egg-laying contest produced, on an average, 162 eggs each, while at New Jersey the record was 161 eggs for each pullet. Flocks of mongrels usually produce from about 75 to 90 eggs per hen.

The Kansas State Agricultural college completed an interesting breeding experiment recently. Common mongrel hens were bred to standard-bred males from good laying stock. The increase in the production of the offspring as compared to that of the mothers was phenomenal. The mongrel hens in one pen produced 104 eggs each in a year. Their daughters, from a standard-bred Barred Rock male produced 184 eggs. The second generation produced 165 eggs and the third, 207. With single comb White Leghorn cockerels and mongrel hens, the results were even more spectacular. The egg production was increased from 74 to 198 eggs for each hen in just three years.

A flock of uniform size, type, and color always looks better than a flock of mongrels. Owners take more pride in good looking birds and give them better care. The hens respond quickly to good care and produce greater profits.



Standard-Bred Barred Rock Cockerel.

Eggs and market poultry produced by a flock of standard-bred chickens are uniform in size, shape, color and quality and are consequently worth more on the market.

KEEN INTEREST IN POULTRY

Requests for Information From Department of Agriculture Average 50 to 75 Letters Daily.

Many requests for information on poultry raising—averaged between 50 and 75 letters a day since early in the year—is reported by the bureau of animal industry, United States Department of Agriculture. In addition the supply of poultry literature distributed by the division of publications has surpassed the records of all previous years.

The department's literature on poultry raising is unusually complete, ranging from discussions of the principal breeds of poultry to mangement, housing, incubation, brooding, and culling. The department's poultry publications include more than 80 bulletins for general distribution and many others of technical character on special phases of poultry work.

LIMBERNECK IS INCURABLE

No Cure Known for Paralysis of Muscles in Necks of Fowls—Decayed Flesh One Cause.

Limberneck, which is a symptom, rather than a disease, is a paralysis of the muscles in the necks of the birds which often results from eating decayed flesh. It is a form of poisoning that also may be caused by eating arsenate of lead and other poisons found on the farm. No cure is known for the trouble, the chief control of it being prevention. Special care should be taken to see that all dead chicks and animals are buried or burned to prevent the spread of the trouble.

WALL BOARD

Make the house more comfortable. Fix up the living room, bedroom or attic. Easy to apply, warm and durable. We have it!

H. CHRISTIANSON & SON
GOODRIDGE, MINNESOTA

[illegible] Thief River Falls [illegible]

Ward Long was a visitor in Goodridge Saturday.

Sheriff W. J. LaBree was a visitor in Goodridge Monday morning.

Rev. Halter of St. Hilaire spent Saturday with the Jay Payne family.

Henry Tharaldson transacted business at Thief River Falls Tuesday.

Ole Fundahl of Germantown was a shopper in Goodridge Tuesday.

Fred DuChamp of Mavie is hauling grain for Andrew Wells this week.

Miss Susie Lindvick was a visitor in Thief River Falls Monday.

Gladys Wilson visited at her parental home near Grygla Sunday.

George Johnson autoed to Thief River Falls Sunday afternoon.

Roy Brown visited at the James Wilson home at Grygla Sunday.

Daniel Payne was a visitor at Germantown Sunday.

Omund Urdahl made a business trip to Thief River Falls Tuesday.

Herman Kjos of Highlanding transacted business in town Tuesday.

Martin Moen transacted business at the county seat Tuesday afternoon.

Miss Anna Rossette visited at the Limesand farm Sunday.

Mrs. Ellef Tollefson returned Monday after a few days visit with her daughter, Mrs. Elmer Olson.

Andrew Wells, a farmer living east of Goodridge, is putting a fine basement under his residence.

Don't forget to attend the Community Club meeting to be held Friday, October 27, at the schoolhouse.

Rev. George Larson of Thief River Falls was in attendance at the Ladies' Aid Wednesday.

Mr. and Mrs. E. J. Erickson autoed to Red Lake Agency Saturday afternoon, returning Sunday afternoon.

Misses Gretta Gulrud and Mabelle Tweeton visited friends at Thief River Falls Thursday afternoon.

Miss Angeline Svobodny of Silverton visited in Goodridge Friday evening.

Irving Quist, drainage engineer of Warren, was a business visitor in this village Saturday.

Miss Frances Hincik of Mavie attended the Literary Society meeting here Friday evening.

Dr. and Mrs. H. W. Froehlich and children of Thief River Falls attended the Festival here Sunday.

Mrs. Frank Pitman visited in Thief River Falls last week, returning Saturday evening.

Leonard Gunderson returned Thursday night from Kennedy, Minn., where he had been employed the past month.

G. Halvorson of Thief River Falls transacted business in town Saturday night.

Carl Magnul of Oklee was a guest at the Carl Christianson home Tuesday.

Mrs. George Josephson, Miss Mildred Seavey and Mrs. George Larson autoed to Thief River Falls Friday.

Anton Overby returned from Thief River Falls Friday after a few days' visit.

Miss Irma Johnson of Thief River Falls was a visitor at the Theodore Tandberg home Thursday evening.

Mr. and Mrs. Carl Christianson and son, Loren, autoed to Thief River Falls Friday.

Mrs. Will Wayne and sons, Will Jr. and Earl, visited at the Jay Payne home Saturday evening.

Sydney Eells of Germantown spent Saturday and Sunday in Thief River Falls.

Jorgen Jelle of Thorhult spent last Thursday night in town en route to Thief River Falls. He returned Friday evening.

Ellen Anderson of Bronkeberg left for St. Paul Thursday evening, where she will visit with her sister and other friends for an indefinite time.

Charles Fiterman of the Northern Trading Company of Thief River Falls transacted business at Thief River Falls Tuesday.

Henry Iverson and Anton Overby drove out east of Thorhult for wood Saturday morning, returning Sunday night.

Mr. and Mrs. Ole Prestebak and daughter, Phyllis, of Thorhult, and Misses Della and Carrie Urdahl autoed to St. Hilaire Sunday and visited at the P. E. Bergh home.

Mrs. J. Ferdinandsen entertained Miss Guida Gilbertson, Clara Ferdinandsen, Mildred Seavey and Messrs. Stuart Ferdinandsen, Rudolph and Andrew Kusmack at her home Sunday afternoon.

Peter Luvenskud and Mr. Olson of the Thief River Falls Co-operative Creamery Association were business visitors in town Friday.

Rev. J. O. Hoyum returned from Roseau county Wednesday morning after a short visit with Mrs. Hoyum's mother, who is seriously ill.

County Attorney Theo. Quale, candidate for re-election, attended the Harvest Festival in Goodridge Sunday.

Rev. G. A. Hanson and two sons of Brooten, Minn., spent the first part of the week at the home of Rev. and Mrs. V. O. Aaker.

Mr. and Mrs. Ole Prestebak and daughter of Thorhult visited at the C. N. Urdahl home Saturday night and Sunday.

Mrs. John Kusmack received a telegram from Litchfield, Minn., notifying her of the serious illness of her nephew.

Adolph Johnson left for his home at Strandquist, Minn., Sunday afternoon. He will make a short visit at home and then continue on to Minneapolis.

Mrs. Ben Habedank and Olga Sigrud returned Saturday from Pittsburg, N. D., where they have been visiting for some time.

Miss Louise Besancon, who is attending school at Thief River Falls, arrived home Tuesday for a week's visit.

Lillian Stephenson returned to her home Monday night from Kenyon, N. D., where she has been employed during the summer months.

Gust Thompon returned from Crookston Thurday afternoon. He has been confined to the hopital for 10 days previous, being injured while at work in the railroad yards.

J. A. Sundquist, Carl Edseth, Theodore Tandberg and Cy Thompson, the latter of Minneapolis, autoed to Four Towns Sunday morning and hunted partridges.

GRYGLA ROAD MEET IS WELL ATTENDED

2-Hour "Better [illegible]ways" Discussion [illegible]s Down "Road [illegible]owhere."

State Board of Health

The road meeting held at Grygla last Saturday evening, attended by a number of Goodridge residents, as well as many farmers residing in both Marshall and Pennington counties, fizzled as far as better and new road improvements are concerned.

Those present—most of them—agreed that good roads were a necessity, but where to start and how best to proceed was the main bone of contention. It was a case of "one is afraid and the other doesn't das't."

Various roads came under discussion for more than two hours and it was evident from the outset of the meeting that many preferred to let the road situation remain status quo.

A. C. Tvedt, one of the best informed road men in this part of the country, pointed out the most feasible road routes, including the proposition of completing the highway which now passes Goodridge going north, but which comes almost to an abrupt end just two miles north. Two well constructed bridges, erected several years ago, along this proposed highway are fast "going to seed" because of the fact that they are not being kept up.

Proponents of completing a road between Grygla and Holt were luke warm in their desire to see such a highway. A move to make this road a fact within the next year or so met with a scattering of hardly audible ayes. Talk of improving the Grgyla-Goodridge road met with about the same degree of enthusiasm.

Mr. Tvedt presented figures to show the comparative cost of transportation between Goodridge and Grygla and Holt and Grygla. He went into detail and showed that shippers were at a distinct disadvantage in going 10 miles further to haul their goods and that hauling from this point meant a saving of from one to 10 cents per hundred pounds. Practically every available rate chart presented indicated that this village could beat Holt by a good margin. They presented a remarkable study in transportation charges.

"By placing the Grygla-Goodridge road in good condition," declared Mr. Tvedt, "you will effect a further saving in transportation charges, and I believe that is what we are all interested in nowadays.

The proposition of completing a north and south highway met with scant sympathy, some intimating that road taxes were already burdensome and that unless the highway could be "fathered" by the State Highway Department, they would be opposed to it.

Commissioner A. W. Hanson stated that before a road could be designated as a state highway, it first had to be recommended as such by the district road superintendent and that the highway department was guided in these matters by such recommendations.

No further interest was manifested and at this stage everybody started talking. A motion for an adjournment then prevailed.

PASKEWITZ-LASSESSON.

Miss Bernice Arolene Paskewitz of Grygla, daughter of Mr. and Mrs. William Paskewitz, was united in marriage Wednesday, October 28th, to Clarence Lassesson of Fargo. The ceremony was performed by Rev. H. Lutz of Goodridge at the home of the bride's parents. Mr. Lassesson is a resident of Fargo, being employed by the Brannick Vulcanizing Company.

KRUEGER MOVES.

Arthur Krueger, who has been renting C. N. Urdahl's farm the past summer, moved Saturday onto a farm south of Goodridge about three miles. Mr. Krueger was formerly a farmer near Thorhult.

Miss Gladys Wilson and Roy Brown visited at the James Wilson home near Grygla Sunday.

NAPLIN OUGHT TO BE DEFEATED.

The Banner has no use for Senator Naplin and don't care who knows it. We could respect the man if he were a good Non-partisan, but he isn't even that. He voted against the Boyd bill to reduce the interest rate from 10 to 8 per cent. His silly excuse is that he thought the bill would be killed in the Senate, anyway. From his standpoint that is perhaps the only excuse he could make, but we suspect the fact that he is financially interested in a number of small banks had something to do with it.

He voted for the purchase of 14 sections of practically worthless cutover land from the big lumber companies, such land to be added to the Itasca State Park. It must have been a relief for the lumber barons to get rid of this tract of land at a fancy price, but how do the members of the Non-partisan League like to have items like this added to their already heavy tax burden. If Naplin is not ashamed of this vote, he ought to be.

Instead of buying land from the lumber barons of this state, whose despoiling of our timber resources stinks to high heaven, why in the name of common sense did he not instead ask for a little money from the state to aid the farmers of this section in their drainage problems?

Naplin shamefully betrayed the interests of his farmer constituents when he voted for the eight-hour law for farm labor. He must have been thinking about office hours for lawyers when he voted as he did. It would be fine if the farmers could get through with their work in eight hours, but unfortunately they are compelled to work nearly twice that long, and if the bill had become a law the farmers would be even worse off than they are now. He probably took his orders from the Socialists of Minneapolis when he voted for this bill, but he must remember he was hired to work for the people of the 65th Legislative District, and he should hide his face in shame when he offers the lame excuse in this instance, as he has in many others, "that he didn't think the bill would be passed."

This is no time for wishy-washy men in the Senate. There's work to do and it must be accomplished by fighters. Naplin has served his purpose as an ornament. Now we ought to send a man in his place who will work for the needs of the district. Has anyone seen Naplin in Goodridge unless he was looking for votes? Certainly not. He never takes part in anything that does not involve his own fortune.

C. L. Hansen may have his faults, but what man has not? Anyhow he is endowed with common sense—and above all things he is not a drone. He fights for what he thinks is right, and The Banner feels sure his record in the Senate will be in line with his past work in the community, which has always been for the upbuilding of everything of merit and the advancement of every good cause.

Miss Tvedt Hostess at Hallowe'en Gathering

Miss Eunice Tvedt acted as hostess Tuesday evening to a large number of friends at a Hallowe'en party given at the Tvedt residence.

The following guests were ushered into the reception room: Misses Ida Anderson, Ruby Thompson, Mabelle Tweeton, Violette Josephson, Gretta Gulrud, Clenora Urdahl, Mable Graff and Messrs. Maynard Halvorson, Alvin Halvorson, Joe Christianson, Gorman Thompson, Daniel Payne, Herbert Nelson, Ludolph Urdahl and Mr. and Mrs. Henry Iverson.

The reception room was appropriately decorated in ostentiously grotesque figures of the feline family, intermingled with diagrams of necromantical individuals with a background of dimmed lights and gay colored streamers suspended from the walls and ceiling. The evening was spent in playing contestant games, which kept the guests in a continuous state of hilarious laughter.

At 11 o'clock a sumptuous lunch was served, after which prizes were given to the one having won the most games in the contests and to the won having the least. Ludolph Urdahl received the first prize for having won three times. Maynard Halvorson received the other for not winning any.

Osmund Urdahl Returns With Guernsey Sire

Osmund Urdahl took a load of cattle belonging to Bell, a dairy farmer near Thief River Falls, to Bemidji Wednesday, which were disposed of to the Anderson brothers. He then drove across to Halstad, Minn., where he purchased a pure-bred Guernsey bull for his neighbor, Stuart McLeod.

Mr. Urdahl and Mr. McLeod are to be congratulated on their efforts in securing such an excellent addition to their already fine herd.

Creamery Manager and Family Move to T. R. F.

Joe Gangness and family removed their furniture and belongings to the county seat Monday afternoon, where they will take up their residence, Mr. Gangness having entered the employ of the Thief River Falls creamery.

Mr. Gangness has been manager of the local creamery since the reopening last spring and he leaves Goodridge with best wishes by the many friends he has acquired during his short stay here.

Andrew Kusmack left for Chicago Sunday evening, where he has secured employment.

Farewell Party Given in Honor of Local Departees

On Friday night Mr. and Mrs. Jas. Cullen and family entertained about 65 guests at their farm home in honor of Mr. and Mrs. Carl Erickson and family, who leave shortly for Thief River Falls to make their future home and the evening was spent in visiting and dancing. A delicious luncheon brought by the guests was served at midnight. Those present were: Mr. and Mrs. Carl Erickson and family, honor guests, Mr. and Mrs. Jas. Cullen and family, Mr. and Mrs. Jack Kast and family, Mr. and Mrs. Henry Clauson and family, Mr. and Mrs. Herman Zinther and family, Mr. and Mrs. Albert Wilkins and family, Mr. and Mrs. Frank Pittman and family, Mr. and Mrs. Ed Eells, Mr. and Mrs. Ed Johnson and famliy, Misses Lena Rosa, Selma Kissow, Esther Coan, Messrs. Henry Becker, Richard, William, Erich, Henry and Herman Kissow, John Coan, Paul Kotz, Martin Eells, Jake Einerson and son, Harold, Arthur Schram and Will Pittman.

THIEF RIVER FALLS JOYRIDERS SERENADE TOWN WITH BAND

Saturday morning a delegation of eight or ten automobiles carrying business men and the band from Thief River Falls stopped in at Goodridge en route to Grygla, where they went to attend the Calf and Pig Show. All spent a few minutes in Goodridge while the band played a selection.

TANEM REPAIRS DANCE FLOOR.

Workmen were busy last week scraping and sand-papering the hardwood floor in the Goodridge Hall preparatory for the usual number of dances held throughout the cold weather months. Mr. Tanem, proprietor, assures all dance zealots that good music and a good time is a byword in his dance hall.

ANOTHER IMMIGRANT CAR ARRIVES IN GOODRIDGE

An immigrant car from Sioux Falls, S. D., belonging to George Asper and family arrived in Goodridge Monday evening. Mr. Asper and his family have secured a place near Thorhult, which they plan to move into in the spring. Until that time they will make their home in Goodridge. Mr. Asper stated that he was well satisfied with our town and country, especially the invigorating climate.

Jay Payne, Victor McLeod and Will Wayne autoed to Four Towns Sunday, where they spent the day hunting partridges.

GIVE US THE NEWS

If your relatives or friends visit you, or you visit them, we would appreciate it if you would tell us about it. We want to print the news first.

HALLOWEEN POLITE AFFAIR.

Hallowe'en lacked its usual bunch of pranks and property damaging in Goodridge Tuesday night. The credit of the quiet evening is attributed to the vigilant officers of the law in this village.

Ole and Andrew Prestebak, Henry Anvinson and John Anderson, all of Thorhult, were shoppers in Goodridge Monday.

LOCAL CREAMERY QUITS CHURNING

All Cream to Be Shipped to Thief River Falls for Buttermaking.

The local creamery discontinued the churning of butter at the beginning of the month of November and from now on will buy the cream and ship it to Thief River Falls for buttermaking.

The buying and testing of cream at the creamery is to be under the supervision of O. N. Urdahl, who will keep his station and office in the creamery.

Joe Gangness, who has been in charge here during the summer, left Monday for his old job at the Thief River Falls creamery.

The reason for the recent shutdown is the meager supply of cream taken in, not being sufficient to cover running expenses. This being the slack time of the season for dairy products, the managers of the institution considered this the most practical move until spring, when churning operations will again be resumed.

COMMUNITY CLUB MEETING IS SUCCESS

Mrs. Carl Christianson in Charge in Absence of Club President.

The Community Club meeting held at the school auditorium Friday evening, October 27th, was in every way a properous issue. The program was illustrious throughout, due to the apparent ability of the performers. Due to several unexpected absentees, the program was reduced to half of the contemplated bill, but despite the numerous setbacks the program was carried out in a finished and peppy manner. Mrs. Carl Christianson, vice-president of the Club, had charge of the meeting in place of Stuart McLeod, president, who found it impossible to attend.

The orchestra rendered several ryhthmical sfielections at the commencement of the program, after which numerous other entertainments were delivered as follows: Duet, Mrs. Carl Christianson and Miss Minnie Lindbloom; reading, Miss Eunice Tvedt; instrumental solo, Miss Gladys Wilson; selection, orchestra; song, Glee club; selection, orchestra.

The program was of a different type than any hitherto featured here inasmuch as it furnished musical numbers instead of the usual speeches.

Conclusively summing up, the program made up in efficaciousness what it lacked in length and numbers.

TVEDT TAKES A HAND.

To the voters of the Village of Goodridge: I sincerely request you to cast your vote for A. W. Hanson for Commissioner for the First District so the road from the Marshall county line to the Red Lake county lines may be completed.

Yours truly,
A. C. TVEDT.

Isaac Isaacson was a visitor in Thief River Falls Friday afternoon.

Morton Howell.

NEWS REVIEW OF CURRENT EVENTS

Lloyd George Starts Campaign and Bonar Law Forms New British Ministry.

GERMANY IS TOPPLING AGAIN

Threatens Voluntary Bankruptcy and Reparations Body Hurries to Berlin—Daugherty's Dry Ship Ruling Is Upheld—News From the Near East.

By EDWARD W. PICKARD

> DAVID LLOYD GEORGE, forced out of the British prime ministership by the attitude of the Conservative party, seeks re-election to parliament and return to power. He opposes the radical demands of labor, and advocates the fostering of friendly relations with the United States and with Russia. In this instance especially British politics affects the world at large. Is it your opinion that Britain would be wise again to put the helm of the ship of state in Lloyd George's hands?

THOUGH he has not fulfilled prophecy by trying to form a new party, David Lloyd George is making a pretty fight for return to parliament and to power. He declares his object is to secure the dominance of a party or group that will keep the government in a middle course of safety and moderation. Addressing a gathering of the National Liberal party, he took a firm stand against recent radical demands of the Labor party, and also made it clear that one of his chief claims for support was his friendly relations with the United States. He asserted all reasonable concessions must be made to induce this country to enter the League of Nations, which would be crippled without it. And he said Britain must pay her war debt to the United States in full. "Working with the United States," declared he, "ought to be one of the chief purposes of the government. If these two nations would work together, it would be the surest guarantee for a just peace, and a just peace is the only lasting peace."

The ex-premier's quarrel with the Labor party is in a way international, for that party, in a manifesto issued last week, not only demands the creation of a "war debt redemption fund by a special graduated levy on fortunes exceeding £5,000," but also declares for the revision of the peace treaty and German reparations, for an international conference to arrange the freedom of the straits, for independence in Egypt and self-government in India.

Andrew Bonar Law, having been elected head of the Conservative party, accepted the post of prime minister and on Tuesday announced his cabinet. It is a respectable list of names, with quite a number from the peerage, but most of the new ministers are considered rather nonentities. The mainstay of the cabinet is Marquis Curzon, secretary for foreign affairs. Lord Cave, the lord chancellor, and Stanley Baldwin, the chancellor of the exchequer, are men of proved ability. It is taken for granted that Bonar Law will make many changes in the ministry if he is returned to power at the general election, which is set for November 15. He is a candidate for Glasgow, and is opposed by a Labor candidate and also by Sir George Paish, noted economist.

The last named gentleman is now in the United States and, addressing the convention of the American Manufacturers' Export association, gave a lot of economic advice concerning production and trade. He scolded our government for hoarding gold, and urged that the tariff barriers and other trade restrictions be removed as the first step in the restoration of foreign exchange. Sir George also wants America to throw open her doors to unrestricted immigration—an unwelcome suggestion in view of our experience with certain classes of immigrants in recent years.

BEING refused the cabinet positions they demanded, the Italian Fascisti in convention in Naples made preparation for militant action that threatened to become revolutionary. Thereupon Premier Facta and his cabinet resigned. Former Premier Giolitti conferred with Benito Mussolini, chief of the Fascisti, and it was believed he would be called on to form a new ministry. The Fascisti are now the strongest organization in Italy and have announced that they will assume control of the government, legally or otherwise.

GERMANY, whose mark made a new low record of 2⅛ cents a hundred last week, is again threatening to go into voluntary bankruptcy by defaulting in her reparations payments in material as well as in cash. Chancellor Wirth, whose political life is in great danger, has begun hedging and now has adopted the slogan of "First bread, then reparations," and has put the problem up to the cabinet. The Socialists are calling for more drastic measures, including confiscation of foreign money in the hands of private persons, and on the other hand the bourgeoisie demand the suppression of the decree against speculation and the agriculturists insist on higher official prices for German wheat and corn. The allied reparations commission went to Berlin to consult with the government. The British commissioner, Sir John Bradbury, said he would vote to declare Germany in voluntary default of its agreement if it should refuse to carry out within a reasonable time requests for internal reforms. This was a considerable concession to the French demands. It may be that in return France will agree to the indefinite postponement of the Brussels financial conference, leaving the entire reparations matter in the hands of the commission.

French, Belgian and Italian exchange rates dropped sharply last week, going to the lowest prices of the year on the New York exchange.

FEDERAL JUDGE HAND in New York upheld the ruling of the attorney general prohibiting the carrying of liquors on vessels entering American waters, and the case brought by a number of steamship companies is now to go before the Supreme court, which probably will not hand down a decision for six or eight weeks. Meantime Secretary of the Treasury Mellon has informally instructed his agents not to enforce the order against foreign vessels whose supplies of liquor are sealed when they enter our ports. American ships, however, must obey the ruling. The French government has indicated that it will not comply with the request, presented unofficially by Ambassador Herrick, that it cooperate in preventing liquor smuggling from the St. Pierre et Miquelon islands off the southern coast of Newfoundland. According to French officials, the islanders trade French liquor for food at Newfoundland and Prince Edward island ports, and do not themselves smuggle the booze into the United States. It is said this liquor trading is essential to the fishermen of the islands.

SAMUEL GOMPERS, Frank Morrison and James O'Connell, the executive committee for the national non-partisan campaign of the American Federation of Labor, have issued a manifesto denouncing the present congress as reactionary and calling on the voters to "put progress in" at the November election. The appeal says the congress has performed no service for the people, but has "tried by every trick and device to serve predatory interests." Its action in removing the excess profits tax and reducing the surtaxes and concerning the soldiers' bonus is especially condemned.

TEN members of the I. W. W. are on trial in Sacramento for violation of the California criminal syndicalism law, and last week the state produced a witness who told a startling story of "wobblies" plots during the war. He is W. E. Townsend and says he was the right-hand man of W. D. Haywood, head of the organization. He testified that he and several hundred other wobblies were employed in the Chicago packing houses and, under orders from the I. W. W., conspired to send to our troops spoiled and poisonous canned foods. He also told of sabotage plots on railroads and in harvest fields.

NAVY DAY was celebrated throughout the United States on Friday—which also was the anniversary of the birth of Col. Theodore Roosevelt. The occasion brought forth many appeals for the maintenance of the efficiency of the navy personnel, which, according to Rear Admiral Rogers, should number not fewer than 120,000 men. To maintain our ratio under the Washington treaty, said the admiral, we should build fifteen or twenty cruisers of 10,000 tons each in the course of the next few years, besides large submarines. President Harding in a letter to Secretary Denby said: "It is well for us to have in mind that under a program of lessening navy armaments there is a greater reason for maintaining the highest efficiency, fitness, and morale in this branch of the national defensive service. I know how earnestly the navy personnel is devoted to this ideal, and want you to be assured of my hearty concurrence."

PREMIER POINCARE is to send out invitations to the Near East peace conference, which is to be held in Lausanne, Switzerland, but at this writing the date of the meeting is uncertain. Lord Curzon, British foreign minister, insists that the United States should participate. Italy says that Russia must be permitted to sit in the conference and also to sign the treaty, and France may consent to this in view of her improved relations with the soviet government. Evacuation of Thrace by the Greek civilians continues amid considerable disorder though the allied forces are doing their best to prevent trouble. The Greeks carry off all they can and often destroy the rest of their possessions, including crops. The American Red Cross has announced that it will care for 800,000 of the refugees. The press of Athens complains bitterly that the United States is the only nation that is giving aid. George Horton, American consul general at Smyrna, is on his way home to report on the destruction of that city and the attending circumstances. His statement as to the origin of the conflagration is awaited eagerly as the payment of insurance may depend upon it. Mr. Horton gave no advance information as to his report, but in his conversation there was an indication that he would tell the State department that the Smyrna fire was started by looters and not by Turkish soldiers.

TEN big transports steamed out of the port of Vladivostok last Wednesday, bearing all the Japanese troops that have held that city and most of the Japanese civilians as well. The forces of the Far Eastern Republic—the Chita government—at once entered the place and took control. The commander of the Red army is said to have ordered the British and American marines to leave Vladivostok and all foreign warships to leave the harbor.

THE constitution of the Irish Free State was adopted by the provisional parliament Wednesday and was taken to London for approval by the new British cabinet, which certainly will not be withheld as no changes that could be offensive to the English government have been made in the draft as approved in June by the Lloyd George ministry. Eamon de Valera is in Dublin again but is suffering from a serious nervous disorder and the authorities therefore will not molest him. His condition is so serious that a priest is in constant attendance.

ONE noted American died last week—Dr. Lyman Abbott, the venerable editor of Outlook. For many years he has been prominent as a preacher, editor, author and lecturer, and he was the associate and friend of the greatest Americans of his time.

[illegible] of Minnesota

EVENTS of the week throughout the "State of Ten Thousand Lakes" told in brief form

Marshall—A complete reorganization of the Marshall Milling company will become effective Nov. 1. Minneapolis men have interested themselves in the institution. The mill has a capacity of 3,000 barrels of flour a day.

Winona—The yacht North Star, owned by Dr. W. J. Mayo of Rochester, is at the dock here ready to leave for a long cruise down the Mississippi to Plaquemine, La.

Luverne—Luverne banks have taken extra precautions against holdups by having firearms placed within easy range. Several long range rifles also have been placed in second stories of business houses which offer a clear view to bank entrances for emergency use.

St. Paul—A reduction of storage rates on potatoes in Minnesota warehouses from five and a half cents to four cents the hundredweight per month was granted by warehouse officials, following a conference with O. P. B. Jacobson, chairman of the Minnesota Railroad and Warehouse commission.

Willmar—The Young People's Federation of the Lutheran Free Church of America will hold their annual convention here Nov. 2 to 5.

Duluth—Fifteen complaints in which the defendants seek redress totalling more than $60,000 were filed in district court here on the last day of filing notes of issue for the November term.

Albert Lea—Frank De Graff has sold the hotel Freeborn here to E. E. Arnold of Mason City, Iowa, who will take possession at once.

Brainerd—An area six miles long has been burned over by forest fires near Mildred, north of here, according to reports reaching here, but the fires have been extinguished. Fires near Hillman destroyed a quantity of hay.

Duluth—Duluth and the range must have 15,000 members in the American Red Cross this year if it is to properly carry out its work in the near east, George M. Crosby told members of the Duluth chapter at its annual meeting.

St. Paul—Representatives of the Greater St. Paul committee, the city of St. Paul, the Northern States Power company and the Markham, Kelsey, Drewer interests attended a meeting of the Wisconsin railroad and warehouse commission at Madison, at which all applications for development of waterpower on the St. Croix river were reviewed.

Duluth—Adoption of a state statute by the legislature giving towns and villages authority to donate funds for the upkeep of humane societies within the county was advocated by Judge A. E. McInnes of Gilbert at a meeting of the St. Louis county humane society.

St. Cloud—Rev. E. V. Campbell, for the last 58 years pastor of the Congregational church here, has resigned. The church's congregation has unanimously elected him pastor emeritus. A resolution was adopted for the placing of a bronze tablet in the vestry entry, which will bear the inscription stating that the church was dedicated by the life service of Dr. Campbell and his wife.

Minneapolis—Legislation aiming at a "carnival proof" Minnesota will be introduced into the next session of the legislature by the Women's Co-operative alliance, according to plans announced.

St. Paul—St. Paul Boy Scouts will pay $13,000 for a 60 acre tract on the shore of Lake Elmo, 12 miles east of St. Paul, to be used as a permanent camp site, it was announced, following a meeting of the Ramsey county council. There are 73 troops of Scouts in Ramsey county, with a total membership of 1,605.

Minneapolis—Dr. Boyd S. Gardner, chief of the section of dental surgery of the Mayo clinic, Rochester, will speak before the Minneapolis Dental society here.

St. Paul—Wherever common barberry bushes have been thoroughly eradicated in Western Europe black stem rust has been brought under control and the losses to grain growers reduced to insignificant proportions, according to Dr. E. C. Stakman, plant pathologist at the University of Minnesota, who has just returned from a six months' tour abroad. Dr. Stakman is a recognized international authority on the subject. He was sent to Europe by the United States department of agriculture to report upon the result of foreign efforts to combat black stem rust by eradicating barberry bushes. He said the evidence of the success of this prevention method was even stronger than he had expected to find.

Minneapolis—Former members of the 408th Telegraph battalion, A. E. F. met at Hotel Radisson for the third annual two-day session of the organization.

St. Paul—Dr. C. L. Schofield of Benson was re-elected president of the Minnesota Public Health association at the annual meeting. Other officers named are: Dr. E. P. Lyons, dean of the school of medicine, University of Minnesota, first vice president; Dr. A. J. Chesley of the State Board of Health, second vice president; A. J. Stowe, Rush City, secretary, and W. A. Laidlaw, St. Paul, treasurer.

[illegible] council has ordered all department heads to prepare the budgets for 1923 and report to the council.

Duluth—Twelve city skating rinks will be flooded this year, it was announced by the recreation department. Warming houses have been constructed at each rink.

Duluth—Tentative plans for a million cubic foot gas reservoir to be built in Duluth have been announced by P. G. Phillips, commissioner of public utilities.

Willmar—The hearing on the $2,600,000 judicial ditch No. 13, Kandiyohi, Renville and Meeker counties has been postponed until October, 1923. This ditch is the biggest project in the history of these counties.

Keewatin—The tax levy for 1923 in the village of Keewatin will be $183,496, the village council has decided.

Hibbing—One of the most important bank transfers on the Mesaba range was closed when the Hibbing State bank became the property of D. B. Fuller, former state bank examiner.

Albert Lea—Jens Wayne, county commissioner, was perhaps fatally injured when his automobile was struck by a Rock Island train at a crossing.

New Ulm—Fire originating in a package of motion picture films destroyed the Woodman hall and Dan D. Harris' lumber yard at Cambria, near here.

Duluth—Building permits for September aggregated $691,000 in Duluth, according to compilations made by the city building inspector. New construction continues heavy in public and semi-public lines.

Chisholm—(Special) — Bids have been called for the paving of the new Babcock highway between Chisholm and Buhl. The bids are to be opened Nov. 9 in Duluth.

Ojibwa, Wis.—O. O. Horlamus, recently resigned as poultry specialist with the agricultural extension division, University of Minnesota, is starting a large poultry farm near here. He is building a poultry house 30x180 feet and will install an incubator of 24,000-egg capacity. He expects to get 6,000 eggs a day before the end of the year.

Crookston—The cornerstone for the $250,000 building, the first of a number to be erected for the St. Benedict Catholic Girls' academy, was laid here Sunday by Rt. Rev. Timothy Corbett, bishop of the Crookston diocese. The building will be used as the home of 250 girls.

Duluth — Formally opening the church for services, Rt. Rev. John T. McNicholas, bishop of Duluth, dedicated the church of the Canons of the Holy Cross.

Duluth—The steamer C. S. Robinson, owned by the Interlake Steamship company, with a cargo of soft coal destined for the Duluth docks, was grounded and sunk on the east side of Devil's Island.

Virginia, Minn.—The memorial committee of the Virginia post of the American Legion has decided that nothing further should be done toward the construction of a memorial at the present time.

Albert Lea—More than 300 Kiwanians from over the state were here to assist in the presentation of the charter to the newly formed club of Kiwanians. A big parade of celebration was conducted.

Duluth—Members of the Wales Forest Protective association accompanied by representatives of the state forestry board, forestry department and the agricultural department of the University of Minnesota made an inspection trip into the north woods.

Willmar—The concrete paving of the business section is practically completed. New street lamps are being installed. A white way of about 14 blocks is a feature of Willmar's big civic improvement plan.

St. Paul—Minneapolis and St. Paul will receive less than 50 per cent of the normal supply of hard coal, according to the plans of the fuel administration and information received by Ivan Bowen, state fuel administrator.

Eveleth—A syndicate composed of the First National bank of Eveleth, the First National of Duluth, and the Northern National of Duluth, was the successful bidder for the issue of $375,000 worth of bonds voted recently by the people. The bid offers to pay par plus a premium of $19,615. The bonds will bear interest at 6 per cent.

Brainerd—A giant magnet was used by Dr. Nesmith Nelson to remove a .22 caliber bullet from the eye of Iden Wade, young son of Hammond Wade, who was injured while playing with the cartridge.

Duluth—More than 150,000 tourists visited Duluth and northern Minnesota this year as a direct result of advertising and publicity given this territory by newspapers of the state and various tourist agencies, according to a report made public by the Duluth chamber of commerce. An intense advertising campaign to double this number of visitors next year will be undertaken, according to E. B. Dunning, chairman of the publicity committee of the chamber.

Crookston—The largest amount of road improvement contracts ever let by a Polk county board was awarded by the board now in session when bids totalling $215,136 were given to nearly a score of the 50 competing firms.

Duluth—Subjects relative to the betterment of the farming situation will be discussed at the thirteenth annual meeting of the Northern Minnesota Development association at Grand Rapids Nov. 8 and 9. The convention is to be held in conjunction with an industrial exposition staged by the Grand Rapids Commercial club.

Nujol
A LUBRICANT—NOT A LAXATIVE

Fate Takes a Hand.

Life has many embarrassing moments, but this was truly a dreadful one. I was a senior in a large university, and had had a romance with a prominent classmate. After our engagement was broken we were not on speaking terms, and this was generally known.

One evening I had been studying at a table in the library reading room when the lights went out. I stood up and collided with some one. I instinctively threw out my arms, and he did likewise.

Of course, the lights went on suddenly, and I found myself embraced and embracing my ex-fiance. Every one saw us, and we made quite a scene trying to get out.—Chicago Tribune.

Stop the Pain.

DAIRY FACTS

CLEANING OUT TUBERCULOSIS

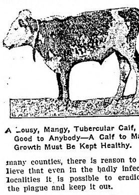
Much Interest Shown in Eradication of Disease—Prevalent in Many Eastern States.

(Prepared by the United States Department of Agriculture.)

In the region that includes the New England states, New York and Pennsylvania, and New Jersey, there is extensive interest in the eradication of bovine tuberculosis. At the Eastern states conference on the subject, recently held, much information of value to dairymen and cattle breeders was presented by state and federal sanitary officials. Their estimates, based upon the results of actual tests of a large number of herds, show that in some parts of this area nearly 30 per cent of the dairy cattle have the disease. It seems to be most prevalent in the thickly populated states of Connecticut, Massachusetts, and Rhode Island, but infection is extensive in New York, New Hampshire, and Vermont. Pennsylvania and New Jersey herds have about 9 per cent of diseased cattle, while Maine has only 2.7 per cent.

To these states, as well as many others, tuberculosis is a serious economic problem, but since the disease makes herds unprofitable or greatly reduces their efficiency, it pays to get rid of it. Keeping up a herd of diseased cows is just as hopeless as it is to maintain a factory or other business at a loss from year to year. Many a dairyman in this area has been financially ruined without knowing the real cause.

Since the plan for getting rid of the disease in definite areas has been carried out with such success in so many counties, there is reason to believe that even in the badly infected localities it is possible to eradicate the plague and keep it out.



A Lousy, Mangy, Tubercular Calf, No Good to Anybody—A Calf to Make Growth Must Be Kept Healthy.

Value of Purebreds

The value of purebred live stock is most noticeable in those cases in which the capability of the animals is measured most directly. Among farm animals the best illustration can be found in dairy cattle, though careful yearly tests of milk and butterfat production are relatively recent affairs. The enormous differences among dairy cows when given the same opportunity have been brought out clearly in a great number of cases, and these differences are strongly inherited through sire and dam. The average production of purebred and grades is much above the average of all milk cows, which is about 4,000 pounds of milk and 160 pounds of butterfat per year.

SECOND GRADE CREAM CAUSE

Lack of Careful Attention to Separator and Improper Cooling Are Held Responsible.

Does your cream grade number one? If not, it should. Lack of careful attention to the separator and not cooling properly usually causes most second grade cream. Raise the quality of butter by keeping your cream out of the grades below.

Second grade cream consists of cream that is too sour to pass as first, that contains undesirable flavors or odors in a moderate degree; that is foamy, slightly yeasty or slightly stale, or that is too old to pass as first grade cream. All sour cream containing less than 25 per cent of butterfat shall be graded as second grade.

Clean Milking Practices.

Cleanliness in milking should be exercised at all times. Before milking begins the cow's udder and flanks should be wiped off, preferably with a damp cloth, in order to prevent particles of straw or loose hair getting into the pail.

Future of Young Stock.

A great deal depends upon the way the young animal goes through its first winter, as to its future size and value.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

METHODS OF UTILIZING CULL POTATOES TO AVOID LOSSES

Feeding Potatoes to Livestock.

Potatoes may be fed to livestock in limited quantities in connection with other feeds. While they may be sliced and fed raw with dry feeds, it is best to cook them before feeding, as heavy feeding of raw potatoes will cause scouring. Under ordinary farm conditions, boiling or steaming is the most economical method of cooking potatoes for livestock. Feeding investigations indicate that when potatoes are fed with others feeds to balance the protein requirements, from 350 to 450 pounds of corn, while from 500 to 600 pounds of raw potatoes are required to equal 100 pounds of corn.

Swine-feeding experiments of the Oregon agricultural experiment station in 1913, showed that steaming the potatoes increases their feeding value about 60 per cent.

One analysis shows that the average analysis of potatoes is 78.9 per cent water, 1 per cent ash, 2.1 per cent protein, 0.6 per cent fiber, 17.3 per cent nitrogen-free extract, and 0.1 per cent fat. The low protein content of the potatoes makes it advisable to feed them in connection with feeds that are relatively high in protein content.

Unripe potatoes and sprouts of stored potatoes contain considerable solanin, a poisonous compound, and should not be fed.

Horses—Potatoes are palatable and well suited for use as horse feed. It is safe to feed as high as 15 pounds a day to work horses. They are equivalent to about one-third their weight in hay. When potatoes are fed, a legume hay is a desirable supplement. If a grass hay, such as timothy, is fed, the ration should contain feeds rich in protein, such as concentrates, legume hay, etc. It is advisable to chop the potatoes to lessen the danger of choking.

Cattle—Cooked potatoes may be fed to cattle at the rate of from 25 to 30 pounds a day per 1,000 pounds live weight. The allowance should be lessened somewhat if they are fed raw, on account of their tendency to produce scourings. A heavy allowance of potatoes, however, produces milk and butter of poor flavor.

Sheep—Potatoes may be fed in small quantities to sheep in about the same way as roots are fed to this class of animals. The daily allowance should be approximately one to three pounds per mature sheep. Potatoes should be used as a succulent feed, together with a regular ration of legume hay and cheap roughage.

Swine—For feeding to swine, potatoes should be cooked and fed with middlings, tankage, or fishmeal in self-feeders. It is especially important that the potatoes be supplemented by these protein feeds for growing shoats. The self-feeder methods is efficient as a means of having the pigs fed potatoes and protein feeds in correct proportions.

Poultry—Potatoes should be boiled or steamed before being fed to fowls and are fed to best advantage when mixed with mash. Since potatoes are quite fattening, they should be fed in limited quantities, preferably to laying hens or growing chickens, and should be used in connection with other feeds. One hundred hens will consume about 10 pounds of cooked potatoes daily, and these potatoes can be used to replace corn meal in the poultry mash. If so used, an equal weight of potatoes and mash may be mixed together. A laying mash for this purpose may be made of: 1 part meat scrap, 1 part of middlings, 2 parts bran, and 4 parts potatoes, by weight.

Other Uses.

Aside from the use of cull potatoes for feeding purposes, potato-starch factories offer a limited outlet for the surplus in those few localities where starch factories are in operation. Such establishments are located in Aroostook county, Maine, central Wisconsin and northern Minnesota. In these sections it may be profitable for producers to get in touch with the factories and endeavor to arrange for a greater utilization of their surplus.

The question may arise as to the practicability of utilizing a portion of the surplus in the production of alcohol, or in the manufacture of potato flour or dehydrated potatoes. It is sufficient to say that under present economic conditions these three outlets are not practicable.

PICK POTATO FIELDS CLEAN—PRECAUTION AGAINST DISEASE

The department continues to advise, as in the past, that potato fields be picked clean of the culls and diseased tubers as a precaution against the spread of disease. Late blight is overwintered only in stored, living tubers. Potatoes which freeze and decay on the ground therefore, will not infect the next crop with late blight, although they may increase the soil content of Fusarium and bacterial decays. The potato scab lives long in the ground, and it is believed that the infection is made worse by leaving scabby tubers in the field. Scab does not injure materially the keeping quality of potatoes and scabby potatoes are good for cattle feeds and starch.

In the western state, fusarium wilt and tuber rots are of major consequence. They infect the soil, and, as a measure of crop sanitation, it is recommended that diseased tubers be taken from the field.

As each year there is a high peak of decay for potatoes shipped in warm weather, shippers should be careful not to forward infected stock during warm fall weather.

The Question of Storage.

If low grade potatoes cannot be fed or other wise used immediately, state extension directors and state marketing officials should decide on their specific policies with reference to whether to bank or otherwise hold them for further distribution, if needed. The department recognizes the marked difference, in this matter, between producing sections within easy reach of centers of consumption at low transportation costs and those which are so remote that shipments involve heavy freight charges.

NDR 114 FLAX AND OTHER SEEDS WANTED AT THE PURE SEED LABORATORY

The rather successful yields of flax which have come this year to those who properly planted the crop, with the news of an increased tariff on flax seed and its products seems to be very encouraging news to many growers. The pure seed laboratory has already received many calls from those who are interested in buying resistant flax seed for sowing purposes. There was a large call for this seed last year, but we could not aid much for lack of information as to the seed in the hands of those who were holding it for sale as seed.

It is the business of the pure seed laboratory to inspect, analyze and to report on seeds for those who wish such analyses. The seed laboratory would like to make this service of the laboratory as valuable to the growers and buyers of seed as it is possible.

It is a natural function of the laboratory to put those who have good seed to sell in touch with those who want to buy good seed. Therefore, if you wish the pure seed laboratory to do this for you, let us hear from you as to the amount of seed you are holding for sale as seed for sowing purposes.

Send to the office of the state seed commissioner a fair, representative sample of the seed which you are able to sell, no matter what the variety or kind of grain. The seed laboratory is particularly interested in procuring resistant flax, resistant wheat, high quality oats, indeed, pure bred varieties of any kind of agricultural seeds. Experts will analyze them and report to you regarding the quality of the same. If found of good quality, your name, address and the amount held for sale as seed will be placed on the state seed list and that list will be sent to those who wish to buy. This ought to be of aid to all parties. Therefore, let us hear from you soon so that the laboratory can serve the public in this important line of seed certification, registration and listing. To be of most use we should build the list early.

Washing dishes in sinks that are too low for comfort—and can't be raised—is made easier by using a wooden rack under the dishpan to lift it to the proper height.

One housewife has a chair in her kitchen with one wide arm like those used in "one arm" lunch rooms. She saves her strength by sitting down to a lot of her work.

ROAD RESEARCH INVESTIGATIONS OF DEPARTMENT OF AGRICULTURE

(Prepared by the United States Department of Agriculture.)

The road research investigations of the bureau of public roads of the United States Department of Agriculture at the Arlington experiment station are now well under way.

A new portable road-impact machine has been received and is giving most satisfactory results in testing the series of road slabs placed earlier in the season. This series consists of 120 concrete slabs ranging from four to ten inches in thickness and from lean to rich mixtures. Some of the slabs are reinforced and others have a two-inch Topeka top. There are at least two slabs of each type of construction, one on a dry subgrade and another surrounded by ditches, which are kept flooded.

What the Machine Does.

Briefly the new machine consists of a typical truck wheel with spring and variable load above it, which is raised and allowed to fall on the slab from any desired height by means of an electrically-driven cam. Recording devices measure the deceleration or rate at which the wheel is brought to rest after coming in contact with the slab, the deflection of the slab at a number of points on a line across the slab, settlement of the slab into the subgrade, permanent set of the slab and the maximum instantaneous fiber stress at the point where the blow is struck.

On the first slab tested the various recording devices checked each other with surprising closeness. For a series of blows varying slightly in intensity, curves for the fiber stress, deceleration and deflection showed corresponding variations and gave assurance as to the accuracy of the new methods of measuring. Some interesting information as to the variation of the support offered the slab by the subgrade under a series of varying blows is being secured.

New Light on Impact.

With the information and experience gained from last year's experiments on impact making possible refinements in the new tests, it is thought that an analysis of the data when all of the slabs are tested to destruction will throw a great deal of new light on truck impact on rigid pavements.

The circular track for the testing of asphaltic concrete to determine the cause of waving is now about ready for the automatically controlled truck traffic. Twenty-seven sections of asphaltic concrete of various mixtures have been laid on a cement base, the coarse aggregate of the bituminous mixes ranging from 40 to 70 per cent, with variations in the grading of the finer material. The amount of asphalt varies from 5.0 to 7.0 per cent and has a penetration value of from 45 to 85.

In line with the bureau's policy of cheapening the cost of road construction by the use of local material wherever possible, a circular track for a wear test on concrete has been completed. Sixty-one sections of concrete have been placed. The aggregates used vary in kind and quality, ranging from hard to soft, and there is variation in the amount of mixing water and time of mixing. In order to eliminate the effect of differences in the subgrade the sections are of reinforced T-beam construction, the slab being 4 feet wide, 10 inches deep, with the T-beam in the middle of the slab. The traffic test on these sections will begin soon and the load on the pavement will be made to represent the rubber-tired rear wheel of a 3½ or 5-ton truck moving at a speed of 15 to 20 miles per hour. Specimens of concrete for beam strength and compression tests have been made from each mix and are being cured under the same conditions as the corresponding sections.

Change in Specifications.

Results of this wear test, representing modern traffic conditions, together with the beam strength and compression tests which will be made for this investigation and on a similar set made in connection with the impact investigation and which will serve to tie the two together, will furnish a sound basis for the consideration of suggested changes in specifications for concrete road aggregates.

A Macadam Road in Virginia.

ANIMAL FEEDS FOR POULTRY

Pullets Fed Skim Milk and Meat Scrap Make Most Profitable Record at Purdue.

Animal feeds have a decided value in the ration of laying hens and pullets. Experiments made by Purdue university showed an average egg record of 140.2 eggs in a year from a pen of pullets fed skim milk; 135.9 eggs from those fed meat scrap; and 61.2 eggs from those that received no animal feed of any kind.

Cull Pullet Flock.

If more pullets have been raised than the poultry house will hold without crowding, it will be more profitable to cull out the small, undeveloped ones than to run the risk of getting disease in the flock.

Maintain Productivity.

Even a rotation in which a small grain crop is alternated with a cultivated crop, will maintain the productivity of the soil better than the cultivated crop alone.

As much feed as possible for hogs should be raised on the farm; no more feed than is absolutely necessary should be purchased.

Why Dairymen Co-Operate

1. To assemble their products most economically at country points.
2. To establish and maintain plants for handling their products at country points.
3. To become a factor and wield an influence in the marketing of their products.
4. To undertake actual commercial distribution of their products.
5. To obtain commercial efficiency in the marketing of their products.
6. To stabilize the supply in accordance with the market demand.
7. To secure for producers the services of marketing experts.
8. To reduce the cost of supplies required in marketing.
9. To eliminate speculation and waste.
10. To secure direct and orderly distribution.

STARTING GOOD FARM FLOCK

Most Poultry Breeders Advise Buying of Young Pullets at the Age of Eight to Ten Weeks.

In answer to a query as to the best method of starting a substantial farm flock of good quality, most poultry breeders will advise the buying of young pullets at the age of eight to ten weeks. Many young people, just starting out on a farm, purchase baby chicks and later cull out the cockerels from the pullets.

Use of Beet Top Silage.

The most economical use of beet top silage calls for about thirty pounds daily for each steer or cow and about three pounds for each sheep. Always begin with a light ration.

Return Plant Food.

About 70 per cent of the plant food removed from the soil by a crop can be returned by feeding the crop to live stock and putting the manure back on the land.

POULTRY

GUINEAS GROWING IN FAVOR

Raising of Fowls Becoming More Profitable Because of Gamey Flavor—Market in Fall.

Guinea fowl are growing in favor as a substitute for game birds, with the result that guinea raising is becoming more profitable.

They are raised usually in small flocks on general farms, and need a large range for best results.

Domesticated guinea fowls are of three varieties, Pearl, White and Lavender, of which the Pearl is by far the most popular.

Guinea fowls have a tendency to mate in pairs, but one male may be mated successfully with three or four females.

Guinea hens usually begin to lay in April or May, and will lay 20 to 30 eggs before becoming broody. If not allowed to sit they will continue to lay throughout the summer, laying from 40 to 60 or more eggs.

Eggs may be removed from the nest when the guinea hen is not sitting, but two or more eggs should be left in the nest.

Guinea Fowls Gain Favor as Substitute for Game Birds.

Ordinary hens are used commonly to hatch and rear guinea chicks, but guinea hens and turkey hens both may be employed successfully, although they are more difficult to manage.

Guineas are marketed late in the summer, when they weigh from one to one and one-half pounds at about two and one-half months of age, and also throughout the fall, when the demand is for heavier birds.

RATS ARE GREAT ANNOYANCE

Best Time to Take Precautions Against Rodents Is in Building of Poultry House.

Rats are often a source of much annoyance and loss in the poultry yard. Perhaps the best time to take proper precautions is in the building of a new poultry house, through the use of cement and fine mesh wire netting under the floor and around the bottom of the side walls to make it rat proof.

The next best thing is to have the poultry house or houses erected by themselves at a little distance from the other farm buildings, and so constructed as to make it hard for the rats to find lodgment there. In this case the rats will have to travel some little distance before entering and therefore run more risk of being caught by the family dog or cat.

TRAP NEST HAS ADVANTAGES

Mighty Useful for Breeder Seeking Higher-Producing Hens—Necessary for Pedigreeing.

Trapnesting is usually not practical on general farms where chickens are kept largely for eggs and meat, though it pays well to head the farm flock with cockerels out of high-producing trapnested hens. Trapnesting is tremendously practical for the constructive breeder and absolutely necessary for pedigreeing, unless birds are mated in pairs only and each pair separately penned. Pen matings, as compared with pair matings, make it impossible to identify the eggs laid by individual hens unless trapnests are used.

POULTRY NOTES

Stale water is not good for any animal, much less for a laying hen.

* * *

Eggs kept in a cool place will retain their fine qualities for several days.

The Goodridge Banner

An Independent Legal Weekly Newspaper Published Every Friday at Goodridge, Minnesota.

S. V. ARNESON
Editor and Publisher
JOSEPH CHRISTIANSON
Associate Editor

Entered as second-class matter at the postoffice at Goodridge, Minn.

EDITORIAL

WALDAL FOR THE HOUSE.

A vote for Marius Waldal, the Red Lake county farmer, for representative in the Legislature, is a vote for the best interests of the entire community. Waldal is an independent thinker who has given serious thought to the problems of the farmer. In his own community he stands ace high, having been honored by his neighbors with a number of positions of responsibility.

His platform of principles indicates an open mind, with vision to see and to act in accordance with the wishes of all the people and not a select few who believe in invisible government.

Mr. Waldal is a young man who is self-educated, and he knows from practical experience what laws and regulations are demanded in an agricultural district. He can more safely be relied upon to heed the voice of his constituents than a man who is forced [illegible]

The Banner, therefore, asks its readers to support for representative Marius Waldal because he is an honorable, forceful, practical man of high ideals who will be a credit to the 65th Legislative District.

YOUR CHANCE IN AMERICA!

An eastern newspaper recently credited an unknown Irishman who had lived for many years in the United States with the following statement, which is the best answer The Banner has seen in some time to the ranting and roaring of the dissatisfied who are trying to breed discontent:

"I came to America 17 years old, with 85 cents in my Dublin breeches. I went to an uncle in Baltimore who was without chick or child and he gave me five dollars a week and wanted to make me his heir. He died worth seven millions a year after that. Had I stayed—but I wanted to see the country. I did. I saw Oklahoma when it was raw, new and young, but my feet itched. I soldiered for Uncle Sam and grew sun-dried at desert posts. There was opportunity everywhere, but I wandered and weaved about, dodging the shower of gold that always is falling in America. I am an expert dodger, a vagabond and a born wastrel, but I have not been able to dodge it all. Almost in spite of myself, I'll die in a clean bed of my own and under a roof of my own."

It's the only land in the world for an upstanding man with two feet under him, two hands at the end of his arms and two eyes in his head. What a country—and there's never been anything like it!

A drunken driver cannot safely handle a Ford and now a drunken workman cannot make a Ford. Henry Ford has decreed that no worker who reports for duty with a liquor breath shall retain his job. The announcement ends up with these weighty words: The 18th amendment is a part of the fundamental laws of this country. It was meant to be enforced. Politics have interfered with the enforcement of this law, but so far as our organization is concerned, it is going to be enforced to the letter." The boozer is always out of luck.

Listening to some men who never read anything better than a scandal story in their life or ever attended a meeting bigger than a "freezout session for the drinks" trying to reform the body politic simply strokes our fur against the grain. We have learned things from fools, but they weren't damphools.

The following from Fred Hadley's typewriter sounds like good horse-sense to us: "For goodness sake, when election time rolls around again, get out and vote! It is your duty as an American citizen. Vote as you please, of course, and as your conscience dictates—but VOTE!"

Some folks fight shy of amendments since the 18th took so much joy out of life. Take our word for it this time and vote for Amendment No. 1, the Rural Credits measure.

PURCHASES PURE-BREDS.

V. C. McLeod returned to Goodridge Saturday with two full-blooded Guernsey heifers which he had purchased from W. J. Bell, a dairy farmer near Thief River Falls.

The R. R. Inner Mission Society will hold a three-day meeting at St. Peter [illegible]

[illegible] theme for discussion, Luke 14:15-24 will be introduced by Rev. [illegible] O. Aasgar Friday forenoon at 11 o'clock. Everybody welcome.

LADIES AID.

Mrs. Iverson and Mrs. Markuson will entertain the Ladies' Aid at the Norwegian Lutheran church Thursday, November 9th.

THE Railroad Conditions and Car Shortage, which will raise prices soon, make it a wise move to do your buying now. We have a complete stock and will be pleased to show same to you, and quote you our prices---which are always right.

Candidate for
Re-election
COUNTY AUDITOR
General Election, November 7th
Your Vote and Support Will Be Appreciated.

(Prepared and circulated by H. P. Rued, personal campaign committee for George M. Gunderson, candidate for re-election as County Superintendent of Schools. Advertising rates to be paid.)

RE-ELECT

George M. Gunderson

COUNTY SUPERINTENDENT OF SCHOOLS FOR A SECOND TERM

Why and How Does the County Superintendent Serve the Taxpayers of Villages and Cities?

They help maintain the office. He receives, files, places on record and reports to the State Department of Education, all village and city school clerks' annual reports on finance, school census and teachers' insurance and retirements. He likewise cares for village and city superintendents' annual reports on attendance of pupils belonging to village and city school systems. He reocrds all teachers' certificates. His office is the clearing house for all matters pertaining to the county's educational systems.

For these reasons city and village voters, as well as country voters, should be interested in retaining an experienced man in the position. "Co-operate!"

Sincerely, **H. P. RUED.**

J. M. Bishop

For

District Judge

Bishop says:

I have not asked for nor do I depend upon the support of lawbreakers, nor of the ditching gang, in my campaign for the office of District Judge of the 14th Judicial District.

I have tried to conduct my campaign in the same manner in which my friends have worked for me, and hope to merit the support of all voters.

"With malice toward none and justice for all."

I am yours very truly,

J. M. Bishop

Thief River Falls, Minn.

Martin Luther

By REV. HENRY LUTZ.

When God, through His apostle, instructed His children, "Remember them which have the rule over you, who have spoken unto you the word of God: whose faith follow, considering the end of their conversation." He thereby surely commanded that we study the lives and follow the examples of those men through whom He bestowed great blessings upon the world, especially the church. Foremost among these, since the days of Paul, the apostle, is, without doubt, Martin Luther.

October 31st, the day on which Luther posted his famous 95 themes on door of the Castle church in Wittenberg, is the day which has been set apart for the celebration of the Refor mation which God wrought through Luther. If on this day we remember Luther and his work, remember how he spoke the word of God unto us, resolve to follow his faith, and especially consider his blessed death and prepare to die in the same way, we are, indeed, not idolizing Luther, but are doing God's will and command.

Martin Luther was born November 10, 1483, at Eisleben. His parents were Hans and Margaret Luther. About six months after Martin was born, his parents moved to Mansfield, where his father obtained work in the copper mines. His bringing up at home and in the school was very severe. "Clubbing was the chief pastime," says W. Dallmann in his book on "Luther."

When 12 the boy was confirmed without knowing Christ as his Savior.

When 14, he attended Latin school at Magdeburg. Here he sang from door to door to beg his bread.

In 1498, young Martin went to Eisenach to school. Here again he sang for his bread, until a kind-hearted lady, Ursula Cotto, to whom his face and song appealed, took him into her house.

In 1501, when 18, Martin registered a student in Germany's most famous university at Erfurt. A year later he became bachelor of philosophy, and in 1509 he was a master of arts.

During this time Luther once accidentally wounded himself and almost bled to death. A classmate, John Buntz, died suddenly. A terrific storm broke over him; the lightning flashed and thunder crashed. All of which put Luther face to face with death. He trusted in and prayed to the Virgin Mary and Saint Ann. He knew he had offended God, but he did not know Christ, the Savior, who had died to save him. He wanted to please God. He wanted to find rest for his conscience, peace with God, so that if he should be called, he need not fear death.

So on July 16, 1505, he entered the Augustinian cloister. He made a good monk. He picked out 21 saints. He prayed to three every day. So every week he made the rounds without slighting anyone. He scourged his body severely, he broke up his sleep during the night, he touched no food for days at a stretch. Thus he tried to please God and win His favor. But —"Not once, with all masses, prayers, chastity, did I succeed in being able to say: Now I am sure God is gracious to me," he writes in later years.

In May, 1507, Luther was made a priest.

In 1508 he was sent to Wittenberg University to teach the philosophy of Aristotle. He hated that. The next year he was made a bachelor of the Bible, and in the fall he was sent to Erfurt university to lecture on the "Sentences of Peter Lombard."

In 1510-1511 Luther made a trip to Rome. He expected to find great holiness in the Pope's city, and to return home with that peace of mind after which he had sought so long. But, he did not find it.

(Second installment of the Life of Martin Luther to Appear Next Week.)

Lutheran Church, Missouri Synod.

Sunday, Nov. 5: 10 A. M., German Reformation services at Germantown; 2 P. M., Sunday school; 3 P. M., English services at Germantown; 8 P. M., English Reformation services in the parsonage in Goodridge. "Remember the Sabbath Day to keep it holy." H. Lutz, pastor.

To the People of the 65th Legislative District

THE ELECTION is now comparatively only a few days off, and I find that it will be impossible for me to call personally on as many people as I would like to do. I am asking your kind consideration and good will in regard to my candidacy for state senator from the 65th Legislative District. I STAND SQUARELY ON A PLATFORM WHICH FAVORS ANY LEGISLATION WHICH IS OF BENEFIT TO THE AGRICULTURAL INTERESTS OF THE DISTRICT. I FAVOR PROGRESSIVE LEGISLATION; ECONOMY IN THE EXPENDITURE OF PUBLIC MONEYS, WITH A VIEW OF LESSENING THE BURDENS OF TAXATION; GOOD ROADS FROM FARM TO MARKET; A LOWER INTEREST RATE; STATE LOANS TO FARMERS AT COST; GUARANTY OF BANK DEPOSITS; ADEQUATE COMPENSATION LAWS, AND JUSTICE TO ALL THE PEOPLE OF THE DISTRICT. I AM OPPOSED TO A STATE CONSTABULARY.

Thanking you, I remain
Yours respectfully,

C. L. Hansen

FRED D. LORENTSON

CANDIDATE FOR

Register of Deeds

Respectfully solicits your vote and support. For the information of those who do not know me, I will state that my home town (Black River) gave me a vote of 37 against 4 for all other candidates at the primary election last June.

(Inserted by Fred D. Lorentson, to be paid for at full advertising rates.)

Prepared and circulated for and by

HOWARD SMITH

Candidate for the Office of

County Attorney

My Platform

I believe that the business of the county requires the same rigid economy that your own and my private business requires today.

I am not a politician, have no axes to grind and would consider my duty as County Attorney to be to carry out your wishes and not my own.

I believe that the office of County Attorney is for the use of the people generally and not to be used to settle private grievances or further individual ambition.

I believe that the prosperity of this county depends entirely upon the prosperity of the farmer, and will back any possible effort to bring prosperity to the county.

MY SLOGAN

Mrs. George Mossholder

La Crosse, Wis.—"Dr. Pierce's Favorite Prescription is a very good medicine and will do all that is claimed for it. I can speak by what it did for me. I was suffering from weakness, was nervous and so completely run-down that I could scarcely do my work. I doctored and took medicine but got no relief. I finally decided to take the Favorite Prescription and after taking two bottles my health and strength returned. I can highly recommend it as a woman's tonic."—Mrs. Geo. Mossholder, 611 Logan St.

A beautiful woman is always a well woman. Get this Prescription of Dr. Pierce's in liquid or tablets, and see how quickly you will have sparkling eyes, a clear skin and vim, vigor, vitality.

Radio Equipment of Airplane.

There has been installed on one of the huge Goliath biplanes engaged in the Paris-London aerial service a combined radio telephone and telegraph equipment of 35 watts antenna output with a sending range of about 186 miles at 900 meters' wave length. The complete radio equipment, according to Radioelectricite, weighs only 125 pounds. An air-propeller-driven generator for six volts and a six-volt storage battery supply the necessary current. A three-bulb amplifier is used for receiving on all wave lengths between 300 meters and 1,000 meters.—Scientific American.

Get Back Your Health!

Are you dragging around day after day with a dull backache? Are you tired and lame mornings—subject to headaches, dizzy spells and sharp, stabbing pains? Then there's surely something wrong. Probably it's kidney weakness! Don't wait for more serious kidney trouble. Get back your health and keep it. For quick relief get plenty of sleep and exercise and use *Doan's Kidney Pills.* They have helped thousands. *Ask your neighbor!*

A North Dakota Case

P. O. Sand, 711 E. Sixth St., Devils Lake, N. D., says: "Kidney trouble came on, due to taking cold which settled in my back and kidneys. I became lame and sore through the muscles of my sides and hips and my back ached so I could hardly work. I learned of Doan's Kidney Pills and procured a supply. Doan's have never failed to cure me of these attacks."

CHAPTER XV—Continued.

—22—

"You're willing to take care of all the rest of the gang, chief?"

"Sure," assented the officer.

"All right. Boys, turn over the whole crowd to the chief, and I'll trust you to see that they're properly booked and jailed. Turn over all the evidence likewise, except that mail sack. Have that brought up here, to this room, and see that the corridor outside is kept guarded. Get me?"

The two saluted. "Yes, sir."

"Good. Send to the federal building, find out where there's an agent of the Department of Justice, and get him here. Have him here inside of fifteen minutes."

"My dear Gramont, your devotion to duty is Roman in spirit," said Jachin Fell, lightly. "I really regret that circumstances so conspire to defeat you! Why can't you be satisfied with bagging so many other victims? You can't bag me—"

"Can't I?" said Gramont, taking a cigar and biting at it. He was cooler now. "By heavens, Fell, there's one thing in this country that you and no other man can reach with any influence, political bribery or crooked connections—and that's the government of the United States! You can reach judges and senators and governors, but you can't reach the unknown and humble men who carry the badge of the Department of Justice!"

Fell made a slight gesture.

"Human nature, my dear Gramont. It is quite true that I have not established this gang of criminals, as you call them, without taking proper precautions. Memphis Izzy, for instance, has influence that reaches far and wide. So have I. So have others in the party. I give you my assurance that your Department of Justice man will not arrest me."

Gramont paled.

Jachin Fell glanced at his watch.

"Lucie will be here at any minute now," he observed. "I suppose your sense of duty will force you to disclose everything to her?"

Gramont merely nodded, tight-lipped. A knock at the door, and one of his men entered with the sack of mail they had taken as evidence.

"A lady is coming here at any moment," said Gramont. "Allow her to enter."

The other saluted and departed.

"A sense of duty is a terrible thing," and Jachin Fell sighed. "What about the oil company? Are you going to let Miss Ledanois' fortunes go to wrack and ruin?"

"Better that," said Gramont, "than to have her profit come through criminal money and means. She'd be the first to say so, herself. But I'll tell you this: I'm convinced that there is oil under that land of hers! If she'll agree, I'll put up what money I have against her land; we'll be able to have one well drilled at least, on the chance!"

"If it's dry," said Fell, "you'll be broke."

"I can always get work," and Gramont laughed harshly.

Fell regarded him in silence a moment. Then: "I think Lucie loves you, Gramont."

A trembling seized Gramont; a furious impulse to shoot the man down as he sat. Did he have the baseness to try and save himself through Lucie? Something of his stifled anger must have shown in his eyes, for Jachin Fell laid down his cigar and continued quickly:

"Don't misunderstand. I say that I think she cares for you; it is merely surmise on my part. Lucie is one person for whom I'd do anything. I stand and have stood in the place of a parent to her. She is very dear to me. I have a special reason for intruding on your personal affairs in this manner, and some right to ask you in regard to your intentions."

"I don't recognize any right whatever on your part," said Gramont, steadily.

Fell smiled. "Ah! Then you are in love. Well, youth must be served!"

"I'd like to know one thing," struck in Gramont. "That is, why you were so cursed anxious to get something on my man Hammond! And why you held the Midnight Masquer affair over me as a threat. Did you suspect my business?"

Fell threw back his head and laughed in a hearty amusement that was quite unrestrained.

"That," he responded, "is really humorous! Do you know, I honestly thought you a fortune-hunter from Europe? There, I confess, I made a grave error."

Without a knock the door opened and Lucie Ledanois entered.

"Good evening, stockholders!" she exclaimed. "Do you know there's a crowd down in the street—policemen and automobiles and a lot of excitement?"

"Allow me," said Gramont, taking her coat and placing a chair for her. "Will you sit down, please? You remember that I warned you regarding a shock that would come; and now I must explain." Gramont gravely handed her his commission from the governor, and resumed his seat. "When I say that I have come here, not to attend a meeting of our oil company, but to arrest Mr. Fell, you will understand. I am very sorry, Lucie, to have to tell you all this, for I know your attachment to him."

"Arrest—you, Uncle Jachin?" The girl glanced from the paper to Fell, who nodded. "Why—this isn't a joke of some kind?"

"None whatever, my dear," said Fell, quietly. "Mr. Gramont is to be congratulated. He has discovered that I was the head of a large organization of criminals. Here, if I mistake not, are your Department of Justice friends, Gramont."

A knock at the door, and it opened to admit one of Gramont's men.

"Here they are, sir—the chief agent and a deputy. Shall I let them in?"

Gramont nodded. Two men entered the room, and Gramont dismissed his own man with a gesture. He saw that the agents both nodded to Fell.

"Do you gentlemen know this man?" he demanded, rising.

"Yes," said one of them, regarding him keenly. "Who sent for us?"

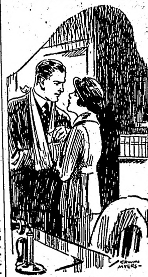
"I did." Gramont gave his name, and handed them his commission. "I have been investigating a lottery which has been conducted in this state for a long time by an organization of very clever criminals. Jachin Fell is the man at the head of this organization. The lesser members of the gang are in custody. The police department will not arrest this man Fell; his influence and that of his gang is extensive in political fields and elsewhere. I have called up the governor, and have been told not to arrest him. I have disregarded these facts, and I now call upon you to hold him in custody as a federal prisoner. Now go to it."

The chief agent laid Gramont's commission on the table and looked at Jachin Fell. For an instant there was a dead silence. Then, when the federal man spoke, Gramont was paralyzed.

"I'm very sorry, Mr. Gramont, to have to refuse—"

"What!" cried Gramont, incredulously. "Do you dare stand there and—"

"One moment, please," said Fell, his quiet voice breaking in. "It is quite true that I have organized all the criminals possible, Mr. Gramont, and have put the underground lottery into a systematized form. I have done this by the authority of the United States, in order to apprehend Memphis Izzy Gumberts and other men at one crack. These gentlemen will tell you that I am a special agent of the Department of Justice, employed in that capacity through the efforts of Judge Forester and Senator Flaxman. I regret that this had to be held so secret that not even the governor himself was aware of it until this evening. The conflict was quite unavoidable. Not a member of that gang must become aware of my real identity."



He Was Still Looking Into the Eyes of Lucie Ledanois.

Gramont sank into his chair, the automatic dropping from his hand. He was suddenly dazed, thunderstruck. Yet he had to believe. He was dimly aware that Lucie had gone to Jachin Fell, her arms about his neck. He stared from unseeing eyes.

Realization smote him like a blow, numbing his brain. He saw now why the governor had conferred with Judge Forester and the senator, why he had been ordered off the trail. He saw now why Fell had preserved secrecy so great that even to the chief of police his impregnable position was supposedly due to influence higher up.

He saw how Fell must have been working month after month, silently and terribly, to form one compact organization of the most talented criminals within reach—headed by Memphis Izzy, the man who had laughed at the government for years! And he saw himself furious, raging like a madman—

Gramont dropped his head into his hands. The pain of his forgotten wounded arm stabbed him like a knife. He jerked his head sharply up, and was aware that the agents had departed. He was alone with Lucie and Fell, and the latter was rising and holding out his hand, smiling.

"Gramont, you got ahead of me in this deal, and I congratulate you with all my heart!" said Fell, earnestly. "Neither of us suspected the part played by the other man! but you've done the work and done it well. Will you shake hands?"

Gramont confusedly took the hand extended to him.

"I've been a fool," he said, slowly. "I might have guessed that something unusual was—"

"No; how could you guess?" said Fell. "There are three men in Baton Rouge who know the truth, and three persons in this room. That's all, outside of the regular government men. I had not told even Lucie, here! I dared not. And I dare say nothing even now. To the underworld at large I will be known as the crook whom not even the government could touch; in days to come I may be of untold service to my country."

"If you will excuse me one moment," he went on, "I shall speak with your men who are on guard, Gramont. I—ah—will be back in a moment, and we may then discuss business. If you agree, I think that your company may proceed upon the original lines, and we shall set to work drilling for oil without delay—"

Gramont scarcely heard the words, nor did he hear the door close. He was still looking into the eyes of Lucie Ledanois, and wondering if the message they held was really meant for him.

CHAPTER XVI

Mi-Careme.

A nameless gentleman from the effete North was enjoying for the first time the privileges of a guest card at the Chess and Checkers. In a somewhat perplexed manner he approached the secretary's desk and obtained a cigar. Then he paused, listening to the sounds of revelry which filled the club, and which came roaring in from the city streets outside.

"Say!" he addressed the secretary. "What's this Mi-Careme I've been reading about in the papers, anyhow? I thought everything was tight as a clam down here after Mardi Gras? It's still the Lenten season, isn't it? Mardi Gras doesn't come more than once a year? Then what's all the celebration about?"

The secretary smiled.

"Certainly, sir, it's still Lent. But the French people have what they call Mi-Careme, or Mid-Lent, and they certainly give it a big celebration! You see, it's a night halfway through Lent, when they can enjoy themselves to the limit—let off steam, as it were. We're having several dinner parties here in the club tonight, for the occasion."

A slightly built little man, who had much the air of a shy clerk—had it not been for his evening attire—approached the desk. He signed a check for a handful of cigars, which he stowed away.

"Please provide a fresh box later," he said to the secretary. "Most of my party is here, I believe."

"I'll send them up, Mr. Fell," answered the secretary, quickly. "Yes, I think the dining room is all ready for you, sir. By the way, Mr. Gramont was looking for you a moment ago—ah! Here he comes now!"

Jachin Fell turned. Gramont was plunging at him, a yellow telegraph form in his hand, excitement in his eyes.

"Look here, Jachin! This wire just came in from Hammond—you know, I left him in charge of things down at Bayou Terrebonne! Read it, man—read it! They've struck oil-sands at five hundred feet—and sands at five hundred, with these indications. It means a gusher at a thousand! Where's Lucie? Have you brought her?"

"She's upstairs. Well, well!" Jachin Fell glanced at the telegram, and returned it. "So oil is actually found! This is certainly going to be one big night. Come along. Let's find Lucie and tell her about it—"

The two men turned away together.

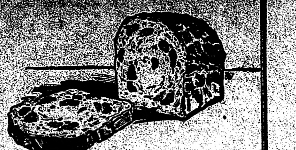
[THE END.]

Typographical Error Cost Life.

A typographical error once cost a woman her life. Shortly after the invention of printing, a German printer working on an edition of the Bible entrusted to his wife the setting up of the type for a portion of the Book of Genesis. There is a sentence in Genesis, describing Eve's duty to Adam, which runs "He shall be thy Lord." The German word for Lord is "Herr" and that for fool is "Narr." The printer's wife changed the "e" to "a" and, in the crude type of that period, the capital "H" looked exactly like an "N." The sentence consequently read. "He shall be thy fool."

Many copies of the book got into circulation before the error was discovered. The ecclesiastical authorities were so enraged at what they considered the woman's impiety that they condemned her to the stake.

People who boast that they never give up sometimes are shown up.



Bakers Bake It For You

—no need to bake at home

HERE'S your old-time favorite—*full-fruited raisin* bread with at least eight tempting raisins to the slice—already baked *for* you by master bakers in your city.

Simply 'phone your grocer or a neighborhood bake shop and have a fresh loaf for lunch or dinner to delight your folks.

We've arranged with bakers in almost every town and city to bake this full-fruited raisin bread.

Made with big, plump, tender seeded raisins. The raisin flavor permeates the bread. You've never tasted finer food. Order a loaf now and count the raisins.

Raisin bread is a rare combination of nutritious cereal and fruit—both good and good *for* you. Serve at least twice weekly to get the benefits.

Use Sun-Maid for home cooking of puddings, cakes, cookies, etc.

You may be offered other brands that you know less well than Sun-Maids, but the kind you want is the kind you know is good. Insist, therefore, on Sun-Maid brand. They cost no more than ordinary raisins.

Mail coupon for free book of tested "Sun-Maid Recipes."

Wonderful Stock Raising Country

Vast stretches of undeveloped fertile agricultural land of the highest productiveness await the settler in Western Canada. The land possesses the same character of soil as that which has produced the high quality of cereals that have carried off the world's premier honors so many times in the past ten years.

Native Grasses are Rich and Abundant

Cattle fatten upon them without any grain being fed.

Limited capital on high-priced lands is not a success, neither can the tenant burdened with high rents hope to succeed. The place to overcome these is in Western Canada — where *land is cheap* where a home may be made at low cost, and where *dairying, mixed farming and stock-raising give an assured profit.*

Land may be purchased from the Railway Companies or from responsible land companies or from private owners. **Free homestead of 160 acres** each are to be had in the more remote districts.

TRADE BOARD HITS GRAIN LAW

Injunction Asked to Test Constitutionality of New Grain Futures Act.

EFFECTIVE NOV. FIRST

Board Claims Trade Is State and Not Interstate—Suit Was Anticipated by U. S.—Ready for Court Action.

Chicago—The Chicago Board of Trade made its first move to test the constitutionality of the grain futures act when it filed in federal district court here a petition for injunction restraining the government from enforcing the provisions of the act.

The law, enacted to take the place of the former Capper-Tincher act, which was declared unconstitutional by the supreme court, was passed to become effective November 1.

Hold Trade Wholly State.

The bill of complaint, filed by Henry S. Robbins, counsel for the board, charges that the law seeks to regulate as interstate commerce trade that is wholly state; that it interferes with state rights to govern exchanges, and that it seeks to deprive board members of their property by admitting representatives of co-operative bodies and permitting them to rebate commissions in violation of rules observed by other members.

Further charges of unconstitutionality are made on the ground that the law makes violations of its provisions a crime—"and constitutes the secretary of agriculture, the secretary of commerce, and the attorney general, a commission with power to depirve offenders of their rights to thereafter pursue a lawful avocation; whereas, such criminal laws are, under the constitution, enforceable only in courts," with a jury trial.

Other Parts Held Unsound.

Other sections granting wide powers of control to the secretary of agriculture, who is given authority to designate what exchanges shall or shall not be contract markets, are attacked as unsound.

Fear of what might result from the drastic provisions of the law, the complaint says, may bring on "a serious disturbance of the grain markets of the country."

"Many owners of grain, it states, "will be deprived of the privilege of insuring themselves against price fluctuations through 'hedging' contracts, and irreparable loss to members and others would result.

Preparations have been under way for some time to combat any such action by the grain exchanges and the government is prepared to go forward immediately with its defense of the law. The federal district attorney at Chicago, with representatives of the solicitor of the department of agriculture, will conduct the government's defense.

STATE MILL IN OPERATION

Grand Forks, N. D.—When Governor R. A. Nestos pressed the button which started the machinery at the state mill and elevator, over a mile away, on the outskirts of Grand Forks, he put in motion one of the three flour grinding units at the state mill. There are two other units which are not yet completely assembled, although most of the machinery for these other units is installed.

Each of the three units is capable of grinding 1,000 barrels of flour a day, or 3,000 barrels a day all told. Two of these units are made for grinding North Dakota's hard spring wheat into first patent flour. The third unit is exclusively for grinding durum wheat into seminola flour, out of which is manufactured macaroni, spaghetti, and other seminola products.

Each of these units is a distinct and separate mill in itself, so far as operation is concerned, although all are housed under the same roof. Each has its own big electric generator, and its own separate electric system. All machinery is electrically driven. The mill has its own power plant, and is also connected with the city power plant of Grand Forks, so that in case of breakdown in the mill power plant, power can be secured from the Grand Forks plant.

The plant is planned for efficient operation, therefore, at full capacity of 3,000 barrels a day, at 2,000 barrels a day, or at 1,000 barrels a day. It can grind 2,000 barrels a day of hard spring wheat and 1,000 barrels a day of durum.

Family Poisoned by Cake.

Philadelphia—Mystery continues to baffle authorities in the case of a poisoned cake which killed W. W. Sterret, expert accountant of Devon, and left his wife battling for life in the Bryn Mawr hospital. The cake had ben sent to Mrs. Sterrett through the mails. Physicians at the hospital are still unable to say what the poison was. An autopsy was performed on Mr. Sterrett's body but no announcement has yet been made. The cake was mailed from Philadelphia.

DYED HER DRAPERIES, SKIRT AND A SWEATER WITH "DIAMOND DYES"

Each package of "Diamond Dyes" contains directions so simple that any woman can dye or tint faded, shabby skirts, dresses, waists, coats, sweaters, stockings, hangings, draperies, everything like new. Buy "Diamond" Dyes—no other kind—then perfect home dyeing is guaranteed, even if you have never dyed before. Tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade, or run. So easy to use.—Advertisement.

A Return Desired.

"How was the political speaking last night, squire?" asked old Riley Rezzldew of Petunia. "My rheumatis was hectoring me so that I didn't feel like attending."

"The Hon. Thomas Rott pleaded with the voters for a return to the principles of the glorious Old Party, and—" replied Squire Ramsbottom.

"He did, hey? That reminds me: if he is in town yet I am going around and plead with him for the return of them ten dollars he borrowed from me six years ago, when he started for the convention."—Kansas City Star.

A Foreign City.

A friend who spent several months in the East, says the thing that impressed him most about New York is that it is a foreign city.

The municipal signs are printed in English, Italian and Yiddish. You hear more foreign language than English in the subway, and everywhere foreign language newspapers are seen. In large sections of the city you do not see an American, or hear English spoken.

A Lady of Distinction

Is recognized by the delicate fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores followed by a dusting with Cuticura Talcum powder usually means a clear, sweet, healthy skin.—Advertisement.

COAL OF VEGETABLE ORIGIN

Abundant Proof That Huge Forests, in Former Epochs of the Earth, Became Petrified.

Although in most instances there are comparatively few traces of its vegetable origin left, coal owes its existence to the vast masses of vegetable matter deposited through the luxuriant growth of plants in former epochs of the earth's history, and since slowly converted into a petrified state.

Coal fields today present abundant indications of the existence of huge ancient forests, usually in the form of coal formed from the roots of trees. Several such forests have been uncovered, one of which in Nova Scotia is a good example. Remains of trees have been found there, six to eight feet in height and four feet in diameter. In a colliery in England, in a space of about one-quarter of an acre, there have been found the fossilized stumps of 73 trees, with roots attached, and broken-off trunks lying about, one of them 30 feet long, and all of them turned into coal.

Monkey Reasons.

It used to be thought that beasts and birds were guided in their action entirely by instinct, reason playing no part whatever in their daily lives. But now naturalists are not so sure. To learn to use a lever as a mechanical instrument implies, one would think, a certain amount of reasoning power. Yet a monkey kept in captivity employed a stick to pry up the lid of a chest which was otherwise too heavy for the animal to raise.

A great person expects everything of himself; the small person expects everything of others.

The man who does his best is a success, whether the world thinks so or not.

WOMEN OF MIDDLE AGE

A Trying Period Through Which Every Woman Must Pass

Practical Suggestions Given by the Women Whose Letters Follow

Phila., Pa.—"When I was going through the Change of Life I was weak, nervous, dizzy and had headaches. I was troubled in this way for two years and was hardly able to do my work. My friends advised me to take Lydia E. Pinkham's Vegetable Compound, and I am very sorry that I did not take it sooner. But I have got good results from it and am now able to do my housework most of the time. I recommend your medicine to those who have similar troubles. I do not like publicity, but if it will help other women I will be glad for you to use my letter."—Mrs. FANNIE ROSENSTEIN, 882 N. Holly St., Phila., Pa.

Detroit, Michigan—"During the Change of Life I had a lot of stomach trouble and was bothered a great deal with hot flashes. Sometimes I was not able to do any work at all. I read about Lydia E. Pinkham's Vegetable Compound in your little books and took it with very good results. I keep house and am able now to do all my own work. I recommend your medicine and am willing for you to publish my testimonial."—Mrs. J. S. LIVERNOIS, 2951 Junction Avenue, Detroit, Mich.

The critical time of a woman's life usually comes between the years of 45 and 50, and is often beset with annoying symptoms such as nervousness, irritability, melancholia. Heat flashes or waves of heat appear to pass over the body, cause the face to be very red and often bring on headache, dizziness and a sense of suffocation.

Another annoying symptom which comes at this time is an inability to recall names, dates or other small facts. This is liable to make a woman lose confidence in herself. She becomes nervous, avoids meeting strangers and dreads to go out alone.

Lydia E. Pinkham's Vegetable Compound is especially adapted to help women at this time. It exercises a restorative influence, tones and strengthens the system, and assists nature in the long weeks and months covering this period. Let it help carry you through this time of life. It is a splendid medicine for the middle-aged woman. It is prepared from medicinal roots and herbs and contains no harmful drugs or narcotics.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Co., Lynn, Massachusetts. This book contains valuable information.

Disordered Stomach

Take a good dose of **Carter's Little Liver Pills** —then take 2 or 3 for a few nights after. You will relish your meals without fear of trouble to follow. Millions of all ages take them for Biliousness, Dizziness, Sick Headache, Upset Stomach and for Sallow, Pimply, Blotchy Skin. *They end the misery of Constipation.*

CARTER'S LITTLE LIVER PILLS

BIRD IS FAST ON ITS FEET

California Roadrunner Famous for Its Custom of Sprinting in Front of Trotting Horses.

A bird known as the California roadrunner has earned his common name from his delight in sprinting along roadways, especially when pursued by horsemen or moderately slow-going vehicles. In the picturesque old days of California it was no uncommon sight to see this bird running a half-mile or so in front of fast-trotting horses.

Another common name, chaparral-cock, is given in allusion to his living in the chaparral of the semi-deserts.

The bird belongs wholly to the West. Formerly he ranged from the plains of Kansas to the chapparal-covered hills of the Pacific coast and from central California to Mexico, but he is rapidly becoming rare. He is built like a heron, except for his short legs, but, unlike that water-loving bird, chooses deserts for his home. He has wings, but scarcely has the power to fly, though he is one of the fleetest of runners.

Not the Influence.

"Is that man who puts on so many airs under the influence of liquor?"

"No," replied Miss Cayenne. "He's a bootlegger. His proud ostentation is due to the affluence of liquor.

We often climb our steepest hills before we get to them.

Don't be content with following good advice; catch up with it.

Children sweeten labors, but they make misfortunes more bitter.

PLAN TO CONTROL WEATHER

Scheme Has Been the Dream of Many Scientists, but Nothing Practical Has Been Evolved.

Three or four years ago a Sheffield (Eng.) workingman claimed to be putting the finishing touches to an instrument to enable him "to focus beams of ether oscillation" and so control the weather. Unfortunately, the instrument could not have been so perfect as he thought, for nothing further has been heard of it. Before that a Leeds scientist had come to the conclusion that it was "within the scope of human possibility to prevent disastrous cyclones, hurricanes and storms, and even to improve permanently the weather of the British isles." The idea was the production of an instrument enabling the operator to collect or dissemble the molecules which form the atmosphere, securing the degree of density desired and so arranging the best weather required for any district or seasonal occupation. More than twelve years ago Sir Oliver Lodge demonstrated that fog could be dispelled by electricity, though the process was too costly for adoption generally.

A Taller Race.

"Girls are getting taller." "They had to." "Huh?" "To reach the street car straps."—Louisville Courier-Journal.

Some people are unable to pocket their pride because they haven't a pocket large enough.

Other birds fight in flocks, but the eagle fights in battles alone.

POSTUM CEREAL
A BEVERAGE
INSTANT POSTUM

It's a main highway

THE way to satisfaction, comfort and health through Postum, has become a world-wide way.

This famous table beverage which has stood the test of twenty-five years, fills every requirement of taste for a hot and invigorating mealtime drink. Unlike coffee or tea, Postum contains nothing that can irritate nerves or disturb digestion. Even the children may safely enjoy it.

Wouldn't it be well for you to avoid the harm which so many have found in coffee and tea, and protect health while pleasing taste, with wholesome, satisfying Postum?

Order from your grocer today!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages), for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes.

The two forms are equally delicious; and the cost is only about ½c per cup.

Postum FOR HEALTH

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

"There's a Reason"

Thanking the Voters
of Pennington County

In expressing my sincere gratitude to the voters of the county for the fine endorsement given me in the June primaries, I respectfully ask their further assistance and support at the coming general election. It has been my constant aim to conduct the affairs of the Sheriff's Office in such manner as to do full justice to the laws of the state and those with whom I come in daily contact, and on that basis do I ask for your continued confidence.

Yours truly,

W. J. LaBREE

CANDIDATE FOR SHERIFF

(Ordered inserted and to be paid for at regular rates by W. J. LaBree).

A. W. Hanson
County Commissioner

Candidate for Commissioner in the First Commissioner District, respectfully solicits the vote and support of the voters in the district at the general elecion November 7th.

My motto is: A fair and impartial treatment of all, and special favors to none.

GOODRIDGE, MINNESOTA

MARIUS WALDAL
Candidate for the Legislature

STATEMENT OF PRINCIPLES:

To the Voters of the 65th Legislative District:

Owing to the great amount of work on the farm at this time of the year, I find it will be physically impossible for me to meet any considerable number of the voters, hence I shall have to depend on the public press to bring my message to the voters.

If elected to the Legislature it will be my purpose to oppose all measures giving privileges to the special interests of the state, including the so-called "Constabulary Law." Giving such added political machinery into the hands of any one man is to my mind dangerous and should be defeated.

If the Rural Credits Amendment is adopted, which I earnestly hope it will, I will give my assistance to the enactment of suitable laws which will give the farmers of the state the privilege of making long-time real estate loans at the lowest possible rate of interest.

It will be my aim and purpose to vote for the repeal of the present vicious pre-primary law and to uphold in every respect the old-time primary under which the voters may express their own choice of candidates.

The departments of the state government should be combined and corelated in such manner as to effect the greatest possible saving to the tax payers, and I believe further that the automobile tax is badly in need of revision and equalization.

All co-operative marketing measures of merit will have my aid and support; the time may not be ripe for state controlled terminal elevators and warehouses, but if such a law should be attempted it will have my vote and support.

I want to make it plain that I stand unequivocally for the agricultural interests of the state, believing that the men and women who labor have not been treated with entire fairness in the past.

Believing I can be of service to the people of this district, as well as to the state in general, I respectfully solicit the aid and support of all voters at the coming general election.

State Board of Health

HANSEN DEFEATS NAPLIN FOR SENATE; 3 COUNTY MEN LOSE

Election Results Completely Upset Dope—Waldal Goes to Legislature and Sande Wins for Superintendent of Schools in Spectacular Race—Steenerson Defeated by Wefald for Congress—Entire State Ticket Re-elected With Exception of Judge Quinn—Kellogg Loses to Shipstead for United States Senate by a Large Vote.

In an election which completely upset the results predicted by the most daring of election forecasters and which was featured by the numerous close contests between a number of candidates for state and county office, Tuesday's election proved one of the most interesting held in years.

Far above the usual number of votes were polled for Pennington county and after the ballots had been counted, three county officials—the register of deeds, sheriff and superintendent of schools—were declared defeated.

C. L. Hansen won handily over his opponent, O. A. Naplin, for the senate, and carried both Clearwater and Red Lake counties by handsome majorities and came within seven votes of placing Pennington county in the Hansen column. Pennington county gave Mr. Hansen 2,127, while 2,134 voters cast their ballots for Naplin. The Hansen plurality in Red Lake county was something over 450 votes and in Clearwater it was 135.

Marius Waldal defeated Nels Fore of Red Lake county and carried every one of the three counties in the 65th Legislative District. Mr. Waldal proved one of the surprises of Tuesday's election and early built up a comfortable lead over his two opponents.

Halvor Steenerson, candidate for re-election to Congress, has been defeated. Knud Wefald made an excellent run for the office.

Judges Grindeland and Watts have been re-elected and final results indicate that the latter received the highest number of votes in Pennington, although both Bishop and Halvorson received a heavy vote.

T. P. Anderson, county auditor, and John Gullingsrud, county treasurer, were easy victors, and at no time during the count was their chances for re-election in danger. The former, with 2,747 votes against Bjerke's 1,482, placed the incumbent safe. Mr. Gullingsrud polled the highest vote on the county ballot, receiving 3,453 votes. Quale won over Howard Smith for county attorney, the vote standing 2,608 and 1,607 respectively.

W. J. LaBree was defeated by Ole Ihle for sheriff, the latter making a steady gain over the incumbent as returns came in. Ihle received 2,420 votes as against 1,927 for LaBree.

The race for register of deeds was fairly close, however Lorentson defeated N. J. Anderson, incumbent, by 286 votes. Lorentson received 2,293 votes as against 1,907 for Anderson.

Gunderson and Sande staged a neck and neck race for superintendent of schools, the result being in doubt until count. Each would lead by a slight majority as the various precincts came in until the final when Sande was declared to have defeated the incumbent. Gunderson received 2,119 votes to his opponent's 2,145, the latter winning with a majority of 26 votes.

It appears that the entire state ticket, with the exception of Judge Quinn, has been re-elected, Quinn being defeated by W. A. Anderson of Minneapolis. Early returns spelled the defeat of the entire state ticket, but as the final returns drifted in, it was evident that the present administration would hold on.

The final vote appears in the tabulation on this page, with the exception of three precincts:

Goodridge Delivers Big Vote to Nick Bundhund

HALLOWEEN PARTY FRIDAY WELL ATTENDED BY PUPILS

A Halloween party was given at the High school Auditorium Friday night given by the High school pupils and faculty.

The guests appeared arrayed in various garbs that caused much merriment among the students and teachers. A few of the feminine members of the faculty appeared as in their childhood days with compendious gowns and with their hair in pigtails, adorned with gaudy-colored tasels, and others were dressed up as ghosts, Negroes, fortune tellers and witches. The fortune tellers proved to be the most popular characters of the evening.

The time was otherwise spent in playing games and telling of stories and weird tales.

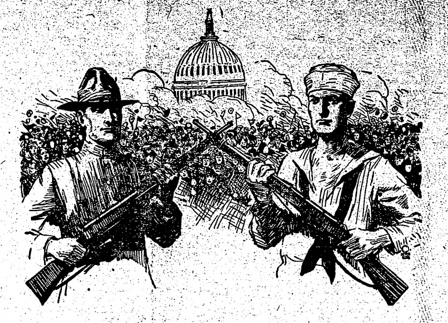
At 10:15 o'clock a delicious lunch was served, after which everyone adjourned to their homes feeling they had enjoyed a successful party.

PROGRAM AND SOCIAL.

Program and social in Big Grove school, nine miles east and two miles north of Goodridge, November 11. All come and have a good time.

AGNES K. FORSLUND,
Teacher.

ARMISTICE DAY TOMORROW



America's First Line of Defense!

BOYS AND GIRLS OF COUNTY READY FOR JUNIOR SHOW

Three boys and girls of Pennington county are impatiently waiting for the long days to pass between now and November 15th, which is the opening day of the Fifth Annual Junior Livestock Show to be held at South St. Paul. These young people, as champions of this county in juvenile cattle, pig and sheep breeding and feeding, have entered their pets in the Junior Livestock Show.

Going to the show from this county are: Wallace Benson of Thief River Falls with his Shropshire lamb; Helen Satre of Thief River Falls with her grade Shropshire lamb, and Virgil O. Denhart of Hazel with his grade Shropshire lamb.

The Junior Livestock Show is the windup of the year's club work when the boys and girls from all over the state, whose calves and pigs and sheep have won prizes in their own county shows, come together and contests for the state honors.

HEAVY RAINS.

Goodridge and surrounding country was visited by heavy rains at intervals during Saturday and Sunday, especially Saturday afternoon and evening, when the rain fell in torrents and was whipped by a strong eastern wind. Roads in the country are in terrible condition due to the heavy rain and Goodridge can now see the benefits derived from the gravelling of streets.

GOOD SHIPPIN MONTH IS RECORDED IN GOODRIDGE

During the month of October, shipping from the local railroad station was very good. Despite the shortage in cars, 24 cars of flax and rye were shipped from the local elevators.

Also two cars of potatoes were shipped from here, one by Christ Vad of Erie and the other by Elev Aakre of Reiner township. October also had its usual shipments of cattle, hogs and sheep.

Mrs. J. B. Weedman and baby of Marshall, Minn., arrived in Goodridge Tuesday and continued on to Grygla, where she joined her husband, who recently moved their household belongings there.

C. L. HANSEN SPEAKS BEFORE BIG CROWD

Successful Senatorial Candidate Discusses Important Issues in Speech.

Senator C. L. Hansen of Thief River Falls addressed a good-sized crowd of men and women at the high school assembly room Monday night.

Senator Hansen's speech was mostly along political lines, but touching occasionally on issues of importance to the public welfare. He stated that people could no longer take parties into consideration but that they had to vote for men and women who could actually help the country.

The senator discussed and explained Amendment No. 1 and 2 and urged all to vote "Yes" on these issues. He thoroughly explained the Federal Reserve Bank and made clear the necessity for a federal system of credits.

ANOTHER IMMIGRANT CAR

The household belongings of J. B. Weedman of Marshall, Minn., were unloaded from an immigrant car and hauled to Grygla Saturday evening, where Mr. Weedman and family will make their future home. He is a brother-in-law of E. Strueber of Grygla.

PURCHASES FEED BARN.

George Wold this week purchased the former Seavey and Josephson feed barn from Ole San, the owner. Mr. Wold has been busy during the past week putting the barn in shape for business and is now ready and in shape to accommodate all business.

FOR SALE.

Three Duroc boars, three months old, well bred. Price will be right if taken at once. A. Fimrite, Erie, Minn.

FEED FOR SALE.

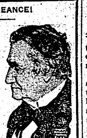
VENGEANCE!



Opie Read

Supposing you were a young man who had served in a war and escaped its perils and that the future were rosy with promise, excepting that fate had called upon you to execute a grim and terrible purpose; the circumstances being that during the conflict, an outlaw operating under the semi-sanction of guerrille warfare had raided your home and murdered your father, and then, hanging his body to a tree, had insolently pinned a card to it bearing the outlaw's name! Would not you likely do as Virgil Drace did—swear a solemn vow to find that outlaw, hang him as high as Haman, and decorate his corpse with your own card? Then, while you were setting about to execute that vow, suppose you met a fascinating girl with whom you fell in love and had the satisfaction of finding your affection sincerely reciprocated. Then supposing it developed that the girl were the daughter of the man upon whom you had sworn to wreak vengeance. What would you do? Is it not a satisfactory web upon which to weave an intensely interesting story of romance, especially when the incidents occurred in the South following the Civil war, the young man a northern officer, the girl a beautiful, fiery southerner, and all the other characters and episodes of the South and that turbulent period which marked the days of reconstruction? Would it not be more absorbing if, as in this case, the author were one of the greatest of American novelists? You will find this stirring romance worked out in the most charming way in "Periwinkle House," by Opie Read.

No man in the United States has written as many stories as Opie Read, and no author has had a larger number of readers. He was born in a small town in Tennessee in 1852, followed newspaper work for awhile in Kentucky, and then moved to Little Rock, Ark., where he edited the Arkansas Gazette from 1878 to 1881. He was next on the staff of the Cleveland (O.) Leader and then returned to Little Rock, where he established the Arkansaw Traveler, a humorous paper which attracted the attention of the entire English-speaking world. Mr. Read furnished most of the material that went into the publication. He conducted it from 1883 to 1891 and then moved to Chicago, where he has since resided, engaged in literary work.

It is doubtful if Opie Read himself could recall the titles of all the books he has written, without referring to a list. One or more of them is in nearly every home where fiction is indulged in throughout the land. They form a conspicuous part of the fiction section of every public library, and are carried in stock by every enterprising book dealer. During late years he has been less prolific, due to the fact that he has not had the leisure for writing, for he has become one of the most sought after lecturers, and his time is practically filled with Chautauqua, Lyceum and special platform engagements. In this work he has covered practically the entire nation.

CHAPTER I

—1—

Out upon the sheen of the mighty river the pine-torch flames fell in rippling streams, and the full moon, peeping over the tall timber, made mouths at herself in the wrinkled mirror of flood. On the steamboat Leona the negro deck-hands were chanting the buoyant anthem of the June rise. In the gilt, enameled saloon, a sweet-stringed waltz, centuries removed from the melodic bellow of the black bucks below, swelled out upon a breeze that seemed eager to mingle with it, while sentiment smiled and gallantry bowed in the studied graces of a floating ballroom on the Mississippi. All ceremony was precise with the inherited observance of precedent, save when some hair-greased and less refined dandy of the woods, having lingered too long at the bar, let liquor fly to his heels to cut a rebellious pigeon-wing.

The boundless ranch of the West was unknown, and along the lower Mississippi lay the great plantations of America. Except for the toil of the slaves, industrial life had been only a sort of happy indolence; but society held many a thrilling charm, and with its libraries from Europe, intellectual life indulged the luxury of ceremonious romanticism. This atmosphere was still breathed on the big Mississippi steamboats, for fantasies which render poetic the condition of us all linger on the water after having been driven from the land.

In the ballroom of the Leona the dress of the men and the women was variegated with the odd ends of different periods of style. Old chests, hidden during the Civil war, only a few years past, had been opened to give up the faintly scented fluffs and gourd-flowered vests of Andrew Jackson's day; and the brigadier in ruffled shirt poured gallantry's extravagant figures of speech upon the graceful young dame arrayed in the silk that had adorned the form of her grandmother when in the village of Washington she waltzed with Lafayette.

During a lull in the music-measured capering a tall, handsome young man, garbed in the fashion of the day, passed with long and careless strides from one end of the saloon and out toward the upper deck.

Admiring eyes were bent upon him; and one lady turned to her partner and said:

"Oh, please, Colonel, tell me who he is."

The Colonel placed his right hand on the bosom of his ruffled shirt and bowed. "Miss Lucy," he said, "it would [illegible] satisfactions of my life to gratify your more than natural curiosity, but that pleasure is denied me. I can't tell you who he is."

And then—because the Colonel had sighed his own sentimental distress in the presence of Miss Lucy and because her curiosity concerning the young stranger stirred a jealous qualm—he added: "He looks like a Yankee to me."

The young man was a Yankee. And because he was journeying to the South upon a grim and terrible mission, the gayeties of the ballroom had grated upon him and he had sought the solitude of the upper deck. Yet it was this moment that Fate chose to bring him face to face with one who was to change the whole course of his life.

For as he turned into a long passageway, aflame with light but deserted, there suddenly entered at the far end a girl thrilling in litheness and almost barbaric in dress. In swift unconsciousness of him she approached, a great handful of roses in red glare hiding her features. She lowered her hand; he caught full view of her face; and it seemed to him that his heart ceased to beat, like a pendulum caught and halted, then thrown again into motion. She did not look at him as he slowly passed her. He gazed into her eyes as she bent them upon the roses held out in front of her; and then he wheeled about to follow her. She turned into a cross-passage, was gone; he ran to the entrance, but she had vanished.

In the young man's heart was a struggle to call her, but there was no appropriate word; and then sobered, the Yankee smiled at himself. But the smile did not balm his delicious wounds, and he continued his search into the ballroom. There were many handsome women, belles of proud villages, but to none did he give a second glance. Again he passed out toward the upper deck.

For a time he stood gazing down upon the never-solved mystery of night on the Mississippi. The fiddles were going again, and he heard slippered feet whispering over the floor, but it seemed to him that this scene of gayety was forced, like a melancholy laugh; it reminded him of a book of poems in tatters, of a love-letter in faded ink.

"Then Tremble; I Am Liberty Shottle."

Built about one of the smokestacks was a shanty of boards called the "dog house." Turning a corner of the shanty, the young man stumbled against some one; a man growled in resentment.

"I beg your pardon!"

"I should say you do!" A young fellow of unusual height and of humorous slimness came forth out of the shadow. The boat was landing, and a turpentine-torch on the shore revealed him, pale and long of face, with collar cut low and chin standing high.

"Yes, sir," he added, "and although it may not be necessary on this occasion, yet if you knew who I am, you would apologize some more."

"Ah, you don't say!" replied the Yankee, smiling. "And as you seem to be fond of the music of apology, will you please tell me who you are?"

"I can do that easy enough, but I don't wish to frighten you."

"You are considerate. But the fact is I rather enjoy the sensation of fright."

"Then tremble: I am Liberty Shottle."

"What, you don't mean that you are really Liberty Shottle!"

"I swear it."

"Well, well! And now will you please enlighten me as to who Liberty Shottle is? And why do you suppose that people who have heard of you, tremble in your presence? What have you done?"

"Sir, modesty puts a clamp on me. And now would you mind telling me your name?"

"Not at all. My name is Virgil Drace."

"You don't say? Well, well! But I never heard of you, either." Now they laughed, the joyous and unsuspicious mirth of youth. They stood looking down upon the deck-hands, loading freight, listening to the stream of the second mate's profanity, who swore his emotion by the stars, the moon, the river, the universe; and when the Leona was on her way again, the fiddles going, the muddy roustabouts singing, Liberty Shottle and Drace seated themselves on campstools, eagering toward swift acquaintance, the friendship of two natures far apart in aim and principle.

"If you've got two cigars, I'll join you in a smoke," said Shottle. "Thank you. You see, my people, what few of them are left, say that I don't exist. They haven't cast me off, or anything of that sort, but being of staid habits themselves, they swear that I am too unreal to exist. Lord, what is the world but queer? What's your game?"

"I haven't any—any game," parried the Northerner. "But what are you doing on this boat yourself?"

"I'm going down to New Orleans," replied Liberty, "to see how long I can stay there. I had a pretty fair job a couple of months ago teaching a school near Memphis. They liked me, too. I've got a sheep's hide from Chapel Hill university, North Carolina, with all the wool singed off and the board acknowledged my qualifications, but they caught me shaking dice with the boys and told me that, as there were some branches of learning they didn't care to have instilled, I'd better get a professorship in some higher institution. Have you been in there?"

Liberty Shottle waved his hand; and Drace, thinking he meant the ballroom, answered him:

"Only passed through. I've been rather worn with that sort of thing."

"Oh, you think I meant the ball! I meant the poker-room."

"Yes, I sat in there for a time."

"How did you come out?"

"Not very well. Lost two hundred."

"You speak of losing two hundred as lightly as if it were a matter of breath instead of blood. Would you mind holding my hand till you say it again? Two hundred! Why, you know, a fellow would teach bullet-heads and sissies for two months for two hundred dollars . . . Now, let me lay down a proposition: I am lucky tonight. I lost fifteen dollars, all I had, but I'd just got up to the point of winning when I lost my last dollar. Just one more ante, and it would have come my way. I saw it coming, but a blundering fool headed it off. Now, here's my scheme, and it's a good one: you want your two hundred back; you stake me to a hundred, and I'll go in there and make a cleaning. Don't refuse, now, until you have let your mind digest the situation. Most of the errors in this life come from snap judgment."

"Ah, you think you can win, because you lost?"

"My dear Virgil, there is, you might say, a psychology in everything. Who wins a fight? The man who believes he can't? No, the man who knows he can. And I know right now. Why, I'd stake my life on it. You give me the hundred and stay right here and wait. As for my honesty, I can give you references—the mayor of New Orleans and Judge Hebbins of Memphis—but he died last week. No matter — I'd jump into the river and let the paddle-wheel beat me into sausagemeat before I'd deceive you. Liberty Shottle, that's my name!"

Drace leaned back and laughed. "Liberty, a thing astonishing to me is going to happen. I'll stake you to the hundred."

No superstitious devotee ever received from the priest of the gods a libation with more of emotional strain than Liberty Shottle evinced when he closed in tight clutch on Drace's adventurous hundred. Then he bowed and disappeared.

Drace sat musing, and soon he began to wonder why he had been so weak as to give $100 to this peculiar fellow, a stranger. Well, Liberty had amused him. Made him laugh, and in this world there is more money spent for the promotion of laughter than for the relief of tears.

Presently Shottle returned. He sat down and though physically he was light, the camp stool groaned beneath him. Drace waited. The Leona blew her great horn and all the world seemed to tremble. When the sound had died, echoing miles away, the gambler coughed lightly and groaned. Drace wondered why he should be tickled over any one's misfortune, but he felt a merry tingling in his blood.

"This boat's got a good bass voice," he remarked.

"Bass voice! Do you know what I'd like to do? I'd like to bore a ten-inch hole in her bottom and let her go down."

"You must have lost, Liberty."

> "Alfred Drace, with the compliments of Stepho la Vitte."

RADIO

FURTHER ADVICE ON PUTTING UP ANTENNA

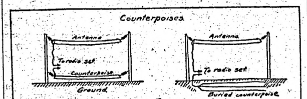
Two Types of Counterpoise Described—Energy Losses Minimized by Proper Location.

It has been stated in previous articles that an antenna system consists of a so-called aerial and a ground. In certain forms the ground is also known as a counterpoise.

Sometimes a counterpoise is made up in a form similar to the aerial and is suspended beneath it. To a certain extent this is true of the counterpoise used on airplanes, which is made up of all the metal parts of the plane.

When the earth is dry or rocky, and consequently a poor conductor of electricity, a counterpoise consisting of a network of wires is laid on the ground and directly underneath the horizontal part of the antenna. If it is desired to install this form of counterpoise the metallic surface of the counterpoise must be at least equal to that of antenna, and for efficient operation, should even be greater than the antenna surface. Also the resistance of the counterpoise should be made as low as possible in order to eliminate the losses that otherwise would take place in it. A counterpoise of the form described is illustrated in Figure 14.

When the ground underneath an antenna is a good conductor, that is to say, is soft and moist, the earth itself is often used as a counterpoise and connection is made with it by means of a number of copper plates or an interconnected network of wires, sunk into the ground at various places within the area underneath the antenna. These buried conductors should have a low resistance and should be put deep enough so that the earth around them is permanently moist. See Figure 15 for a counterpoise of this type.



The Beverage antenna is one of the most recent additions to the art of short-wave radio reception. Due to its characteristics, it was used at Ardrossan, Scotland, last December, when 28 amateurs succeeded in bridging the Atlantic with radio.

The Beverage antenna is adapted to the reception of signals on a single predetermined wave length. It consists of one wire supported on 10 to 12-foot posts, this wire having a length of either one or two even wave lengths. If designed for 200-meter reception, the wire will be either 6,500 or 1,300 feet long.

Unlike the customary form of antenna, this wire is grounded at both ends. At the far end, away from the receiver, it is grounded through a non-inductive resistance of from 250 to 400 ohms, and at the receiving end through a variable inductance. In the case of the receiver used at Ardrossan, five stages of radio frequency amplification, a regenerative detector and two stages of audio frequency amplification were used.

As stated above, the Beverage antenna is designed for reception of a single wave length, depending on the length of the antenna wire. If other wave lengths are to be received, the length of the wire must be changed. It has been found that the signal strength using 1,100 feet of wire, 12 feet above the ground, is approximately the same as would be heard with a single vertical antenna wire, 130 feet in height. However, the Beverage antenna is highly directional, and on account of this fact, interference from directions other than those from which one wishes to receive is reduced to a minimum. Also, due to the short distance from the ground, static and atmospheric disturbances are almost eliminated.

In general, it may be said that the Beverage antenna is extremely well adapted for the long distance reception of signals from a given station whose transmitting wave length is known.

Often by erecting an elaborate antenna system, the amateur does not get as good results as would be obtained from a simple, well-located one. The function of an antenna is to cut the electro-magnetic and electro-static components of the field radiated by the transmitter, and have induced in it an electro-motive force which will cause a current to flow in the antenna circuit.

The capacity and inductance of the receiving antenna plus a small amount of lumped inductance in the station to furnish a drop to operate the receiving set directly or a magnetic field to transfer energy to a second oscillating circuit, should be equal to the natural period of the received wave. Roughly, the natural period of single wire antenna is 1.22 times the length of the antenna proper, plus the lead-in. This natural of the antenna system should be as stated above, just slightly less than the wave length on which reception is desired. By actual experiment it has been found that the received energy is the same for a single wire as for a multi-wire antenna, unless the spacing between the wires is very great. The greatest advantage of a single-wire antenna is mechanical. It is much simpler to erect, due to the absence of spreaders, and it will withstand severe storms which would tear down a multi-wire antenna with the same supports.

Not all the energy induced in a receiving antenna by the wave produced by the transmitting station is useful. Part of the energy is reradiated, part is lost due to the resistance of the antenna conductors, part is lost due to the eddy currents produced in neighboring non-conducting material, and part is lost by leakage around the antenna insulators. All of these losses can be reduced to a minimum by properly locating and erecting an antenna.

The losses due to eddy currents can be reduced by erecting the antenna so that it will not be near any objects such as houses, barns, trees, etc. The resistance loss can be reduced by using a heavy conductor of low high-frequency resistance, such as stranded phosphor bronze cable. Good, long insulators with plenty of surface creepage distance will minimize insulator leakage. Just as much care should be taken in bringing in the lead-in as in erecting the antenna. Don't run the lead-in close to a wall for any great distance.

It is always desirable to have an antenna just as high as possible, not only to receive the maximum amount of energy, but also to prevent shielding. If an antenna is erected on a site surrounded by high buildings containing conducting material, the buildings will shield the antenna electrically. That is, the energy is absorbed by the buildings and little is left for the antenna. Sometimes an antenna is shielded by some object in such a manner that reception from one particular direction is impossible.

Keep the antenna and lead-in as far as possible from electric light and power lines. If a power line runs nearby, run the antenna at right angles to it, and so obtain the minimum amount of interference.

The best receiving antenna for amateur and broadcasting wave lengths is a single wire 100-175 feet long, constructed of standard copper, phosphor bronze or copperweld wire, just as high and far away from surrounding objects as it is possible to get it, and with a lead-in brought down from one end and kept at least three feet away from the house. An antenna for this type not only gives good results but will withstand storms and is not objected to by the landlord and neighbors.

TIPS TO THE RADIOIST

Isaak Newlin, an Eskimo in his early twenties, is a radio operator of marked ability in Alaska.

Dealers are getting business by testing out each set sold, using it to receive over their own antenna.

Lakeview, Ore., has begun to worry about the time lost by its people because of the lure of radio programs.

A song writer composed a song en route to Europe and sent it by radio from midocean for publication. Each note was indicated by name, as "mi, re, do, la-sharp, sol-sharp, etc."

Each fire alarm box in the Presidio, San Francisco, is to be equipped with a radio vibrator, which will turn in an alarm at headquarters when any one yells "Fire!" into it.

At a Chautauqua concert at Camden, N. Y., a large audience was so terrified by a thunderstorm received by radio from a great distance and amplified by the apparatus, that they rushed from the tent, only to find the moon shining and no signs of a storm.

Some of the fire insurance companies are demanding that radio plants be inspected and certificates of approved wiring be obtained. Possessors of radio home outfits would do well to see that their policies are not affected by the installation of their equipment.

One of the great uses of radio in the future will be the sending of day and night letters abroad. The low rates that will be possible will make such communications feasible and economical and reduce the time necessary for transacting transoceanic business to that of land lines.

Government officials have vetoed broadcasting by private outfits in the Canal Zone and Panama, the latter having granted all rights of wireless communication to the United States. Thousands of progressive citizens of both places have protested and offered to pay all expenses involved, but without results.

DAUGHTER HAD TO HELP MOTHER

Now Can Do All Her Housework Alone Because Lydia E. Pinkham's Vegetable Compound Helped Her

Jasper, Minn. — "I saw in the paper about Lydia E. Pinkham's Vegetable Compound and took it because I was having such pains in my stomach and through my back that I could not do my work. I had tried other medicines, but none did me the good that your Vegetable Compound did. Now I am able to do all my work alone while before I had my daughter staying at home to do it. I have told a number of friends what it has done for me and give you permission to use my letter as a testimonial."—Mrs. JESSE PETERSEN, Route 1, Jasper, Minn.

There is no better reason for your trying Lydia E. Pinkham's Vegetable Compound than this—it has helped other women. So if you suffer from displacements, irregularities, backache, nervousness or are passing through the Change of Life remember this splendid medicine. What it did for Mrs. Petersen it may do for you.

The Vegetable Compound stands upon a foundation of nearly fifty years of service.

Musical.

Jones—And how did you get your musical temperament?

Williams—I was born in a flat.

The airplane chauffeur has some excuse for feeling uppish.

60 LOSE LIVES IN PENN. MINE

Explosion Occurs in Pit Mine Soon After Men Start Work for Day.

BODIES ARE SCATTERED

Exact Number in Mine at Time of Tragedy Is Unknown—31 Rescued From Gas-Filled Mine Are Expected to Recover.

Spangler, Pa.—Between 50 and 60 miners were killed in the Reilly mine of the Reilly Coal company, near here, according to an official estimate made public by rescue workers and company officials.

This estimate was arrived at after rescue workers who had searched the explosion-wrecked mine for many hours reported they believed there were no more survivors in the workings.

31 Are Rescued.

Thirty-one rescued men are in the Spangler hospital.

Officials of the company are still uncertain as to the exact number of men who went to work just a short time before the blast.

They believe that the total was between 90 to 95.

Rescue men who had attempted to count the bodies they stumbled over declared they counted approximately 50, but said it is probable that a few more men perished in the unexplored chambers.

Rescued Mostly Young.

Thirty-one blanched survivors from the mine—most of them young men—lay on a double row of cots in the miners' hospital here, anxiously watching the entrance to the big room. They were the known survivors of the 94 miners who went into the mine a few minutes before a terrific explosion.

Their vigil began when the first eight were brought to the hospital. The entrance of stretcher bearers meant that another comrade had been dragged from an underground sea of gas.

Blast in Heart of Mine.

At 7:30 o'clock in the morning the explosion occurred in the heart of the mine. As soon as miners from the neighboring pits could reach the mine preliminary work of rescue began, and it was supplemented later in the day by trained engineers from the United States bureau of mines in Pittsburgh, and the rescue crews of neighboring mines.

The rescue men all told the same story as they came to the surface. They declared that bodies were scattered through the working for more than 500 feet.

"The sad part of it," said one sturdy miner, "is that at least 20 of the victims were within 100 feet of fresh air when they were overcome by the gas."

Kin Throng Scene.

Men, women and children by the score crowded the police lines near the shaft. Many of them had been there since they heard the explosion early in the day, and there was no indication they would leave their post until the last body had been brought out.

"On the cot of honor" at the hospital rests a youth of 22. His name is Abe Craig. His coolness saved at least a dozen lives.

ALLIES WANT TURK RESPECT

Paris—The French and British governments, in full accord, will insist that the Angora government respect the terms of the Mudania armistice, and instructions to the high commissioners in Constantinople have been drawn up in that spirit.

It is expected in French circles that the Angora authorities will accept the viewpoint of the allies.

This expectation was based upon the fact that the Turks, through excessive exactions, would risk the cooling of friendships that would be most valuable to them at Lausanne and, after Lausanne, when Turkey faces financial problems.

It is thought possible that a compromise may be effected under which the Kemalists would be allowed to send functionaries to Constantinople and perhaps some gendarmes to maintain order in the Turkish quarter.

Can't Send In Troops.

The allies, however, will refuse all requests of the Turks to send troops before the signing of peace.

Premier Poincare and Lord Curzon, the British foreign secretary, are exchanging views with regard to the Angora note respecting foreign warships and the railroads, and probably will agree upon an early reply.

MacSwiney's Sister Hunger Strikes.

Dublin—A bulletin issued by the Republicans states that Miss Mary MacSwiney, who was arrested by the Free State military, has been hunger-striking since she was taken into custody. A letter said to have been found after her arrest reads: "If imprisoned, I will hunger strike. I don't know whether they will let me die, but if they do, pray for me that I may be brave as those who have gone before me." Mary MacSwiney is a sister of the late Terrence MacSwiney, lord mayor of Cork.

[illegible] for England and Wales for 1920, just issued, shows the highest marriage rate yet recorded—20.2 per one thousand of population, the highest birth rate since 1900—25.5 per one thousand, and the highest natural increase by births over deaths of any period ever recorded in the history of the country. England and Wales added almost 600,000 to their population by natural increase during this year. The number of deaths was the lowest since 1882, when the population was half that of 1920.—The Living Age.

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving bathing and shampooing.—Advertisement.

American Miners Outdig Russians.

American coal miners, thrown out of work by the five months' strike in the United States, have been drifting into the pits of the Donetz basin in Russia.

The Bolshevik government at Moscow announced the other day that 32 Americans in the Yusowiki mine had established a record by digging in one day two and one-half times as much coal as did the same number of Russian miners. It is understood that more American miners are on their way to Russia.

Our Patriots.

Senator Lodge of Massachusetts was discussing office seekers. "They are the bane of a legislator's existence," he cried, adding, "and most of them seem to think that government positions are nothing but graft. It never seems to occur to them that it takes able workers to carry on the machinery of the greatest government in the world.

"Why, the other day, in talking to a candidate for a really important position requiring a good all-round education, I discovered that the fellow actually thought that South Bend was a morning exercise."

Rare Find in English Church.

After three centuries of concealment behind plaster and rubbish, the remains of a Fourteenth century stained-glass window have been discovered at Chelsea (England) Old church. The old glass, which is of immense value, was found between layers of soft plaster behind a mass of old bricks. In one window only a fragment of a border was found, but in the other a panel two feet by two was brought to light. The panel is nearly complete, the head of the figure—apparently that of St. Lawrence or St. Stephen—is missing. The glass seems to be of a date not later than the middle of the Fourteenth century. With the exception of Westminster abbey, there is no London church with its own glass of so early a date.

Where Marks Are Easy.

Departing New Yorker—I'll be glad to get out of this topsy-turvy land. One of my chauffeurs has bought a German castle.—Simplicissimus (Munich).

Truly an Optimist.

He was an optimist, and had just moved into new lodgings with his wife.

On the north of them dwelt a gas company. Chemicals were made in the east. A glue factory perfumed the south. The west wafted weird soap-boiling effluvia. But, bless you, he was an optimist!

"Of course, dear," he murmured, holding his nose, "it is a little trying sometimes. Still there's an advantage in the arrangement. At least, we don't need to buy a weathercock to tell the way the wind is blowing."—London Tit-Bits.

New Book Ends Invented.

Because book ends relying on their weight have a tendency to slide apart on smooth tables an inventor has patented a pair mounted on rollers and held together with a spring to keep them against books between them.

Don't grumble about the rough road in life; help to mend it.

On the Anxious Seat.

At the Brightwood branch library one little girl was much interested in the book-reading contest. However, she wasn't interested to the extent that she would make the effort to read the ten books necessary to receive a diploma.

After the contest was closed and the winners had received their diplomas, she remarked, "If there are any diplomas left, I believe I will take one."—Indianapolis News.

Bit by Bit.

"The regimental riding school isn't proving much of a success."

"Not horses enough?"

"Oh, yes, but the pupils are falling off every day."—American Legion Weekly.

A Revealer of Undulations.

"I thought you believed with Voliva that the earth was flat."

"I did until I had gone riding in Springnixe's second-hand car."—Judge.

Are you among these thousands?

THOUSANDS of people keep on trying, year after year, to build health from food that has been robbed of certain elements required for perfect nutrition.

If your food doesn't contain the mineral properties that go to build up nerve, tooth and bone structure, *there is no other means by which you can get these vital elements.*

This is one reason why so many well-informed people eat Grape-Nuts—the food that enriches the blood, and builds sound, healthy bodies.

Grape-Nuts is made from whole wheat flour and malted barley—baked for 20 hours, which develops the natural richness of the grains and makes for ready digestibility.

And Grape-Nuts is perfectly delicious—served with milk or cream, or made into an appetizing pudding for dinner.

Get a package of Grape-Nuts from your grocer today, and give the family a help to health.

DAWES' CHALLENGE.

General Charles G. Dawes, former director of the budget, had a perfectly lovely time in New York and gave a banquet crowd a few truths to think about. It all rose out of his experience in trying to get into government affairs something of order and economy, and he paid his respects to cabinet officers and congress and said bluntly what he thought they were.

As General Dawes found them, cabinet officers were nothing but vice-presidents who did not know anything about the business of their departments. Congress was a nest of cowards, he said. After his excoriation, the general sought causes and found the direct primary to be the most prolific breeder of mischief.

"Look what the direct primary law has done to congress!" he exclaimed. "Read the roster of congress and think what the names meant 25 years ago and read it today: Pusillanimous fellows!" Again he said: "The trouble is the cowardice in congress, men in office who would barter the interests of their country in order to stay in office."

Again he exclaimed: "Look at the way they ran before the organized minorities of the soldier bonus bloc, the farm bloc, the maternity bloc, the good roads bloc! The damned cowards run and run!" Harsh words!

All this led to a very interesting point. Looking into the future, General Dawes saw the hope in the young American type who would stand for right things and be willing to get thrashed for his principles. He wished such a young man would start out to call a spade a spade and take his successive lickings at the hands of the political bosses.

"I can promise him a career of statesmanship, the only career of an honest man's ambition," said the general.

Here is a fine prospect for the young man [illegible] the older men, [illegible] has gone by for them to think of political careers, but who do know from experience that what Dawes says is true, just lie back, eschew the polls, or vote their party ticket and, by example, teach the young man what is not worth trying to fight against?

Why do they do it?

Withal, The Banner likes to freeze to men like General Dawes. He has reiterated that which this newspaper has said so many times before—that our great American congress is literally packed with a horde of cowards!

NO SOUL-SELLING GIRLS.

The decadence of American girlhood has been overestimated, says the Crookston Times. Two young men had an argument over the proposition that "any woman would sell her soul for money." They found no souls for sale, but did find themselves facing jail for their indiscreet methods of investigation.

Letters were dispatched to young women of various classes in cities all over the country, purporting to come from an heiress, "kept from marriage by the provisions of a will, but about to defy convention by journeying abroad with her sweetheart. Three thousand dollars and traveling expenses were offered each recipient of a letter if she would go along as companion to the writer's brother.

Not one girl of all those addressed accepted the proposition. One, incensed at the insult, turned the letter over to her father with the result that postal authorities arrested the writers for misusing the mails.

It was a foolish thing, but it has its good side. The cross-section of America's young womanhood it revealed gives proof of moral goodness.

Four years ago two million stalwart yanks were wading to their bellies in French-Flanders mud. Today at least half of them can hardly keep body and soul together. The only things standing between them and contentment is a mere job.

Collect and congregate are synonyms, yet the church often finds that there is a vast disparity between the collection and the congregation.

President Harding can thank his lucky stars that he didn't hav to stand the acid test at Tuesday's election.

Did you ever see a man who ever made an impression wearing an impossible grouch? Neither did we.

We have often noticed that people who write anonymous letters never know how to spell.

A flapper can't help it if she's good looking and you can rest assured she will not try to.

With election over, there may still be a chance of a few of us getting back to work again.

Even a cigarette manufacturer considers that "there is always room at the top."

The Banner doesn't make a heck of a lot of money, but what it makes is good stuff, anyhow!

SCHOOL NOTES.

Due to the rain on Saturday and Sunday, many of the country pupils did not return to school before Monday noon. Most of the absentees were among the Freshman class.

Tuesday morning Mrs. Fore, accompenied by her American History class, made a visit to the voting polls. Mrs. Fore's object was to get the class interested in voting and help prepare them for their future duty.

On Friday of last week tests were given in all subjects to benefit the pupils in the coming six weeks' examinations. The return marks showed that there were just a few delinquent students.

The High school Halloween party on Friday evening was well attended. Those who chose to do so came dressed in a costume to represent some personage. There were ghosts, gypsy fortune tellers, a negro, two pretty little girls, and various other types of attire. The evening was spent in playing games and having a social time. At 10 o'clock a portion of a picture was given to each one and were told to compare pictures, and the two who could combine their pieces and make a picture were partners. When all were coupled up lunch was served. The party came to an abrupt end at 10:30 when the electric lights went out. There was a wild scramble for wraps and many hasty adieus.

Ma[illegible]

By [illegible]

(Second Installment.)

In 1512 (Oct. 19), Luther was made a doctor of theology. "When I was made doctor, I did not yet know the light," he says. But soon he was to see it. He now began to lecture on the Bible. He took up the study of Paul's letter to the Romans. He then writes:

"With a burning desire to understand Paul, I took up the Epistle to the Romans. But in the very first chapter there opposed me the word: 'The righteousness of God is revealed in the Gospel.' (Rom. 1,16,17) You see, I hated the word 'righteousness of God,' for, owing to the teaching of my former professors, I held it that attribute of holy God according to which He punishes sinners. Though I lived a blameless monk, my restless conscience nevertheless told me I was a sinner before God. And for that reason I hated a righteous God punishing sinners. I rebelled against God. . . . My conscience was wounded, I gnashed inwardly, and yet ever came back to that verse, for I would by all means get the sense of Paul. At last, thinking over the matter for days and nights, God showed me mercy and the connection of these words with the sentence: "The just shall live by faith." Ie began to understand that the righteousness of God meant here is the one pious man receives from God as a gift, by faith. I saw the meaning of the verse to be: 'Through the Gospel is revealed that righteousness of God by which the merciful God declares the believers righteous. . . . Now I felt myself new-born and in Paradise. All the Holy Scripture looked different to me. . . This passage in Paul appeared to me as the gate of Paradise."

That was Luther's conversion. Now he could rejoice: "Thou, Lord Jesus, art my Righteousness, I am Thy sin. Thou didst take mine and give me Thine."

Now the events in his eventful life came thick and fast. He began to preach and teach this glad tidings which had brought him peace and comfort, knowing that it would bring peace and comfort to others also. But, wonder of all wonders! he was opposed by the very leaders of the church, whose duty it was to preach just this gospel. At first Luther thought that this opposition was due to misunderstanding But he soon learned that the Pope's church could not hear just this sweet message of grace and pardon, because it robbed the pope of his power, the church of its prestige, and many monks, priests, bishops and prelates of many dollars [illegible] glory and honor to God.

On October 31, 1517, [illegible] his famous 95 theses on the door of the Castle Church of Wittenberg. He did not intend to begin a reformation then, but he did begin it—unintentionally. His purpose was to announce that he would debate the question of selling the foregiveness of sins, as was done by John Tetzel at that time Luther, of course, was opposed to such a fraud.

The theses were soon stread and read throughout the then civilized world. Every one took sides either for or against the bold monk of Wittenberg.

(Third and last installment of Martin Luther to appear next week).

Rains of Past Week Are Heaviest in Many Years

The drizzling rains of the past week are still falling and the ground has received a thorough soaking from the large amount of precipitation. Ungraveled roads throughout this section of Minnesota have been rendered almost impassable because of the wet weather.

The rains are unusual for this time of the year and have been accompanied by the mildest kind of weather. The temperature on Tuesday evening, however, was falling, and reports of snow from the west undoubtedly had something to do with it, Kenmare reporting eight inches of snow.

[illegible] ADDRESSES TILLERS

D. P. O'Neill, Delivers Splendid Speech at H. S. Auditorium.

D. P. O'Neill, former senator, now a member of the Grain Grading Department at St. Paul, addresed an audience composed of farmers and business men at the High school assembly room Friday evening.

Mr. O'Neill is well known among early settlers of this community, having been a farmer here some years previous to his election to the Minnesota senate.

Mr. O'Neill began his speech by asserting that he needed no introduction to the people of this district, assuring them that he was not a candidate for any office. He stated he had a selfish interest in Pennington county due to the fact that he had about all of his worldly belongings here.

He discussed the high prices to consumers and the low prices to producers, thoroughly explaining the scale of the ever climbing cost of commodities and the gradual advance of labor along the same lines. Mr. O'Neill then assured the people that this was no time for despondency as a period of this kind had always been felt after a season of prosperity as we had after the war.

Mr. O'Neill stated that the county had a tremendous crop of potatoes and that prices undoubtedly would be small, but he warned the farmers not to become discouraged and urged the raising of potatoes next year as it is likely to turn out a dry potato year and producers would reap the benefits. Mr. O'Neill took a rap at the belittlers of good roads and spoke strongly in favor of the Babcock Amendment. He informed the audience that he was one of the Committee of Seven who successfully started the Babcock system.

He stated that he believed the road from Thief River Falls to Red Lake, when completed, would be taken under the Babcock plan.

There is no substitute for death! Neither is there one for moonshine.

Second Rust Meeting
St. Paul, November 14

The second annual meeting of the Conference for the Prevention of Grain Rust will be held at University Farm, St. Paul, Nov. 14. J. R. Howard, president of the American Farm Bureau Federation, has accepted an invitation to attend, according to Harrison Fuller, director of the organization.

A Few Pertinent Facts For Local Merchants to Consider---

First of all, get the fact firmly impressed upon your mind that the merchant who has occasion to complain about not getting his share of the business in his line is entitled to no sympathy unless he makes an effort to analyze the situation in order to ascertain the cause.

Nine times out of ten the cause can be traced directly to insufficient publicity, or in plain English--FAILURE TO INTEREST THE BUYING PUBLIC THROUGH NEWSPAPER ADVERTISING.

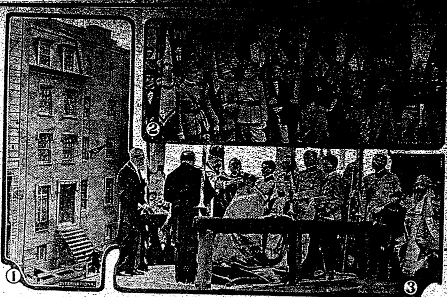
And right here is where The Banner comes in. Its columns provide Goodridge merchants with the most effective and economical means of proving the merits of their goods to the consumer, and the cost of this service is very slight. In no other way can the same results be obtained for the money expended.

The fact that you are reading this page proves you do what others do--read Banner advertisements.

The great mail order houses of the country know the value of advertising, depending upon it to get business from your very door. This should be a valuable object lesson to the country merchant.

Name of Your Firm Here

(Don't You Think it Would Keep Business at Home?)



1—Birthplace of Theodore Roosevelt, 28 West Twentieth street, New York, which is to be preserved as a Roosevelt museum. 2—Some of the Fascisti, carrying their standards, who have won control of Italy. 3—King Ferdinand of Rumania, himself just crowned, placing the crown on the head of Queen Marie.

NEWS REVIEW OF CURRENT EVENTS

Fascisti in Complete Control of Italian Government With Mussolini as Premier.

JUGO-SLAVIA TALKS OF WAR

America Declines to Participate in Near East Conference but Names Her Interests—Turkish Nationalists Dethrone Sultan—Marriage of Former Kaiser Wilhelm.

By EDWARD W. PICKARD

> **THE United States has declined the invitation to participate in the Near East peace conference at Lausanne, Switzerland, but will be represented by observers who will keep tab on "certain subjects of particular American concern." Do you think the United States could or should do anything more than this in the settling of the tangled affairs of the Near East?**

NO VICTORY could be more complete than that won by the Fascisti in their peaceful revolution in Italy. They are now in absolute control of the government and their chief, Benito Mussolini, is premier and minister of foreign affairs and of the interior. Giolitti declined the premiership, so Mussolini at the invitation of the king took the place and promptly announced the new cabinet. Most of its members belong to the Fascisti, but several places are given to the Nationalists, one to the Democrats and one to the Catholic party. From all over the country the Black Shirts flocked to Rome where 100,000 of them paraded before the king and premier, and then, at the order of their leaders, they dispersed to their homes to resume their vocations.

Italy seems to have supreme confidence in Mussolini, believing that he will put an end to the conflicts of political factions that have sadly hindered its development during the last three years and that under his rule economic prosperity will be restored. He is young, vigorous and unpretentious and already has buckled down to hard work. Once he was a revolutionary Socialist and was expelled from Switzerland and from what was then the Austrian Tyrol. But he broke with his old associates when in his paper, Popolo Italia, he urged Italy to enter the war on the side of the allies. To the world at large the victory of Mussolini and his Fascisti is most important because it was a victory over the Communists, radical Socialists and "Reds" generally. These forces of disruption and disorder were so badly whipped that the Communist party in Italy has announced its own dissolution, which presumably means that the Communist deputies will resign from the chamber.

Mussolini, denying that his program has any chauvinistic plans, said: "Italy needs peace at home as well as abroad. I never believed in a bellicose attitude, and therefore no clash is possible between Italy and Jugo-Slavia or any other power. We want to prove that our sole ambition is to make the country a true friend toward friends and of a people strong, fair and laborious, a people worthy to live alongside the greatest nations."

Nevertheless Jugo-Slavia was greatly excited by Mussolini's triumph and talked wildly of mobilization and war. Her frontier guards were re-enforced and some fighting was reported. In Rome it was said the alarm of the Serbs was groundless.

WHEN envoys of the nations most concerned gather in Lausanne, Switzerland, on November 13, for the Near East peace conference, the United States will be represented only by "observers." We were invited to full participation, but Secretary Hughes declined, stating:

"The conference proposed for the purpose of drawing up a treaty of peace with Turkey will have primarily to deal with the problems resulting from the state of billigerency between the allied powers, Turkey, and Greece. The United States was neither at war with Turkey nor a party to the armistice of 1918, and does not desire to participate in the final peace negotiations or to assume responsibility for the political and territorial adjustments which may be effected."

At the same time Mr. Hughes said his observers would keep watch over the disposition of "certain subjects of particular American concern."

Soviet Russia was invited to take part in that portion of the conference which has to do with the Dardanelles, and while she is indignant at the limitation, she probably will accept.

THE Angora national assembly has declared the sultan of Turkey dethroned and also has condemned to death the Turkish signatories of the treaty of Sevres and the members of the cabinet of former Premier Damad Ferid Pasha. Thme sovereignty of the nation is declared to rest in the hands of the people, and the name Ottoman Empire is changed to the State of Turkey. This is virtually the proclamation of a republic, but another sultan may be elected later.

EXCEPT among the German monarchists, the marriage of the former kaiser and Princess Hermione of Reuss on November 5 has caused only amusement. Really it is entirely unimportant, but Wilhelm spread himself so far as he could, with ludicrous pomp and proclamations in which all his lost titles appear. The ceremony was performed at Doorn and was attended by a considerable number of the faithful, including George Sylvester Viereck, the notorious pro-German-American publicist. Wilhelm wanted to take his bride for a honeymoon trip outside of Holland, but the allies and the Dutch government wouldn't permit that. The "queen of Prussia," as Hermione now styles herself, seems to be a determined lady and she has announced that she will spend several months each year away from Doorn which would be too dull for continuous residence. But hubby must remain there.

ATTORNEY GENERAL DAUGHERTY, who has been attacked repeatedly because of his alleged slowness in prosecuting the "war swindlers," has announced that preliminary investigation into 425 wartime contracts has disclosed evidence on which the government will take action. In every one of these cases, he says, either civil or criminal suits or both must be brought by the government. "Legal civil action will be taken in every case in which it has been discovered that fraud, collusion, or dishonesty was practiced," said the attorney general. "While great numbers of cases indicate on their face the worst kind of fraud and thievery, the government cannot, of course, go into court until it has established absolutely on the face of records in its possession that its case will stand the acid test. The government must be fair to itself, and fair even to those whom it would brand as crooks and profiteers, yet, every single individual, firm, or corporation involved in the cases now in the possession of the department, must satisfy the government's claims to the last penny."

PRESIDENT HARDING celebrated his fifty-seventh birthday last Thursday by going through with his usual round of official duties. The day was not forgotten, however, for telegraphic greetings came from many rulers and leaders of other countries and from innumerable friends in America. The President spent the evening quietly with Mrs. Harding, who, though recovering from her recent severe illness, is still confined to her bed.

FINAL ballyhooing for the elections this week demanded much attention from Americans during the week just closing. To predict results would be foolish. Down in Texas there was a seemingly inextricable tangle that, it was believed, would leave both major parties without any candidate for the United States senate on the ballot. The Democrats had G. E. B. Peddy, fusion candidate, barred from the ticket because he participated in the Democratic primary. This affected the 150,000 Texans who voted for Harding. Then charges were brought against E. B. Mayfield, Democratic candidate, because he was said to have been a member of the Ku Klux Klan. This has resulted in a legal complication which at this writing seems likely to keep Mayfield's name off the ballot. The fight may be carried to the senate.

MUNICIPAL elections in England, which were taken as indication of the results in the coming general elections, turned out very badly for the laborites, usually classed there as Socialists. They lost 149 seats which they had held in London and about 160 seats they had held in 80 boroughs outside the capital.

Cuba also had elections and the Liberal party scored a sweeping victory, increasing their representation in the lower house of congress so much that the administration majority is imperiled. It is worthy of note that no disturbances were reported.

PRESIDENT OBREGON of Mexico got rid of one of his most dangerous enemies last week. General Murguia, leader of the latest revolt, was caught asleep in a church at Tepehuantes and within a few hours had been court-martialed, condemned and executed by a firing squad. The haste was explained by the fact that he was seeking legal restraints to prevent an immediate trial. It was felt in Mexico City that Murguia's death brought appreciably nearer the general pacification of the country.

THREE notable men died last week. Father Bernard Vaughan, famous Jesuit preacher and brother of Cardinal Vaughan, passed away in England. Thomas Nelson Page, well-known American author and former ambassador to Italy, died in Virginia. Thomas DeWitt Cuyler of the Pennsylvania Railroad company and chairman of the Railroad Executives' association, was found dead in a private car at Philadelphia.

THE mixed claims commission, named to adjudicate war claims between the United States and Germany, is now busy in Washington. At the first sessions, with Justice Day presiding as umpire, the working system for presenting the claims was settled. The American commissioner is Judge Edwin B. Parker and the German commissioner, Dr. Wilhelm Kiesselbach.

RECENTLY the federal railway labor board rendered a majority opinion rejecting "the living wage" theory advanced by spokesmen for railway unions. If given strict application, it would give common laborers a minimum wage of about 72 cents an hour, and as a step toward this the maintenance of way men asked a 48-cent minimum. The labor board, increasing the prevailing rate 2 cents an hour, granted a minimum ranging from 25 to 37 cents an hour. It was in connection with this decision that the living wage opinion was given, the board asserting that the wage theory of labor if given application "would wreck every road, and if extended to other industries, would carry them into communistic ruin." Samuel Gompers, Edsel Ford and William Randolph Hearst all assailed this view. Their attacks rolled Ben W. Hooper, chairman of the board, and he retaliated with a stinging statement. He gave Mr. Gompers credit for sincerity, marveled at the attitude of the Hearst papers and poked fun at young Ford. He continued:

"One of the expert economists who presented the matter to the board for the employees stated that this would 'throw a monkey wrench into the industrial machinery' and that the theoretical living wage should not be established all at once, but the minimum should be made 48 cents per hour. This would likewise create a deficit of several hundred million dollars.

"The swelling tide of prosperity in our country cannot be hastened by methods of this kind."

Minnesota

Events of the week throughout the "State of Ten Thousand Lakes" told in brief form

Deer River—Cyrus Murdock King, aged 62, lifelong democrat, one of the leaders in the development of northern Minnesota, died at his home here. He was the father of Stafford H. King, state adjutant of the American Legion.

Owatonna—Major E. C. Clemans, veteran of two wars and pastor of the First Methodist church of this city, was elected chairman of the Steele county chapter, American Red Cross, at its annual meeting here. He was also elected director of the sixth roll call.

Windom—Citizens of Windom will have a special ballot to vote at the election on which they will be asked to give the city council the authority to purchase for $15,000 the waterpower rights on the Des Moines river at this point. It is proposed to establish a hydro plant to be operated in conjunction with a steam plant for furnishing electricity.

Luverne—Burglars entered the State Bank of Steen through a window, blew open the vault and looted the safety deposit boxes.

Worthington—Samuel Shell, Worthington, former state representative and senator, died at his home here. Mr. Shell, who was more than 70 years old, had been ill for several months.

St. Paul—Hannah McGee Memorial library in St. Paul is now open to the public, following formal dedication. This library was installed through public subscription in honor of the memory of the former principal of St. Paul Hill school.

International Falls—Lumbering operations in Minnesota and Wisconsin have resulted in a heavy demand for experienced men, J. D. Williams, member of the state industrial commission, says. Reports filed with the commission showed that 1,810 men and women were placed in October.

Minneapolis—With the appointment of a commission to appraise the land and assess the cost, the acquisition of Rice lake and the lands along Minnehaha creek from the lake to the falls for park purposes, is under way. This includes about 200 acres and cost of acquisition will be $250,000. The entire project, including the improvements will cost $1,000,000.

Red Wing—The fire department has raised funds to install a radio apparatus at central station, and special arrangements will be made to accommodate a large number of people at one time. "We want it understood," Chief Gross said, "that men, women and children of Red Wing will be welcome to 'listen in' at central station at all times."

Duluth—Increases in salary, retroactive to Oct. 1, and affecting about 12,000 employees of the Oliver Iron Mining company, were announced by Pentecost Mitchell, vicepresident of the corporation.

Austin—White Leghorn pullets from the Brookholm Farms, near here, will be used to establish a flock for the university farms at Morris. A representative of the state university was here to inspect poultry for the new university farm.

Duluth—Following an executive session, the board of St. Louis county commissioners reached a "gentleman's agreement" whereby the 1923 county tax rate will be increased about one mill.

Hibbing—A case in court here is of interest not alone to the village of Hibbing, but to the state at large, since on its results hinges an interpretation never before sought of the state veterans' preferment act. The case was filed in district court on behalf of Lester Atkinson, former weighmaster of the village, who was summarily dismissed last August. The village of Hibbing is made defendant and Atkinson claims $600 back salary on the ground he is still legally an employe of the village.

Duluth—Plans for a new $1,000,000 city hall are now in the hands of architects. Details of the new structure will be referred to the people of the city for suggestions.

Minneapolis—Munsingwear corporation is negotiating for the purchase of Wayne Knitting mills and the Thieme Brothers company silk mills of Fort Wayne, Ind., according to reports.

Appleton—The 12th annual Minnesota meeting of the Yellowstone Trail association was conducted here. This is the seventh in a series of 14 state conventions. Henry Orme of St. Paul, Minnesota member of the national executive committee for 1922 presided.

Hibbing—It is not difficult to obtain radio messages on the iron range according to Ralph English, who was sent to the iron range by a twin city radio company when it was reported that messages could not be received here as easily as in other parts of the country.

Minneapolis—The Flower Festival to be given under the auspices of the Minnesota State Florists Assn. Nov. 11th to 16th, will have some fine specimens of dahlias, iris and peony plants for the University farm is co-operating in experimental work with several of the national flowers societies.

[illegible] Duluth [illegible] was announced by Mayor S. F. Snively.

Virginia—Organization of several purebred sire associations will soon be perfected throughout this district, according to plans announced by County Agent, August Neubauer.

Minneapolis—The Last Man's club of the 151st Field artillery held its annual meeting here. About 25 members are expected and letters will be read from members now scattered throughout the country.

Hibbing—For the first time in the history of the state at this time of the year there is no water in the swamps in the northern part of the state. The swamps are dry and fires in the low places burn stubbornly. Overdrainage of these lands is believed to be the cause.

Eveleth—Safety measures at every mine in the county are responsible for bringing the number of accidents down to 19 for the fiscal year as against 26 in 1921.

Duluth—An urgent appeal for the shipment of 800,000 tons of hard coal to Duluth and the head of the lakes before the end of the navigation season to carry out the original pledge of this district was telegraphed to Washington authorities by Congressman O. J. Larson.

St. Paul—Dr. Elias J. Durand, professor of botany at the University of Minnesota and internationally known authority on botanical subjects, died at his home here after a long illness. An operation last summer failed to bring relief, and Dr. Durand had been failing since.

Minneapolis—Complete returns on Minneapolis registration brought the total up to 145,506 names or within 5,000 of the registration for the presidential election two years ago.

Minneapolis—Bond requirements of the Board of Education for 1923 are being prepared by administrative officers of the board for presentation to the board of taxation November 7. It is unlikely the figure will be less than the $2,500,000 fixed by the board of taxation, officials said.

St. James—Plans have been completed for the fitting observance of Armistice day in St. James. A parade in which Civil, Spanish war and World war veterans will take part, will be one of the features.

Canby—A number of farmers in this vicinity report that wolves have made raids on their sheep herds, killing a number of the animals.

Faribault — Minnesota's longest stretch of paved highway, reaching 175 miles from Faribault northward through St. Paul, Minneapolis, St. Cloud and Little Falls, is now completed. Road builders have poured the last batch of concrete on Trunk Highway No. 1 paving near Westcott. Celebrations will be held at various towns on the highway Nov. 9, 10, 11 and 12.

Deer River—A virulent form of diphtheria is reported raging in the north settlement, and one child, died after a short illness. According to the investigations made by the state laboratory, the cases are those of black diphtheria.

Minneapolis—The Northwestern Bell Telephone Co., has installed 100,000 telephones in this city. This announcement was made by local officials. Minneapolis now ranks fifth in number of telephones in use in the U. S.

Hibbing—To encourage the use of peat for heating purposes the staff of the state mines department headquarters here is using peat to heat the building. The dried peat has been used by mixing with coal and separately and it has worked satisfactorily.

Duluth—Duluth will have juvenile traffic cops, if the recommendations of R. T. Hugo, chairman of the traffic committe of the Duluth Auto club, are carried out. It is proposed to station school boys at crossings in front of public school buildings to direct students across the intersections.

Fergus Falls—The freight cars ordered to the West by the Interstate Commerce commission will arrive too late to save the potato crop as the shippers will not risk sending out potatoes in ordinary box cars so late in the season. This was the situation in the potato country as revealed to O. P. B. Jacobson, chairman of the Railroad and Warehouse commission, and N. J. Holmberg, commissioner of agriculture, on the first day of their tour in which they covered Alexandria, Carlos, Henning, Parkers Prairie and Fergus Falls.

St. Paul—A bid is being made by the Twin Cities to secure the proposed Brotherhood of American Yeomen community building for orphan children for this state. Minnesota has a good chance of securing this institution, according to officers of the association, providing the citizens of the state show proper interest. The Yeomen's plan includes building a town for the care of orphan children. The program provides that within 10 years the institution will have 150 houses accommodating 15 children in each home, together with their guardian or foster parents. The project will require an investment of $10,000,000 to $12,000,000 which will be provided by assessments on the 300,000 members throughout the country.

Crystal—Fire of unknown origin caused a $30,000 loss at the Elmhurst Dairy farm, Crystal village, bringing the total loss in mysterious dairy farm fires to approximately $240,000 in a year. Authorities have decided that firebugs are to blame for at least three of the five blazes.

Dexter—A remarkable family gathering occured at the farm home of B. F. King, in Sargeant township, when six brothers and one sister gathered for a reunion the oldest being 77 and the youngest 66. Their combined ages totaled 494 years, and the seven count 76 grandchildren

Rev. B. M. Bridges Gives Facts in His Case

It is doubtful if there has ever been a medicine endorsed by so many ministers of the Gospel as has Tanlac. Indeed, there is scarcely a faith, creed or denomination in all the land in which one, or more, of the clergymen has not publicly expressed their indebtedness to the Premier Preparation for the benefits they have derived from its use.

One of the latest to speak out in this connection is Rev. B. M. Bridges, a widely known and beloved Baptist preacher, residing at Mooresboro, N. C., whose statement follows:

"Tanlac has given me a good appetite, toned up my system and renewed my strength in such a gratifying way that I am glad to recommend it to anyone who is in a run-down condition. For ten years past I have had such a severe case of indigestion that I could not find anything to eat that agreed with me. Finally I became very nervous and could get but very little sleep or rest.

"It seems that I took nearly everything trying to get myself right, but nothing helped me until I ran across Tanlac. My nerves are so much better now that my sleep is sound and refreshing. I enjoy my meals and have also gained weight. I can say from experience that Tanlac is a splendid medicine and tonic, for it has built me up wonderfully."

Tanlac is sold by all good druggists. —Advertisement.

Talking, Not Entertaining.

Mother's Voice—Are you entertaining Harold?

Daughter—No, we're just talking.

Mrs. S. L. Roberts

St. Paul, Minn.—"During my early married life I became sort of rundown and suffered with general feminine troubles. I took Dr. Pierce's Favorite Prescription and it built me up in health and strength. Then about two years ago I suffered with functional disturbances, became weak and all run down in health, and I again took the Favorite Prescription and it gave me the same help as before; it built me up in health and strengthened my whole nervous system. Favorite Prescription is a splendid woman's medicine and nervine."—Mrs. S. L. Roberts, 291 Cliff St.

Do Dreams Come True?

A southern Indiana man a few evenings ago went into a drug store in his town and bought a quart of red whisky, "the kind we used to get," being fortunate in getting one of two quarts the druggist had. The latter asserted he was going to keep the second quart for his own use.

The buyer stole away from the drug store with his package, mentally debating whether he should share his prize with friends. After several moments of anxiety he came to his decision. No one but himself should ever taste a drop of the precious liquid.

Then the baby cried and he woke up.—Indianapolis News.

At Last.

"He was always waiting—did anything finally turn up for him?"

"Oh, yes—his toes did."

You can't be too particular in choosing your particular friends.

The Farmer's Own Page

Timely Comments on Agricultural Topics for Our Readers

POULTRY

EGGS AND FOWLS PLENTIFUL

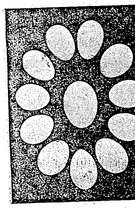
Storage Houses Are Full and Farmers Have Increased Flocks to Unusual Extent.

(Prepared by the United States Department of Agriculture.)

This fall and winter eggs and poultry will be plentiful and prices should be low enough to make them economical. Just now storage houses are full of eggs and farmers have increased their flocks of poultry to an unusual extent. On August 1 there were 4,812,248 cases of eggs in storage, which is about 35 per cent more than the average at this season for the last three years.

Eggs start moving out of storage in summer and the greatest sales of such eggs come in fall and early winter. As a rule, the bulk of storage eggs are sold before the first of January, the activity of the market after that date depending on whether the weather is severe or mild enough to stimulate egg production. An open winter practically eliminates the storage eggs early in the season. But this year, regardless of the state of the weather, eggs should be available at very reasonable prices from the start.

Poultry farming, both as a specialty and as a side issue on other farms, has been one of the best-paying lines of agricultural work during the last two or three years, which accounts for the large supplies on hand this year. Prices to the farmer, however, have now reached a low point on both eggs and poultry, and he is not marketing poultry freely, but is holding his birds for better prices or using them on the table at home. Poultry fattening stations that are usually crowded at this season are now only about two-thirds full.



Eggs of Best Quality.

HENS ARE OFTEN DISTURBED

Interference With Nervous System Is Frequently Sufficient to Set Layers Back.

To a great many persons it will seem like going to extremes, but, nevertheless, it is true that interference with the nervous system is frequently great enough to cause a serious drain on the vitality of the laying hen, says the United States Department of Agriculture. Various things that interfere with the ordinary daily life of the fowls may be put in this class. Hens are often disturbed, especially those of the more nervous breeds, by the presence of strangers. Changing them about frequently from one pen to another is also a disturbing factor and will set the layers back, as will the mixing together of birds that have been separated for some time.

TREATMENT FOR SCALY LEG

Mix Kerosene and Lard Together and Thoroughly Brush Into Covering on Feet.

One of the most common remedies for scaly leg of fowls is to mix together kerosene and lard and thoroughly brush or rub this into the scales covering the foot and shank. It is rather harsh treatment, but will cure the trouble if repeated at intervals of a week. Some cases will be cured with two applications, while others may need several.

Probably the best remedy is oil of caraway. Mix one part of oil of caraway with five parts of vaseline. This material is very penetrating, but not nearly as irritating as kerosene. Rub the ointment in the leg and repeat every few days until signs of the disease disappear.

PERTINENT POINTERS for MODERN FARMERS

Prepared Under Direction of North Dakota Agricultural College

DAIRY BREEDERS NOT SPECULATORS, MOST IMPORTANT

(By Max Morgan, N. D. A. C.)

One may trace the history of any breed of livestock from its emergence into the light of authentic history down to the present time and he will find that the men whose names are honored and whose fame has endured are those who raised livestock as their life work. It was not those men who became interested in the buying and selling of livestock because of the profits which they say could be gleaned through their shrewd purchases and sales that has made the livestock business successful, it was the farmer or breeder who was in the business because he knew its various angles.

Dairy cows are good investments, however, they should be regarded not as a speculation but as an honest and legitimate investment. Every thinking man knows that the right kind of dairy cows bought at present prices are bound to increase the prosperity of his farm life. Even though this is true, the mere speculator should not be encouraged to enter the dairy business. We don't need them and they are not wanted.

What we do want is the young, intelligent, ambitious farmer and livestock lover who has long desired to enter the dairy business on a legitimate basis who who has been deterred by former high prices and big crops of grain. One who has studied over the future which the milking cows may have for him and has laid his plans accordingly, is the farmer who will make a success with the dairy cow providing he obtains the right kind.

We need not fear for the man who goes into the dairy business properly prepared for he will amass more wealth from dairy cows than the speculator who springs up like a mushroom in times when candidates are favorable.

The dairy cow with her conformation and working apparatus is so vastly different from any other farm animal that it takes keen judgment and operation to choose from the mass, cows which will be profitable.

Speculators will not help rebuild the present system of agriculture, they will generally make many disappointments as well as undermine the work which has already been successfully laid out by others.

The dairyman is a manufacturer and the dairy cow is a machine by which alfalfa, ensilage, grain and other coarse products on the farm are manufactured into milk and butterfat.

The dairy cow is a high powered specialized machine which it has taken centuries of time to develop. It is due to this long period of development for dairy production only that the dairy breeds of cows have become far more superior than any other breed and cross bred animals. She is an intricate, delicate, yet strong and easily run machine if the time and care is given her which these many years of breeding have made necessary. The difference between the dairy cow and beef cow is vast. Each has been developed for hundreds of years to produce the opposite product from the other, the beef cow to produce beef, the dairy cow to produce milk and butterfat. Yet often is it found that the beef sire is bred to a dairy cow to raise calves which will produce beef and milk. This is the very opposite to what a breeder would call good breeding, for the ability to produce beef or milk has been bred into each breed for so long that if she is a representative cow this first cross, a second cross especially will develop into a poorer milk and beef producer than the dam of this heifer. It takes several such crosses as this by the use of a highly bred purebred sire. In nine cases out of ten it is more advisable when a farmer desires to change from dairying into beef production that he sell his dairy cows and purchase beef animals.

It is because men and women are showing an interest in the ability of the dairy cow as a transformer of coarse feeds into a highly specialized product which leads us to believe a third school of breeders is slowly yet gradually developing. It is composed of substantial, clear-thinking men—men who realize that great lasting achievement in breeding livestock does not come in a few days or a few years and that it cannot be attained by cutting corners or chasing fads and fancies.

(By J. R. Dice, N. D. A. C.)

A glance at the market prices of grain and dairy products is sufficient to convince anyone that the dairy cow continues to make a strong bid for farm-grown feeds.

In planning for the winter care and feed for the milk cows good dairymen try as far as possible to duplicate June conditions, for it is under such favorable conditions that the cows do their best and return the most profit.

Keep the cows comfortable. No cow in milk will prove to be a good producer if she is cold, regardless of her breed or inherited ability. When the herd is turned out for exercise do not allow the cows to stay out until they hump up. The stable does not need to be elaborate but it should be reasonably clean and the temperature should be above freezing if possible.

A cow on pasture gets an abundant supply of succulent feed that contains sufficient protein. Her winter ration therefore should contain the feed necessary to maintain her body and to supply the material necessary for good production. Feed the cows all of the roughage that they will eat and about a pound or quart of grain for every four pounds of milk produced. Silage or some succulent feed and alfalfa or sweet clover should make up a part of the ration. Unless alfalfa is used, oil meal should make up about a third of the grain ration.

Feed the cows so that they will neither gain nor lose weight. If a cow becomes thin, increase the grain fed, while if she gets fat reduce the grain ration.

A good ration for a herd when alfalfa is not available is as follows: 100 pounds ground oats, 100 pounds ground barley or corn, 200 pounds wheat bran, 200 pounds oil meal.

When plenty of alfalfa or sweet clover is fed, the following ration is suggested: 300 pounds ground oats, 300 pounds barley or corn, 300 pounds wheat bran, 100 pounds oil meal.

SHROPSHIRE SHEEP BEST BREED

That the Shropshire is the best breed of sheep for average North Dakota conditions is the opinion of E. J. Thompson, professor of animal husbandry at the North Dakota Agricultural college.

"The Shropshire is the predominating breed of sheep in North Dakota and is very popular with the modern farmer because of its better-class mutton and wool, its ample size, its early maturity, its fecundity, which is above the average, and its fine temperament," said Mr. Thompson.

This medium wooled breed is larger and somewhat heavier than the Southdown. A striking breed characteristic is the heavy cap of wool over the head coming down to the nostrils and covering all but a small part of the nose. The face, ears, and legs, are usually a dark brown or blackish brown.

Brown and white spots about the face and legs or grayish brown color of face and legs were quite common 15 years ago and these old-fashioned breed characteristics sometimes show up in good animals at the present time but are discriminated against as showing lack of up-to-date breed character.

A standard weight for mature rams of this breed is 225 pounds, with 150 pounds for ewes. Shropshires rank first among all sheep for gentleness and ease with which they may be managed. Bluish-pink skin is often found among sheep of this breed, but modern breeders are demanding a clear, bright pink or cherry red skin.

In the early maturity this breed ranks in first class. Lambs at four months will easily weigh 40 pounds and at 12 months of age will weigh over 100 pounds. It is popular among feeders because of this early maturity and because it is easily fattened. This breed is noted for its back and loin, combining level carriage, width and covering, and having a full bosom, a well sprung and deep rib.

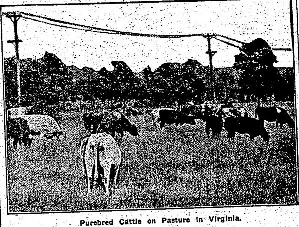
DEFINITE STATEMENT SHOWING IT PAYS TO RAISE PUREBRED STOCK

(Prepared by the United States Department of Agriculture.)

A certain number of farmers have long recognized the superiority of purebred animals over scrubs and grades. By them no exact figures were needed. There are many men, however, who demand definite statements of facts showing that it pays to raise animals of known blood lines. The United States Department of Agriculture now has statements from a large number of farmers which go to show that the experience of nearly all of more than 500 of these raisers of purebreds is in favor of these animals as profit makers.

Purebreds Far Superior.

An analysis of the large number of estimates made by these men shows that they consider purebreds of all kinds more than one-third better or more efficient than common stock. The difference seems to be most marked in the case of dairy cattle, the average dairy farmer in the list questioned considering that the cow of pure breeding was 47.8 per cent better than the common cow. The superiority of other kinds of farm stock, according to the investigation, was as follows: Poultry, 40.7 per cent; swine, 38.3; sheep, 37.8; horses, 37.2; beef cattle, 36.8, and goats, 36.8 per cent. The average superiority of all kinds of purebred stock over common stock was given as 40.4 per cent.



Purebred Cattle on Pasture in Virginia.

Cows and hens show up better than other kinds of farm animals probably because it is easier to measure their production and consequently easier to improve them. A New England dairyman attributes his increased returns from purebred dairy cows to the fact that "more attention is paid to testing and feeding. Consequently there is more weeding out of the poorer cows, which results in building up a better herd." A Florida poultryman described how by trapnesting his flock he increased the annual egg production per hen from 80 to 150. This was accomplished by selection and feeding without introducing new blood.

How do purebreds excel ordinary stock? Here are the different points in the order of their importance as listed by the Department of Agriculture: Better conformation and quality, better selling price of animals, increased production, stock more salable, more product for the feed, interest and price (results in greater returns), uniformity (factor in making sales), early maturity, ease of fattening and finishing, better prices of products, increased vigor and docility and ease of handling.

"My purebred stock," says one farmer "weigh as much at 15 months as my scrubs did at three years—a saving of 21 months in feed and labor, besides getting a better price. They are early maturing, easy keepers and good producers." A dairyman says: "My cows have more than doubled in milk production. Scrub and grade cows used to give me about 4,000 pounds of milk a year, while my purebreds average more than 8,000 pounds."

Worthy of High Price.

There appears to be a determination among experienced breeders to get sires of the desired type and breeding even at great trouble and high price, because of their faith in ultimate results. "They come high," says one breeder, "but are worth what they cost. I saw the need of better cattle and sold my scrubs and bought registered Herefords. They have more than paid for themselves." For the most part, users of purebred sires are reasonably well satisfied with them as individuals. Of 450 users, 380 report general satisfaction, 71 are satisfied except for the desire for still better, and eight are dissatisfied. In general, about 98 per cent of the owners appear to have obtained satisfactory purebreds as sires. The average estimated increase in financial returns "traceable to the use of purebred sires" was 48 per cent. The profitable results are due largely to the fact that such a sire gradually improves an entire herd or flock. Especially in the case of poultry and hogs, which multiply rapidly, a few animals of pure breeding may in a few years become the ancestors of hundreds of purebreds.

Men change their ways of doing things for various reasons. The farmers questioned by the department changed to purebred animals as a result of various influences, but principally as a result of reading, observation, talks with county agents, lessons learned at meetings and institutes, sales, fairs, shows, home influence, college instruction, natural liking for good animals, live-stock club work, and various other reasons. "As a boy," said one stockman, "I saw that my father never would make a success with scrubs."

Fall Seeding of Lawns.

Many grasses reach maturity in the early fall and re-seed themselves where they stand, indicating that the fall is their natural seed time. This seems to hold good for lawn grasses as well as for other lands and fine lawns are frequently established by fall seeding.

Plan to Save Implements.

It will pay any man to form the habit of taking an oil can and wrench in hand and frequently look his implements over.

Fertilizer in Stacks.

Not all fertilizer comes in burlap sacks. Some of it is in straw stacks.

LIGHT ON CAUSES OF CORN ROT

Diseases Found Distributed Throughout the Corn Belt.

Diseases Can Be Greatly Reduced by Properly Balancing Fertilizing Elements in Soil and by Using Selected Seed.

(Prepared by the United States Department of Agriculture.)

The severity of the root, stalk, and ear rots of corn, diseases found to be more or less widely distributed throughout the corn belt, can be greatly reduced by properly balancing the fertilizing elements in the soil and by planting selected strains of corn.

These conclusions are the result of investigations carried on by the United States Department of Agriculture, in co-operation with a number of state experiment stations.

In the past it was not thought that the corn plant was particularly sensitive to the balance of the various elements in the soil, but now the damage caused by these rots is believed to depend largely upon these conditions and upon climatic factors. Also the nature of the plant itself—what plant breeders call the genetic composition—has much to do with its susceptibility or resistance to these rots. In the experimental fields self-fertilized strains of corn of many different varieties are showing peculiarities formerly regarded as symptoms of root, stalk, and ear rots, and many strains are being isolated which, even though self-fertilized for many generations, show resistance to the organisms associated with the rots.

Reducing the losses from these rots is a complex problem, requiring much more investigation. At present the department can go little farther than to say that primarily it involves a careful consideration of environment, soil fertility, and the nature of the particular strain of corn.

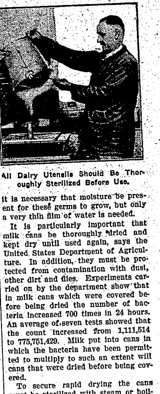
DAIRY

KEEP DAIRY UTENSILS CLEAN

Bacteria Increase in Astounding Numbers When Conditions Are Right—Must Be Kept Dry.

(Prepared by the United States Department of Agriculture.)

Because bacteria increase in numbers at such an astounding rate when conditions are favorable, it is necessary not only to kill as many of them as possible in order to keep dairy utensils clean and insure a good product; but utensils must be kept dry, so that the few organisms that are left after sterilization will not multiply greatly. In addition to the proper temperature it is necessary that moisture be present for these germs to grow, but only a very thin film of water is needed.



All Dairy Utensils Should Be Thoroughly Sterilized Before Use.

It is particularly important that milk cans be thoroughly dried and kept dry until used again, says the United States Department of Agriculture. In addition, they must be protected from contamination with dust, other dirt and flies. Experiments carried on by the department show that in milk cans which were covered before being dried the number of bacteria increased 700 times in 24 hours. An average of seven tests showed that the count increased from 1,111,514 to 775,751,429. Milk put into cans in which the bacteria have been permitted to multiply to such an extent will cans that were dried before being covered.

To secure rapid drying the cans must be sterilized with steam or boiling water. If a sterilizer is used the cans may be left in it until time for them to be used again, but there must be some means of ventilation to carry off the moisture. Cans may be set on a rack to dry, but they should be protected from flies and dust, preferably in a well-screened milk house.

Producing Clean Milk

Factors to be observed in producing good clean milk:

Clean, healthy cows in clean, well lighted and well ventilated quarters.

Plenty of pure water for the herd and milkhouse.

Clean utensils, thoroughly washed, steamed and sunned.

Small-top milking pails. Milk with dry hands.

Remove milk from stable as soon as drawn from each cow.

Have a separate milkhouse for handling milk and dairy utensils.

Cool milk to 50 degrees F. or lower as soon as drawn.

Keep milk at a low temperature until delivered and deliver regularly.—G. E. Morton, Colorado Dairy Commissioner.

EXCELLENT CALF PEN HINTS

Should Be Located on South Side of Barn and Arranged So that Sunlight Enters Freely.

Calf pens are preferably located near the south side of the barn and so arranged that sunlight enters them. Exercising yards to the south of the barn connecting with the pens are desirable in order that calves may be turned out for exercise even on cold days and be protected from the north winds. Cement floors are satisfactory from the standpoint of durability and cleanliness, but are cold in winter unless covered by an abundance of dry bedding.

Beware of Moldy Silage.

In opening the silage it is necessary that all moldy silage be removed or silage poisoning may result and sometimes it may cause death of live stock.

Silage Not Balanced Feed.

Silage is not a balanced ration. It should always be supplemented by other feeds.

Heating Stoves

The nice weather of the past month is over. Ahead of us we have a cold winter. With cold weather comes the necessity for stoves. We have them. Heating Stoves, Oil Stoves and Cooking Stoves.

Mrs. J. P. Jensen left Tuesday evening for Brookings, S. D., where she will visit with her daughter and son-in-law, Mr. and Mrs. E. J. Beithon.

Frank Carpenter of Thief River Falls was a visitor in Goodridge on Friday. Mr. Carpenter was at one time employed at the former Resan & Yohn livery barn.

Miss Carrie Boe returned to her home at Albert Lea, Minn., Monday evening after having visited her sister, Mrs. L. J. Mork, for the last several weeks.

LUTHER LEAGUE HAS GOOD MEETING

Large Crowd Present Despite the Inclement Weather.

The Luther League held another very entertaining and successful session Wednesday evening, November 1. A large crowd was in attendance despite the inclement weather and a very fine program was rendered, the numbers being mostly musical. The program was rendered as follows:

Song, Luther League; reading of the 4th Psalm and prayer, Rev. Aaker; recitation, Hazel Aarness; vocal solo, Miss Minnie Lindbloom; musical composition, Miss Adeline Davids and Miss Minnie Lindbloom; duet, Miss Myrtle Iverson and Miss Clenora Urdahl; address, Rev. Aaker; song, Luther League. The minutes of previous meeting were then read by the secretary.

All numbers were rendered in a very finished manner, and especially the musical composition by Miss Davids and Miss Lindbloom, which without doubt is the most beautiful and talented number ever rendered by any local people in Goodridge.

After the program the usual election of new committees was held. The following people were elected on the committes: Program committee, Hazel Aarness and Alvin Halvorson; lunch committee, Mrs. V. O. Aaker and Mrs. Theo. Gilbertson; membership committee, S. Tharaldson and Miss Emma Gilbertson

As a conclusion the usual appetizing lunch was served at the cost of 10 cents a plate.

The services are held in the parsonage in Goodridge at 8 P. M. "And they continued steadfastly in the Apostle's doctrine, and fellowship, and in breaking of bread, and in prayer." Acts 2,42.

LEAVE FOR TURTLE RIVER.

Curtis Francher, Harry Halvorson, Oliver Reson, Elmer Resan and Carl Josephson left for Turtle River, Minn. this week, where they will spend the winter hunting, trapping and cutting wood. Oliver and Elmer Resan will return shortly to get two of Oliver Resan's teams that will be used for logging throughout the winter.

Wedding Dance Is Given by Goodridge Newlyweds

A wedding dance, with an invitation extended to the public, was given on Friday evening, November 3, by Mr. and Mrs. Henry Iverson, newlyweds.

An extraordinary large crowd was in attendance and everyone reported a transcendent time. Despite the bad weather and heavy roads, many from the country were in attendance.

The dance started promptly at 9:30 P. M. when the local orchestra struck up the nuptial waltz, which was then waltzed by Mr. and Mrs. Iverson and by the attendants, Miss Violette Josephson and Ellard Iverson. At midnight the newlyweds were presented with a purse containing a snug sum of money by Albert Halvorson, who acted in behalf of the donors. The spokesman then extended the best wishes of the crowd to the newlyweds for a long and happy married life and then invited everyone to the Stephenson cafe, where they partook of an appetizing supper. The dancers again retired to the hall, where they continued to trip the light fantastic until the wee small hours of the morning.

Reopening of Feed Barn

CLA[illegible] ANDERSON [illegible]SSES TO REWARD

12-Year-Old Daughter of Sigurd Anderson Dies at Family Home.

Sunday evening, November 12, at 8 o'clock occurred the demise of Clarice Anderson, the oldest daughter of Mr. and Mrs. Sigurd Anderson, residing five miles north of Goodridge, death being due to diptheria.

Deceased was born March 3, 1910, at Morris, Ill., and was 12 years eight months and nine days of age at the time of her death.

Clarice Anderson attended the local school, being a clause of the seventh grade, and was a student of unexcelled ability, sustaining the unstinted commendation and admiration of instructors and schoolmates alike, who sadly lament her departure from among the schoolroom.

Departed is survived by her father and mother and younger sister, Judith Anderson.

The entire community joins in expressing their heartfelt sympathies to the bereaved parents and sister.

SHERMAN KELLY PLAYERS AT THIEF RIVER FALLS

The Sherman Kelly Players, one of the best road shows entour this season, have been secured for a week's engagement at the Auditorium, Thief River Falls, commencing next Monday November 20th.

The company numbers 14 people, with Sherman Kelly and Miss Mae Ambler in the leading roles and will offer the latest play success with all special scenery for each production. This is the same companay that was at the Metropolitan in Grand Forks last week anad received excellent praise from the Grand Forks Herald. This week they are showing the Orpheum at Fargo to capacity business nightly.

They will present a different play each evening and a feature vaudeville program will be given between the acts of the play.

Mr. Kelly has announced that he will open at the Auditorium with the big laughing show, "Buddies," one of the most pleasing comedies ever written.

Popular prices will prevail during the week, with all seats reserved; seat sale at Lambert's Drug Store—Adv.

Mr. and Mrs. G. C. Gulrud were visitors at Thief River Falls Thursday afternoon.

Germantown Farmer Moves to Buffalo, Minn.

The household belongings of Angus Nicols, a farmer who has resided near Germantown, was hauled to Goodridge and billed to Buffalo, Minn., this week, where Mr. Nicols and family will make their future home. The Nicols are exceptionally well liked and it is with regret that we witness his departure.

Hunters Pass Through.

The official hunting season opened for male antlered moose and deer on Friday, November 10, and will continue until Monday, November 20, inclusive. A great many hunters have been seen passing by or stopping in on their way to the hunting grounds and it is expected many will return with game.

Breaks Collar Bone.

Carl Mandt, a grade student at the local school, had the misfortune of breaking his clavicular bone last Friday. It appears the boys were enjoying a game of shinny when in some manner Carl tripped and fell so as to fracture the bone. He was immediately taken to Thief River Falls where the injured member was set. He is now improving rapidly and will soon be able to resume his duties at school.

Miss Wilson Leaves for Chicago.

Miss Gladys Wilson, who has until recently been employed as a bookkeeper at the Farmers State Bank, left Saturday for Chicago, where she will be employed.

To Reside in Town.

Mrs. Ellen Iverson and family have removed to the Gunderson residence west of town, which they have rented for the coming winter. The Iverson family formerly resided north of town on the old J. H. Hay place.

Loses Wheel.

Henry Hope, the Grygla truckster, had the misfortune of running off one of the rear wheels of his Ford truck Friday evening about a mile and a half east of Thief River Falls. After a short time of repairing Mr. Hope was again able to continue on his return trip to Grygla.

A man who makes money in a community has a duty to perform to that community. It may be that he has made his money by his superior business ability, and that he would have done as well anywhere. That does not alter the case. If his gifts are great his responsibilities are equally as great. No man was placed on earth for the sole purpose of making money and the man who has this as his ideal had better never have been born. It is not an act of charity, but the performance of a simple duty for the man who has made money to pass a little of it on for the benefit of the community, even though he never expects to get a dollar of his contribution back.—Hankinson (N. D.) News.

Mrs. Julia Gebhard left Monday for Grand Forks, where she will spent an indefinite time visiting.

SCHOOL NOTES

Judith Anderson has been absent from school this week on account of illness.

* * *

Dr. H. W. Froehlich visited school Monday. He was consulted by the school board in connection with the rumor of diphtheria among the pupils. It was decided to keep close tab on the pupils and watch for symptoms of the disease.

* * *

The Junior class organized last Friday. Gustaf Thompson was elected temporary chairman. The following officers were elected: President, Edith Schie; vice president, Ida Anderson; treasurer, Gorman Thompson; secretary, Gustaf Thompson; sergeant at arms, Gustaf Thompson; class advisor, E. J. Erickson. The class decided to present a junior class play some time during the winter.

* * *

Gina Dahlen has quit school here because of the inconvenience in getting here in the morning.

* * *

The eighth grade pupils have just started that most interesting book, "Treasure Island."

* * *

The literary program which was to have been given Friday has been postponed until Friday, Novembe 24, at 3 o'clock. The public is cordially invited to attend.

* * *

The newly received seventh and 8th grade books are greatly appreciated by both teachers and pupils.

* * *

The absence of Carl Mandt is keenly felt and we sincerely hope he will be back with us again soon.

* * *

A few of the intermediate grade teachers have been living in mortal terror ever since an amateur Sherlock Holmes made the all-important discovery that a few innocent mice were making their home in the hall. In order to save these champions of education from an attack of neurasthemia two dozen traps have been set to apprehend the innocent offenders.

Norwegian Lutheran Church.

V. O. Aaker, pastor. Sunday, Nov. 19: Sunday school and Bible class at Goodridge at 10 A. M. Services at Bethania at 11 A. M. and English services at Goodridge at 8 P. M. The Young People's societies of Torgerson and Erie meet at the churches Sunday afternoon. The Ladies' Aid of Torgerson meets with Mrs. Ole Holen on Wednesday, November 22, and in the evening the Luther League of Goodridge meets a tthe church. Everybody welcome to all these meetings.

Roy Bro[illegible]n Goes to [illegible]icago for Winter

Ro[illegible]rown, who purchased land east of Goodridge last spring and who has been cultivating it during the past summer, left Saturday evening for Chicago, where he will tend to his real estate business throughout the winter. Mr. Brown is an energetic and ambitious man who has acquired numerous friends and acquaintances during his short stay here, who will regret his departure. Mr. Brown stated that he would return next summer and again cultivate his farm.

Services at Schoolhouse.

Rev. E. Halter of St. Hilaire will hold services at the schoolhouse Sunday evening, November 19, at 8 P. M.

Leave for South St. Paul.

Three sheep went through Goodridge en route to South St. Paul last week, where their owners, Westley Sheldrw, Ola Willard and Ethel Sparby, respectively, will display them at the Fifth Annual Junior Livestock Show. They were accompanied by A. J. Anderson of Grygla.

Tribune Editor to Speak.

J. S. Arneson, editor of the Thief River Falls Tribune, has accepted an invitation to address the Community Club meeting to be held here Friday evening, November 24, and has chosen as his topic, "Community Spirit and Good Roads."

FOR SALE.

Three Duroc boars, three months old, well bred. Price will be right if taken at once. A. Fimrite, Erie, Minn.

FEED FOR SALE.

Have some flax screenings, suitable for sheep feed, for sale cheap at Hanson & Barzen Elevator.

WHY SHOULD YOU HELP RED CROSS?

Get Your Joachimsthaler Ready, and Do It Today. Work of Soliciting.

The annual canvassing campaign for the American Red Cross has begun in Goodridge and is under the able administration of local school teachers, who will no doubt get the quota asked for—and then some.

But nevertheless we want to impress upon you the necessity of donating a liberal subscription to this worthy organization. The Red Cross serves you in so many ways that we would not attempt to enumerate them all, but we will make a mention of some of them that benefit you directly.

The Disease Relief—Has spent in this country many thousands of dollars in rendering aid to the multitudes suffering because of fire, flood and other catastrophes.

Public Health—The Red Cross has trained nurses, established classes in home hygienes and classes in nutrition.

Live Saving—Established life-saving corps and educated the people in first aid to the injured.

It has saved and helped the 30,000 disabled veterans of the World war, and furnished cheer and comfort to our enlisted men, home and abroad.

The duties of the Red Cross never end. You may be next to be helped, who knows. Give liberally to the Red Cross.

Lutheran Church, Missouri Synod.

Sunday, November 19: German services at 10 A. M. Sunday school at 2 P. M. English services at 3 P. M. at Germantown. English services in the parsonage at Goodridge at 8 P. M. "Wherefore, as the Holy Ghost saith: Today, if ye will hear His voice, harden not your hearts." Hebrews 3, v. 7.8. H. Lutz, pastor.

From the circular of an investment company we learn that if a young man at the age of 25 invests $25 each month and reinvests the income at only 6 per cent, at the age of 60 he will have accumulated more than $35,000 and have an annual income of over $2,000. And there are hundreds of young men in every community who could do that very thing if they but set themselves to do it.—Morris Tribune.

Now that election is over, let us get down to business and pull Pennington county out of the mud. It CAN be done.

Live and Dressed Poultry Wanted

We will need a lot of Live and Dressed Poultry the next two weeks to fill our orders for Thanksgiving. We can pay you more money for your poultry than you can get shipping out of town. Special prices will be paid for Dressed Turkey, Ducks and Geese. Be sure and dress only the No. 1 birds for Thanksgiving. Ship or bring your poultry to Peterson-Biddick Company, Thief River Falls, for best results.

Tanlac Put Him Back on Job, Says Davis

"I've never been much of a hand at praising medicines, but I can certainly say something good for Tanlac," said Geo. Davis, 110 Naglee St., San Francisco, Calif.

"I had a bad case of ptomaine poisoning and it came pretty near laying me out altogether. For three months I was in an awful condition and suffering constantly from diarrhea. I became weak all over and was going from bad to worse. I tried everything I knew of, but it was beginning to look like nothing would ever reach my case.

"Then, a friend of mine recommended Tanlac to me. And it's a fact, four bottle have made a clean sweep of my troubles and built me up to where I feel like a new man. I am working every day now and when it comes to recommending Tanlac I can't put it too strong."

Tanlac is sold by all good druggists. —Advertisement.

In All Humility.

"How do you think the financial relationships of the world ought to be adjusted?"

"'Tain't for me to say," replied Farmer Corntossel. "I can't even get the mortgage paid off of a 50-acre farm."

DYED HER BABY'S COAT, A SKIRT AND CURTAINS WITH "DIAMOND DYES"

Each package of "Diamond Dyes" contains directions so simple any woman can dye or tint her old, worn, faded things new. Even if she has never dyed before, she can put a new, rich color into shabby skirts, dresses, waists, coats, stockings, sweaters, coverings, draperies, hangings, everything. Buy Diamond Dyes—no other kind—then perfect home dyeing is guaranteed. Just tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade or run.—Advertisement.

VENGEANCE!

SYNOPSIS—The time is the late '60s or early '70s and the scene a steamboat on the Mississippi river. All the types of the period are present and the floating palace is distinguished by merriment, dancing and gallantry. There are the customary drinking and gambling also. Virgil Drace, a young northern man, is on his way south on a mission of revenge. He meets an eccentric character in the person of one Liberty Shottle, who is constantly tempting the goddess of chance.

CHAPTER I—Continued.

—2—

"Don't call me Liberty. Call me Lib—just Lib; that's enough. But let me tell you something. Never in all my life have I ever come as near being a rich man as I was just now. I had won—by George, I had so much money stacked up in front of me that a mulatto from the North called me 'marster.' And then a cog slipped. We could have split and had a small fortune apiece."

"Blundering fool again?" Drace inquired.

"Yes, sir, and I was the fool. I wanted to be a rich man—and came within one of it. You know, sometimes Fortune hesitates as to whether she shall crown you or slap you."

"In your case, she didn't seem to hesitate long, Lib."

"No the hair-tangled hag! And then do you know what she did just as I was forced to get up from the table in as hot a fever as ever scorched a man's blood? She smiled at me. Now, I'll swear to that. But it's all over. A fellow has his little day, and then stretches out and lets the undertaker measure him."

"Yes, Lib, and I'd advise him to bring along extra tape when he comes after you."

Shottle attempted to smile, but the fever within him was still so hot that his effort ended in a grim tightening of the mouth.

"That's all right, Virgil, but you must remember that you are one out of a million. How a fellow can lose $200 at poker and get up from the table with money still in his pocket is beyond me. However, it means that you haven't got poker in your blood, which of itself is a marvel. But I want to tell you that every man is food for some sort of desperate passion. If it isn't gambling, it may be love. How about that?"

"Hasn't caught me yet," answered Drace, stoutly, even though the picture of the girl in the passageway was at the moment floating bright before his mind's eye. "Of course," he added, "I may marry, Liberty; that sort of thing runs in our family, you know. But I don't think the subject very interesting."

"I grant you. In this we walk shoulder to shoulder. But there is something of vital interest. Just now—I lost."

"Yes, and a very natural thing," Drace agreed.

"No, it wasn't natural. It was unnatural that I should lose just at that time. It was an accident. Listen to me for just a minute. Anybody can do the natural and expected thing. A dog or a cat or any other animal always does. It is doing the thing that nature didn't intend that marks the progress of civilization. Now, I have a proposition to make that may seem unnatural. Perhaps no man you ever met before would make it. But you never met such a man as I am, before. You couldn't look forward and see me. Could you?"

"I didn't," Drace cheerfully admitted.

"And it would have been hard for you to believe that I exist, which I don't, according to the belief of some of my folks. Now, then, what are we getting at? Another stake? No, I am not going to ask you to risk any more of your money. But this is my proposition: You let me have $100; if I win, I'll pay back all I owe. And if I don't, I'll belong to you—your property, body and soul — but with this understanding, I am not to perform any menial service in public. And it is further understood and agreed upon that if by any chance I can raise $100, I am to have the privilege of buying my freedom. The first $100, you understand, was a stake and not a loan. Before you decide, weigh the advantages of owning a man. I will be your Greek, your enslaved philosopher, be your Epictetus and turn your mill. We will revive the ethics of ancient society. Won't that prove that history really does repeat itself?"

"Yes," answered Drace, "but I don't care any more whether history repeats herself than I do that a stammering man repeats himself."

"Now my dear friend soon to be my master, I hope—I ask you; isn't it something to own a companionable slave?"

"Yes. By the way, do you know New Orleans very well?"

"What! Does a bloodhound know the scent of a darkey?"

"All right, Lib—here's $100. And I believe that within an hour from now you'll be my property."

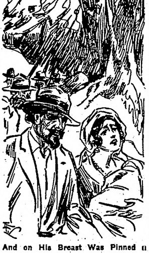
CHAPTER II

Drace sat musing over the strange creature who had just left him, but soon his mind flowed down another channel, far different from a whim or an amusement—his mission in the South, secret, grim and desperate. But life on a river steamboat in that day left little time for brooding for, a few moments after Shottle left to risk his liberty and Drace's hundred, a roustabout thrust his head in at the door and announced that down on the deck there was to be a throwing and tying match. The big fireman of the Leona was about to encounter Vicksburg Joe for the championship of the River.

In an instant Drace was on his feet, all his instincts keen and ready to jump. He was something of a boxer and wrestler, but he had not been taught in this peculiar art of tying an adversary once one has thrown him. And there was that in his mind which made the acquisition of this knowledge seem to him desirable indeed.

As he joined a group of men making their way below, he overheard the Colonel, Miss Lucy's admirer, explaining the gentle pastime. "Tying a man once you have thrown him," the Colonel was saying, "is the climax of prowess. I saw Cal Blodgett throw and tie Nick Pavin at a barbecue at Mount Zion campground, and I have cause to remember it, for the young lady I went with deserted me for the hero, sir—actually stuck flowers into his hair. Here we are."

Two enormous fellows were struggling, while nearby lay a convenient rope. Finally Vicksburg Joe tied the fireman, and he lay helpless, unable to get up.



And on His Breast Was Pinned a Card That Read: "Alfred Drace, With the Compliments of Stepho La Vitte."

"I will give you five dollars if you can throw me and tie me that way," called Drace to the victor when the excitement had a little subsided.

Joe looked at Drace a moment. The young man looked powerful enough to be dangerous, but—five dollars was five dollars. He smiled, bowed, spread out the wrinkled rug and took Drace by the hand to lead him forth. To the astonishment of all, Drace threw Master Joe; but he could not tie the champion.

"Show me how it's done," said Virgil, "and I'll give you the money."

For a long time, and until the Colonel and Shottle were worn out with waiting, the two struggled; and so apt was the student that he succeeded finally in turning the master over and tying him. But it seemed that the burly champion was too willing, and Drace insisted on another fall. And now, though the struggle was genuine on Joe's part, Drace tied him. Still more, another five promised, and Virgil was willing to quit.

"Finest sport I ever had!" he said as he turned away to the upper deck again to avoid the questions and felicitations showered upon him. . . .

Drace was musing—not, it must be confessed, upon the serious purposes which had brought him to the South, but upon that girl of the red roses—when Shottle appeared again. Liberty stood in his presence, not with a droop but straight in the manly resolution to discharge the duties an adverse fate had thrust upon him. In the belief that it would make him look more like a slave, he now wore his coat turned wrong side out.

"Master, I salute you," he remarked.

"All right," said Drace. "But turn your coat. I want my slave, the grinder of my mill, to appear respectably clad. You may sit down."

"I thank you, sir."

"You didn't last long."

"No, master. The tangled-haired hag kicked me sidewise, like a cow. In only two pots! But what can you expect of a man that has an ace-full beaten? How long can a man preserve his freedom at that rate? And a fellow with a spindle chin and a nose no bigger than the average wart beat me with four jacks. Crushed me! And he would have crushed Julius Caesar just the same. Well, after all, freedom has many responsibilities. As a slave I'll cultivate what virtues I can get hold of, and look toward old age and a cabin on the hillside. And now, as it is natural for every man to hide his degradation, will you permit me to call you Virgil in the presence of other people?"

"I thought you didn't believe in the natural thing! But all right; I grant your request. And now I suppose I'd better give you some pocket-change. It isn't well for even a slave to be broke."

The slave's face brightened with hope. "You couldn't make it as much as five dollars, could you?"

"No, thirty cents."

Shottle took the money and sat drooping. Drace gave him a cigar, and they smoked for a time in silence. At last Shottle looked toward Drace, his face guiltless of the whimsical humor that had hitherto possessed it.

"Master," he said, "I don't want to be inquisitive, and if I'm prying into what's none of my business, I won't mind your saying so. But I want to be a faithful slave, and I can serve you best if I know what—what are my master's purposes in life. For example, was there any special reason for your learning to throw and tie that way? Is there anybody in particular I could help you to put the rope on?"

Drace made no answer for a moment, but bent a searching eye upon his new servitor. Somehow the man's soul seemed to shine transparent in his face.

"Liberty," he said, "did you ever hear of a man named Stepho la Vitte?"

Liberty nodded. "Yes, I've heard of him; they say he's an outlaw, a smuggler."

"And worse," said Drace. "He's the man who—Liberty, give me your word, your oath, that you'll keep this a sacred secret!"

Liberty gave his word and his oath with a certain quaint dignity, and Drace went on:

"Liberty, before the war my father, Alfred Drace, was manager of a line of steamboats on the Ohio. In his employ was the creole Stepho la Vitte. After a time it came to my father's knowledge that Stepho was not only dishonest in ordinary dealings but had been guilty of piracy along the Gulf coast. And so my father dismissed Stepho from a position which the creole's dishonesty had made lucrative and valuable to him.

"Just after that," Drace went on, "the war broke out. La Vitte became a guerrilla—one of the men of Quantrell's stamp, who kept out of the army but who gathered in bands and lived by rapine along the border. I was only a little boy, Liberty, when La Vitte's band of guerrillas crossed the Ohio near Cincinnati and raided the little town where we lived. But the horror of that night still burns like a flame in my brain, Liberty."

Drace stopped, drew from a breast pocket a card and handed it to Shottle. On it was written in bold black characters: "Stepho la Vitte, with the compliments of Alfred Drace's son Virgil."

Shottle read the card, then looked inquiringly at Drace:

"Liberty," the young man explained, "those guerrillas under La Vitte burned our little town and killed nearly every grown man in it. For word was brought of their coming, and the men—nearly all of them married men or old—who had not gone to the war seized weapons and went out to defend their houses.

"They were massacred almost to a man. . . . And it was not plunder alone that led them to choose our little town for outrage, Liberty, but a passion for revenge. For next morning my father was found hanging to a tree. And on his breast was pinned a card that read: 'Alfred Drace, with the compliments of Stepho la Vitte.'"

Liberty looked again at the card he held in his hand, then handed it back to Drace. "I reckon I understand now, master," he said. "You are huntin' this Stepho to—"

"To hang him as high as Haman and to pin that card on his breast," declared Drace passionately. "While my mother lived, Liberty, I could do nothing. You know how women are in such matters. But—she died this spring, Liberty, after long years of grieving for the man that d—d outlaw foully murdered. Now I am free to strike for my honor and my father's memory—to carry justice to that murderer."

"The barbaric rose maid—the girl who had touched his heart with a torch."

(TO BE CONTINUED.)

WHEAT TAKES SLUMP

Market Has Shown a Slow Holiday Tone.

U. S. Bureau of Markets, Washington, D. C., for week ended Nov. 10, 1922.

GRAIN: Market was strong during part of week on bullish private crop reports but uncertainty prevailed later and the close was irregular. Chicago December wheat lost 1⅝c; Chicago December corn up ¾c. Wheat averaged lower on the 9th on decline in Liverpool and absence of important support but short covering checked break. Later buying of Chicago December and selling of May by seaboard caused firm close. Country offerings not large; cash demand fair; exporters in market for durums. Government crop report showed larger corn crop than expected and prices declined. Closing prices in Chicago cash market: No. 2 red winter wheat $1.25; No. 2 hard winter wheat $1.18; No. 2 mixed corn 71c; No. 2 yellow corn 72c; No. 3 white oats 43c. Average farm prices: No. 2 mixed corn in central Iowa 57c; No. 2 hard winter in central Kansas $1; No. 1 dark northern wheat in central North Dakota 98c. Closing future prices: Chicago December wheat $1.15⅝; Chicago Dec. corn 69¼c; Minneapolis December wheat $1.14¼; Kansas City Dec. wheat $1.07⅞. Winnipeg Dec. wheat 99¾c.

DAIRY PRODUCTS: Butter markets reacted following long period of firmness and steady advances and were barely steady to weak at the close on the 9th. Movement slower and some price concessions have been made. Consumptive demand decreasing at prevailing high prices. Closing prices, 92 score: New York 49½; Chicago 48½c. Cheese markets barely steady following Monday's declines on Wisconsin cheese boards. Movement continues slow; heavy accumulations reported at country points. Buying and selling limited. Prices at Wisconsin primary cheese markets Nov. 9th: Twins 24c; Daisies 24¼c; Double Daisies 23¾c; Longhorns 24½c; Square Prints 25c.

LIVESTOCK AND MEATS: Compared with a week ago, the trend of hog prices at Chicago was slighty upward. Cattle and sheep prices also improved somewhat. Beef steers steady to 25c higher, butcher cows and heifers steady to 50c and veal calves 25 to 75c up. Feeder steers were weak to 25c lower for the week. Fat lambs ranged from 25c lower to $1 higher; feeding lambs 15 to 25c, and yearlings 50 to 75c higher. Fat ewes were steady to 25c up per 100 lbs. On Nov. 9th hogs were generally steady, light hogs about 5c lower. Cattle market fairly active, generally steady to strong on all classes, spots higher on desirable short fed steers and butcher heifers. Fat lambs 25c higher, sheep fully steady. Nov. 9th Chicago prices: Hogs, top, $8.65; bulk of sales $8.10-8.65; medium and good beef steers $7.10-11.75; butcher cows and heifers $3.50-10.50; feeder steers $5-7.75; light and medium weight veal calves $8.50-10.75; fat lambs $13.25-15; feeding lambs $12.25-14; yearlings $9.75-13.25; fat ewes $4.50-8. Stocker and feeder shipments from 12 important markets during the week ending Nov. 3 amounted to: 173,595 cattle; 15,684 hogs; and 213,643 sheep. In eastern wholesale fresh meat markets prices continued their downward trend for the week. Veal weak to $1, lambs and mutton weak to $2 and veal weak to $3 lower while light pork loins ranged from $2 to $5 down and heavy loins were generally $1 lower. On Nov. 9th steer beef ranged from weak at some markets to $1 higher at others; veal $1 to $2 lower at Philadelphia. Barely steady at other markets; lamb unevenly $1 to $3 higher at New York, weak elsewhere; mutton weak to $1 lower at Philadelphia; weak at Boston and steady at New York; pork generally $1 to $2 lower. Nov. 9th prices good grade meats: Beef $14-18; veal $14-16; lamb $22-24; mutton $12-15; light pork loins $18-24; heavy loins $16-21.

Minneapolis Cash Closing Prices.

Spring wheat—No. 1 dark northern, 1.15@2.24; No. 1 northern, 1.13@1.22; No. 1 dark hard, 1.19@1.26; No. 1 hard 1.15@1.24. No. 1 am. dur., 1.08@1.10; No. 1 durum, 96c@1.03. Corn No. 2 yellow, 67c@69c. Oats No. 2 white, 38c@41c. Barley, choice to fancy, 58c @62c. Rye No. 2, 80c. Flaxseed No. 1, 2.42@2.44.

South St. Paul Live Stock.

So. St. Paul—Steers, $4.00@7.00; veal calves, $3.00@8.75; cows and heifers, $3.00@5.00; hogs, $7.75@8.10; sheep and lambs, $7.00@13.75.

BUTTER—Extras, 47c; firsts, 43c; seconds, 38c; packing stock, fresh sweet, 25c; stale groods, 5c; grease, 1c; storage sweet extras, 45c.

EGGS—Country receipts, rots out, per case, $12.90; No. 1 candled, good extras, free from rots, small, dirty and checks out, per case, 46c; dirty and held stock, rots and leakers out, dozen 22c; checks, rots and leakers out, 21c; quotations on eggs include cases; fancy storage eggs, 30c.

14 Saved From Burning Ship.

New Orleans—The 600 ton freighter Nola of the Gulf Navigation company was abandoned in the Gulf of Mexico 40 miles southwest after a fire had got beyond control. 14 persons were taken off.

Clemenceau Not Welcome at Boston.

Boston—Mayor Curley has ended a controversy over the reception to Georges Clemenceau here on November 22 by notifying the French consul that the city will take no official part in the welcome.

Mrs. Mary Ross

Minneapolis, Minn.—"When my children were small I had a sick spell that weakened me so I could not walk across the floor without the aid of a chair. Our druggist advised me to take Dr. Pierce's Favorite Prescription and Golden Medical Discovery, alternately, according to directions, and six bottles completely restored me to health and strength. Since that time I have frequently recommended these two famous remedies to members of my own family and to my friends and have seen only the most satisfactory results from their use."—Mrs. Mary Ross, 2313 22nd Ave., S.

Health is wealth. Do not neglect the most valuable asset you have. Write Dr. Pierce, president Invalids' Hotel, in Buffalo, N. Y., and receive good medical advice in return, free of all expense, or send 10c for trial pkg. of tablets.

SQUEEZED TO DEATH

When the body begins to stiffen and movement becomes painful it is usually an indication that the kidneys are out of order. Keep these organs healthy by taking

LATHROP'S
GOLD MEDAL
HAARLEM OIL
CAPSULES

The world's standard remedy for kidney, liver, bladder and uric acid troubles. Famous since 1696. Take regularly and keep in good health. In three sizes, all druggists. Guaranteed as represented. Look for the name Gold Medal on every box and accept no imitation

Speed Necessary.

"Of course," said Miss Cayenne, "I am willing to pay more for rapid work."

"How rapid must it be?" inquired the dressmaker.

"Rapid enough to keep a dress from going out of style between the time I order it and the time I get a chance to wear it."

Important to Mothers

Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it

Bears the Signature of Chas. H. Fletcher
In Use for Over 30 Years.
Children Cry for Fletcher's Castoria

Milk for the Baby.

Two-year-old Betty had always used a special brand baby milk but recently has been drinking very little, preferring the more solid foods. At the dinner table a few days ago it became the subject of discussion and it was decided to discontinue the special milk when Phyllis, six years old, who had been listening with interest, inquired: "Daddy, where do they get milk for babies? Is that calf's milk?"

CRISIS IN NEAR EAST IS EASIER

Noslems Expected to Make No Further Breaks Pending Peace Parley.

CONDITIONS ARE WORSE

Allied Evacuation of Constantinople Still Being Considered—Greeks Accused by Turkish General of Forcing War.

Constantinople—From Angora comes the report that Rafeal Pasha, the Nationalist governor, has been instructed to press the demand for complete control of Constantinople without allied interference.

Constantinople—There is an appreciable slackening of the tension which has prevailed over the successive demands of the Kemalists for greater control of Constantinople. Although no official announcement was made, it was stated in allied circles that sober reflection by the Turks has caused them to make no further provocative gestures before the opening of the Lausanne conference.

Thus, while the situation continues uncertain, it is felt that the peril of a rupture has momentarily been averted.

Situation Improved.

The departure for London of Colonel Gribben, British chief-of-staff, and the decision of Sir Horace Rumbold, the British high commissioner, to leave for Lausanne, was interpreted as indicating an improvement in the situation.

Nevertheless, a persistent impression prevails in some quarters that the Allies may find it expedient to evacuate the capital before peace is concluded.

Turks Cared For.

The British embassy is giving asylum to several hundred Turks of the old regime, including many former ministers whose lives are in peril.

Meanwhile, the economic situation grows worse; prices of fodstuffs are steadily soaring and business houses continue to suspend, their owners departing.

Demands of Turkey Outlined.

Lausanne—Turkey demands merely that it be dealt with as a government founded as other responsible governments are, and that it be allowed to enjoy the same rights in its international relations. This, in brief, was the statement made to representatives of the world's press by General Ismet Pasha, head of the Turkish delegation.

Ismet denied reported wholesale atrocities against Greeks, and said there had been an organized effort to stultify the Turkish Nationalists in the eyes of the western world. The Turks he said protected women and children in their movement against Smyrna, and avoided loss of life as far as possible during the operations.

1400 DEAD CHILE QUAKE TOLL

Santaigo, Chile—The latest advices from Villenar say the entire town was destroyed. Only three houses are standing. Thus far 600 dead have been counted, but many of the streets have not yet been cleared of debris, under which additional bodies are expected to be found. The advices say that it is expected the total deaths in Villenar alone will reach 1,000.

Fourteen hundred persons lost their lives in the devastating earthquake and tidal wave which rent the coast of northern Chile, according to the most accurate estimates.

Starvation, pestilence, and exposure are claiming additional victims in the wake of the disaster, and relief caravans are pushing forward to aid the homeless in the stricken area.

Communication with the shattered towns along the coast from Valparaiso to Antofagasta, the district which bore the brunt of the quake and upheaval of the Pacific, was still disrupted, but couriers brought word to the capital of whole villages leveled by the quake with survivors wounded lying by the hundreds in the streets.

Vellenar, Copiapo and Coquimbo, three little coastal towns, suffered most from the great shock. They were inundated by a rush of the Pacific, which followed the first earth tremor, but little villages further back in the hills appeared also to have suffered a terrific loss of life and property which it may never be possible to estimate.

It was reported that whole communities were wiped out.

This quake was felt over the entire South American continent and recorded on the seismographs of the world, lasted over three hours.

Not Seeking Argument, Says Tiger.

On board the steamship Paris, en route to New York—Former Premier Clemenceau reacted promptly to a wirelss message from Jean Longuet, French deputy and leader of the minority Socialists, now lecturing in America, who challenged him to a debate on the league of nations. "I am going to America to talk to Americans, not to argue with Frenchmen," he commented. "I can have all the debates I want with them back home."

NOT TO BE READ LITERALLY

Wording of Advertisements Calculated to Bring Smile to the Face of the Reader.

Here are some choice lines gathered from various publications all over the country:

Men—Experienced on ladies' pocketbooks and handbags; steady work.

Wanted—Maid for general housework in family of two adults. Must know how to coo.

For Rent—In apartments a large newly finished and furnished room, with windows on four sides.

Silk socks, 49 cents, 2,000 pairs purchased for this sale. You never saw such values. They won't last long.

Wanted by a widower a respectable woman to nurse a little girl at least thirty-five years old.

For Rent—Second-story front room; semi-private bath; electric light.

Wanted—Thirty or forty good young laying hens wanted. Must be reasonable.

For Sale—Baby carriage, in good condition. Reason for selling, baby outgrown it and no more expected.—Everybody's Magazine.

Cuticura for Sore Hands.

Soak hands on retiring in the hot suds of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do if Soap, Ointment and Talcum are used for all toilet purposes.—Advertisement.

PRESCRIPTION FOR LONG LIFE

According to This German Physician, It Is Easy to Add to One's Years of Usefulness.

The gathering of centenarians which took place the other day recalled the case of the eminent German physician, Doctor Fischweiler, who died recently at the age of one hundred and nine. He often declared that he possessed an infallible rule for securing longevity, which he would reveal to the world in his will. Upon his death, then, this formula was disclosed:

"Put your bed, orienting it by means of a compass, so that you will have your head placed north, and lie in a horizontal position. Sleep solidly with closed fists."

This is the whole secret. This position, it is asserted, brings the body in communication with the great tellurian currents coming from the north and insures an extremely happy blood circulation.

Poor Business Proposition.

For real good advice to younger business men I think the following letter that was sent me the other day is the best that could be offered: "A man who would be successful in business must ever treat the public as his friend. He must ever strive to give honest values and be courteous to prospective patrons. Another point that should be carefully considered is the folly of trying to belittle a competitor. To knock a man engaged in the same line of business as yours creates in the mind of the customer a doubt as to the excellence of your own wares and arouses a feeling of sympathy for the man who is not there to defend himself against your charges."—Exchange.

He Had to Stand It.

Yesterday while I was seasick it seemed to me I couldn't stand six days more of it or any more of it. Which reminded me of a remark I once heard a very old man make. He was ill and was telling me of his troubles. Without thinking I said: "I don't see how you stand it." The old man thought a while and then replied feebly: "I have to stand it!" There are many disagreeable things we can't get away from; we are compelled to stand them.—E. W. Howe, in "Daily Notes of a Trip Around the World."

The man who minds his own business is well employed.

Genuine BAYER ASPIRIN

SAY "BAYER" when you buy. Insist!

Unless you see the "Bayer Cross" on tablets, you are not getting the genuine Bayer product prescribed by physicians over 23 years and proved safe by millions for

ANYTHING TO BE OBLIGING

Little Thing Like That Mentioned Was Nothing to This Applicant for American Citizenship.

At each hearing where applications of foreign-born persons seeking citizenship in the United States are considered and passed on, incidents come up which add humor to the otherwise serious process. At a recent hearing before Judge W. W. Thornton of the Superior court, Room 1, George Mackay, United States naturalization officer, was quizzing an applicant regarding his knowledge of the inner workings of the government and regarding the history of the United States.

"Who was the first President of the United States?" he asked.

"Washington, D. C.," replied the anxious applicant.

"Just leave off the D. C.," said Mr. Mackay.

"Oh, I don't care," said the applicant nonchalantly, with an accompanying gesture of his hand. — Washington Star.

Not for Discussion.

"I understand your campaign fund is quite large."

"Let's change the subject," interrupted Senator Sorghum. "It isn't large enough to be worth mentioning."

At the Opera.

Alice—"Gladys isn't saying a word to her escort." Virginia—"I do believe she came to hear the music."

Country Signs.

The Woman was driving in the north woods and so charmed was she with the views, the glimpses of silver lakes, the rugged hills, the woods, that for quite a while she forgot about time, and a definite appointment, relates the Chicago Journal. Suddenly, however, she remembered she was due at a certain place at 1:30.

They had told her that it was a straight road for nine or ten miles, and then the road forked, and then—But the rest of the directions the Woman had forgotten. Was she to take the road to the right or the left? But surely there'll be a signboard at the forks, she thought, and that would tell her what to do.

And when she got to the forks there was the signboard, and in straggly black letters it announced: "Either Road."

Red Has-Beens.

Representative Bok of Texas said at a banquet in Washington:

"Our Reds find their audiences less and less sympathetic as Russia totters more and more.

"A Red was orating on a soap-box the other day.

"'Yes,' he snarled, 'you're afraid to revolt. You're like the prodigal son. All you get to eat is the husks the swine won't touch. But pretty soon the husks will all be gone. What'll you do then?'

"'Why, eat the swine, o' course!' said a young man in blue overalls."

Suspicions which may be unjust need not be stated.

Do you hear the clock strike the night hours?

HOW often you have heard people say, "I can't drink coffee; it keeps me awake nights!" *They've* learned from experience; have you?

If you are a coffee drinker and fail to get sound restful sleep, it means that your nerves are over-stimulated and that health needs protection from coffee's drug, caffeine.

There's no sacrifice in making health safe, as so many thousands have found who have turned from coffee to Postum. It has a delightful coffee-like flavor, and is free from any element that can harm you. As many cups as you like, and no regrets.

Your grocer has Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes.

POSTUM CEREAL
INSTANT POSTUM A BEVERAGE

The two forms of Postum are equally delicious; and the cost is only about ½c per cup.

Postum FOR HEALTH

EDITORIAL

THE STRAY CATTLE NUISANCE.

Goodridge has for the last few weeks been acting in the capacity of a pasturage for numerous wandering cattle who have been feeding on the lawns and otherwise making themselves an annoyance.

This is one of the most aggravating things that can happen to an inhabitant who has spent sums of money and valuable time in repairing and fixing a spot of beauty on his property and as a reward see straying cattle devour his plants and destroy the shrubs and perforate the grounds with the impressions of ugly cow's heels.

If there ever was a thing the word disgrace should be attached to, it is an act of apparent laziness and habitual negligence that the owners of these bovine animals show in letting them continue their carousal and grazing upon the property of others.

A place for the keeping of cattle in a pasture has been provided in the southern part of town, and for a mite of a disbursement on the part of the cattle owners this public irritant and nuisance could be eliminated.

If we're going to make a cow pasture out of this fair village of ours, let's make it unanimous and allow the city dads to charge for the service and thereby enrich the coffers of Goodridge.

It would be a great thing for Goodridge if its inhabitants could boast of the fact that no cattle run loose thru the streets and private property. Let us see an effort on the part of the cattle owners to build up this sought-for reputation.

WHY ADVERTISING IS ECONOMICAL.

Some firms have maintained that advertising is an expense added to the cost of distributing goods.

Let us see how that works. There seems no reason to doubt that any concern that distributes reliable merchandise can secure and hold a greatly increased trade by advertising. Watch the crowd flock into a city store after a sale is announced, and your own eyes will prove it.

Over and over again, small and obscure firms have gone ahead in a short time, as the result of judicious publicity. When a store tells about its goods and solicits patronage, people feel a desire to see the merchandise thus offered, and they also think that such a place is a live one that will give good service.

Many stores double their sales in a short time through using regular publicity. But the expense of such a store did not double from the increase of trade. Its overhead costs for interest, taxes, rent, salaries, etc., would have increased but very little. And its operating expenses would not come anywhere near doubling. Its total costs might not be more than 25 per cent above the figures on the old basis. Consequently the charge to be made against each article for overhead and running expenses would be much less than previously. The store could sell stuff for less money than before.

Advertising enables the enterprising merchant to do business on a bigger scale and take advantage of special opportunities. If the non-advertiser is offered a large lot of goods at a special price, he might feel that the deal was too big for him to swing with his regular trade.

But the advertiser would know that by announcing a special sale, he could get the public coming to his place, and could work off those goods in a short time. He could afford to sell them at a low price, and the deal would pay through the big volume of sales in a brief period.

Thus the advertising store can handle large deals at a profit both to itself and the public, and newspaper publicity is one of the biggest forces tending to reduce the cost of distributing merchandise.

A northern Minnesota farmer lost a cow last week, bagged by a hunter who mistook bossy for a deer. Here is a splendid chance for some new member of the next Legislature to distinguish himself by getting thru an amendment to the game laws that would hold hunters down to at least one cow and one deer.

The prettiest girl in the state has been found to live in northern Minnesota, whereby this section of the commonwealth again distinguishes itself. Miss Verona Hansen of Ada, Minn., has been declared the state's most beautiful girl by a committee of eight university young women students.

Skunk succumbs to vile fumes arising from moonshine still, says headline in the Thief River Falls Tribune. And at that we'll wager that Mr. Skunk wasn't trying to swim in it the way some people do.

When a girl votes that another lives who is prettier than she, we can still see a lot of good in the feminine world.

Senate G. O. P. leaders may ask President Harding to ask Senator Newberry to resign his seat in the interests of party harmony in 1924. If they were real smart, they would include Harding in the same invitation.

Many funny faces have lately disappeared from the columns of the country press. Elections always are lamentable, not only to the candidates but the reading public as well.

Everybody is in favor of good roads but it isn't everybody that is willing to pay for them.

MARTIN LUTHER

(Third and final installment)

By REV. H. LUTZ.

The Papists tried to frighten or entice Luther into recanting, taking back what he had written in the theses. The Pope sent delegates, Cajetanus, Miltitz and Eck to persuade Luther to recant. They could not convince him that he had taught falsely. In fact, they did not try to prove that he had said or written anything contrary to the Bible. They only said he had offended the Pope, and that he must take back what he had said because it was contrary to the teaching of the church.

In 1520 the Pope excommunicated Luther. The document of excommunication was burned by Luther on December 10, 1520. "Behold thou hast grieved the Holy One of God, the eternal fire consumes you."

In 1521, Luther was cited to Worms to defend his teaching before the rulers in church and state, who had assembled there. He knew that it would be a dangerous trip, but he went. "And if there were as many devils in Worms as shingles on the roofs, yet would I go." He considered this a cal from God. Luther himself wrote a brief history of his appearance before the Diet of Worms. Here it is: "Are these your books?" "Yes." "Will you revoke them?" "No." "Then get out. Luther said he would not take back and retract anything he had written unless it were proven to him by Scripture that it was false doctrine.

On his way back from Worms, Luther was taken by some friends and brought back to the Wartburg. His enemies did not know what had become of him, so he was safe. Here he translated the New Testament into the German language. He finished the translation of the complete Bible in 1534. It was a stupendous task.

"Sometimes we sought two, three, four weeks for a single word, and then, sometimes we did not find it." In 1529 Luther published his two [illegible] the Small Catechism.

In 1528 King Henry VIII of England wrote against Luther. Luther answered him "to a finish."

Luther also was forced to face Zwingli, founder of the Reformed Church. They had a meeting at Marburg in 1529. They could not come to a full agreement. Luther held: "The Lord saith: 'This is my body,' therefore I believe it." Zwingli argued. "I cannot understand it, therefore I will not accept it." So they remained separate.

In 1530 the followers of Luther submitted a written confession of faith to the Reichstag which met in Augsborg. It is called the Augsborg confession and is the confession of the true Lutheran church to this day.

On June 13, 1525, Luther was married to Katharine von Bora, who had been a nun, but after having been convinced by a book of Luther's that such a life is not pleasing to God, had escaped from the cloister. Luther's had six children, three boys and three girls. One of the girls died less than a year old and another at the age of 14 years.

Luther died on February 18, 1546, at Eisleben, the place of his birth, where he had gone to settle a dispute which had arisen between the counts of Mansfield. His body was laid to rest near the pulpit in the Castle Church of Wittenberg, where he had preached so often and with such great power. His soul was taken by the angel into "Abraham's Bosom." His spirit remained, and is with the true church of the Reformation today; indeed, it is felt throughout the world.

THE COUNTY VOTE

AS CERTIFIED BY MEMBERS OF PENNINGTON COUNTY CANVASSING BOARD.

Congressman, 9th District:	
Knud Wefald	2,794
Halvor Steenerson	1,350

Frank J. Hebl	252
Associate Justice Supreme Court:	
William A. Anderson	2,325
James H. Quinn	1,241

You never can tell. Lynn Frazier, recalled as governor of North Dakota, is elected to the United States Senate. Henrik Shipstead, twice defeated for governor of Minnesota, is elected to the United States Senate. Knud Wefald, defeated for the legislature by the people of his own county, is elected to Congress. It reminds us that Abraham Lincoln was five times defeated before he received the start that made him President of the United States.

The Democrats who ran for office on the Republican ticket did not fare well either in Minnesota or North Dakota.

[illegible]TON COUNTY [illegible]

I take this means of [illegible] appreciation of the fine vote and support I received at the general election. It was a pleasure to receive such a fine endorsement as was given me by the women voters. As before stated, it will be my purpose to faithfully enforce the laws impartially and without fear or favor.

Respectfully yours,
O. L. IHLE.

Mortgage Foreclosure Sale.

Whereas, Default has occurred in the conditions of that certain mortgage duly executed and delivered by M. O. Seavey and Rachael Seavey, his wife, Mortgagors, to Ole A. San, Mortgagee, bearing date the 1st day of July, 1921, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds, in and for the county of Pennington and state of Minnesota on the 31st day of August, 1921, at eight o'clock A. M. in book 57 of Mortgages, on page 609, such default consisting in the non-payment of the interest upon the principal sum of such mortgage, with interest to-wit: the sum of Two Hundred Eighty-six and 80-100 dollars ($286.80), became due and payable on July 1, 1922, and, whereas, the undersigned, Nick Bundhund, was on the 10th day of July 1922, duly appointed guardian of the estate of said Ole A. San by the Probate Court, of Pennington County, Minnesota, and a certified copy of the letters of guardianship issued to the undersigned as such guardian has been duly recorded in the office of the said Register of Deeds. And, whereas, the undersigned did on November 6, 1922, pay the interest then due upon a prior mortgage upon and against the premises hereinafter described, amounting to the sum of One Hundred Twenty-four and 42-100 dollars ($124.42). And, whereas, the undersigned, as guardian has declared and does hereby declare the whole sum secured by said Mortgage to be due and payable, and, whereas, there is now claimed to be due and is due at [illegible] the sum of Five Thousand Two Hundred Ninety-five and 92-100 dollars ($5,295.92), including the interest so paid on said prior mortgage, and no action or proceeding having been instituted at law or otherwise, to recover the debt secured by said Mortgage, or any part thereof.

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in said mortgage, and pursuant to the statute in such case made and provided, the said mortgage will be foreclosed by a sale of the premises described in and conveyed by said mortgage, to-wit:

The west half of the Southwest quarter (W½ SW¼) of section fifteen (15), and the east half of the southeast quarter (E½ SE¼) of section sixteen (16), and the west half of the southeast quarter (W½ SE¼) of section sixteen (16), in township one hundred fifty-four (154), north of range forty (40), west of the fifth principal meredian, containing 240 acres, according to the Government survey thereof, in Pennington county, and state of Minnesota, with the hereditaments and appurtenances; which sale will be made by the sheriff of Pennington county, at the front door of the Court House, in the city of Thief River Falls, in said county and state, on the 6th day of January, 1923, at 10 o'clock A. M. of that day, at public vendue, to the highest bidder for cash, to pay said debt of Five thousand two hundred ninety five and 92-100 dollars ($5,295.92) and the interest, and taxes, if any, on said premises, and Seventy-five dollars ($75.00) attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated November 16, 1922.

NICK BUNDHUND,
as Guardian of the Estate of Ole A. San, Incompetent, Mortgagee.
H. O. CHOMMIE,
Attorney for Mortgagee,
Thief River Falls, Minnesota.
N-17 D-22

Firestone
GUM-DIPPED CORDS
Most Miles per Dollar

Everywhere You Hear It—
Firestone Builds the Finest Cords

HARDLY a day goes by but some one goes out of his way to tell us that Firestone Gum-Dipped Cords are the best tires built.

Cords—as only Firestone builds them—will give you many extra thousands of miles of wear. And for fall and winter driving there's nothing like them. The strong, resilient Firestone carcass of gum-dipped cords, can stand the hardest punishment.

With the reputation Firestone Cords hold, it is not surprising that so many motorists in this community have made them standard equipment. The demand for Firestone Cords in the last few months has broken all records.

Prices were never so low as they are now. Perhaps never again can mileage be sold so cheaply.

Decide now that you will get Most Miles per Dollar. Drop in any time and let's talk tires.

Timely Tribune Editorials

(Thief River Falls Tribune)

THE ELECTION.

The wise ones are now busy accounting for the results in the recent election. A few of our exchanges think the country has gone Bolshevik, some lay the blame to the general feeling of unrest and clamor for a change, while others are simply stunned and cannot account for the upheaval which occurred. There is no accounting for what is in the voter's mind when he goes into the booth to vote, but a combination of untoward circumstances undoubtedly had much to do with the chastisement accorded the Republican party.

Fortunately for the country and its free institutions, voters no longer vote "the straight ticket.' President Harding promised to do something for the relief of agriculture and his indifference in one or two instances since he assumed office, notably his failure to help out the northwestern farmers in their fight for the restoration of the old time system of grain grading, his weakness in the railroad strike and coal strike, has not passed unnoticed.

The government has been vigilant in pursuing the small taxpayer guilty of minor infractions of the income tax law, but has made no effective move to punish war profiteers. The government has placed Coleman in charge of the coal situation, but people are either without coal or have had to pay exorbitant prices. The government has placed Coleman incharge of the car suituation but shippers still have no cars. Inefficiency all along the line, in many cases unavoidable it is true, but inefficiency just the same.

The farmer, who produces the bread and butter of the country, is being ground to pieces between the low prices of what he has to sell and the high prices of what he has to buy, while the middle man in many cases is rolling in luxury. Perhaps the government is powerless to make the adjustment, but people are possessed of the notion that no effort worthy of the name has been attempted in the line of correction.

The Democratic party was in and failed, the Republican party came in on a big wave of protest and it has also failed in the opinion of many people to get action where action is needed, and the natural result is that people are going to continue to try something else until they get a few men into office who will give serious attention to the needs of the common people.

The Tribune is not at all alarmed over the situation. [illegible] nothing sacred about a party fetish as we view it, and unless the old Elephant wakes up and proceeds with the task in hand, it does not matter in the least whether it has to give way to the Farmer-Labor party or any other organization which can furnish men to produce desired results. The Republican party still has two years before it in which to give a good account of itself, and the people have merely given the powers that be the high ball to proceed with full steam ahead.

It has been claimed that voters who generally support the Farmer-Labor candidates for office, blindly follow the dictatorship of their leaders and newspapers, but the vote in this district does not bear out the assertion. In spite of the fact that both Shipstead and Johnson carried this district by substantial majorities, the voters departed from League instructions and elected to the legislature Mr. Hansen and Mr. Waldal, and we feel sure Mr. Day would have been defeated had he been opposed by a progressive candidate. However, aside from his opposition to the good roads program, Mr. Day has a pretty fair record, and he will probably redeem himself in this respect this winter. What we started to say was simply that the farmers have a clear idea of what they want, and The Tribune de- [illegible] to office.

Senator Hansen has a real opportunity for constructive service to his district. Elected on a progressive platform, but without the hampering fetters of fealty to any set of dictators except his own constituents, he can be a free lance in the Senate, and knowing the man as we do it is not difficult to prophesy that he will make the most of his opportunity. Our prediction is that the 65th district has made an excellent selection. The new Senator is pretty well posted concerning the needs of the farmers, who have first claim on his services, and we are confident he will secure for the district better consideration in all respects than has heretofore been the case. What we needed was an influential man of vision and determination to plead our case at court, and we assuredly have such a man in Mr. Hansen.

The voters gave Governor Preus a slap on the wrist. As The Tribune pointed out during the campaign, it was a grievous mistake on his part to read Oscar Keller out of the Republican party after he had been nominated for congress in the 4th district. Keller carried the 4th dis- [illegible] The beauty of our political system is that no man is big enough in this country to define the ethics of office holding in any party.

It is noticeable that the country country press is gradually getting around to the task of ridding the communities of bootleggers and moonshiners. And in all seriousness The Tribune wishes to remark at this time that the editors of the country have never tackled a problem more worthy of their best efforts. The liquor traffic in its newest phase is more hideous than ever, and no other agency can be more potent in rooting it out forever than that of the untrammeled country press. The dark places can stand almost anything better than the light of pitiless publicity.

No man got as many different varieties of sensations out of the election as Ole Sande. He was defeated and elected alternately at least a dozen times last Wednesday. The last township to report put him ahead 26 votes and he can thank his lucky Star.

What Thief River Falls needs to make it the best town north of St. Cloud is to get some of the boys who are now pulling in the breeching to pull in the tugs. It CAN be done.

RED CROWN GASOLINE

Your Guarantee of Service

Use Red Crown Gasoline

and Get Power When You Need It

Sustained pulling power—tremendous power is what Red Crown delivers to your rear wheels. It contains a range of boiling point fractions that insure the maximum of power your engine is capable of developing.

Steep hills, deep mud—if they can be made—you can make them with Red Crown in your tank.

Red Crown delivers steam-engine like pressure to the piston that produces a steady flow of power.

Red Crown does not let down. That's one reason for its wide-spread popularity.

Buy Red Crown

The High-Grade Gasoline

At the Following Standard Oil Service Station:

2nd and Main Streets

And at Any Filling Station or Garage Showing the Red Crown Sign

Standard Oil Company *(Indiana)* **Thief River Falls, Minn.**

2704

1—Ten thousand University of California students asking President Barrows to withdraw his resignation.
2—Wretched, ragged children of the tent city of evicted miners near Johnstown, Pa., for whom aid is sought.
3—Dr. Royal S. Copeland, health commissioner of New York city, who was elected United States senator by the Democrats.

NEWS REVIEW OF CURRENT EVENTS

Democrats Score Great Victory and Almost Capture Control of Congress.

EIGHT G. O. P. SENATORS OUT

Al Smith's Success in New York Starts His Boom for Presidential Nomination—Turkish Nationalists Goading the Allied Nations to Drastic Action.

By EDWARD W. PICKARD

AL SMITH, former governor of New York, has been elected to that office again by a huge plurality and already is being boomed for the Democratic nomination for the presidency in 1924. Regardless of party affiliations, do you think he would make a good nominee, and a good President if elected?

REPUBLICAN control of congress was almost swept away in the Democratic landslide at the election on November 7. According to the returns at this writing, the G. O. P. in the next congress will have 53 senators, compared with 60 now, and the Democrats will have 42 compared with 36 now. Doctor Shipstead, who defeated Senator Kellogg in Minnesota, represents the Farmer-Labor party.

The lower house of the Sixty-eighth congress will be composed of 225 Republicans, 207 Democrats, one Socialist, one Independent and one Farmer-Labor member. If these figures are not changed by the revised returns, the Republicans will have a majority over all of 15.

Nine senate seats were lost by the Republicans, by the defeat of Senators DuPont in Delaware, France in Maryland, Townsend in Michigan, Kellogg in Minnesota, Frelinghuysen in New Jersey, Calder in New York, Poindexter in Washington, and Sutherland in West Virginia, and of Albert J. Beveridge in Indiana. The Democrats lost two seats through the downfall of Senators Hitchcock in Nebraska and Pomerene in Ohio.

Among the outstanding results of the election was the great victory of Al Smith in New York. He defeated Miller for the governorship, which he once before held, by a plurality of more than 390,000. This makes him a logical possibility for the Democratic nomination for the presidency in 1924, and already his enthusiastic admirers are booming him for that honor. One possible rival, Senator Pomerene, is removed by his defeat for re-election by Fess, Republican, but it is likely Cox will want to try again. Another man who may be put forward by the Democrats is S. M. Ralston of Indiana, who defeated Beveridge for the senate and who is very popular among the Hoosiers.

Necessarily the election has its effects, also, on Republican presidential probabilities. Some politicians in Washington think President Harding will not seek another nomination because the great reverses sustained by his party are interpreted as the expression of dissatisfaction with his administration. However, if he should wish to lead the ticket again, two likely contenders for the place are now out of it—Beveridge of Indiana and Miller of New York. But there are other strong Republican possibilities. Senator Hiram Johnson of California was returned with a big plurality; Gifford Pinchot won the governorship of Pennsylvania by 255,000 plurality; and Senator Pepper of Pennsylvania easily won re-election. Any one of these may reasonably ask the presidential nomination, and so, too, might Governor Allen of Kansas. There is some talk even of Senator McCormick of Illinois as the choice of the progressive Republicans; and Jim Watson, now restored as the boss of his party in Indiana, might get ambitious and offer himself. His followers, as well as those of Senator New, are accused of having knifed Beveridge at the polls; and the charge seems to be true, as Republican congressmen were elected in nine of the thirteen Indiana districts.
